ANIMAL PORTRAIT SUPPLEMENTS.

WE print to-day the first one of a series of five American animal portraits by Mr. Ernest E. Thompson. These are to be given as full page supplements, with the first issues of the months as follows:
Jan. 5 (to-day).—The GRAY WOLF.
Feb. 2.—The WHITE GOAT.
March 2.—The COYOTE.
April 6.—The ANTELOPE.
May 4.—The FOX.
The dates of the former series (of which copies can be supplied) are as follows: Sept. 8, 1892.—The Panther. Oct. 6.—The Ocelot. Nov. 3.—The Canada Lynx. Dec. 1.—The Bay Lynx.

THE MILITARY REVOLVER.

THE position of the revolver as a military arm is a very anomalous one. It is in, yet practically out of use since there is no general provision for any practice drill with it. The rifle has secured for itself a definite recognition. In the regular army the scheme for developing skill with this arm is elaborate and is working out good results. There is a systematic cultivation of the best shots from the company through the department team to the Division and Army teams. Prizes are provided, with recognition and honor for those who best master the art of marksmanship. No distinction is made between officers and men in this rivalry of skill, and the system of matches is now so well established that the whole army is rapidly becoming a company of marksmen over 25,000 strong.

All this for the rifle, and yet not a match is on the programme for the revolver. The arm is there. At West Point the cadets are given firing drill with the revolver, though much of it seems rather blank cartridge work to accustom the horses used in the cavalry drill to the sound of firearms. So with the cavalry men out on the plains. The revolver rests in the holster pocket, and it is fired off occasionally as drill for the horses; but scoring with the arm is not encouraged in the prize list, and but a meagre portion of the arm practice report is given up to a statement of the skill reached with the small singlehand weapon.

In the militia the influence of the regular arms is seen in the neglect which has been meted out to the handy little piece. The majority of the States, though having a National Guard, do not add the revolver to the bill of arms, or where it is done, there is no preparation, either in the issue of ammunition or the issuance of a programme of matches, by which that rivalry which is the very heart and soul of marksmanship is developed to practical results.

It is not even agreed among military experts just what position the revolver should occupy as a military arm. One man in gold lace will declare with emphasis that he would not have a revolver in the hand of either officer or enlisted man, no matter what arm of the service they may follow, and the officer of equal rank and experience will assert that a revolver is worth its weight in gold and that it should be brought into service wherever practicable. To every one, save infantry private, already armed with the rifle, these enthusiasts would issue the revolver and

follow up the work with a liberal supply of practice rounds.

One of the strongest objections made by those who decry the revolver bears on this question of ammunition. There is a strong temptation to use the light charges to make pretty target diagrams at short distances. until when the time comes for effective work with the real service ammunition, the shooter finds himself handicapped by the heavy charge, and the tendency of the stiffer charge to overshoot.

There is much that may be criticised in the present fashion of rifle practice in the army proper as well as in the militia force; but the arm having been issued, some sort of practice follows, and so far there is logic in the matter, but with the revolver that senseless layman notion that the skill to use a pistol or revolver comes with the purchase of it, and that such a thing as practice is entirely unnecessary, seems to run through the uniformed ranks as well. The citizen who buys a blunderbuss, and lugs it home, may sleep sounder o' nights in consequence, even though it would put him in a tremor to suggest his pulling trigger on a charge. To find men whose profession is that of arms following out the same notion is more than absurd, it is an imposition upon those who support that army, and look to it for the highest state of efficiency and security in case of need.

A CRANK ACCOUNTED FOR.

A RECENT order of the New York Police Department deprived the men of the clubs with which they were formerly armed, including the formidable night sticks, and substituted for them small batons which are required to be worn in a pocket and drawn only in extremity. This change of weapons, it is now reported, has been followed by a change for the better in the relations of police and public. The unsavory record of brutal clubbings, so common under the old order of things, has been noticeably diminished; there have been fewer affrays between policemen and citizens, and the improvement has been gained without sacrificing in any degree the efficiency of the force and without any encouragement of disorder or crime. The policeman as a man is showing himself more efficient than the policeman as a clubbing machine.

The experience is interesting and instructive because it illustrates so well a common principle governing men who have weapons put into their hands. Equip a police force with clubs, and there will always be some who will use their weapons wantonly, aggressively and brutally. With such men the mere possession and handling of a club provokes its use. So with drivers, to have a whip or gad means to belabor with it, and the rule holds with drivers of city drays, ox-teams in the woods, mule-teams on the plains, and the great army of bull-whackers the world over. The principle applies as well to the small boy with the pea-shooter, popping away at the song birds. And in certain boys of a large growth, equipped with shotgun or rifle, there is shown a like provocation to wanton killing. The billy, the whip, the pea-shooter, the shotgun, the rifle, each of these appears to bring out and stimulate in its possessor all the brutality there is in his nature.

This, we take it, is the genesis, and this is the explanation of the shooting crank who goes into the fields and blazes away at everything that flies or runs or crawls, who shoots game if there be game to shoot, but with equal avidity pots song birds, chipmunks, chipping sparrows and garter snakes. Armed only with a walking cane, this same individual might wander all day long through the fields with never a remote thought nor inclination to kill the little birds about him. It is the gun in his hand that put into his heart the killing.

Here, too, is the explanation of that freak one encounters everywhere in Florida—the fellow who shoots from the steamboat deck.

Alligators, ducks, shore birds, plume birds, all alike are prey for him, all alike are killed in pure wantonness, and all alike are abandoned where they fall, to rot. The old books of French and Spanish adventure in Florida give very full accounts of the Indians who inhabited the peninsula, but nowhere is it recorded that they killed game for the pure satisfaction of achieving its death. This is a form of savagery that has required centuries of high civilization for its development and is exhibited in its perfection only in these latter days, when we are celebrating our advancement, four hundred years after Columbus.

If such an explanation of this Florida phenomenon is

the correct one, it follows that the only way to suppress the nuisance is to take his gun away from him. Florida game laws amount absolutely to nothing. So long as tourists are permitted to bear arms on boats, they will keep up their fusillade. The one effective cure is to forbid the possession of guns on board. Every steamboat captain has the remedy in his own hands. Why may it not be put into effect?

OUR NEW HEAD.

THE departments of this journal are in that healthy condition where each several department editor is forever wrangling with all the others about space. Each one, every week, demands that fewer columns be given to his esteemed associates and more to himself. There is a never-ending, week's end to week's end, the year round, clamor by the Kennel editor for some of the space he declares to be "thrown away" on the Yacht man, and the Yacht man never tires of devising schemes, fair or foul, for appropriating some of the space over which the Trap editor stands guard with a shotgun. Every newspaper man will recognize that all this is just as it should be. It shows that the departments are alive.

When it was rumored the other day that the FOREST AND STREAM was to have a new vignette on the front cover, Mr. Lacy, who lays claim to some artistic skill with a pencil, ingeniously and blandly volunteered to draw the head; and the task was assigned to him. When Mr. Stephens heard of this, for some reason known to himself, he urged that he could probably provide a more artistic, comprehensive and appropriate head than Mr. Lacy would be likely to achieve. Then Mr. Townsend suggested that though he was not an artist himself he had some notion of what an improved FOREST AND STREAM head should be, and he and Mr. Burnham would cheerfully devote themselves to the work.

In due time the several designs were submitted. The predominating characteristic of each one was found to be an extraordinary abnegation of self by the artist, and a generous recognition of all the other departments. While no one of them has been given the coveted place on the front cover, reduced copies of all are printed to-day on other pages. They are chiefly interesting because they show so clearly the ideal FOREST AND STREAM as pictured by some of those who help to make up the journal as it is to-day.

SNAP SHOTS.

If the newly drawn title on the front cover shall prove in the printing all that is intended, news-stand purchasers will welcome the improvement. Without sacrificing any of the characteristic and familiar features of the vignette, the artist has secured increased legibility, and the name stands out in bolder relief.

This first issue of the new year is also the initial number of a new volume—the fortieth—and a journal's attainment of its fortieth volume is equivalent to a man's attainment of his fortieth year. We celebrate the occasion by providing a new and handsome outfit of type. In respect to beauty of typography, in illustrations and in text, the FOREST AND STREAM challenges a critical and discriminating comparison with any of its weekly contemporaries. We begin the year with an ambition to make these pages more than ever truly and adequately representative of the American field sportsmanship of the day—a journal of sportsmen, by sportsmen, for sportsmen.

Capt. J. W. Collins having resigned from the office of representative of the United States Fish Commission on the Government Board of Management and Control of the World's Columbian Exposition, President Harrison last week appointed Dr. Tarleton H. Bean to the place. Dr. Bean is the Assistant in charge of the Division of Fish Culture of the United States Fish Commission, and is the editor of the Sea and River Fishing columns of FOREST AND STREAM.

Our first annual Amateur Photography Competition has been much more of a success than was anticipated for it, both in the number of competitors and the standard of work submitted. We shall not delay our announcement of the awards of prizes.

Dr. James A. Henshall, who is in charge of the World's Fair angling exhibit, and reports that the display will be a credit to the craft, is planning an Izaak Walton memorial.

The Sportsman Tourist.

A LITTLE DOMESTIC ARGUMENT.

A GOOD bag of game is always a desirable thing to the sportsman. Yet he knows that even this is not the most desirable thing. The pleasure of hunting cannot be reduced to an argument, but a lot of birds goes a long way toward convincing one's family and friends of its utility. After a successful hunt one is more reconciled, somehow, to having neglected his business, and seems to care less whether the world knows it or not. The great thing about hunting cannot be expressed in a formula of birds, and is independent of a good string, although it goes very well with it. Your true sportsman knows what it is. The rest never will. This has always been a favorite theory of mine, and I have preached it so often to my family that I have no doubt they are heartily sick of it.

Of late I have been quite successful, and have been given to computing the cash value of the birds brought home, and generally the balance has been on the right side as against the actual cash outlay. Of course I counted the time spent as nothing. No sportsman counts his time as anything when afield with dog and gun. The favorable balances I have used as a family argument for going again.

It used to be quite different, and when I had nothing to show up I drew largely on the pleasure of hunting *per se*. I remember one particular occasion (and this is what I started to tell) when, after a desperate day's hunt, I had killed nothing. So far as I was concerned I didn't care, but my wife liked birds and I remembered that I had been so very confident in the morning. This was not the first time it had happened, either, and my argument about birds being scarce had been used so often it was no longer formidable and, indeed, was generally anticipated.

My meek and dejected look proclaimed the result of my hunt without my announcing it, and it was very likely that the Presiding Genius of my household would engage me in conversation upon the subject of hunting—from her standpoint. She did, and this is what it was:

PRESIDING GENIUS—"Well, I suppose this ends it: I don't see how you want to go hunting when you don't get anything. That's what is so funny to me. Here you have been time after time and haven't brought home a thing—you know you said the last time you came home you'd be something-or-other if you ever went again. Now here it is again the same thing. I really am ashamed to—"

HUNTER—"My dear, you are looking at this matter from the standpoint of a woman. Any sportsman will tell you that a big bag of game is a secondary consideration. The pleasure—"

P. G.—"I know just what you are going to say. I have heard it so many times that I know it by heart: 'pleasure of hunting in itself,' 'tramp all day, bracing air,' 'renewed health—youth again.' Oh, I know it all. If you would only get something once in a while. I would be more reconciled. Others do, and I don't see why you can't; you know how fond I am of game—I just love it."

H.—"From the standpoint of a woman, you are undoubtedly correct. I never felt so weak about it myself as I do this minute; I am almost tempted to give the thing up right here and now—you see birds were scarce."

P. G.—"If they are so scarce why don't you buy some? I saw a lovely string of quail hanging up at the market this morning and I was tempted to order some; I might have known you wouldn't get any. Dear me! I know they are gone now. You said you would surely get some to-day."

H.—"I don't hunt to supply my family with meat. Talk about my buying game! It would be an insult from one not so dear to me! I would rather shoot my dog and then give my gun away. We only saw one bery; but you ought to have seen Ruby catch the scent as she was quartering a stubble field! She is a daisy, and no mistake. She roared then a quarter of a mile, I should say, and came to a beautiful point, head way up—just like her dam—looked as if she was star-gazing, you know. I flushed them, but my left barrel missed fire—you know what I have told you about those shells—and I was so taken back that I couldn't get in my other barrel. They settled in a dense thicket, and we never saw hide nor hair of them afterward. Is supper ready?"

P. G.—"It is very strange, with all the hunting traps you've got, that you can't get some cartridges that will go off. How do you expect to kill anything unless you do? Dear me! what can I do about my luncheon to-morrow?"

H.—"What luncheon?"

P. G.—"Luncheon for the girls, of course. Didn't I tell you I was going to have one for Lizzie's friend? No, I didn't, come to think about it—she is an awful swell. Here, look at this menu card I have painted. Do you see that third course?"

H.—"Yes, I see it. 'Quail on toast.' You've counted your quail before they are hatched."

P. G.—"I told Lizzie you had gone hunting expressly for that course, and she said it was lovely of you to do it for her. She said it was so much nicer to know that one's game was fresh and all right. I don't see how you can bear to look her in the face."

H.—"I shall be very busy to-morrow. There is a man coming."

P. G.—"He was here to-day, and there was a boy with a telegram looking for you. They looked all over town, heaven only knows where, to find you. Why is it that you are so ashamed of going hunting that you can't leave word where you are gone. After they had looked in every section of the town and couldn't find you, your man—that is coming to-morrow—called me up and asked me where you were."

H.—"What did you say?"

P. G.—"I said you had gone hunting."

H.—"What did he say?"

G.—"He said, 'Oh, is that so,' in such a tone and rang off. Don't you think it is about time to give up this hunting business? Here you are neglecting your office, and men chasing all around town looking for you. Just think if the banks and credit companies should find it out."

H.—"I don't care if they do. I know that hunting is a gentlemanly recreation and that it is of the greatest value to me. It is not measured in dollars and cents, and I don't suppose I can convince them of it any more than I can you by demonstration. In the nature of things, you

will never know what the pleasure is. You probably call it a weakness in me. Women, too, have their little weaknesses, I guess. You remember that little six inches of point lace you got from that traveling lady (you said she was so lady-like and refined) in exchange for a large section of my old goods and chattels that erstwhile reposed in the attic, as well as several rolls of old carpet brought up from the cellar, plus numerous old boots and shoes of various members of the family."

P. G.—"What are you talking about?"

H.—"Well, you thought it very strange that I didn't rave over that speck of lace. But it wasn't in me to do it and I couldn't. You used to get up at night to look at it by moonlight, but I couldn't see anything in it. I don't know the difference between point lace and a wire fence and probably never shall. You look at hunting through the bars of the broiler, while to me the pleasure—"

P. G.—"Tea is ready; let's talk it over afterward."

TOLD IN HEROICS.

TELL you how it was.

I hadn't been bass fishing this season. Didn't think much of prospects, rosy reports nevertheless, for the woods are full of fishers for count. My friend, J. P. H., offered me his team for the four-mile trip, partly because the horse was in danger of dyspepsia and gout from high living and little exercise, and partly because J. P. wanted to get rid of me for a day anyway. For so do sweets cloy at last. You see his office was too handy to loaf in, so I allowed him to persuade me and went.

Got to the place about 8 A. M. Had belgranites (that word shocks me every time I speak or write it) and crawfish and grasshoppers and worms and tadpoles and flies and spinners for bait. Thought I ought to corral something with all that. Daughter with me. Loves to fish, too. Natural. Usually catches more than her derivative. Hired a boat at the mill by a dam site. Dam there too, half a mile long. Went to work at upper end. Rocky bluff. Hemlocks. Lovely. Water pretty deep. Daughter began by pulling out sunfish. Nothing else for an hour. Very few of these. Then I fastened to a bass of promising proportions that immediately began to go somewhere with considerable determination for about thirty seconds, and I thought he was truly mine, when, the fastening being insecure, owing to circumstances over which I had little control, he went, and—well, you know how it feels when your hook comes back to you sudden with nothing on it. Fish must have gone and told all the others, for all the forenoon I fished up one side, down the other, up both sides, down the middle, crossed over and saluted with various tempting inducements with all the skill I could muster, but not a nibble thrilled the anxious line. By noon a goodly string of sunnies floated alongside, the product of the little lady's skill, but "nary bass nor picker-el" had sampled my refreshments. So we sampled some in the basket, and with them some nice warm creek water, began again.

Sun warm. More than that. Fish all gone to cool off. So we went still further up stream, passing the mouth of a little creek in whose shallow limps we caught with much strategy and our hands some of the loveliest polliwogs that ever wiggled. Now, don't some of you litterateurs rise up and correct me, for you'll slip up just like the rest. Pollywogs is vulgar. We caught them of all sizes clear up to where they were sprouting legs, and I felt confident that as the bass didn't want anything else, polliwogs'd fetch 'em. But they didn't. More fond hopes dispelled, dispersed, dissipated. Great big fat fellows, all stomach, hooked by the tail, went wriggling downward, or kicked on the surface, "just as natural," but not a bass responded. So I returned to hel—dobsons and worked down stream slowly, while the sun threw a few more degrees of heat into his beams and became doubly wearisome to the flesh.

Then we tied our boat to the bank and caught some more sunfish, and one eel came to us squirming and tying himself into knots that wouldn't stay tied a minute, and making me go tizzer-rizzer all over when I touched him. I like eels on the table thoroughly cooked and dead, but the touch of a slippery, slimy, twisting, squirming, crawling, writhing, clammy streak of sinuosity shrinks and shrivels me right up. Same feeling that a woman experiences when she touches a worm. I can sympathize with her.

Along about 4 o'clock I noticed a spot near the opposite shore in shadow from trees over our heads that looked cool and pleasant and tempting for fish, so we rowed over, put out the anchor and

Fished and fished and fished and fished.

And then we fished some more.

and might as well have fished up among the hemlocks, and a good deal more comfortably. Giving it up in disgust, I raised the anchor, and telling the little maiden to take an oar and keep the boat within easy casting distance of the shore we floated slowly down, while I cast a good-sized hel—dobson repeatedly with matchless skill and arm-ache until I began to tire of such foolishness, when, after a careless and despairing cast, as I was recovering, the line straightened and began moving off down stream with a steady, strong movement that spoke of large game. This is what I was going to tell you about.

Calmly waiting, with one foot advanced, the exact and opportune moment when the doughty denizen of the deep should be debating in his mind whether he desired to retain the mouthful he had or no, with the stereotyped upward and backward movement of the wrist, I struck, and struck hard, and as the cruel steel went home (opinions that the fish doesn't suffer pain to the contrary notwithstanding) the beautiful *Micropterus* dashed wildly and desperately for deep water and freedom, while the reel sung as doth the stridulous cicada when all the air quivers beneath the fierce rays of the great luminary in the long summer noon. Now with steady and powerful surge like unto the Atlantic liner breasting the seas, he piles up the water before him and compels the cession of braided silk or else the fracture of the pliant thing-of-beauty-joyforever rod, and again with mad rush he cleaves his watery domain with the speed of light, while the tense line cuts the water with a swirl like that of the sword of Richard Coeur de Lion when, with a single back-handed lick, he relieved Bobadil of Santander of his caput. The graceful and resilient rod bends to a semicircle chordeb by the gossamer-like line, seemingly all too covebby to sustain the immense pressure put upon it by the enraged and battling leviathan.

And now the frenzied bronze-backer, stung to desperation, speeds to the surface like a rushing rocket, and bursting into view projects his piscine form thrice its length above the aqueous depths, which scattered into a thousand drops, flashes and scintillates in the sunlight like unto the blinding showers of sparks thrown from the huge and glowing mass of metal beneath the terrific impact of an hundred ton hammer. Maddened, with eyes emitting fire and with quivering form he vainly endeavors to shake from his mouth the cruel barb, and failing, cleaves the water again to resume his desperate rushes for liberty.

Aha! He spies the boat, and deeming it a haven of refuge he lies him for its protection. But my good right arm and nimble rod shall avert catastrophe liable to result from the successful accomplishment of such strategy, and anon, turned from his course like meteor flash, he rushes for deep water once more, and the line smoking with friction is paid on demand while the obedient reel goes through the cicada business again. Snubbed a little, he rises to the occasion and to the circumambient, and shaking himself in speechless rage, gnashes his teeth and flashes defiance from those glittering orbs erstwhile so calm and fishy as on evenly balanced fin his bronze-green majesty whiled away the midday hours beneath the shadow of a mossy rock.

Downward he goes again with a mighty splash, his burnished sides reflecting the day god's rays in kaleidoscope of green and brown and black and bronze with every separate spine of dorsal erect, like quills upon the fretful porcupine, while spray, like that when iceberg on the precipitous shores of far Alaska, cleft from the gigantic front of the resistless glacier falls with thunderous sound into the vasty deep, envelops all around. Dauntless I stand watching the uneven fray.

See! He's off again. With strength renewed he takes the line he gave, and gathering all his force he plows the watery main with strength prodigious, making at last his boldest rush for liberty.

The combat deepens. On! ye bass
Who hunts deep water or the grass.
Mass, bronzy, all thy powers mass,
And fight with all thy strategy.

Four times he cleaves the translucent wave, four times he shakes his raging form in air, and four times falls amid the yeasty foam, weaker at each attempt, until, at length worn out in the terrific combat, he turns his quivering side to heaven and gasping floats into the handy lunch basket manipulated by the maiden, because we had left the landing net at home.

We rode peacefully thither in the gloaming, where we scaled the glorious prize, which weighed—more with the scales than without. O. O. S.

KELLUP'S BEAGLE.

ONCE in awhile of a Sunday afternoon, Kellup used to rummage through the bureau drawer in the attic where he kept the back number odds and ends of fishing tackle and things and the bag of marbles of the little boy that died, and the old leather strap with a German silver plate and Dodger's name inscribed thereon. But about the last thing to go back into the drawer was the leather strap with the silver plate and Dodger's name inscribed. At these times, Kellup always assured himself he would never own another dog, but that day last winter, down in South County on the annual hunt, Jake said: "Why don't you send me down a beagle? Get a good one 'n I'll keep him for you."

The idea struck him favorably. He kept thinking it over all the way home in the train. It seemed quite the proper thing, quite in the line of the "gentleman sport." He said nothing to Susan, but one evening when his old friend Sammy came over to smoke in the kitchen he broached it. Not that Sammy had any special information about dogs. Kellup was a little diffident about the price. He didn't feel that he ought to pay over \$5 for a dog, and he shouldn't want Susan to know it at that. He should like her to get the impression that somebody gave him the dog.

Old Sammy reassured him. Said there'd be no trouble at all. "Just let it leak out that you want a dog for five dollars and then take your pick of the beagles that come howling round." So Kellup let it leak out. After a few days he got tired watching for boys to come leading them on strings, so he wrote to a high-toned kennel and got a catalogue with prices that made him sigh. Sammy advised him to have it framed. Then he dropped remarks in the gun stores and places where sporting men do congregate, and at last he hailed Tom Healy driving by. Tom pulled up to the curbstone.

"Say, Thomas, who's got a good beagle hound? A nice one, Thomas."

"I have."

"Ah! just the man I want. What'll you take for him?"

"Take? Money won't buy him."

"Oh-h-h! Well, where can I get one, Thomas? Not a very high-priced one, you know. Just a puppy, maybe."

Tom thought a while, and then told him about an English chap named Crossley, who lived behind a tin-shop. Kellup couldn't get away during the week, but the following Sunday afternoon he put on his black suit and took the cane he had when he was married, and told Susan he was going for a little walk. At last he found the place and Crossley came to the door in his shirt-sleeves. He didn't stop for a hat, but led the way to the back yard.

"Noh, soh; you're mistaken, 'e's not a puppy, 'e's a dog; two y'r old. 'Ere Dan, Dan! Dan-n-n!"

Dan was off in a distant corner of the yard. Crossley's voice seemed to grate harshly on his ear. He lifted his head impatiently and resumed his occupation cleaning a bone.

Kellup started to go. "No," he said, "I'm afraid he's too old, he's too deaf; his coat isn't bright," and he made his way to the gate. Then Crossley called him back and opened a little padlock, and out tumbled a fat, rollicking puppy about six months old, full of grease and good nature. Kellup fell in love with him right away.

"What do you ask for him, Mr. Crossley?"

"Well, tell the truth, sir, 'e's no good. Now take 't hold dog there, 'e's wise. 'E knows a lot, and in the woods—"

"Is the pup for sale, Mr. Crossley?"

"Well, I tell you 'e don't know nothing. But Dan

there, 'e's, oh, 'e's got a sweet voice, an' a good—"

"Say! What price—do you place—on that bright

coated puppy with black and white markings?"

Crossley sighed and looked down and seemed about to discover new virtues in Dan when Kellup went on to say that he wouldn't take him as a gift. He preferred a young, untitled dog, with his future all a pleasant mystery. He said he was just that foolish. Then he repeated his question.

Crossley hung his thumbs in his vest holes and observed Kellup shrewdly, with his eyes at narrow gauge like an artist when he wants to see through his subject, and the old gentleman wished he had left the cane at home and worn his old clothes, for he wanted that dog. Then Crossley slowly opened his eyes and said distinctly—"Twenty-five dollars."

It was some time after that the errand boy at the store, in a moment of confidence said,

"Say, my brother-in-law's got some dogs."

"That so, Tommy. What kind?"

"Beelies, a beedle and four puppies."

Kellup laid down his pen and took the boy inside. He didn't want his fellow clerks to hear. He didn't care to have them know how he spent his holidays.

"What does your brother-in-law—a-hem, does he want to sell one, Tommy?"

"Yes, sir. Five dollars a piece."

So the following Sunday saw Kellup trudging toward a cottage in the suburbs on the edge of the vacant lots. There was a barn, and some hens and an express wagon. The brother-in-law was not at home, but the young wife

"PODGERS'S" MENAGERIE.

SAN FRANCISCO, CAL., Dec. 23.—I see by my last FOREST AND STREAM that the minks have been put on the retired list and that the bob-tailed cat or lynx has succeeded him, and I come to the front again on this question, having had some experience with this species of catamount, and which is about as vicious and untamable a varmint as I ever had any acquaintance with.

While stationed down upon the Rio Grande at one time with two other Uncle Sam's orphans, and running a bachelor establishment, we took a fancy to collect a menagerie, consisting of two young specimens of the lynx family, a couple of raccoons, an armadillo, a bear, two deer and a Mexican leopard—the latter a little chap when we acquired him, about the size of an ordinary cat. All of these we tamed and left loose to run around the house, except the two of the lynx species. These we never could tame, and had to keep in confinement, all our efforts to get on sociable terms with them failed. They would spit and snarl, and our Mexican boy who fed them was several times badly scratched and lacerated in attempting to be familiar with them, and we had to give it up after a six months' trial.

The little leopard, on the contrary, became as tame as a house cat, and as playful. He was a beautiful little fellow, with soft fur and marked all over with black spots. He always slept on my bed, and when he had slept enough

house, dragging his corrugated tail after him, which sounded like dragging a joint of stone-pipe over the floor. He was the last of the menagerie; and we left him as an heirloom to our successors.

All of which experience as set forth goes to prove that however tame and amiable nearly all so called wild animals may be in their young days, they are bound to show up their natural proclivities as they grow older, it is "agin natur" for them to remain docile beyond a certain age.

I see in this same copy of FOREST AND STREAM the story of a sea captain about the devil fish that his crew harpooned, which he described as something of a marvellous and wonderful size.

While at the mouth of the Rio Grande, and during the menagerie experience, it was our daily amusement to take the little 30-foot pilot boat and run down on the bar and harpoon one of these devil fish, and to be towed to sea often for a distance of ten miles, at such a rate of speed as to pile the water as high as the deck at the bows, it always ending in the fish returning to the point of departure. We captured dozens of them, the largest I remember measuring 26ft. across his back, and about the same in length. They are really nothing but great overgrown skates and are harmless. At the present time they prevail in unlimited numbers on the bar at the mouth of the Rio Grande.

Now fetch on your next "discussion," and two to one I can "see you" on the question, whether it be fish or

A GREENWOOD LAKE FISH STORY.

From photo by Daniel K. Young.

(Forest and Stream Amateur Photography Competition.)

gave him the key to the shed and a pan of warm mush to make friends with.

There was a whimpering within as he unlocked the door. The mother, a half-size rabbit hound with heavy dugs, got up and eyed him with dignified mien and a drooping tail, with never a wag on the end of it; but the family—three little chaps and their sister—recognized him at once as Somebody, and all tried together to fall into the pan of mush.

Kellup concluded not to push acquaintance with the dam. She looked carnivorous. Her present condition illly disguised the strong, graceful lines, supple and sinuous like a panther. She seemed a thing of prey as she raised her muzzle toward him from her bed in the straw and quivered her nostrils, so he concluded to go and judge the rest of the show outside. The first one was out of it, on account of the license—too high. The next was too small. The third went inside and sat up beside his mother on the straw and whimpered. There didn't seem to be anything the matter; appetite all right and couldn't be homesick, so Kellup concluded he was troubled about the world. He had been out and looked it over and come back disappointed. So that left the black and tan with white on the breast and between the ears. He made a good showing so long as he kept his legs well braced apart, and then collapsed. Kellup concluded his fore legs were unnecessarily heavy and his tail altogether too strong—he wagged himself all of a heap every time he felt good natured.

The result of it all was when the 7:30 train went out next morning there was a black and tan hound pup in a little crate in the baggage car and Kellup standing on the platform till his small wailings were no longer heard.

JEFFERSON SCRIBB.

And while we are speaking of heads, here is a little story we saw the other day, credited, we believe, to an English paper, *Tid Bits*:

An English lady who visited America many years ago used to tell the following story: On the voyage she was one day shocked by seeing a ship's officer knock down one of the crew who was inclined to mutiny. So much did the sight affect her that she retired to her cabin, and did not again appear on deck until land was sighted. Then she perceived at the wheel the man who had received the blow. Approaching him, she asked, with deep sympathy: "How is your head, now?" "West-and-by-nor", ma'am, was the answer.

would crawl up and wake me by purring in my ear and insist on being amused. He grew rapidly, and finally became so heavy as to be an unpleasant bed fellow, for he would persist in lying across me and his weight was oppressive. His weak points was dogs, and woe to any unsuspecting canine that came to the house; but as he grew older he began to assert himself; one day we had a disagreement, and when I attempted to discipline him, he showed fight; and although I subdued him, I did not conquer him, and got badly scratched in the fracas. However, we made it up, after a fashion, but after our pet had chawed up a valuable setter belonging to an officer visiting us, we concluded to dispense with him, and gave him away to a friend who took him to New Orleans, and we never heard anything more of Don Thomaso.

As for the cats, they were our *bêtes noires*. We could find no one to accept them, until one day a steamboat captain said if we would send them down aboard he would take them down the river and turn them loose. But how to get them there was the question. Finally the Mexican boy solved the conundrum by lassoing the largest and snaked him out of his cage. The way the rascal charged around and spit and snarled created a panic, and we got out of his way. To lead him was impossible. As it happened, the watering cart was at the door, and the driver said, "hitch him on to the tail of the cart and I reckon he will have to come along." After considerable skirmishing this was accomplished and the cart started. After hanging back a few moments the varmint made a dash forward and entangled the rope around the horse's heels. This terrified the horse, which started off at a 240-gait, kicking and snorting. The driver was thrown off, the cart demolished; and when the terrified horse finally brought up at his stable there was very little left of the other animal; he had been kicked to a jelly. As for the horse, he was ruined; whenever put into harness subsequently he would tremble and kick himself clear.

To get rid of the other cat we administered a dose of strychnine.

The coons got fat and mischievous and made forages into the neighbors' hen roosts and met their fate from shotguns. The deer grew ugly and dangerous and we gave them away.

The little armadillo alone stood the test of time. He was what Artemus Ward would have called "an amosin" little cuss." He lived under the house, where he spent the day, and at night came out and trotted around the

some other specimen of natural history. I am not out of experiences yet by a long shot. The one already quoted goes to show that you need not waste your valuable time endeavoring to tame bob-tailed cats, yelect lynxes, for you can't do it. He is the quintessence of pure cussedness (if you hear me) and the greatest disgrace to the animal kingdom—not excepting the little chap in the perfumery line.

PODGERS.

A FISH STORY.

As we strolled down to the boat house from the Greenwood Lake club house, we overheard some of the guides telling fish stories. As we had just heard a batch of them at the club house from the members, we had some curiosity to learn whether the members or their guides excelled in this, the most important requisite for a good fisherman.

"We were rowing up the arm of the lake," said Garrison, "when we saw straight ahead very rough water as if a great gale was blowing over the water there. It was right smooth where we were, so we went ahead to see what it was."

"I know," said Storms "it was the fish jumping in the water and out of it. I have seen that often."

Garrison looked somewhat abashed at having his story forestalled, but pleased to hear it verified.

"Well, that is just what it was, but what do you suppose happened to us when we reached them?"

"Why," replied Ryerson, "the boat bumped up against them fish as if it had hit a stone and you couldn't pull through them. That's what happened to me once."

Garrison was balked, but he soon recovered his second wind and this time rushed to the end of his story without giving the others a chance to interrupt him.

"Yes, sir, them fish blocked the way so that we couldn't get through."

"Will you swear to that?" asked Ryerson raising his right hand.

"Yes, sir, on a stack of Bibles. And then them fish began to jump in the boat and over the boat and on to us. And in a minute the boat was so full that she began to sink. And we had ter jump out and walk over them fish that was in the water to the shore, and there wasn't one of us that so much as wet a shoe, because we walked right on the fish you see, and every one o' them fish was a small-mouth black bass that weighed full eight pound and was as long as that."

D. K. Y.

Natural History.

THE GRAY WOLF.

THE large wolf of North America is commonly known as the timber, or gray wolf. It was formerly generally distributed throughout North America from the Arctic regions to the tropics, but has of course disappeared from all settled portions of the country.

Over the larger portion of its range this wolf is gray in color, but in Arctic regions it is white, or nearly so, while in Florida and some of the Gulf States and in British Columbia a black form exists. In Texas there are red or bay wolves.

Except in its color, the large wolf of North America (*Canis occidentalis*) is everywhere the same, but in its habits there is more or less difference, caused by the circumstances of its environment. The wolves of the north feed to a considerable extent on reindeer and caribou, those of the east on deer, while those of the south prey on deer and on the wild hogs which run at large through the pine forests and swamps. A few years ago the center of abundance of the gray wolf in America corresponded very closely with the center of abundance of the buffalo. Great bands of these gaunt and ever hungry animals accompanied the buffalo herds, killing calves or old bulls, and sometimes cutting out from the herd strong young heifers, which they had little difficulty in pulling down, if they could once separate them from the companionship of their fellows.

Notwithstanding the fact that ever since the settlement of America the wolf has been pursued with guns, traps and poison, it is certain that no blow was ever dealt this race so severe as the extinction of the buffalo. Their natural prey gone, the wolves turned their attention to the herds of the stock men, and for years now their depredations have resulted in very serious losses to raisers of horses and cattle on the northern plains. They do not attack the herds when they are alarmed and closely bunched together, but prowl about their outskirts, trying to cut off the young stock, which they can easily pull down. Sometimes a small band of wolves will round up a little bunch of cattle, which stand in a close circle, their heads outward, prepared for the attack. After circling about them for a short time, two or three of the wolves will dash at the bunch, and if they can scatter the animals it is the work of an instant only to pull down a yearling, or to kill two or three calves. We have seen two wolves thus destroy a yearling steer with no greater apparent effort than a setter dog would use in killing a cat.

Year by year the range of the wolf is growing more contracted, and it is extremely desirable that we should know where this animal is still to be found, all about its color varieties, and what we can about its habits. It is therefore earnestly hoped that such of our correspondents as are informed on these points will let us hear from them without delay. It is only a few years ago that some of the most eminent naturalists in America believed that the panther does not scream, but the discussion recently brought out in connection with the FOREST AND STREAM Supplement of the panther has definitely settled this question in the affirmative. This shows how much good can be done by the FOREST AND STREAM constituency if it will take the trouble to contribute to these columns what its members know on any subject in natural history.

LYNXES IN CAPTIVITY.

SANTA FE, N. M., DEC. 20.—*Editor Forest and Stream:* It is a mistake that the lynx, either the *canadensis* or *rufus*, can not be tamed, for I have tamed both varieties myself. While in Florida about three years ago I secured a very young bay lynx and soon had it as tame as any house cat, and it was really a very affectionate pet. It disliked to be left alone, and would lie on the floor beside my wife's chair and play with scraps of cloth by the hour; but if my wife left the room it would soon begin to cry and try to get out the same door to follow her. The sweet little pet was accidentally injured when it was about four months old and died from the effects.

Last May a little Mexican shepherd boy found a den with three beautiful little kittens (*Lynx canadensis*) in the mountains near this place and brought them to town to sell. He sold one of them before I saw him, but I secured the other two, and soon had them very gentle. They are quite difficult to raise, though I don't see why they should be. We fed them on fresh goat's milk for a few days, gradually working on to raw meat. They grew very rapidly but after a few weeks began to have fits, and one of them died. The other one got better and was the prettiest pet we ever had, being more gentle than the average house cat. She was very fond of lying in my wife's lap, and another favorite pastime was to climb on the bed and playfully pull our hair with her sharp claws. She always had her full liberty; and never showed any desire to leave the place, nor any signs of her wild nature. She lived on the best of terms with my numerous dogs, although she never seemed to fancy the foxhounds. Her especial favorite was a black cocker spaniel; and they were fast friends, playing together for hours at a time, the spaniel enjoying the romp as well as the lynx. I am sorry to say that last month she was taken again with fits, although she had been in the best of health for over three months, and after having two or three very severe ones she died. She was then about six months old and about twice the size of a house cat.

While stationed in Florida I tamed a full grown bay lynx, that is tamed it so I could handle and pet it, but of course could not turn it loose. I believe it was the most vicious animal when first captured that I ever saw, but in eight or ten weeks I had it so that I could put my hand in the cage and pet it, open its mouth to show its teeth to my friends, and in fact handle it very freely. It seemed quite fond of having its head scratched, and that was the first thing I was able to do with it; but after that I made rapid progress in taming it.

The Canada lynxes are quite numerous in this vicinity, but very difficult to kill without the aid of hounds. I have killed three fine specimens within the past month, my hounds having treed them for me. I have never seen a bay lynx in this part of the country but I think that there are some here, as the old hunters speak of killing two kinds of "wild cats" here.

I don't think that the ocelot is ever seen in this part of the Territory, as diligent inquiry among the old hunters

fails to draw out a description of it. I would like to learn more of them and of the country they recover. Why cannot some of our friends in southern Texas write us about their experience with the beautiful "leopard cat," as they surely are found there. There are a great many of their skins on sale here in "curiosity stores," made up in rugs with the head half mounted, and of all the cat family they must be the most beautiful. Tradition tells us that the ancient Aztecs trained them to hunt and used them to catch antelope and deer. Gen. Lew Wallace, in that beautiful Aztec tale, "The Fair God" makes his hero the possessor of one of these wonderfully trained animals. The most of the skins on sale here come from southern Texas and Old Mexico. I shall make an effort to secure some young ocelots next spring and try taming them, also some young panthers, which are quite common in the mountains in this country.

H. B. HERSEY.

DEER AND SHEEP.

COMMENTING on the statements in a recent issue of FOREST AND STREAM on "Vermont Deer and Sheep," Isaac Kenwell, of Indian Lake, Adirondacks, New York, writes:

"Deer will not kill sheep nor molest them in any way. I have spent my whole life in the woods and had great opportunity of studying the habits of deer, both in this State and the backwoods of Upper Canada. So far as deer yarding, as they always do during that part of the winter when the snow becomes very deep, they will yard all kinds together; that is, bucks, does, old and young, and live in perfect harmony. Bucks will not mate with ewes, neither will deer kill sheep. Now I can furnish any amount of evidence to substantiate the above: First, David Keller of this county is an old pioneer farmer and hunter; to my knowledge he keeps sheep. He also kept a female deer for seven years that had the liberty of his place, ran with his sheep or cattle just when and where she chose. Now during the rutting season in the fall this doe would take to the woods, sometimes for a week at a time, and on her return to the clearing she would be accompanied by a buck, and sometimes by two bucks. Now, these bucks never interfered with the sheep, even though it was in the rutting season. Keller has killed as many as five bucks that had followed the doe home during one fall. I can also give you the names of several others that have had like experiences with deer. Wm. Pashley is another farmer or pioneer of the Adirondacks. Robert Manes, of Hastings county, Ontario, Can., keeps sheep in the backwoods of Canada, where deer frequently would feed in the pasture with the sheep, and I can produce more than fifty similar illustrations where wild deer frequented the sheep pasture; but in no place or case did deer harm sheep in any way. It is something else that destroys your farmers' sheep. Surely deer will not do it.

Therefore, you can sum it up in this way: bucks will yard with bucks alone, also bucks will yard with bucks and does; bucks will not mate with sheep; bucks will not kill sheep.

I have seen deer yards that contained more than 100 deer, and found them of or including old bucks, old does, young bucks and young does; in fact, all kinds and of all sizes, living in perfect harmony.

A NEW MEXICO COLLECTION.

EDDY, New Mexico, Dec. 26.—Is there such a thing as the "cactus deer?" I met here an old frontiersman who for many years has been collecting the wild animals of New Mexico, upon which he practices, rather roughly, the art of taxidermist. His collection now embraces every wild beast known to the Territory, usually several specimens of each. Among these is what he calls the "cactus deer." In place of the antlers it has a number of protuberances grouped together in two or three clusters, which look exactly like a variety of cactus common in New Mexico and Texas. Indeed the resemblance is so striking that I had a suspicion that the old man had played a trick by deantlering the animal and fixing the vegetables on his head. In a moment, however, I perceived that the cactus-like thing was a true outgrowth from the head. He claims that it is a distinct variety of the deer whose horns are always like the cactus. Can this be so? Truly, I never heard of such a beast before, and I thought myself well read up as to beasts. I hope FOREST AND STREAM and its New Mexican correspondents will turn their lights on the subject. To me it seems nothing but a common black-tail deer which has shed its horns, and that the cactus-like things are the new horns sprouting out. But its color is darker than that of the other black-tail deer in the collection.

He has a noble elk in his collection, killed in the Gualalupe Mountains, about sixty miles west of here. It weighed 700 lbs. and stands almost as high as any horse. How this animal could get along or be at all comfortable with the prodigious antlers which he carried is what causes me to marvel. Their weight must be near a hundred pounds, for they are as stone and about as hard as the hardest. Was he proud of them or was he continually sad under the burden of the great weight? The upper surfaces of the antlers of this one are polished as smooth as glass by friction against the brush. The old man tells me they live in the deepest recesses of the mountains where the brush is almost impenetrable. How can they manage their great horns in such a place? Evidently the elk was intended for the open country, and he now seeks the mountains and brush, not that he likes them, but that he would hide. Poor fellow, he is now but a prisoner, and the days of his race in this world are nearly numbered.

"And this," said my old friend, pointing to another great beast with wild, protuberant, flaming eyes, "is the Mexican or Rocky Mountain lion." I looked and saw that it was nothing in the world but a tremendous puma, or cougar, or panther, about 8 ft. long, counting the tail. There was another beast of the same kind in the assemblage which he called a panther, but it was in no wise to be distinguished from his lion except in size. The one was a big puma and the other a puma of ordinary size, and that was absolutely the only difference. I suggested to my old friend that his "lion" was only a panther. "Oh, no," said he, "this is the female of the mountain lion. The male is much larger and has a mane on his neck. And he roars." That may be, but the panther, cougar or puma also roars when he feels like it. Put it down when you hear of the Rocky Mountain lion that it is nothing but the cougar. But the Mexican or mountain lion, as known in Texas, is quite another thing and much

more formidable. Indeed, he is a terrible beast and more to be dreaded than any other that walks on American soil. However, I choose not to discuss lions now, but may do so some other day.

My old friend Riggs is an enthusiast as to wild beasts; and that is not strange, seeing he has associated with them all his life. Yet he has not imbibed any of their ferocity. On the contrary, no cooing dove could be gentler or more lovable than he. He has a world of anecdote touching them, which it is delightful to hear him recite. Like all enthusiasts, however, he has a tendency, I think, to stretch the blanket a little. He told me some things about his friends which I do not find myself swallowing very readily; but I lay them aside for future thought. His collection is the best in New Mexico, or probably anywhere else outside of the museums. I am very partial to men who are enthusiastic over wild beasts.

Eddy is in the valley of the Pecos River. I called this river, the first time I saw it, "the betwixted river," and the more I see of it the more I think it is bewitched. It is twice as big here as it is a hundred miles below, and I suppose if I go to its head I shall find it, too, twice as big there as it is here. Over twenty years ago, when there was not a human being living on it—except murderous Apaches and Comanches—I predicted it would become the seat of a great community. The prediction is now verifying beautifully under my eyes. Wealth is pouring its abundance into the valley. The strange river is used for irrigation and the whole region is rapidly becoming a great garden, orchard and vineyard. One man here has a vineyard, of the finest European grapes, of nearly 700 acres, which, when the vines have on their summer attire, is a glory to behold. I have always called the river "my Pecos" and I'll stick to that claim. N. A. T.

Game Bag and Gun.

THE GREENSBORO SPORTSMEN.

CHATTANOOGA, Tenn., Dec. 10.—I have had splendid sport quail shooting in Virginia and North Carolina. I shot over well trained dogs and in company with several representative Southern sportsmen, than whom none can be better companions either afield or at their own firesides. My little .16 Parker was a trifle too much of a fine thing (being full choke) for bush and thicket shooting, still I gave a fair account of myself after I settled on a load that did not smash things and gave me a little more margin.

I was invited to go on a turkey hunt at Greensboro, N. C., and was almost allured, but when I discovered that I probably would have to run a dead heat with the dogs of a mile or two, wade a few belt-high swamps, tramp, by way of rest, twenty-five or thirty miles, and, perchance, if fortune favored me, lug home a couple of 20 lb. gobblers, I discreetly refrained, as running was never my forte.

The natives of Greensboro are thoroughbreds; they hunt foxes at breakneck speed through everything, with rattling good horses under them and swift foxhounds ahead, to say nothing of very fleet and cunning foxes in the fore. They follow well bred beagles afoot, racing and tearing through and over anything that comes along, cheering on the dogs and making bunny think a pandemonium has suddenly overtaken him and usurped his tranquil and happy home. And when it comes to shooting quail, why they fire their rights and lefts with such simple yet superb regularity that they made me positively envious, and almost renounce my own dear native land. A genuine North Carolinian loves a dog right next to his wife and children if he has any; if not, then his own parents and sweetheart. So if I have any choice in the matter when the transmogrification occurs, I will apply for a pass to Greensboro, N. C., for, alive or dead, that is a sportsman's paradise. To be fully appreciated in Greensboro he should stand about 5 ft. 10 in., weigh 160 to 180 lbs., measure 42 to 44 in. around the chest, be swift as a deer, tough as a bear, have the pluck of a bull-terrier, ride like an Indian, shoot by inspiration, have the eye of an eagle, the wind of a race horse, and be a general bang up good fellow, open-hearted, hospitable and true to his colors: in other words, a man.

I could not close without mentioning that grand old dog Dash, formerly owned by Wm. Jordan, who trained him and now the pride of Mr. Gilmer. Dash is a Laverack—a dog that though years are telling on him is still fleet—quite fast enough to give any man all he can conveniently do to follow him. He is staunch, true as steel, sagacious to such a degree that to interfere with his course is proof positive of ignorance, for no living dog can have more bird sense or a more level head. Aside from this he is an all day dog—and furthermore a several consecutive day dog. In fact, after working hard for six or seven days he seemed to be just at his best. What must he have been three or four years ago? I shot over him two whole days and an afternoon and never once did he lag or show signs of distress, albeit he had worked just as hard for several days before. One had better shoot over such a perfect animal with a flintlock than over an inferior one with the finest breechloader, for after all the birds must be found to be bagged. Briers, thorns, tangled vines, nothing stops him; he launches out at early morn and keeps up a rattling pace until daylight ceases, then comes to heel, jumps in the wagon and is apparently oblivious of everything until he cheerfully responds to the "He on, Dash," on the following day. Faithful, magnificent fellow—ribbed of steel, lightning geared, of vast intelligence—how fondly I will remember the many times we lost you in those great stubble fields or intricate thickets, then to find you, staunch as a rock, quivering with a bevy or single bird nailed fast to the ground! Who would not tramp and plod on with such a leader? Docile as a lamb, yet with the true courage that never says fail.

Well, he is only a dog; but when his honest eyes shall close to open no more—when the muscular, well-knit legs shall lie stiff and cold in death—I fear must feel sorry for the man who has known him, could he contemplate him then with tearless eye or feel, indeed, that he had not lost a devoted, brave and noble friend; for such to me is Dash. But he has a kind master and a lovely mistress, and sure is he of kindest treatment; when age creeps on, and that is more than many a human being can claim, perchance because he never earned them, perhaps because he never deserved them. So, grand old dog, adieu. May time deal kindly with us all, and rest assured that no man can with impunity disparage thy noble traits in the hearing of GAUCHO.

SOME BOSTON SUCCESSES.

BOSTON, Jan. 1.—The season on Maine big game has closed, and yet the reports of the wonderful success the hunters have had continue to come in. The Dr. Bishop Christmas hunting party has proved something of a success, notwithstanding the adverse conditions of most remarkably cold weather and a crusted snow of anywhere from 10 in. to 2 ft. in depth. This snow made still-hunting rather difficult, and besides some of the party were somewhat frost-bitten. The mercury was down as low as 30 below zero part of the time. Dr. Bishop contracted a very bad cold. One of the guides is reported to have frozen one of his feet; Mr. James Brown froze his chin and Dr. Sanborn his cheeks and ears. But Dr. Bishop was up in a day or two and after the moose, one of which he followed all one day, only to find that it was a cow, and he would not destroy it. A pool was made up in the party for the man who should succeed in bringing in the first head of big game. Mr. N. C. Nash was the fortunate person, the president of the Massachusetts Rifle Association. He brought in the head of a fine caribou on Monday. Mr. Sanborn has shot a fine deer, weighing nearly 200 lbs. Mr. James Brown has also killed another deer. A number of caribou and deer were started, but the weather was too bad for remaining long on the trail, and the snow was crusted so badly as to make very difficult hunting. Five moose have been started by different members of the party, but only two were fairly seen, and these were both cows, in fine condition. They were allowed to escape. The party was to arrive in Boston on Tuesday evening.

Some of the Waltham hunters have had remarkably good success in the Maine woods the past season. Oliver Cone, a noted lover of hunting in that town, Charles Herrick and C. H. Bull returned a week or more ago from a most successful deer hunt in that State. They went to Oldtown, and then into the wilds beyond. Nine deer were the result of the hunt. One of these they used for food, and the eight they brought out to Waltham. There were four bucks and four does. The carcasses of the entire number were exhibited in McClure's store window, and attracted a good deal of attention. Mr. A. W. Thompkins, who gave me the item, says it was the finest display of game ever seen in Waltham.

Mr. H. E. Mudgett, of Auburn, Me., has the credit of bringing the largest caribou to that town recently ever seen there. It excited a great deal of curiosity when it was exhibited at Peabees & Garcelon's store. Mr. Mudgett owns a fine camp at the Penobscot headwaters, which he visits every season, and he has shot a number of caribou there. He writes me that this one, killed near his camp, on Dec. 14, beats anything he has ever seen in the line of caribou. Others he has killed, some weighing up to 350 lbs., one the same day, but this big one he declares must have weighed fully 600 lbs. at the time he was shot—a monster for a caribou. Mr. Mudgett, in the same letter, also extends a most kindly invitation to me to visit his camp with him next season; a remarkably good location for caribou. The camp is west of Mount Chase, on the shores of Shin Pond. Perhaps Mr. Mudgett would kindly include some one or two of the good readers of the FOREST AND STREAM in his invitation. To visit a camp like that, with such a successful and genial hunter as Mr. Mudgett, would be a treat worth a lifetime.

One of the greatest moose hunts of the season of 1892 seems to have not yet been reported. Dr. C. F. Rowell and D. L. Hall, both of the town of Wilton, Me., seem to have had an experience with the lordly moose of that State that is worth relating. They left that town late in November, for a hunting trip into the famous Spencer and Dead River region. Being thoroughly familiar with the woods and the method of hunting large game, they took no guides. Dr. Rowell writes me that early in the trip they found signs of big moose—signs that are recognizable only to those who are accustomed to such hunting. In a few days they had the big fellows located. Then they waited for a suitable day for the hunt. Instead of trying to capture them under unfavorable circumstances, a proceeding that would have been very likely to have resulted in a failure. A light snow soon came one night—just the day for the hunt. Dr. Rowell writes: "We left camp early in the morning, and were soon on the tracks of two large bull moose. We knew the nature of our game by the marks of their antlers on the trees. Following on, to the leeward all the time, and as still as it is possible for a hunter to move in the woods, it was not long before we caught sight of an enormous pair of antlers. These we saw before we saw the great bull to which they belong, and I at first thought that they were the roots of a great tree that had been upturned by the wind. But 'sh! sh! It moves!' It is the great king of game! He had not seen us, and we bent down to reconnoiter. We soon saw the other bull about 25 yds. ahead of the first one. Both were some 50 yds. from us. It was time for action. We leveled our rifles, both aiming just back of the foreshoulders, each hunter upon his own moose. With a preconcerted wink Hall gave the signal and we both fired. We then rushed upon our game, firing second and third shots the best we could. We quickly passed one moose in the throes of death. The other was making a trail of blood, but moving rapidly enough to give us some concern lest he should escape in a wounded condition. But he only ran some sixty rods to a thicket that he apparently did not have the force to enter. As we approached he turned and faced us, evidently with the intention of charging upon us. But our rifles were ready, though it took four more

shots to bring the great fellow down. Our game weighed, when dressed, 750 and 788 lbs. respectively. When alive we estimated them to have weighed 1,150 and 1,200 lbs. They stood 18 hands and 19 hands 3 in. high. Both had particularly fine antlers, and are claimed to be the finest specimens ever taken in that region. But here the hunt ended and the work began. It took us nine days to get the great fellows out to the settlement, with the help of four or five Canadians. The heads are being mounted by Link Daniels, of Portland, in this State. We also shot a fine buck deer and a fox, making a pretty big bag of game for a party of only two, with no guide; even for the Dead River region. Mr. Hall carried a Winchester rifle, .32-40, and I a Marlin .38-40."

The above adds two more to the already full account of moose killed in Maine during the open season of 1892. The presence of such game is remarkable, and speaks volumes for what protection has been done in that State. The hunt is also a very remarkable one, and one that shows most careful planning, leading up to a success that the hunters can never forget. I do not know the opinion of Dr. Howell and Mr. Hall, but I have talked with a number of other successful moose hunters, and they all tell me that the enthusiasm and the excitement is very great until the fatal shot has been fired and the moose lies prostrate. Then comes a reaction, followed almost invariably by the wish that it had been a nice deer, or some sort of game that it is not almost beyond the reach of human possibility to get out before it has spoiled. But many gentlemen of means, and ardent lovers of hunting, will frequently

MARSH SHOOTING.

SHOOTING wild ducks in the fresh water marshes that border the shores of many of our inland lakes is grand sport when fowl are abundant, and to the lover of nature there is a peculiar charm in pursuing them in such localities that is lacking in many of their deep-water resorts.

Scattered irregularly about, in the midst of the luscious growing mass of wild rice, blue flag, and the various growths which flourish here, are calm, still pools of open water, often fringed with patches of pond lilies of rare beauty and size. The broad, rafflike leaves tempt many a gorgeous dragon fly to alight and spread his gauzy wings in the warm, autumn sunshine. Water spiders innumerable play at "hide and seek" among the lily pads, and we may also discover the gossamer spider in the act of launching his fairy web of spun silk from the tip of a tall rice stem. These modest little fellows have successfully solved the problem of aerial navigation, and the filmy sails of their glistening "white squadron" are spread to the light air which breathes from the south, and sail in the blue sky like tiny cloudlets.

'Tis true we are after ducks, but the surroundings always add a charm to the pursuit of game, and fortunate is he who can observe and appreciate, even to a limited extent, this teeming insect life, as he cautiously pushes his light boat through the marsh in search of wild fowl.

Silently we glide along the lanes of open water, which thread their devious paths among the reeds. What's that? A guarded quack! quack! from the margin of an opening, whose still waters we see glistening just ahead betrays the presence of ducks.

Now is the time for a tenderfoot to have the "duck ague," and even to an old hand the experience is ever new, ever thrilling.

We have all along moved stealthily, no careless crashing through the reeds, no jar of paddle has disturbed the quiet. But now we must exercise the greatest caution, we must steal up to this little pool with the silence of a thought.

Where is the man who has felt the keen excitement of such a moment that will ever forget it?

As we near the spot a basking pickerel darts with a sudden rush under the lily pads. Such is our nervous tension that it seems as though we had struck a whale and a chill creeps down our spine. Hush-sh-sh! Here we are!

Now! A few vigorous strokes, deep, long, and strong, and our little craft like a racer under the lash springs forward into the open.

Whirr! Whirr! Whirr-r-rrr! Right, left, all around us, the air seems alive with ducks.

To drop the paddle, seize the gun and fire is the work of an instant.

How the echoes are flying in response to the bang! bang! of our salute, while clear and thrilling amidst the din there comes to our ears a sounding splash! splash! announcing the successful shots.

This is not luck alone, no one may blunder through the marsh and kill game. It is the quick ear, the cautious approach, the thorough "know how," coupled with perfect accord of brain, eye and finger, that instinctively presses the trigger at the right instant, that has won the prize. My word for it, that right and left, made so handsomely in this lonely marsh, will serve memory with an incident to quicken the heartbeats for many a day to come.

If we had decoys I should set them out right here, for this is evidently a favorite spot with the ducks, as those numerous floating feathers, indicative of a leisurely toilet, will testify, and in due course, when satisfied that all danger is past, they will return by twos and threes, affording fine sport. Not having decoys, our best chance will be among the reeds at the head of the marsh, where it narrows out toward the lake. There we shall be apt to see every duck that comes in, and, if fortunate, by sundown we will have added largely to our score.

Here is the place! You see we are concealed from the eyes of any incoming birds, the sun is at our back, and right before us is spread a lovely picture.

In front, directly across the marsh (here about forty yards in width), a heavily timbered ridge runs down to the lake shore, and in the full glow of changing foliage, blushing in the mellow sunlight which floods the scene, the effect is indescribable. High in air the light gondolas of the spiders are drifting, each bearing its tiny navigator, and while watching one little craft (that has become entangled through carelessly taking a lower course over the reeds) a huge shadow glides upon the water before us.

We know that something with feathers is near by, and "coming to a ready" we wait an instant, only to see an immense blue heron sail over, not ten yards away.

Well! He was surprised when he caught sight of us. It is laughable to see one of these clumsy fellows when startled. They seem to be all tangled up for a moment, head, legs and wings are going like the sails of a windmill, as they make a ludicrous effort to get away.

See that duck! Bang! Never touched him! What! By George, he's down! well! well!

Quick! mark north three blacks!

"Great Caesar!" all there? Yes! all cleaned out!

Thus we spend the afternoon, killing some, missing others, taking no note of time as the golden hours slip by, until the hooting owls in the darkening woods on either side the marsh tell us it is time to be moving out, and on our departure we can fancy their big broad wings are hovering over the scene in search of a possible cripple wherewith to regale themselves.

I wonder if they enjoy hunting as much as we do?

WILMOT TOWNSEND.

BAY RIDGE, Long Island, N. Y.

AMONG THE WILDFOWL.—XXI.

What tantalizing things a fellow does see when he's out without a gun

pay out a great deal of money and spend much time for the sake of a shot at a moose, and often they are satisfied with one.

SPECIAL.

OUT OF HIS RECKONING.

A YOUNG sportsman of Sandwich, Mass., Bowme by name, had an unexpected encounter on the beach a few days since. He was looking for other game when he came upon a fine green turtle somewhat benumbed by the cold, but resolutely headed toward Buzzard's Bay, some six miles distant, across the narrowest part of Cape Cod. The turtle weighed about 150 lbs., and as his flippers were unpierced there can be little doubt that he ran out of his course when southward bound, after spending his summer in the North Atlantic. Green turtle occasionally range as far north as the Grand Banks and return south by way of the Labrador Current; but unless they keep well off shore, Cape Cod Bay is a *cul de sac* from which they can hardly escape. Can it be possible that this waif of the southern seas hoped to burrow in the northern sands to a depth that would enable him to hibernate something after the custom of his resident cousins in these higher latitudes—the snappers and pond turtles. I never heard of such an instance, but the promptings of nature are wonderful for the preservation of her lost children. It is most likely that the poor fellow's naturally cold blood was chilled beyond further endurance by the icy waters of Massachusetts Bay and he sought the shore as a last desperate refuge. It is remarkable that he survived the cold so long. I can testify, however, that he was in good condition and made most excellent soup.

C. L. W.

CAPE COD DEER.

THERE are, it is believed, only two in this big family of forty-four States—namely, Connecticut and Rhode Island, that have succeeded in totally exterminating wild deer within their borders. It is not a matter upon which they are to be congratulated. Indeed, they ought to be ashamed of such evidence of their improvidence, but, after all, it is not easy to say how it could have been avoided. The time is now approaching, however, when it will be possible to restore and preserve the game and reforest the ranges that are their natural home.

Massachusetts has never quite exterminated her deer, though she came dangerously near doing so ten or twelve years ago. At this writing they are fairly abundant, and increasing in Barnstable county, and have recently been reported from Berkshire, at the opposite corner of the State.

All the world knows Cape Cod, at least by name, and it is of no special consequence to outsiders if its legitimate political title is Barnstable county.

As such, however, it had to be recognized when the close deer law was passed for Plymouth and Barnstable a few years ago. Plymouth was allowed to come in mainly as a matter of courtesy, for in point of fact she had few if any deer of her own, but conscientiously enumerated before shooting every luckless straggler that found its way up from the Cape. There is no reason in the world why the Plymouth woods should not be restocked simply by allowing nature to take its course, but it is far harder for the well disposed hunters of Plymouth to keep the reckless element in check than it is here on the Cape, simply because it is easier to get away with one's game. The Cape deer range is, roughly speaking, a triangle measuring about 15 miles on each side, and containing, therefore, something like 100 square miles. It embraces the townships of Sandwich, Bourne, Falmouth, Mashpee and Barnstable, most of them settled as long ago as 1650 or earlier. The old established centers of population are naturally coastwise, leaving the central area of the triangle unoccupied save by a few hamlets, scattering farmhouses and the camps of cranberry pickers. Throughout this region are ponds and lakes, some of them miles long, others no larger than duck ponds. Almost everywhere the hollows have at one time or another been sufficiently under cultivation to establish a growth of grass that affords winter grazing when nothing else is to be found. The country is broken into hill and dale, all covered with a dense growth of oak, pine and underbrush, very difficult to pass and affording abundant cover for the game.

Legislation for the preservation of the Cape Cod deer began some twenty-five years ago, and imperfect as was the protection afforded, the herd increased rapidly, until in 1885-'86 it was estimated at 1,000 head. Then came a sweeping forest fire, starting from the railroad near Sandwich, which, with what seemed little less than intelligent malignity, first surrounded and then traversed the entire district, burning for several days and reducing the unhappy deer by several hundred head. The survivors, however, have been fairly well protected and now number, according to the most trustworthy estimates, something like 300.

There is no open season, but in a land where every man is more or less a hunter, and constables are few and easy-going, it is not in reason that "wood's mutton" should not now and then find its way to privileged tables.

The state of the case is this: Here is a law, of which all good "Cape Cod folks" approve, but it cannot be enforced with the means at hand. Obviously the dozen existing constables could not efficiently patrol as many square leagues of nearly impenetrable forest, even if they were veritable human bloodhounds, and not the good-natured fellow mortals that many of them are.

The deer, therefore, must look for protection to the public at large, or rather to that portion of it who are at once fond of hunting and disposed to do the fair thing by the deer. Opposed to this faction is the reckless element, which asserts the right to shoot any wild creature that crosses its path, flies over its head or swims under its dory.

Just after the above-mentioned fire certain hunters of this class took advantage of the burned and smoldering woods to make life a burden to the hard beset remnant of the herd. Seeing that the deer would be literally exterminated if some decisive action were not taken, an informal combination was made among the well-disposed class and the constables were notified that they must act. Thus were the deer saved after a characteristic American fashion, namely, the intelligent, informal action of citizens supplementing the unavoidable shortcomings of the authorities. This successful deal seems to have given the hint for the system or no system that still affords fairly efficient protection. All the decent young men of the neighborhood are volunteer game keepers. They live on the borders of the deer range and their daily vocations take some of them along the wood roads. Many of them know the voices of all the deer dogs in the five towns. If a deer is killed the fact is almost certain to be known, and an inexorable people's court sits in judgment upon the case and decides whether or not the killing was justifiable.

I am told that not more than ten deer have been killed here this season (November and December). This certainly is not an excessive number considering the circumstances, and its moderate figure speaks well for the efficiency of the volunteer police.

Of course, the disadvantage and uncertainty of this existing state of things is recognized, and there is some talk of organization. This, however, would mean personal pledges of total abstinence from deer hunting; a sacrifice which our volunteers are by no means disposed to make. It would also mean the relegation of the whole detective business to paid officials who would sometimes be blind, sometimes inefficient and always too few in number to do their duty efficiently. The farmers, wood-cutters and the rest, who now render volunteer service would keep their woodcraft for private use, and the only question for the poacher to consider would be "Can I do it and not be found out?" That he could often do so is tolerably certain, and even if arrested and brought to trial, we all know how lenient the local courts are in cases where no clearly defined individual rights are involved.

Of course, this sort of thing is irregular and somewhat reprehensible. Our kindly considerate cousins across the water condemn the whole business as a loose American way of dealing with wilful malefactors. They stubbornly shut their eyes to the fact that population to the square mile in the United Kingdom is far denser than anywhere

in the United States, and that in spite of all their elaborate machinery of private game keepers, and a strong well organized rural constabulary poaching continues to flourish.

So long as every American has the right to bear arms and shoot wild game over every square mile of his native land it will be impossible to enforce stringent protective laws. The most that can be done is to define close and open seasons based upon the local habits of game in respect to breeding. The Cape Cod plan, while confessedly open to objection on account of its looseness and deliberate violation of law, is upon the whole the most practical solution of the problem. It is not easy for a party of hunters from the outer world to invade Barnstable county with the indispensable outfit of dogs and guns and successfully escape interference. On the other hand, it is quite the thing for residents to introduce friends from "the Continent" when there is to be a quiet local drive.

The "proof of the pudding," says *Life*, "is in the digesting," and experience seems to show that at least in this corner of New England there is enough of honorable common sense among the local farmers to enforce the State law by the simple process of breaking it under proper volunteer supervision.

It seems well nigh incredible that such a slipshod way of protecting the deer should be effective, but the testimony of the most trustworthy hunters is unanimous that it is far more so than any plan that has thus far been tried.

C. L. N.

SANDWICH, MASS., Christmas, 1892.

OUR TURKEY SHOOT AT WAMP'S.

ABOUT noon on Friday, Dec. 23, I received a postal reading: "You and your son are invited to attend a turkey shoot at my house in Mudge Holler, on Monday, Dec. 26, 1892.—INGALS WEMPEL." Now I am stuck on turkey shoots, and don't care who knows it, and it is seldom indeed that one is held in this vicinity that I don't burn powder at it. Wamp, as the boys call him, always gives a good shoot. His turkeys are large and in good condition, and he exerts himself to the utmost to make it pleasant for his guests. So I decided to be there ready and waiting when the match came off.

The turkey shoots held in this vicinity are patterned after those in vogue when I first came here, forty years ago. The range is eighty rods, guess measure, for it would be quite difficult to measure it accurately across this up hill and down dale country. And the riflemen who have used their rifles on a measured range soon discover that whoever estimated the distance was careful to guess far enough. The turkey, with from 10 to 15 ft. of strong line tied to his leg, is made fast to a stake, and has the privilege of moving about to the limit of his tether. And as the blasts of wintry wind howl across the ridge and whistle through his wattles, he is not very slow about seeking shelter in the little hollows between hummocks, where he offers so small and difficult a mark that it is not easy to pop him over.

All that is necessary is to draw blood, no matter how slightly, so long as it can be seen, and the bird is yours; that's the rule. But it takes an old turkey tender to turn back the feathers and find the place where blood has been slightly started. He is in the employ of the hotel people, and unless the shooters are having hard luck and are not getting many birds, he does not search closely.

If a turkey jumps he must examine it, but if the mark is slight and they are killing them fast, he sometimes ignores it and puts the fowl down again. If it is severely hit he throws up his cap and takes the bird off, bleeds him by cutting his throat, and ties on another. Even with the best and most honorable management, it is often found when the birds are picked that they have been hit several times.

If a shooter has reason to believe that he has hit a bird, that is not taken off for him, he claims a shot on it. Then when it is taken off and brought in, he looks it over carefully, and if he finds the mark, he is given a turkey.

A scorekeeper is appointed who calls off the names in turn, and each man must be ready to shoot when his name is called. When the match is over the shots are counted, you pay a dime for each one charged up to you, and the man who has secured the most birds in the fewest shots is boss man on that occasion.

The matches are of varying degrees of excellence or the reverse. I have in mind one I attended last winter at Cranesville. There was a good company of riflemen present, mostly from Amsterdam and several from Albany and Schenectady; they were all old turkey shooters and mostly good shots. There was no snow; and the turkey was placed on soft, grassy ground that was much higher than where the shooters were stationed. The bullets struck dead and it was impossible to locate one of them. A very tall Englishman was acting as marker; he was green at the business and very timid, so kept well screened from danger behind a high bank and could not see where any of our shots struck, but could hear the thud as they buried themselves in the soft ground. We called several times, but could not make him hear; so we ceased firing and after a while he came out. We made him understand after much shouting that we wanted to know where our balls were striking. He went up near the turkey, took a general view of the landscape all round, raised his arms as high as he could reach and shouted back, "Shoot away! we're comin' doind close till 'im." That was all the satisfaction we could get from him, and when we quit shooting that day most of us had no turkey.

On another occasion at the same place the landlord decided to have a turkey shoot during the holidays, and made all his calculations on the basis of snow, deep snow, for Christmas. So he touched up his old horse and searched the country over for white turkeys. He secured the finest lot I ever saw; they were nearly as white as snow, and if placed on a snow bank eighty rods away it would be very difficult to see them at all, and the landlord smiled a smile as he contemplated the slick little game he intended to spring on the boys. As the days passed and no snow fell he became anxious. When the appointed time was near and the ground was still bare he got frightened. Dec. 24 was a fine, warm day, and he gave up all hope. The old horse was again hitched up and he sallied forth, this time in pursuit of black turkeys. But the farmers had already marketed their fowls, with the exception of those reserved for breeders, and his quest was vain. As night approached it became a little colder and his hopes rose as the mercury went down. Before going to bed he stepped out on the front porch to take a

look at the weather, and when he saw the large circle around the moon he was so encouraged that as he trudged up to bed he said softly to himself, "I guess I'm all right yet." Christmas morning came but no snow. The landlord was in despair. A large number of riflemen gathered and he was compelled to set up the white turkeys. They made a beautiful mark on the dark ground and were knocked over right lively, while the landlord's jaw dropped disconsolately, as he realized that he had totally missed his calculation.

But enough of reminiscences. Let us go to Wamp's. Monday morning came, and, oh! how cold it was! Eight degrees below zero, the thermometer said, and I didn't doubt it. A strong west wind was blowing that threatened to nip ears or nose on the slightest exposure. But that did not prevent my going. Like the old darkey who rose early and dug his fish worms before being informed of his wife's death, I also made arrangements and had to go.

It was not very far to the "Holler," so I arrived early and found that I was the first man on deck. But the shooters soon came straggling in and I realized that greeting old friends of many turkey shoots was not the least enjoyable part of the day's amusement. When we had warmed up we went outside to see what arrangements had been made. We found everything ready, except placing the birds, and the markers were then donning overcoats, mufflers and gloves for a start, and we soon had the satisfaction of seeing them on their way with a load of fine turkeys.

The shooting stand was on the east side of the woodshed, where we were partly sheltered from the wind, and a convenient open door led through a passageway into the barroom, which is a very important part of the proceedings. The landlord does not expect to get rich by the profits off the shoot direct, but he has advertised the matter judiciously and a large crowd of spectators are always on hand. They patronize the bar very liberally, and that's where the profit comes in.

The rifles used were one Ballard, two Remingtons, one Hepburn, one Marlin repeater, one Colt lightning repeater, one Winchester single shot. About half of them were fitted with elevated rear and wind-gauge front sights, and on the others the necessary elevation was secured by wedging up the rear sight; and the allowance for wind was very quickly and accurately gauged by knocking the muzzle sight to right or left by striking it with the end of a jack-knife. The scorekeeper took the names of all who intended to shoot, and when that was accomplished the turkey was ready and the trouble began.

Notwithstanding the extreme cold it was a good turkey day, and we popped them over right merrily.

The man who has an "old muzzleloader at home, b'gosh," that he says he will "bring around after dinner," that is, if he has any balls run up, and show you how to shoot, was there as usual. He was a little dubious about having the balls. But there could be no question about his having found the bar and the hot whisky. You have all met him; and when he does not turn up with his old fuzee, you know that he is either out of balls or too drunk to keep his promise.

Another fellow who usually gets there is the man with the .44 Winchester, old model and open sights. He walks up with confidence, and after squinting about a quarter way down the range, inquires: "Where is the darned old turkey, anyway? I can't see him." When he has followed with his eye the line pointed out by your index finger, and at length spies the bird, his astonishment is great. He retires gracefully, sets the old gun down in a corner and becomes an interested spectator.

When dinner time arrived we all had captured some turkey meat, and we adjourned for refreshments. After dinner when we resumed shooting, the crowd was very greatly augmented, and a new feature was added to the entertainment. Those sportsmen who think that a spice of danger gives zest to sport would have been delighted with the match at Wamp's that afternoon, for that condition was present in great "gobs," like the seasoning in an over-ripe bologna, where there is as much spice as meat. All through the afternoon's performance there was a delightful sense of uncertainty as to whether you could escape the danger from accidental discharges and manage to be alive when the scorekeeper called your name for your next shot.

Several of the regular shooters allowed others from among the spectators to take turns in shooting their guns, and it resulted it greatly increasing the danger to all.

I speak earnestly in this matter because I myself came very near furnishing business for the coroner on that occasion. And it came about in this way:

After making a shot Harry Coats cleaned and loaded his gun—a Marlin repeater—and then set it down by the shed, while he went into the barroom to warm up a little. The scorekeeper called "Pete Manifold," and Pete stepped up, took Coats's gun and looked it over. "I wonder," said he, "if Harry loaded her for me. I'll try her once, anyway, and see." He knelt down on the straw, rested the muzzle on the end of the plank and pulled the trigger. Clip went the hammer on the firing pin, and there was no explosion. "No," said he, "Harry didn't load her." And he stepped back among the crowd, threw the lever down and saw a cartridge in the chamber. "Ha!" said he, "she is loaded after all; I'll try her again." And he brought the lever back to place with a smart jerk, and must have touched the trigger at the same time, for the old gun roared out a salute and I saw a streak of fire spurt out, directly in line with my head, but a little too high. When Pete realized that the gun had gone off, he was so amazed that his jaw dropped, and he retained the gun in the same position while he stammered excuses and numerous explanations of how it happened, and while he did so, I had an opportunity to estimate the closeness of the call. The streak faded so quickly that I hardly think I had time to go inside and borrow a rule to measure the actual distance from my head, but as near as I could tell by the eye he missed me by from three to six inches.

The explanation of the difficulty as given by the owner of the gun when he came back was that his son had primed the cartridges and had not seated them deep enough, and throughout the day there were frequent misfires on that account.

Another of the men, for some reason, carried his gun inside the barroom, and was manipulating the lock while the muzzle pointed in behind the bar. The barroom was crowded at the time, but for some reason the bartender had just stepped back into another room for a moment. Suddenly there was the crash of an explosion, and

wreaths of powder smoke rose curling above the bar, spread out into a blue haze and mingled with the tobacco smoke near the ceiling. The loud talk ceased instantly, and the crowd pressed up to the bar. The landlord also came rushing in, and on the outskirts of the crowd, and peering in through open doorways stood the female help. All were apprehensive that a tragedy had been enacted. The result of the shot was plainly to be seen in a large hole torn through the floor; but the cause of the explosion could not be ascertained. It was simply an accident through carelessness, and a mere matter of luck and chance that nobody had been killed by it.

Such trifles did not damp the ardor or check the enthusiasm of the crowd in the slightest degree; they were there for a rip roaring old time and were bound to have it. At night when we quit shooting we all had several turkeys—I had five; and as we separated all agreed that barring the accidents of the day, we had enjoyed ourselves famously, and decided that "all's well that ends well."

PHIL PLAYFORD.

A BUDGET FROM BLUENOSE LAND.

THE fall of '92 will be remembered by the fraternity hereabouts as the best season for woodcock and snipe known to the present generation of shooters. Among our leading wing shots are Harry Atherton, George Hoegg, Lee Babbitt and Sergeant Walker. As the Sergeant remarks, they have bagged "slathers of snipe and a power of cock." The partridge crop was about an average yield. Never were the birds so speedy and guileful.

What has become of the "partridge" of our forefathers? What is he evolving into, anyhow? "Shoot the lowest bird on the tree, my son, and you'll get 'em all," the old man used to say. Lucky old man! Verily, "twere better to be a forefather than than a hindfather now."

Certainly, the grouse hunter in these regions who relies on wing shooting alone will not have much trouble in lugging home his birds at night. His bag will be at least as buoyant as his spirits. No doubt, upon the edges of fields or clearings where the shooting is open, or along the backwood roads, where the birds come out for gravel and sunshine early in the morning and late in the afternoon, the snap shot is often feasible. But in the dense alder swales, or upon the hardwood ridges, or along the streams where birds do most abound, "take 'em as you find 'em" is the only practical rule. An English army officer's experience here last season may be cited. He was a grand wing shot and mowed the snipe and woodcock down like grass. He scorned to shoot a partridge on the ground or in the tree. He spent four days with a friend at the Nashwaak Narrows. Out of probably two hundred birds that were flushed he gathered in just eight. The friend, not so scrupulous, bagged forty-two, and added insult to injury by being the happier man of the two.

Can any one explain by what species of jugglery it is that King Umbellus makes himself invisible to mortal eyes when he is really in plain, open sight? All my life I have tramped the woods, and I am credited with knowing a thing or two about ruffed grouse, too. But they fool me just the same as ever. In fact, I think they fool me now more than ever. And they do it dead easy every time. The longer I live the more I believe that if a partridge were to light on a telegraph pole in full view of twenty men, at least ten of those men would walk up to that pole and declare that he wasn't there. In old times when I was after grouse I used to fire at nothing but grouse. But now I fire at knots, roots, snags and even at shadows and sounds. And it pays. I find that roots will pan out on the average about 40 per cent. of grouse. Sounds are not so profitable. But shadows will yield 50 per cent. clear grouse and 20 per cent. of "joebuck."

I remember once this fall looking carefully through a big birch tree into which I thought one of the gray phantoms had flitted. It seemed to me that I was in full possession of my faculties. I examined the tree from every standpoint, and passed every knot and limb in critical review. I gave it up. As I stood filling my pipe my companion came along. Bang! and down came a feathery knot from the lowest limb. Bang again! a bunch of moss from the main trunk fluttered down. Why, it fairly rained grouse for a few seconds, and I got in out of that rain without delay. From that identical birch tree the gleeful Harry harvested there and then a beautiful bunch of four. It was over ten miles to town, but I kicked myself the whole way home. And then I went to bed.

Fool me? Why, I think the grouse about this district wouldn't care to live if they hadn't me to play with. And the ruling passion with them is just as strong in death. Soon after the first snowfall in November, I was prowling the woods as usual, when I saw a grouse on a small ash tree about 20yds. from the logging road on which I stood. It was just about dusk. I fired at him and saw him fall. Then another bird materialized on an upper branch of the tree. The second barrel fetched him and I saw him tumble to the ground. But when I reached the foot of the tree to my amazement neither of the birds were to be seen. I tramped around awhile, but not a feather could I find. Then I came back to the tree and saw where the No. 6 shot had fairly riddled the limbs on which the birds had been sitting. I was satisfied that I was alive, and also that I was awake, but as to my complete sanity I had grave doubts. Finally I stood at the foot of the tree, completely rattled. At once a muffled flutter caught my ear. Stooping down I discovered a hole in the crust less than 3in. wide and about 8in. deep. There I found my two little vagrants lying snugly together in their last, cold sleep.

The prohibition against deer-shooting expired Sept. 1. The only kill yet scored was that of Mr. Frank Risteen, who, on Nov. 15, while after grouse, stumbled upon a fine doe in the Odell Brook, within the town limits. Frank always carries a prescription for Br'er Bruin. He utilized it promptly. His gun was full-choke and the slugs flew over the most of the parish. One of them, however, shattered the spinal column of the doe and she dropped at once. Deer are drifting in gradually from Maine and the Canadas now and quite a number will doubtless be brought in this winter. An old farmer claims to have seen wolves, but this particular old farmer is an able liar on both sides of the family.

Within a dozen miles of town is Yoho Lake, and within much less than a dozen miles of Yoho Lake, if all reports be true, there is a snow-white deer. The animal was seen by four different men lately. Any quantity of men can be produced who have seen the lake. The great trouble

now is for the boys to agree on some practical plan of action. Some think the deer should be taken in alive. Others want him taken in dead. It is probable that a compromise will be reached by the deer taking in the boys.

Two of the city amateurs were made happy a few weeks ago—Alf Vanwart and Will Berry. They were up the Nashwaak road after rabbits and ran across a 300lbs. bear. The bear hadn't much luck hunting for his den, so he changed his mind and hunted Alf and Will. The latter had nothing bigger than No. 5, but they went up close to the bear and fired a volley into his skull. It proved to be a dose for an adult. The bear was restless for a spell, but by and bye he calmed down and his hide and a piece of his steak were lugged into town that evening. The bulk of Will and Alf was covered with blood and mud, but the balance was covered with glory.

Henry Braithwaite, the noted guide and trapper, has just come out from his grounds on the Dungarvon. He wants a breathing spell and, incidentally, more grub. Henry has slain two fine moose lately, one of them a monster that has been dodging him for years. The horns of this moose measured over 6ft. when the tape was passed around the prongs, and a little over 4ft. when measured straight across. Henry is very grateful that this moose should fall to him. Last summer, when he hadn't his gun along, it looked as though Henry would fall to the moose.

Braithwaite has tried all kinds of rifles, and now favors the express .50cal. with plenty of powder behind the ball. He says the .40-44 Winchester merely tickles a moose and

FIG. 1.—BEAR TRAP.

makes him want more. He is also opposed to magazine rifles, as they often get out of order, especially in winter. This is important for there is a marked scarcity of gunsmiths in the Dungarvon Woods, and the express and postal facilities are poor.

Joseph Selick, another famous hunter, will use nothing else but the Winchester .44 repeater. He aims for the head and says what it don't kill it will stun. In a bear argument Braithwaite's favorite doctrine is a chapter of buckshot through the lungs. Jim Connel, of the Bathurst road, a well known caribou hunter, says a single-shot Remington (old style) .35cal. is good enough for him. All of which should make us humble. Nobody knows it all.

The panther's musical powers have been discussed here as well as elsewhere. Braithwaite says the panther is a soloist of the second rank; he can't be compared with the wolverine or "Indian Devil." Chief Cabe disputes this statement. He says the "Indian Devil" is the panther or catamount. "It's a queer thing," he says, "if us Indians don't know our own devil!"

FREDERICTON, N. B., Dec. 24.

PROWLER.

INDIANA QUAIL SHOOTING.

WILLIAMSBURG, Ind., Dec. 22.—The open season for quail in Indiana closed on the 20th. Birds were about as numerous as usual, but not so plenty as were expected, for there were more old birds last summer than for ten years past; but the very wet weather of the early summer spoiled many eggs. The season has been one of unusual enjoyment for the writer on account of having abundant leisure and so many days of pleasant weather. The shooting was nearly all done on a tract of ground three miles long and two miles wide, on which there were at the beginning of the season twenty-five coveys, about 500 birds in all. Three hundred of these were bagged by the writer and fifty more by various other parties. The whole tract was traversed during the last three days of the season, and careful note taken of the number of birds found at that time showed 155 strong birds still alive. If nature is kind to them till next season they will rear from twenty-five to forty broods, averaging twenty birds each.

No lands are leased for shooting purposes in this section, and probably three-fourths of the land is forbidden ground to shooters, though most of the farms are shot over by some one—some friend of the owner, the owner himself, or his boys. Few of these hunters have dogs, but they are none the less destructive, for the shooting is done while the snow is on. The birds are found in bunches, and both barrels of the gun fired into them wipes out the lot. Our law does not protect rabbits, and many of these rabbit hunters kill quail whenever they can find them. The rabbit is a nuisance, but he ought to have the same protection as quail, so there would be no excuse for carrying a gun when quail are not in season.

O. H. HAMPTON,

SOME NEW BRUNSWICK TRAPS.—I.

The trap here shown (Fig. 1) is a dead-fall for bears, as built by trappers on the Tobique River, New Brunswick, in the following manner:

Stout stakes, standing four or five feet high, are driven close together in the form of a pen about three feet wide, rather deeper, and open in front. The first pair of stakes, however, upon each side, are a foot or more taller than the others, and stand eight or nine inches apart. Two or three short logs, for a "bed-piece," eight or nine inches in diameter, are laid one above the other upon the ground, across the front of the pen, between the pairs of front stakes. Then a spruce, or fir log, about the same thickness at the butt as the "bed-piece," and over twenty feet long, is cut for a "fall." The larger end is laid lengthwise upon the bed-piece and the smaller end is, if necessary, elevated upon a log to make it level. The upper ends of each pair of front stakes are tied together with a withe to prevent spreading.

Next a stake, *a*, four or five inches thick and three feet high, is driven into the ground close beside the bed-piece at one side of the pen, inside. About eight inches from the rear wall of the pen two short stakes are driven, a foot apart, each with a fork at the upper end pointing downward and forward. Then are cut a stick, *b*, two and a half or three feet long flattened at one end; and another, *c*, three feet long, having a square notch near each end but on opposite sides of the stick. When the trap is set, the stick *b* is laid across the top of the post *a* and the fall rests upon the projecting end of the stick, which is held hori-

zontal. Upon the other end of this stick is suspended, by means of the notch, the stick *c*. The notch at the lower end of the stick *c* is caught on the under side of a square stick on a foot log that is placed horizontally under the pair of inverted forks. Thus the weight of the "fall" upon one end of the stick *b* causes, through the series of connected triggers, an upward pressure upon the forked pegs. The bait, a piece of smoked codfish, is tied close to the lower end of the stick *c* (known as a "bait-stick.") The bear enters the trap about half way and with a slight pull at the bait releases the lower end of the bait-stick, which flies upward, as the fall drops down across the animal's back. The fall is heavily loaded with logs laid upon it.

In the construction of this trap, only the oldest materials should be used. There should be, if possible, no new axe-work in the neighborhood, and the older a trap can be, consistently with strength, the better. Often the trap is all "brushed over" to conceal the nature thereof and allay suspicion.

TAPPAN ADNEY.

Protector Carr's Christmas.

STATE GAME PROTECTOR HENRY C. CARR was presented with an elegant gold watch and chain to-day by a number of his friends. Mr. Bannister making the presentation speech. The watch is a Waltham movement, full jewel, adjusted to heat, cold and position and was made particularly for the occasion. It is a stem-winder, open-face and on the inside is this inscription:

Presented to Henry C. Carr by the Central New York Game and Fish Protective Association, Dec. 25, 1892, in token for his services in protecting game and fish.

The contributors from Auburn are Jay E. Stokes, Geo. H. Nye, H. E. Hills, G. R. Peck, C. A. Bannister, J. H. Clark, G. W. Nellie, C. U. Chedell, W. Cosgrove, John D. Tripp; from Lyons, W. S. Gavitt; from Ithaca, W. H. Wilson, L. Kinney, A. B. Stamp, A. H. Fowler, C. B. Brown, H. M. Hubbard, C. M. Sharpe, Jesse Jennings, E. W. Pragne, C. J. Runsey; from Oswego, B. J. Davis; from Seneca Falls, W. T. Seymour, C. T. Silsby, Frank G. Seaman, Hammond & Hammond, W. S. Silsby, John Cuddeback, Frank Gargan and some from Union Springs. It goes without saying that Mr. Carr appreciated the kindness of his friends and values highly their recognition of his work.

Mr. Carr expressed his gratitude for the gift and his appreciation of the motive behind it. He said he was never "harnessed up" with a watch before, but had always been willing. He promised never to forget the Christmas of 1892. He also said he had received the heartiest support in the past from the association and that had been one of the pleasantest features of his official life, and he trusted the cordial relations would continue in the future and added: "I shall do my best to deserve it, you may depend upon that."—Auburn (N. Y.) Advertiser, Dec. 24.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Dec. 24.—Mr. J. F. Randall, of Alton, Ill., writes me under date of Dec. 16 a letter of great interest to shooters of this and other sections of the country. It is very gratifying to hear of the success of Mr. Randall and his friends with the Mongolian pheasants thus far, and their ultimate success would be a triumph for the whole State. Every experiment of this kind makes all game birds, imported or local, creatures of more importance, more consideration and value in the minds of the shooters who have so long held the native birds so lightly. Therefore, each experiment of the sort makes easier the framing and enforcement of proper laws for both the imported and the local birds, and so renders the cause of sportsmanship moral and practical help. Mr. Randall's letter is as follows:

It may interest you to know that through the kindness of Judge S. H. Greene and the efficient service of Mr. R. B. Hibbe of McMinville, Ore., we have secured a small consignment of Mongolian pheasants. A pair of old birds and a brood of this year's chicks were collected for us by Mr. Hibbe during the summer, with the intention of keeping them until strong enough to bear transportation. There were sixteen of them, but they are slippery things, and some of them got away just before the time of shipment. Eleven were finally crated and shipped—four cocks and seven hens—and of the eleven we received ten in fairly good condition. Considering the length of the journey we think this a very favorable record for both the shipper and the Express Co. We did not buy them just to look at, but intend to give them a good, careful trial, to see if by propagation a fine game bird cannot be added to our diminishing supply. If others are trying the same experiment we should be glad to exchange experiences.

We have the birds in confinement on our preserve about nine miles from Alton, placing them in large and high basement under a barn standing on a hillside, open to the south, bottom of basement being on a level with a rear yard fenced ten feet high and covered with wire net. As a protection against vermin we placed swinging perches hung on wires, but the birds are not inclined to "roost high," preferring to huddle in a brush pile and a pine top which are placed in the back corner. Here we intend to keep them until April, when we shall give them the chance to pick for themselves. When received they were a little battered about the heads, but are now in nice shape, feeding well and growing. They want of course plenty of fresh water, sand and gravel. Up to the present they have not proved themselves great corn birds, but take well to wheat and other small grain, and are fond of cabbage. Apples are highly spoken of as a feed, but a dollar and a half a bushel has taken all the apples out of that section, and we have only had a few windfalls, gathered in from neighboring farmers.

Our preserve is a beautiful piece of country, being in the valley of the Piasa, a delightful complex of bluff and winding valley, high prairie and low bottom, well timbered hills and in parts thickets that would fairly balk a fox or a weasel. Here one of our party owns a 340-acre piece, and we have secured the exclusive privilege of about 1,000 acres of adjoining lands up and down the valley. The neighboring farmers are all interested and give us their hearty co-operation in protecting the birds, and we hope to secure all necessary protective legislation this winter.

Our "club" is only an informal association of friends as follows: H. J. Bowman, of Alton; E. W. Bowman, Geo. K. Hopkins, J. N. Drummond and J. F. Randall, all of Alton and St. Louis. The number is small, but unanimous. We get our heads together as we ride to and from our daily business and concoct such schemes as the foregoing, and it is easy to carry them out, all pulling together.

ALTON, Ill., Dec. 16.

"Forest and Stream's" Charity.

A recent issue of "Sports and Amusements," a paper devoted to prize fighting, theatricals, bicycling and piracy, is very complimentary to FOREST AND STREAM, although a trifle careless in its methods of being complimentary. It manages to credit one half-column article, "Playing a Trout," taken from FOREST AND STREAM, but forgets the journalistic courtesy of credit on the page or so of revamped items such as the one on "Match Shooting," etc., taken from "Chicago and the West." A paragraph from the "Drivers and Twisters" of the FOREST AND STREAM trap department it prints entire without credit. In an article it prints in this same issue, headed "Rabbit Shooting," I saw something that looked familiar, and found that an entire column had been taken direct and without the slightest credit, from the *Times* of this city. This I know, because I know who wrote the article. On the whole, FOREST AND STREAM should feel much flattered by a paper which makes up the bulk of its material from the FOREST AND STREAM columns. But what is the use buying such a paper when you can buy FOREST AND STREAM a week or so earlier, and get much else beside? What, indeed, is the use of such a paper? I'm sure I don't know. It ought to succeed, for it has discovered a new and cheap method of collecting news. I imagine a man might give willingly for charity what he would spare grudgingly when taken unbeknownst from his henroost. Henroost papers may quote the words of the French beggar, who said, "But, monsieur, I cannot starve!" Talleyrand's reply, it may be remembered, was "My friend, I am willing to debate that question with you."

Halcyon Days.

The *Daily News*, of this city, in its bright "Story of the Day" for Dec. 21, has the following on "halcyon days," which may be interesting to many sporting writers who are in the habit of placing "halcyon" days in the spring, fall, or any place else in their copy where they happen to feel particularly good:

"Halcyon days was the name given by the ancients to the seven days preceding and the seven days following the 21st of December, the shortest day of the year. It was supposed that during this period, while the halcyon bird or kingfisher was breeding, the sea was calm and navigation perfectly safe. The bird was represented hatching her eggs on a floating nest on the ocean. From this old fable the phrase halcyon days came to be a synonym for a time of tranquility and peace. There are other curious legends concerning the kingfisher, one of which is that its color was changed from plain gray to blue-green and rich chestnut by flying toward the sun after its liberation from Noah's ark. Its back then took on the hues of the sky above and its breast the tints of the setting sun. In some countries the people thought the dried body of the kingfisher could avert thunderbolts and that if kept in a wardrobe it would prevent destruction by moths. Ovid tells a story about Ceyx and Alcyon, who were changed into kingfishers, or birds which bred at the winter solstice, when through the influence of Aeolus, the wind god, all gales were stilled and the sea calmed so their nests could float uninjured on the waves."

The Draining of Lake Angeline.

Last summer the editor of FOREST AND STREAM asked me to locate a rumor of a lake out in Wisconsin or Michigan which was being drained or pumped out. I could never get at the facts until the past week, when Mr. C. Norris, traveling agent of the Big Four Railroad, secured them for me through the kindness of his friend, Mr. J. H. Molloy, of the Northwestern Railway's office at Ishpeming, Mich. From this source I learn that Lake Angeline overlies a great bed of iron ore, and that one of the great

iron mining concerns of the North Peninsula determined to pump the lake over the divide and drain it to the bottom—an undertaking of a stupendous nature. The lake originally covered 153 acres and was from 10ft. to 50ft. deep, its fluid contents being estimated at 800,000,000 gallons. At this work a vast pump (a C. B. Howells centrifugal) was set in motion in July last. This pump has a 20in. suction and 22in. discharge. It has done its work so well that on Dec. 16 the lake was about pumped out, although it is spring fed. A deposit of silt on the bottom of nearly 2ft. has interfered with the work materially of late.

Naturally the heavy stream carried by this colossal pump would let a good-sized fish through the valves. The engineer in charge writes that many tons of suckers have been pumped out. These all went into Carp River, which receives the drainage. He says further, "Several tons of siskowit (lake trout) also went through the pumps, of which many were caught alive. They were not often injured by the pump, though occasionally one would come through which had had its head cut off by the fans of the pump. A great many brook trout also came through, and Mr. Norris told me of one that weighed 3½ lbs."

175 MONROE STREET, Chicago.

E. HOUGH.

IN PENNSYLVANIA COVERS.

WYALUSING, Pa., Dec. 7.—Ruffed grouse have not been as plentiful in the vicinity of this place as during the past three or four years, and those who have made a practice of hunting this "whirlwind" of the American forests have all made lighter bags than usual. Young birds especially have been scarce, old ones being brought in mostly. Whether this is caused by the past season being unfavorable to the rearing of broods or to the depredation of foxes, coons, owls, etc., upon sitting and young grouse is a question. Foxes and coons are especially plenty, and early last summer I came upon the remains of several grouse left by some animals on the ground.

Coons are unusually plenty. This fall one man killed nine in a week, and frequently four or five have been killed before midnight by a party of two with a dog. They are hunted but little, and the same can be said of foxes.

The best bag of grouse for one day I have heard of this year was made by James Emory, of Beaver Pond, about four miles from here, and that was only seven birds. But then there is ten times the satisfaction in getting one grouse that there is in shooting a quail, so you see Emory had a pretty good time.

There are two distinct kinds of shots on grouse. The cool, deliberate fellow, who wants a choke gun and lets his bird go 20 or 30 yds. while he is aiming at it, generally pots a good many, but he needs open shooting. Then there is the nervous man, who cannot hold himself when a bird rises. He gets somewhat rattled, and if he has a short scatter gun he will down quite a few grouse, and if he follows hunting a good deal, becomes a rattling good brush shot.

Grouse shooting and quail shooting call for entirely different kinds of work. With a good dog in the open fields where quail abound, when they get up you can take cool and deliberate aim, and a fair shot can make a good bag. But most of the shooting of grouse is done in close cover, where one has to get his bird within a few yards if he gets it at all. Then is the time the lightning shot gets in his work; but, as I said before, he wants a scatter gun, as most of his birds will be downed within twenty yards. A dog that will hunt very close helps the grouse hunter.

Mr. Tucker is right in his remarks on the Milwaukee shoot. The wolves scare away most of the amateur shots that would go to tournaments for the fun of the thing. This will fit little side-show tournaments as well as big ones, and it has to be stopped or trap-shooting will decline. There are lots of fair shooters who would attend tournaments and not mind a moderate expense, but they do not propose to make contributions to the wolves.

PENN.

PENNSYLVANIA ASSOCIATION.

HARRISBURG, Pa., Dec. 20, 1892.—At the annual meeting of the Pennsylvania State Sportsmen's Association, held at Reading, Pa., August, 1892, the following resolution was offered and adopted: "That the president appoint a standing committee of seven members, of which he shall be chairman, said committee to be styled the 'committee of legislation,' and whose duty it shall be to secure needed revision of the game laws now existing, and the recognition by the State Government of the Pennsylvania State Sportsmen's Association as the proper body to have charge of the propagation and protection of all wild game birds and animals in our State."

In compliance with the above I hereby appoint as members of such committee Chas. C. Matten, Pottsville, Pa.; Elmer E. Shaner, Pittsburgh, Pa.; Jas. Wolstencroft, Frankford, Philadelphia; R. E. Shearer, Carlisle, Pa.; J. H. Millsbaugh, Williamsport, Pa.; J. A. Wilson, Franklin, Pa.

The protection of the game birds and animals of our State has never been given the attention which its importance deserves. The State Association, with its perfect organization and membership of upward of a thousand sportsmen, is the only competent body to take charge of this important work. It is deemed essential that the State Legislature should, by the passage of the necessary legislation, confer upon our association the rights and power deemed necessary, and grant it similar rights, privileges and assistance as is now given to the State Fish Commission.

We believe that the next Legislature will readily grant what we ask if the matter is properly placed before them, and it is especially desired that each member of this committee shall do his utmost to secure the legislation needed. The members of all the clubs forming this association are earnestly urged to exert their influence with the representative from their district, and with all others where possible, and endeavor to create a sentiment generally in favor of game protection and propagation.

A meeting of this committee will be called by the chairman prior to the assembling of the next Legislature, and each member is earnestly requested to prepare himself with the best information he can gain as to the best methods to pursue to further our object, as success will depend entirely on the committee, backed by the associated clubs.

C. E. H. BRELSFORD, Pres.

THE ADIRONDACK PARK.

[From Governor Flower's Message.]

THE preservation of its forests, and thereby the protection of its water courses, has become the established policy of the State. It is a movement which is heartily approved by the people. It is of vital importance to the future of the State. The practical working out of the policy, however, is full of difficulties, and the State has taken varying attitudes as to modes of procedure. It must be confessed that the results to-day, after nearly seven years' effort to establish an Adirondack Park, are disappointing. While much good has been accomplished, there has been a lack of well-defined policy and business-like management which has prevented a full measure of success. Part of this has been due to the law and part to its administration.

Last year the Legislature passed an act which defined the limits of the proposed park and authorized sales of all State forest lands outside of those limits, and with the proceeds, the purchase of new lands within the limits. It was estimated that the State owned then about 900,000 acres, half of which was located in detached pieces around the edge of the forest and could be sold at a price per acre sufficient to buy a larger number of acres within the limits of the proposed park. This is well enough so far as it goes, provided the sales and subsequent purchases are conducted on a business-like basis. But, the trouble with this policy is that it puts the Government in the market as a buyer and seller, and opens the way to all kinds of impositions and frauds. While it must answer the temporary purpose of getting rid of lands useless for a forest preserve and acquiring other lands needed, so far as the proceeds of the sales will permit, it will not do for a permanent and exclusive State policy.

If it is the desire of the people that the State should absolutely own two or three million acres of the forest preserve the land should be acquired at once by right of eminent domain. The operation should be comprehensive and decisive, and performed in this way it would be vastly more economical in the long run than the present policy of purchase by dribbles.

If, on the other hand, the people are indifferent as to whether the ownership of the bulk of the great forest is in private persons or in the State, so long as the forest is preserved perpetually from destruction, then by a new departure the purpose of preservation can probably be accomplished without any great expenditure of public money.

It is well known that vast tracts of the Adirondack forest are now owned by individuals or by private associations, and are used mainly for purposes of recreation. These large private preserves, I venture to say, could be forever guarded against the danger of denudation by a sufficiently liberal contract between the owners and the State, and would thus serve the main purpose of the public preserve. These private owners, at present, are as much interested in the preservation of their tracts as the State could possibly be, and some of them, I know from personal assurance, would be willing to enter into an arrangement with the State, whereby, in consideration of forest protection furnished by the State and exemption from State taxation, they and their grantees would refrain forever from removing the timber, except under certain conditions imposed by the State. I feel confident that hundreds of thousands of acres could thus be practically added to the State preserve at comparatively little expense. Whatever land might be necessary to buy outright could be bought under proper safeguards. Such a policy, it seems to me, if it could be carried out, would give greater satisfaction to the people, for it would save large expense and, what is worse, great possibility of scandal.

If this suggestion should meet the approval of the Legislature, the necessary legislation to carry it into effect should be enacted without delay, for each year's devastation of forest land is making more difficult the attainment of the State's object. With such legislation I recommend the reorganization of the Forest Commission. It does not seem to me wise that this should be a permanent commission, as at present. I think that much more satisfactory results could be obtained were the commission created for a fixed time and for the definite purpose of establishing the proposed park within that time. Energy, promptness and intelligence are greatly needed. A special commission appointed for a definite purpose would bring aspiration and pride to the performance of its great mission. The commission should consist of at least five persons, nominated by the Governor and confirmed by the Senate, and should be composed of active, capable and honest men, selected for their peculiar fitness to discharge this task creditably to themselves and to the State. After such a commission has completed its labors its services should be discontinued, and the detail work of maintenance, oversight and protection of the forests should be left to trustworthy and competent officers under the direction of the Comptroller or State Engineer, or under a Commissioner of Agriculture, should such an officer be established. A Bureau of Forestry, as a part of a well organized Department of Agriculture, would be the most natural and most desirable disposition, and should accomplish much good, not merely in guarding the forest preserve, but in subserving the agricultural interests of the State.

The establishment of a great forest preserve could be made to pay all or a large part of its cost under intelligent and wise legislation and supervision. Without injury, but rather with benefit, the State could acquire considerable revenue by granting permission to fell trees above a certain diameter on State lands. Additional revenue could be obtained from leases of small parcels of land to individuals for the establishment of summer homes under proper regulations, as is provided in the existing statute.

I would also call the attention of the Legislature to needed amendments in the laws governing the cancellations of tax sales. Upon flimsy pretenses of one kind or another the State has lost nearly 100,000 acres of forest land since 1886 through these cancellations. The State having legitimately come into possession of large tracts of Adirondack land through failure on the part of the owners to pay taxes, it should not be exposed to the loss of this now valuable possession by technical defects in legislation or administration which are taken advantage of by Adirondack speculators. Not another acre of State land should thus be yielded up. The present laws are defective and should be promptly amended before there is any further loss of timbered land.

THREE DAYS IN THE BAD-LANDS.

"Where darkness found him, he lay glad at night:
There the red morning touched him with its light.
Three moons his great heart him a hermit made,
So long he roved at will the boundless shade."

—R. W. Emerson in "Woodnotes."

Of course Emerson was not referring to the Bad-Lands of North Dakota in these lines, for although the morning may be red oftentimes amid the buttes, the shade is not exactly described by the adjective "boundless;" but he does refer to great-hearted men—such as Stephens is—and all brother sportsmen who are worthy of the name. Then, too, Stephens was not on his hunt for "three moons"—only three days saw him in pursuit of the deer, but, as he phrased it, "Many moons, many times multiplied, could not have furnished more enjoyment."

His going was in this wise. Jack and I were sitting in my room the evening before Thanksgiving discussing various matters pertaining to earth and sea and sky, when in came Stephens with a rush, exclaiming, "I'm off for the Bad Lands to-night. Come, go along." But this neither Jack nor I could do, and we said so. "Well, I'm sorry for you fellows," he cheerfully replied, and going to the gun rack, took his .38-40 Marlin out and throwing it to his shoulder sighted at a mounted deer head on the wall, saying as he did so, "I'll lay some of those fellows low, and you two chumps will be so envious that you'll go and destroy yourselves. Where's that cleaning rod?" he continued, and I had to go and hunt it up. Jack, Stephens and I keep our guns, rods and fishing tackle in one large case, which stands in my room, and here is common meeting ground for "we three" nearly every evening when we are all in town. "Well, so long," he said, as he started for the door, "I've just got to get up and hustle to make that train."

Silence most profound reigned for a time after Stephens had gone. Every sportsman knows what our thoughts were. At length, Jack gave a big sigh and said, "It's hard to be tied down when I want to go so bad," and I agreed that it was a grievous hardship. Every time we met during the following week we talked about Stephens and wondered if he had any success. A heavy snow storm came on the second day after he left and we discussed the probability of its reaching where he was, for if it did we knew it meant no hunting for him.

The days dragged slowly along, and one morning before I was dressed in walked Stephens. One look at his face was enough. He was fairly radiant with success, good will and happiness. "I had a great time, one of the best of my life. I was on the hunting grounds for three days and I shot seven deer, one black-tail and six white-tails. I dropped every one of them dead, too. I tell you I want no better gun than my little Marlin."

It was a very enjoyable story that he told. One time he had three deer lying dead on the ground within a few rods of each other, the result of fine long range marksmanship and quick shooting. I felt almost as though I'd been there myself by the time he had finished his graphic recital, combining, as he did, the hunting of the game with description of the country, the people he met and ranches he visited. He came to the end of his story by saying, "We'll go there for a month next fall." I met Jack on the street that forenoon and told him of the hunter's return. "Come back empty handed," quoth Jack.

"Not much; he killed seven deer."

"By the great horn spoon! You are fooling!"

"No, I'm not; it's honest and straight."

"Oh, where were we that we were not in it?"

"Not there at any rate."

"I suppose that he'll aggravate us beyond endurance, now that he's come back with such proofs of being a mighty hunter."

It was a little hard on us to have Stephens look at us and grin and say, "I wish you had been along," then smile broadly as some thought of the hunt came to him, and then proceed to tell how it was thus and so, at such and such a time. There is nothing like a few days' outing for a tired man. The whole winter will be brighter and easier for Stephens on account of these three days in the Bad Lands.

MYRON COOLEY.

DETROIT CITY, MICH.

SOUTHERN QUAIL SHOOTING.

AN unexpected change always has in it an element of intoxication to the overworked, and when a lover of good hunting is surprised to find himself starting on a shooting trip his enjoyment is complete. One week before we started one member of the party, at least, did not even suspect that he would be in either North Carolina or Virginia for many a year to come. Kind fortune started him, however, and we were in Danville, Va., dogs, guns and all, on a wet, disagreeable morning early in November last, before I fully realized the reality of the journey.

We had gone to Danville from Washington on the Richmond and Danville and there we connected the narrow gauge for Martinsville, Va. The distance from Danville to Martinsville is about forty miles and you make it in one-half day or thereabouts, at the option of the conductor of that unique branch road.

Arrived at Martinsville we procured a good dinner at the Hotel Hamilton. Of course it had the Southern hotel air of the ever-present chicken about it, but everything was well cooked and plentiful. From this point we were to travel "cross country" in a "hack," a covered spring wagon familiar to Southern travelers, to a plantation eight miles distant. The gentleman whom I had the good fortune to travel with was well acquainted in this country—Henry in Virginia, by the way—and was well known by the planter whose guests we were to be.

It was not a pleasant trip "across country" from the fact that rain followed us and it was cold and foggy. The clayey soil became covered with a pasty mud that had the faculty of flying higher and easier and sticking harder than any mud I had seen before. It was a lovely red color, but that could never make it aesthetic. The negro driver's hands were cold, as he had provided a bottle of applejack and no gloves, and he was in a hurry to reach a fire; so with a strong wagon and good horses we made good time despite the rough roads.

Up to this point of the journey my poetic ideas of the "Sunny South" had been dampened and chilled and in body also I was extremely uncomfortable on account of the cold rain and rough eight-mile drive, but once arrived

at the plantation house the welcome given to me—a stranger—was one that I never can forget, and in it I found not only more than a realization of my imagined South, but its non-artificialness warmed my spirit into a glow and my bodily cold soon passed away before the great hearth fire. But I must return to the hunting.

The remainder of the day was spent indoors in preparation for the morning. Next day dawned clear and mild, regular Indian summer weather, and we were off early.

Not but a short distance from home we had a "point" and a "rise" by a fine covey of twenty birds. We found twelve coveys that day, and during my stay of one week at this plantation, eight miles from Martinsville and four from Ridgeway, Va., we never found less than twelve coveys and many times fifteen in a day.

The country is very uneven and the short hills are steep, but it is not hard walking; so in a short time you become accustomed to them and enjoy the variety. It is a tobacco-raising country principally, but much wheat and corn also is grown, and it is upon wheat stubble that you find the coveys first, as a rule, and in these open fields you have the clean shot rivaled only by those chances offered upon the Western prairies. The birds generally fly a short distance to cover "in old fields" among "broom grass" or "brown straw," a high, rank grass, and it is from these hiding places that the hunter can kick the quail up, one at a time, but seldom interfered with by a single pine. Of course there is some thick country, but it is easier to find a new covey than to work at a disadvantage for one already flushed and driven into a thicket.

The climate in November is beautiful. But little rain and warm, mild days, like early October in New England. The birds are large and fat, and to the unskilled shot seem unusually active. The coveys rise all together and fly a short distance, lighting well scattered in a long line at right angles to the line of flight.

To return to our trip. From Ridgeway, Va., we went to Stoneville, in Rockingham county, N. C., and after spending a week there on to Pine Hall, Stokes county, N. C. At Stoneville the birds were not so plentiful as at Ridgeway or Pine Hall. Accommodations in the little town were very good.

At Pine Hall we again met old friends of my companion, and for another week we were made more than at home in the enjoyment of the hospitality and companionship of those most warm-hearted people.

Ridgeway, Stoneville and Pine Hall are all stations on the Norfolk and Western Railroad, and can be reached best from New York via Roanoke, Va., by Pennsylvania Railroad and Norfolk and Western through Hagerstown, Md., where the two roads connect. A twenty-four hours' ride from New York city.

Under the circumstances narrated this locality afforded to me the place of an unusually pleasant shooting trip. Others might or might not find in it an equal satisfaction.

J.

THE MENACE TO YELLOWSTONE PARK.

FOREST AND STREAM has done a public service in bringing together in pamphlet an account of the Cooke City raid on the National Yellowstone Park, and of the consequences to the Park if it is allowed by Congress to succeed. We have described and entered protest against this scheme long since, but such matters need to be repeatedly brought to the attention of the public, and Congress needs to be repeatedly reminded of its duties in relation to them. It will be recalled that Cooke City is a small mining camp located just beyond the northeast corner of the Park, and it wants a railroad. It is claimed that the only feasible route is through this corner of the Park along the banks of the Yellowstone and East Fork rivers and Soda Butte Creek. Consequently Cooke City and other interested schemers are lobbying Congress for a grant of this right of way. Two alternate bills have been prepared and are pending in Congress—one simply granting right of way for a railroad within the Park, and the other, designed to overcome the objection to a railroad within that domain, changing the Park boundaries so as to cut off the corner to be invaded by the railroad. Both schemes are utterly objectionable.

The fact is, as FOREST AND STREAM points out, that in the first place the mineral resources of Cooke City are not rich enough to justify the Northern Pacific in building a branch to that place, as President Oakes has testified; and, in the second place, an even more feasible route for a road is to be found in direct line from Cooke City north to Stillwater on the Northern Pacific, the maximum grade of which need not be over 150ft. to the mile, whereas a grade of over 200ft., and often of 300ft., is to be found on the Northern Pacific. But there is a town called Livingston, further west on the Northern Pacific, which wants Cooke City traffic to pass its way, and the town lo boomers and miners of both places are thus demanding the Park route, and they are aided by a floating crowd of hunters and trappers and prospectors, who want the rich northeastern corner of the Park thrown open to their depredations.

Of course their demands ought not to get a foothold in Congress, but they have, for the reason that the public's case has not been as persistently represented. A change of the Park boundary least of all should be conceded. The present boundary, as FOREST AND STREAM points out, is a natural one, presenting natural barriers to poachers. Moreover, this particular corner which it is proposed to cut off contains some of the Park's greatest attractions—the petrified and fossil forests, the sublime scenery of the Soda Butte Valley, and the Park's finest game pasture, where the grass is luxuriant and snows moderate, and without which thousands of the elk and deer and antelope must be driven out. To hand only one-half of this pasture over to the population hovering about the Park would be to invite the extinction of all the game which winter there. But a railroad without a change of boundary should not be allowed in the Park on any condition, for reasons too obvious to need describing, and wholly independent of the fact that it would destroy the grandest drive to be had in the Park, and would lead to a fire which would, as Capt. Anderson, superintendent of the Park, says, "burn off the Park as black as your hat in six months."

Two such measures as these Cooke City bills ought not to be able to get a hearing on the floor of either branch of Congress. Let the hunters and town lo boomers and mine speculators, who are thus seeking the destruction of this majestic inclosure, which has been reserved to nature, be kicked out.—*Springfield Republican*.

NEW YORK STATE ASSOCIATION.

THE annual winter meeting of the New York State Association for the Protection of Fish and Game will be held in Syracuse, Jan. 12. Each club will be entitled to representation by nine delegates. Important matters will be considered. A full attendance is desired. Clubs and individuals in sympathy with the Association are cordially invited to unite with it. For copies of the constitution address JOHN B. SAGE, Sec'y, Buffalo, N. Y.

The Ways and Means Committee acknowledge with thanks these contributions to the Association's working fund: Mr. W. C. Browning, New York, \$10; Mr. Wm. J. Kimball, Rochester, \$25; Mr. Frank J. Amsden, Rochester \$25.

THE NEW YORK GAME LAWS.

SYRACUSE, N. Y., Dec. 24.—*Editor Forest and Stream:* The following amendments to the game law have been submitted to the Committee on Legislation of the Executive Committee of the State Association for the Protection of Fish and Game:

SEC. 30. Amend so as to read as follows: "Special Protectors: The Board of Commissioners, in its discretion, may, at its pleasure, appoint or remove a person recommended by any Board of Supervisors, or any incorporated society for the protection of fish and game, as special protector, who shall possess the same powers that are conferred upon State Protectors; such special protectors shall receive no compensation from the State, but they shall receive from the county wherein the work is performed, compensation for their services at the sum of \$100, exclusive of expenses in and out of the county, and the sum shall be a county charge to be audited and paid as other county charges are paid. The accounts shall be verified as similar accounts are required to be verified. They shall make similar reports to those required from State Protectors."

SEC. 41. Amend by inserting after the word "venison" the words "deer, antelope," and strike out of said section the words "or out of the State."

SEC. 44. Amend by striking out the words "eleventh," "tenth" and "September" in the second line, and inserting in place thereof the words "first," "twentieth" and "October."

SEC. 47. Amend by inserting before the word "crusting" the words "floating and jacking."

SEC. 49. Add, "and rabbits and hares shall not be hunted, shot at, killed or possessed, between the first day of January and the first day of September."

SEC. 70. After the words "south of Iona Island," amend by striking out the words "and that portion of Lake Ontario known as Great Sodus Bay."

SEC. 75. Amend by striking out the words "or out of the State," and by adding at the end of such section the words "China pheasant shall not be caught, killed, sold or possessed in the State of New York for five years."

SEC. 77. Strike out the words "and excepting in the counties of Onondaga, Wayne, Oneida, Cayuga, Wyoming, Genesee, Niagara, Monroe, Erie, Chautauqua, Cattaraugus and Orleans."

SEC. 102. Amend by adding the words, "Having in possession nets, or fish caught or killed in any manner or by any device, except angling, upon the shores, islands or inland fresh waters of this State, shall be sufficient evidence of the violation of this section."

SEC. 108. After the words "landlocked salmon" insert the words "pike and pickerel."

SEC. 110. Amend by inserting after the words "thirtieth of May," "except in the waters of Lake Ontario, in which black bass or Oswego bass shall not be fished for, killed or possessed between the 1st day of January and the 15th day of June."

SEC. 111. Strike out the words "eight inches" and insert in place thereof "one pound in weight or one foot in length."

SEC. 112. Strike out the words "thirtieth of May" and insert "15th day of June."

SEC. 120. Amend by inserting after the words "\$10 for each fish caught" the words "killed or possessed."

SEC. 132. Amend by adding after the words "any islands therein," "and within three months of the month of the Niagara River," and by striking out all of the words in parenthesis as follows: "The waters of Lake Ontario in the county of Jefferson, included between Blue Rock Point, in the town of Brownville, and the town line between the towns of Lyme, Cape Vincent, including Chaumont Bay, Griffin Bay, Three Mile Bay, are hereby exempt from the provisions of this act."

SEC. 134. Amend by striking out the word "eighth" and inserting in place thereof the word "fifth" of this section.

SEC. 140. Amend by striking out the words "It shall be lawful to fish for bullheads with fyke nets in Seneca River, in Cayuga, Wayne and Seneca counties, but not in any part of said river, within fifty rods of the mouth of the Clyde."

ART. 9. Amend by inserting a section after Section 214, as follows:

SEC. 214A. "After the laying out of the grounds for private parks, and the due publication and posting of the notices provided to be published and posted in this article, and upon filing in the clerk's office of the county where the premises are situated, proof by affidavit that the foregoing provisions of this article, as to posting and publishing notices have been complied with, an order may be entered in any court of records in the county where the premises are situated, reciting the fact of such publication and posting of notices, and declaring that the premises therein described have been constituted a private park, in accordance with the provisions of this article."

A certified copy of said order may be read in evidence in any civil or criminal action or proceeding, as evidence of the facts therein recited.

SEC. 215. Amend by inserting after the words "or interfere in any way with," the words "or catch, shoot, kill or possess."

SEC. 217. Amend by inserting in the first line, after the word "article," the words "is a misdemeanor, and in addition," and by striking out after the words "damages in," the word "an," and insert in place thereof the word "the," and after the word "amount," strike out the words "not more than," and insert in place thereof the word "of," and after the word "lessee," insert the words "and penalties in the sum of \$10 for each fish so caught, killed or possessed, and \$25 for each wild bird or wild animal so caught, shot, killed and possessed."

SEC. 232. Amend by striking out in Section 232 as follows: After the word "may," in the fifth line, insert the words "prosecute for and," and after the word "penalties," in the same line, add the words "and fines;" and after the words "such person shall be entitled to" strike out the words "one-half of," and after the word "penalty" insert the words "and fines," and after the word "recovered" strike out the words "the other half to be paid to the Board of Commissioners."

SEC. 237. Amend by adding the words "No person imprisoned under an execution of the person, as herein provided, shall be admitted to the liberties of the jail."

SEC. 248. Amend by adding to the section the words "the fact of giving such evidence by an offender against a co-offender in any civil or criminal action, prosecution or proceeding shall be a bar to any civil action or criminal proceeding against such witness."

WALTER S. MACGREGOR, Chairman.

Colorado Shooting Notes.

DENVER, Col., Dec. 28.—Reports from Garfield and Mesa counties state that large numbers of deer have been killed there during the past three weeks. It is not professional hunters alone that are doing the killing, as several parties of so-called sportsmen have killed a great many, leaving them to rot, and the ranchmen are accused of killing them and feeding the major portion of the carcasses to hogs. If this is so the officials should make an example of the offenders.

Edward Kemeys, the sculptor, has returned from his hunting trip in the western part of the State. He found deer very plentiful but did not see many elk.

There is a dearth of shooting news as the season has practically closed. A few ducks and geese are killed on the river occasionally, but aside from that there is nothing.

TESEBY.

With all due reverence for the fame of Israel Putnam, was his encounter with the wolf such a heroic deed, after all? Is the wolf of America anything but a coward in the presence of man? What foundation of fact is there for the often told newspaper tales of human beings in this country devoured by wolves? Are any of these incidents well authenticated?

Camp-Fire Flickerings.

"That Reminds Me."

THE DOCTOR'S SCORE.

WASHINGTON, D. C.—On a recent trip to North Carolina after quail and on the day preceding my return, the "boys" kindly volunteered to go out with me and help make a bag that should be the admiration and envy of my shooting friends at home. To make the success more assured it was determined to divide the party of four in two, each side to shoot against the other for numbers. It fell to the lot of the writer to be paired with Sheriff Taylor, and a truer sportsman or better shot never pulled trigger, while the other side consisted of Dr. H. and mine host Fowler, of the Central Hotel.

Now, Dr. H., aside from being the best physician in Chatham county, is by all readily recognized as the very prince of good fellows and has long been considered the best shot of that section, if judged by the number of birds he killed. The result of the day's shoot was that the Doctor's party had a few more birds at the close of the day, which seemed but natural, until the next morning, when old Aunt Brown, of ebony hue, presented the Doctor in the presence of several friends a bill for \$3.25 for her hen and thirteen chicks, with a demand for immediate payment, which the Doctor was compelled under many protestations to honor. It finally came out through the unwilling testimony of friend Fowler that the Doctor had vowed, on starting, to beat "those other fellows," and mistaking a rustling in the high sedge for the movement of a covey of quail, cut loose with both barrels with the unfortunate result stated; and as one of Aunt Brown's pickaninies was a witness to the murder most "fowl" the Doctor was unable to prove an alibi.

It is needless to state that the first costs of the good Doctor's mistake is no circumstance to what it has cost him in the effort to keep the thing quiet, but like Banquo's ghost it will not down. W. T. B.

THE PANTHER'S "HAND-SPIKE" TAIL.

Editor Forest and Stream:

There was one sentence in the letter of "Jacobstaff," printed in the issue of Dec. 22, to which, in the interest of courageous sportsmanship and science (more especially science), I wish to again direct attention. In telling the experience of "Old Ralph," your correspondent says of the panther: "It crouched down, wearing its tail back and forth, and gave several yells, etc." I have italicized a number of words in order to attract the special attention of the reader to them. Of the part of the sentence referring to the panther's yells nothing need be said, so many courageous sportsmen have written pieces and essays in your paper to demonstrate that a panther does not scream, and have so often proved, so to speak, that all who think they have heard one scream were merely frightened out of their wits, that it would be trespassing on your space and wearing to the reader (especially wearing to the reader) to add a single word in that line of argument. What I desire to do is to prove by references to my own experience and the muscular construction of the animal that the panther never waves its tail.

This foolish notion, born of trembling fear, that a panther waves and lashes its tail, has been too long allowed to float about in books of natural history and periodical literature of like ilk. Let the rising generation of sportsmen, the youth who count it a day lost when the mail that brings FOREST AND STREAM gets stuck in the snow, be taught the truth. The panther's tail sticks straight out behind like an Adirondack hand-spike, rigid and immovable.

So firmly rooted is the popular notion about the waving of the panther's tail that no doubt many of your readers will either think that I am joking or insane, but I beg them to read on and they will see at least that I never was more in earnest than at this writing, and as for my health, I am pretty tolerable, thank ye. But of course I must needs bring proof when overturning a popular fallacy, and here it is:

During the past five years I have traveled through fifty degrees of latitude and nearly one hundred of longitude—from the frozen shores of the Arks Fiord in Greenland to Panama on the South Sea, and from the Azore Islands to the Golden Gate. I have been among the forests of the Cobequid Mountains of Nova Scotia, the crags of the Teton and the Shoshone Mountains of Wyoming, the desert wastes of Death Valley and the wilds of the Ozarks in Missouri, and yet in all that time I never saw a panther's tail wave. To the majority of those who have written you on the subject of the panther's scream this statement will be absolutely convincing on two points: First, and most important, the panther's tail does not wave. Second, and almost as important, I am a man who, like themselves, is never frightened when in a game country. My nerve is never ruffled by the wail of a loon, while my calm and deliberate gaze is never deceived into supposing that the tail of a panther waves.

Having thus placed myself among those courageous sportsmen who allow no shrinking modesty to prevent their giving their personal experiences in the interests of science, I might well rest satisfied, and I would do so but for the fact that a very large number of your readers know something more about panthers than can be learned even by following the trail of the beast and shooting it from the crotch of a big birch after the dogs have treed it. There are even readers of FOREST AND STREAM who have with a scalpel cut the muscles of the *Felis concolor* apart, have, in short, dissected it from the tip of its nose to the tip of its tail. These people will say that the bones of the panther's tail are so articulated as to move readily one on the other, and that the muscles connected with these bones not only permit but are admirably adapted to make the bones move; they find there what they would call a beautiful adaptation of means to an end, i.e., the end of "lashing about."

This I freely admit, but I am still able to prove that the tail does not wave. In their dissecting did they not observe certain muscles and pipes, so to speak in the panther's throat that are known to common folks as vocal organs? They did. Did they not find a larynx—in short, did they not find there means beautifully adapted to the productions of sound—even screams and yells fit to "stop his heart a beating" as "Old Ralph" said to Jacobstaff? And yet we know that those vocal organs are never used—that is

we who never get scared know it. Q. E. D.: The muscles of a panther's tail never make its bones move—the panther never waves its tail. To those who say they have heard panthers' screams we who are brave say they were merely frightened by the owl, the loon or some other fearsome sound-producing denizen of the forest. To those who say they saw the panther wave its tail I reply: "You were scared out of your wits, boys, it was the waving of a bush, the nodding of a weed, or the trembling of your own fear-smitten eye winkers."

Oh foolish trembling timorous fear,
What sights you see! What sounds you hear!
A waving bush becomes a bear,
Whose open mouth doth raise your hair!
Of *Fulpes* you a wolf can make,
You turn a worm into a snake:
On waking from some fearsome dream,
You think you hear *Concolor* scream.
But worse than this—ye fates bewail!
You see the panther wave his tail.

JOHN R. SPEARS.

Sea and River Fishing.

CHRISTMAS GIFT RHYMES.

From John C. Sickey to J. S. Van Cleef on presenting a book containing plates of trout and bass flies, Christmas, 1892.

SOME fishermen from lack of skill
Blame poor success to flies;
And some their ill-luck to conceal
Resort to telling lies.
This book the first fault should remove,
As you'll see by its plan;
Should ill-luck yet attend you—well—
Well, you're a fisherman.

Acknowledgment by J. S. Van Cleef.
Your book and note are both received,
And clearly you imply
That fishermen will be deceived
If I will only lie.

In olden times, the years gone by,
When streams were full of fish,
I had no need to tell a lie
What'er might be the wish:
For then on every fishing bout
My creel was always filled with trout.
While now, when streams are getting dry,
My creel I rarely fill;
In vain I often cast the fly,
In vain exert my skill.
But now, alas! the day's gone by
When I could learn to tell a lie.

ANGLING NOTES.

The Man Who Tells the First Story Is Not In It.

When I wrote the article, "Leaping Salmon and Swimming Trout," in FOREST AND STREAM of Nov. 17 and this journal reproduced in half tone the photograph of the modest Shelving Rock Falls to accompany the article, I had not the slightest idea of what that article might lead to. I told of some little trout swimming up in the sheet of water of some little falls, and told my story rather haltingly and with doubts as to how it would be received, for on another occasion when I told of salmon jumping ten feet I was immediately jumped upon with more feet than the salmon jumped. Now, I am tempted to blush for having told such a modest little story in such a shrinking, diffident manner, and I expect that FOREST AND STREAM will regret having spent good, hard money of the Republic in reproducing that rather pretty picture of falls of the size, judging from recent information, that are suitable for a remnant counter. I can now see that I made the fatal mistake of telling my story first. Why? Because a friend has sent me a clipping from the Albany Journal, and from it I learn that fish swim over Niagara Falls, and the man who says so is "Prof. Jacques Marie Phinni, a professor of Laval University of Quebec, who has established a very remarkable observation at the base of the thundering Horse Shoe Falls on the Canadian side of the Niagara River." Prof. Phinni (that is the way the name is spelled, but I presume it is pronounced Finny), "who, by the way, is a fellow" (not of infinite jest, as the fishy pronunciation of his name might possibly lead one to suppose) "of half a dozen royal and national societies, including the National Institute of France," has made it his object to elucidate the question as to how certain fishes known to be of the salt-water species get into the upper lakes. "This has heretofore been explained on the ground of assumed subterranean currents, or the action of storms, or of birds carrying the spawn from the lower waters to the upper."

The unscientific man may suggest that the most comfortable route for the certain salt-water fishes to reach the upper lake is by way of the Welland Canal, thus avoiding the falls of Niagara, but Prof. Phinni apparently will not have it so. He admits that it is not to be supposed that fishes, even the largest of them, are endowed with power sufficient to overcome a force strong enough to crush the strongest ships and bend and twist the heaviest iron rails like straws. "Their power is rather an adaptability to elude the impact of the on-rushing water." By the aid of a powerful electric search light, fish have been seen and photographed in their approach to the base of the falls, and then, as they boldly enter the cataract itself. In making the ascent to the top the Professor calculates that the fish swim a distance three times the height of the falls.

Section 140.

This is the number of a section of the New York Fish and Game Code that in its intent opens the door to all kinds of poaching in the waters of Warren county. It is an abominable law, inasmuch as it legalizes the use of spear and gun and net to take and kill certain fishes at any time. Long ago I pointed out in this journal the injustice of such a law, and referred to Deputy Attorney Gen. Whittaker's condemnation of it, speaking as one of the codifying commissioners. Mr. Whittaker's note to Section 140 reads: "The provision in this section authorizing

the netting, etc., of suckers, etc., in Warren county was advocated to the Commission by Albert H. Thomas, and is in the interest of those opposed to protection and in favor of netting in the fresh waters. The Commission opposes this provision." At the recent meeting of the Board of supervisors of Warren county a petition addressed to the Legislature and asking for the repeal of so much of Sec. 140 as applied to Lake George was signed by all the Supervisors except the one from the town in which Mr. Thomas resided, and he was not asked to sign it for obvious reasons. I might say parenthetically that I do not think the petition should be granted until it is changed so that it asks for the release of all the waters in the county from that obnoxious spear, gun and net section. If the section is admittedly bad for Lake George then it surely is bad for the other waters in the county to which it applies, and the other waters in the county have not such powerful friends to look after the well-being of the fish in them as Lake George appears to have.

Game Protector Wm. H. Burnett procured the signatures to the petition I have mentioned, and after it was completed one of the supervisors came to him and requested that his name be removed from the paper. Asked as to the reason for his sudden change of front, the supervisor finally admitted that he still believed that the law relating to Warren county in Sec. 140 should be repealed, but he had been informed by the State game protector for the Fourth District, which embraced all of Hamilton and part of Essex county, that if he signed such a petition, the State Fish Commissioners would not grant an application for fish fry for the supervisor's town waters. This strikes me as very queer bulldozing on the part of a State game protector. Of course I do not believe that the Fish Commissioners made any such threat as was implied by the game protector. It seems rather officious at best for a game protector who does not live in the county to take such an interest in waters in which he can have no personal concern and which are outside of his official district. One would think that when the county law makers are moving to get rid of the spear, the gun and the net that threaten the extinction of their food fishes, that the officer paid by the State to preserve the fish and game would be the first to aid them to the extent of his power. I confess to a curiosity to know just where the African is located in this particular wood pile.

Is it the voice and threat of Mr. Kenwell, and the "slick work" of Mr. Thomas? Whatever it may be, a State game protector has no business whatever to attempt to check the repeal of an infamous game law that is "in the interest of those opposed to protection," and if he attempts such a thing by methods of intimidation he is an excellent man to be removed from office. I think one of the old fish commissioners did say that if pike were given a close season in Lake George he was not in favor of further plantings of trout in the same water, but that is quite a different matter from what I have stated above, and I question if the new commissioners have said anything about it one way or another.

Title in Fish.

In 1881 Mr. W. L. Hillman, of Hoboken, N. J., bought a farm in the town of Wilton, Saratoga county, by contract of Richard Robens. Mr. Hillman's father, Morgan Hillman, resided on the farm for some years. Four years ago C. T. Barrett, son-in-law of Morgan Hillman, with the consent of W. S. Hillman and his father, made an artificial pond on the farm by damming a stream which flows through it. This pond Mr. Barrett stocked with German carp. Last spring Richard Robens brought an action in the Supreme Court against both of the Hillmans, for the possession of the farm, and at the same time he brought an action against Barrett to restrain him from taking any of the fish from the pond, Robens claiming that they were part of the farm. At the trial of the case Judge Joseph Potter sustained Robens's claim. The case was appealed, and now the General Term has reversed Judge Potter's decision and gives judgment against Robens for costs. A. N. CHENEY.

CHICAGO AND THE WEST:

[From a Staff Correspondent.]

CHICAGO, Ill., Dec. 31.—Mr. Carl Guinotte, of Kansas City, has made the most remarkable double shot yet on record. His dog pointed a turkey, which Mr. Guinotte killed as it rose. Turning as he was about to open his gun, he saw a fine large deer crouching in the grass nearby him on the left, and this he slew with his unused left barrel. All this happened down in the Chicoree Strip, this month, where a great many other deer and turkeys and a large number of quail were killed by Mr. Guinotte and friends. The party was composed further by Dr. Henry Messrs. Wm. Brown and John Chambers of Jacksonville, Ill., Frank Johnson of Chicago and Wm. Peters of Kansas City. They hunted at and below the "21" camp on Greener's ranch, where Mr. M. E. Allison, Mr. D. R. Streeter and some others of us had our greyhound hunt on deer in 1887. Mr. Guinotte brings up Mr. Streeter's remembrances from Kiowa town. Quail shooting was superb, and the turkeys were abundant in the black jacks. The party had a great hunt.

Mr. Fred Sheldon, of Chicago, writes me to-day the following interesting letter:

"I just drop you a line to let you know that J. Triggs, of No. 102 N. Adams street, has a box of trout (brook) on sale. Is it not illegal?"

"Yesterday a fresh buffalo hide was brought into Mr. Taylor's harness and leather goods store, on Washington street, near Fifth avenue, and had a lining put in it. It may be the one that was recently shot in the Yellowstone Park."

I cannot find in the *Book of the Game Laws* anything prohibiting the sale of trout in Illinois in the winter, more's the pity! It is easy to tell where they came from. Their capture is easy at this time through the ice of the northern lakes and streams, and the market-fishers know it very well. Many are taken from the spawning beds in October and November.

There is not time at this writing to look up the history of this buffalo hide, but next week I will try to find out about it. It may be one from the Jones herd, where an animal may have been slaughtered for holiday sale.

Angling Books.

Wednesday's *Tribune* of this city contains the following noticeable mention:

"The noted collection of books on fish, angling, etc., belonging to Robert Clarke, of Cincinnati, comes to the

Newberry Library, of Chicago. There is no collection of books on this specialty in this country which will compare with it in completeness and value, and only one in England, the Dennison Library, which surpasses it. Forty years ago Mr. Clarke, an enthusiastic fisherman and lover of field sports, began to collect his library, and it has been his delight and recreation during these many years to secure all fish books, which he did not possess, in the best editions, and copies in the finest condition—the rarity and cost being no consideration with him. The books number about sixteen hundred and all have been handsomely bound in London. Dr. Poole has been in negotiation with Mr. Clarke for this library for more than three years and the trustees have consummated the purchase. Several natural history and sporting clubs and a prominent Western university have endeavored to secure it. The consideration, however, which finally prevailed with Mr. Clarke was, that, as his fishing days were over, and in the event of his death the collection might be scattered, he would place the collection in the Newberry Library, where it would be appreciated and used by scholars and specialists."

Mortality at Lincoln Park.
Two deaths occurred this week among the animals at Lincoln Park. The last of the sea lions, known as Ben Butler, banded in his cheeks, and the sacred zebu, with genuine hump, also departed in search of Nirvana, which was the only thing Chicago didn't have to offer. Nirvana is a place where a zebu don't have to hump himself the way he has to in Chicago.

Fish Talk.
Mr. W. T. Dennis, State Fish Commissioner of Indiana, begins on Feb. 1 the publication of a monthly which he will call "Fish Talk." Col. Dennis's wide experience as an angler and culturist should provide him with a fund of interesting talk.

New Things.
In sporting inventions brought to light in Chicago I have this week three things to mention. Mr. A. S. Comstock has patented an iron tent pin, three-ribbed, light, and with all possible weight cut away, yet offering all the holding power of a wooden pin at the same or less weight. This ought to be a mighty good thing. Mr. Chas. F. Johnson, of the Waltonian Mfg. Co., has patented a bass fly, with features which his experience prove to be very killing. The Natchaug Silk Co. have out a new bait-casting line, made different from those of last season, very fine and elegant and very strong. I saw the first of these that came to the city, and if it does near as well wet as it does dry it will be a darling. E. HUGH.

175 MONROE STREET, Chicago.

THE LEWISTON RESERVOIR.
The Lewiston Reservoir in Ohio is one of the largest artificial bodies of water in the world, and contains some 15,000 acres within its levees.

It is among the best fishing resorts of the West, and indeed of the nation. It is thoroughly well stocked with the finest of black bass and perch, and best of all is the fish pond of the people. It is State property, and the angler with his \$30 rod and the ragged urchin with pin hook and line of wrapping twine are equally entitled to monopolize its privileges.

In several places it disperses into veritable lakes that afford fine opportunity for using the trolling spoon.

There are a number of islands in the reservoir, containing from a quarter acre to 400 acres. Many of the shores of these islands, together with the north and east shores of the reservoir are low, sloping fat bottoms that furnish a feeding ground *par excellence* for the numerous woodcock that are always there in season.

The last time I visited this charming resort I had been spending a few weeks along the C., H. & D. R. R., the famous "Battlefield Route," looking up the history of the early settlement of the Miami valley, picking up an occasional relic, and here and there halting to enjoy some of the very best of quail shooting by the way.

Stopping off at Wapakonetta, I was soon borne so high upon the tide of enthusiasm of a trio of very good friends that I soon found myself busily engaged in getting ready to try the game bass. Fishing tackle was put in order, a few shells loaded for the ducks that were already beginning to come in, provisions purchased and tent outfit packed.

In a committee of the whole, it was resolved that we must get into camp that same evening; and the resolve was fully accomplished by a drive through the little village of Lake View to Lake Ridge beyond; plus the time necessary to peg down a tent and get the bedding, cooking utensils, provisions, etc., in place.

Let me introduce the trio. First comes Jake M., big-hearted and enjoying sport keenly. Martin P., a big, easy-going fellow; a great practical joker. He had a keen appreciation of the ludicrous. He possessed a consuming desire to be first best, was not altogether unselfish, and cherished the idea that everybody but himself was an unsophisticated sportsman. Last of the trio comes Sam S., by far the ripest sportsman among us. Bred from his youth to use the rod and gun, he acquired a knowledge of the thousand and one little things not taught in the books, but that contributes so much toward success. He could tell at a glance the best radius in which to drop a hook, and could come nearer climbing the right stump every time to halt "bunnie" in his race before the dogs than any man I ever knew. With such companions as these it was impossible that we should not enjoy the outing whether successful or not.

As daylight approached next morning it found us getting into our craft and pushing off. We decided to go two in a boat, Jake and Martin in one, Sam and myself in the other. We were to take turns trolling and rowing, or rather pushing the boat, as we termed the exercise of propelling a boat by pushing the oars forward instead of pulling. When carefully done this enables the one trolling to stand erect, and with a long, stiff rod, and about 18 ft. of line, fish a swath 40 ft. wide in front of the boat.

As soon as we were fairly out into clear but comparatively shallow water the trolling spoons were put in. Sam said the water looked a little fishy, and we might as well fish it as we pushed on towards the deeper water of the lakes.

First strike was Sam's, and he lifted into the boat a 4 lb. rock bass. He had not loosed it from the hook until Martin followed suit with another. One or two sweeps of the rod and another, until there was a half dozen in each boat by the time we reached Mud Lake.

Now the small talk was hushed, we were in the region of black bass. And hungry bass they proved to be. Sam was first to hook a fish, a 4-pounder, that rushed straight for the boat into the waiting landing net. Now another half as large, another a mate to the first until we had five in the boat in twice as many minutes. Martin had three, but not time now to brag or exchange congratulations. The rapid biting lasted an hour, then eased off, and at half past ten ceased altogether. We rowed our boats together and counted the strings. Thirty-six on one, thirty-three on the other. They were enough; so at least it was unanimously voted by the quartette. A row of four miles brought us into camp, and an hour later four hungry men were feasting on nicely browned black bass.

It was well into the afternoon before the dishes were washed and everything put in order, so it was decided to not go out again until next day.

We all determined to try for woodcock next day, so the evening was spent in getting ready, or so much as we needed of it, and the remainder in seeing who should get the cinch.

Early on the morning of the second day we rowed over to Crane Island, where thousands of these birds come each year to rear their young.

This island has low shores, and it was not long after landing until we had found some of the coverts of the woodcock. By 10 o'clock, we had secured twenty-four birds. It was a shame to have these delicacies spoiled in cooking, so we rowed over to Indian Lake Hotel, in time to have them prepared nicely for dinner. Indian Lake, on the east side, is one of the nicest of the seven landings, where boats are kept to let; and the hotel proprietor knows how to care for the wants of sportsmen.

In the afternoon we ran over to the north side, near Sassafras Point landing, to try the ducks. They were there, but hard to approach, and we only succeeded in bagging seven birds. But we had located their feeding grounds, and next day, we were sure, we could do better.

After supper was over in camp, every empty shell was loaded, and we needed them, too, for the first three hours of daylight next day served to empty every shell. There were mallards, blue-winged teal, spoonbills and baldheads galore.

The remainder of the third day was spent on Black Lake trolling for black bass, and in the evening our team came to take us back to Wapakonetta. We were proud sportsmen. Over 100 ducks and 70 lbs. of black bass to carry back to friends in W.

This reservoir is a splendid all the year round place for sport, and, best of all, is State property, open alike to all who are willing to observe the game and fish laws of the State.

NATHANIEL R. PIPER.

SCHOHARIE CREEK SALMON.

AMSTERDAM, N. Y., Dec. 28.—*Editor Forest and Stream:* Mr. A. N. Cheney, under "Angling Notes" of the FOREST AND STREAM in Dec. 15 issue, speaks of a salmon which had wandered up to the Schoharie Creek from the Mohawk river this summer or fall. This may be true, but no one here believes it or had ever heard of it so far as I can learn. I have talked with all of our best informed and most ardent fishermen, and they all shake their heads. I have lived near and fished this stream for the past eighteen or twenty years, and know every stone and hole from its mouth to ten miles up, for I have waded and fished it hundreds of times for black bass. How a salmon or any other fish could get over the State dam at Fort Hunter during the summer I cannot imagine. To be sure there is a so called fishway there, but no one believes even a minnow ever managed to wriggle through it. Eight months out of the year it is high and dry above low water mark. Twelve months of the year it is filled with stones, gravel, corn-cobs and float wood. So far as I can learn the Fish Commissioners have cleaned it once in some eight or ten years. Once I believe the president of the Amsterdam Fish and Game Protective Association made an attempt to do it but could not do much. What rubbish he did take out some evil-minded person below kindly put back the next night, because I suppose he thought he would lose a fish or two. So knowing the above to be facts I think Mr. Cheney has been misinformed in regard to a salmon being seen or caught in this stream.

The Schoharie Creek is a natural water for bass. The water is pure and clear, filled with rocks. The gravel beds afford good spawning grounds, and the feed is abundant.

Good catches were made the past summer, and we wonder at it, for it is fished from mouth to source nearly every day during the season by scores of fishermen. If the dam at Fort Hunter was removed or a fishway properly built the fishing would be better. The dam does but little good to the Erie Canal except in the spring as a feeder. The rest of the year little water runs in because of the low water in the creek. Last spring an effort was made to stock this stream. The order was received at the State hatchery, and they wrote us that we would receive our fish later on, and would notify us when to look for them. We are looking yet. Perhaps some more favored individuals can tell what became of them. We cannot.

Will Mr. Cheney kindly inform me through FOREST AND STREAM where he got this bit of news, and by whom was this salmon taken, if taken at all?

ROBERT M. HARTLEY.

Massachusetts Association.

THE regular meeting of the Massachusetts Fish and Game Protective Association was held at Young's Hotel, Boston, Tuesday evening, Dec. 27. President Geo. W. Wiggins in the chair. The nominating committee presented the following list of candidates for office for 1893, to be acted upon at the annual meeting to be held on Jan. 11: President, Hon. Geo. W. Wiggins; Vice-Presidents, Ivers W. Adams, Jas. F. Dwinell, Edward A. Samuels, C. J. H. Woodbury, Augustus Hemenway, John T. Stetson and Horace T. Rockwell; Treasurer, Andrew J. Lloyd; Secretary, Richard O. Harding; Librarian, John Fottler, Jr. Executive Committee—Heber Bishop, Frederick R. Shattuck, Chas. G. Gibson, Wm. F. Keith, John N. Roberts, Wm. C. Thairlwall, M. A. Morris, Rollin Jones, W. G. Kendall, Henry H. Kimball, Wm. B. Smart and Charles F. Chamberlayne. Membership Committee—Edward T. Barker, Arthur W. Robinson and Walter C. Prescott. Fund Committee—Benj. C. Clark, Edward Brooks and Walter A. Power. Messrs. Humphrey Dyer, Thomas Dickson and Philip Prager were elected members of the association.

Game Protector Barber.

GREENWICH, N. Y., Jan. 3.—*Editor Forest and Stream:* My attention has just been directed to the article "Further Concerning Hudson River Salmon," by A. N. Cheney, in your issue of Dec. 29, 1892. As I have in preparation a full and conclusive refutation of the charges brought against me, I do no more at this time than beg your readers to suspend their judgment. I promise them I shall prove that so far as A. N. Cheney's information being as he says, "most reliable," is quite the reverse. I have never read so many falsehoods packed in so small a space as in the letter he quotes from his Mechanicville correspondent, as I shall prove to all in a later communication.

CHARLES H. BARBER,
Game and Fish Protector 17th District.

Fishculture.

NEW YORK FISHCULTURE.

[From Gov. Flower's Message.]

Propagation of Fish.

AT the last legislative session I vetoed two bills establishing new fish hatcheries. A personal investigation during the summer into the work of the Commissioners of Fisheries, including visits to some of the existing hatcheries, persuaded me that only three out of the five hatcheries are located properly for the successful propagation of fish. It is unfortunate that public money has been thus misappropriated. I suggest that hereafter, when in the judgment of the Legislature new hatcheries are needed, the location of the same be left to the discretion of the Commissioners of Fisheries. They are presumably better qualified by reason of their expert knowledge to judge of the comparative merits of different localities as places for fishculture, and such a transfer of responsibility would check a tendency recently observable in the Legislature to make the creation of one new hatchery depend upon the creation of one or more others.

The Commissioners of Fisheries are continuing the stocking of lakes and streams, and with apparently good results. Their efforts should be directed mainly, however, to increasing the supply of food fish. Merely as conservators of sportsmen's interests, their official existence and powers would scarcely be justified by the tax-paying public. The scope of their responsibility and the measure of their opportunity are much wider than is prescribed by any such narrow field. There are 1,500 square miles of water within the area of our State, capable of producing an unlimited supply of fish food, thus cheapening in a large degree the cost of living to the people, creating additional employment, and adding to the State's wealth. Every stream might be made to yield largely to the food supply of the farms through which it runs, and every lake might give means of livelihood to more men and furnish cheap, palatable food to more families. Liberal stocking of Lake Ontario with whitefish, pike and lake trout, assisted by proper regulations for catches, would build up an important industry in that vicinity, profitable alike to the fishermen and to the public.

As a step in this direction I am informed that about 10,000,000 whitefish will be placed in Lake Ontario during the coming year.

I bespeak for this subject the earnest consideration of the Legislature, believing that with comparatively small expenditure great good can be accomplished.

Oyster Culture.

Inspected with great interest during the summer the oyster beds along the southern shore of Long Island Sound, The State has the opportunity here to develop an important industry, giving employment to thousands of men, enriching the people by millions of dollars, and yielding, under proper laws, considerable revenue to the State Treasury. It was in 1887 that the act to encourage oyster planting in Long Island Sound was enacted, and up to that time very little had been done in the deep-sea cultivation of oysters, the planters who supply the markets relying almost entirely upon Virginia for sea oysters for cultivation. During the last five years the industry has made such rapid progress that now conservative estimates place the value of the oysters lying on the beds of Long Island Sound at \$1,500,000 and the number of men employed in the industry at 10,000. During the past year 116,000 barrels of oysters, valued at \$580,000, were shipped to Europe from New York city.

COLORADO TROUT WATERS.

DENVER, Col., Dec. 22.—*Editor Forest and Stream:* There were some inaccuracies in your note on page 516, of Dec. 15. The correct figures are here given: Mr. Kincaid, the Deputy State Fish Commissioner, went to Wellington Lake Nov. 24, and that afternoon took and impregnated more than four gallons of eggs, fully 200,000. On succeeding days he continued taking eggs until he had fully 750,000, which were successfully transported to the State hatchery near Denver. They had to be taken nine miles by private conveyance over a mountain road to the railway station; thence on the train to Denver, and then by private conveyance to the hatchery. This was done with the loss of scarcely an egg.

The Wellington Lake Co. have a hatchery at the lake, in which they have 500,000 eggs, being the full capacity of the establishment.

DENVER.

Winter Health Resorts in Montana.

WHY go to damp, chilly and malarial resorts of the South when you can find more healthful and picturesque locations in the West? And a climate delicious, healing and invigorating and entirely free from malarial poison. Where water, air, food and scenery combine in giving relief to bodily ailments. There is Hotel May at Boulder Hot Springs, heated with natural hot water, with splendid bathing privileges in water equal in many respects to the Arkansas Springs. Rates very reasonable. Boulder, Mont., is on the Great Northern Railway between Helena and Butte. White Sulphur Springs reached from Keibart, on the Great Falls branch of the Great Northern, and also noted for healing qualities. Write F. I. Whitney, G. P. & T. A. G. N. R'y, St. Paul, for further information.—*Adv.*

A Postal Card Will Do.

SEND a postal card containing your address to F. I. Whitney, G. P. & T. A. G. N. R'y, St. Paul, Minn., for publications and information of interest to persons looking for new locations. Farming lands, grazing lands, timber lands, mining lands and business chances in growing towns and cities.—*Adv.*

ASHBURNER's little book on the beagle gives information in regard to breeding, rearing and training. Sent to any address, postpaid, on receipt of 50 cents.—*Adv.*

IF YOU HAVE a friend, good and true, whom you would like to remind of *his* friend, fifty-two times in the year—once every week—why not ask us to see that a FOREST AND STREAM wrapper has his name on it, with your initials in the corner of the address label?

PAWTUCKET DOG SHOW.

This interesting little dog show was brought to a successful close Friday evening, Dec. 30. It was held under the auspices of the Rhode Island Poultry Association in the skating rink. Ostensibly commencing on Dec. 27, the dogs arrived in a desultory fashion on that day, but it was not until about 10 A. M. Wednesday, Dec. 28, that the benching was in order and the bulk of the dogs on their benches. Either owing to the dilatoriness of the express companies or the exhibitors themselves several dogs made their appearance during the day, but in many cases too late for the judging, which did not commence till after 1 P. M.

Mr. J. Otis Fellows was the judge, and once started, the judging continued until after 7 P. M., and was carried through in Mr. Fellows's usually careful and conscientious style. This is the first year that the society has held their dog show under A. K. C. rules, and while glory was the only reward, and for which an entry fee of \$1 was charged, many well known exhibitors availed themselves of the opportunity of easily putting a win to the credit of their dogs and thus placing them either into the challenge class or a step nearer to the desired goal. If the proposed new rules go through next year, this task may not be so easy. It is ridiculous on the face that small shows like this should count as much in a way as at New York, Chicago or Boston.

The building was well adapted for a show, light and well ventilated. The society, of course, is essentially an association of chicken men, and though the dogs are all very well in their way, to the cocks and hens belong the spoils. The poultry exhibit was a creditable one and nicely arranged; at the far end of the hall the dogs had their days. Austin & Graves's food was well relished by the dogs, and to Cynoline fell the duty of keeping the atmosphere of the show in a healthy state.

Although the classes were as a rule represented by two or three entries, still the quality of the show on the whole was fairly good, and many of the dogs on hand can hold their own in much better company. The presence of several well known exhibitors made one feel quite at home, and the New England contingent was out in force. Among the familiar faces I saw were Messrs. Robert Leslie, Walter F. Comstock, D. E. Davis, E. S. Eames, H. D. Freeman, F. W. Chapman, H. V. Jamieson, W. S. Clark, German Hopkins, E. H. Roberts, James L. Wells, Geo. W. Lovell, Fred Schmitt, Arthur Trickett, J. Clancy, W. Birch, D. B. Lemly, H. E. Elliott, Mr. Flynn, Jr., B. Alton Smith, Drs. H. T. Thurber and W. F. Kenney. The attendance was not very good on Wednesday, but improved during the rest of the week. Supt. Chas. H. Keyton, the only dogman among the officers of the show, a breeder of Gordons, etc., was attentive to the wants of the exhibitors, and had much to contend with in getting things properly fixed up. Pres. Hannon S. Babcock worked very hard as ring steward and stuck to his work till the last.

The club had sold the catalogue rights to somebody else, and it was money out of that somebody's pocket that the catalogues were not on hand till the day after judging. This made double work for the steward and every one else who had anything to do with getting the names of owners and dogs. Mr. Michael Flynn, Jr., busied himself during the day in getting in the ring and rendering efficient help. There were 124 entries and the awards were as follows:

MASTIFFS.—The first dog to appear as a mastiff brought a smile to the face of every one. His style was unknown to any one present, but he partook of the Leouberg as much as anything. Prize was withheld, but it was afterward learned he was entered in the wrong class; but as he did not appear again I don't know what became of him. The real mastiffs were eventually found and judged after the St. Bernards, but we will put them in their proper place. R. Lawrence Guild's Leo was the winner in dogs, repeating his victory of last year, his head is not short enough and expression rather sour, light in bone, but likely enough otherwise.

ST. BERNARDS (ROUGH).—Quite a good dog class (4) headed by the Brooklyn winner Fred Schmitt's Otos and Roland, Jr., they both looked exceedingly well, at the same time I liked John L. Graham's Kamehameha I. (late Wyoming Prince), though his name is certainly unique, but he has the best head in the class, lots of quality good legs, nice color and coat, body a bit short and tail curls over; he took third. J. Clancy's Barry vhc. or fourth, rather sharp in muzzle, good body, bone and forelegs, but straight behind and feet turn out a little. In bitches (2) Fred Schmitt's new purchase, Lady Bountiful won, she is good sized, would do with more depth of body, head not badly shaped if there was more of it, heavy black shadings, a good useful sort. J. Clancy's Daisy, second, lacks quality, is small and muzzle too sharp, coat curly. In dog pups Barry was alone and in bitches Daisy also scored without competition.

SMOOTHs.—E. H. Moore's Melrose won hands down in open dogs, carrying more flesh than when shown at Rochester. Edgar Redmond's Abe, second, while better in coat than the winner, loses to him in every other essential, moves well but bone light and muzzle as well, and not correctly shaped in quarters. In bitches (1) E. H. Moore's well known Miss Alton was alone, she shows a better coat than her brother. This completed St. Bernards, no challenge entries.

GREAT DAXES.—Two present but only one with much pretension to type. New York Pug Kennels' His Duke was alone in dogs; He won second at Brooklyn. Light in bone, snipey muzzle, skull too broad, in fact not a winner; in bitches Nora showing a good deal of quality and a nice head, second in whelp, is a nice stamp, grand quarters and thighs, head would do with more length, perhaps.

GREYHOUNDS.—Quite a neat little display, though nothing out of the average. In open dogs (2) D. M. Lemley's Imperator, very short in back, not quite good in head and loin and quarters fall away too quick, was placed first; John Sharkey's Veno, a son of the winner, light in loin, out at elbow and bad

feet, was liberally dealt with in getting c. D. B. Lemley's Idlewild and Catchfly won first and second in the bitch class (2). Idlewild is from Roger Williams' Kennels and was at Lexington last year, as a puppy; she has a good head, nice quarters and loins, is well ribbed but feet are not compact enough and she is light of bone. Catchfly is too long in loin, throws her elbows out, has a screw tail and too much stop.

POINTERS.—These came next and made a very creditable display. In challenge heavy dogs, an old friend, George W. Lovell's Pontiac, won a bloodless victory. His shortcomings are well known to all interested in the breed. Robert Leslie's Belle Randolph also took another step toward the title of champion; she was looking well, too, and her owner was just as proud as ever. In open dogs, Harry Dutton's field trial dog Duke of Kent was alone, and won. Dash A. and Nick C. were also shown in this class, but afterward the weights were divided. In bitches, George W. Lovell and Leslie K. Morse's Lilly and Tempest Queen were given equal first, though I think that the balance of merit was with the last named; she is a litter sister of Duke of Kent; her head has too much stop, but muzzle is deep and square, is well ribbed; in fact, is much better than Lilly behind the head, where the latter is light throughout. Lilly has a better head and expression, but muzzle not deep or square enough. Vesta C. was absent. In light weight dogs (2), Geo. W. Lovell's Dash A. had little difficulty in scoring over W. W. Bainbridge's Nick C., who could get no nearer to the money than vhc.; he is a bit dish-faced and light in bone, weedy. In the confusion we do not know whether Mr. Lovell's Lass of Kippen was judged or not. I could not find her afterward.

ENGLISH SETTERS.—Competition was keen here and "Uncle Dick," in the confined space, had to move carefully. In challenge classes there were no dogs, but J. W. Lawson's Blue Nell, well known, had a walkover; she looked well, too. In open dogs (8) the struggle between J. L. Wells's Revery and A. J. Lewis's Prince L. was hard, with the decision finally in favor of the big dog Revery, who is rather coarse but built on workmanlike lines; he is well known, and so is Prince L., who excels him in quality, chest, coat and head. Reserve went to Fred H. Clarke's Claude, winner of All-Age at Assonet the last month; he is a bit straight behind, good bone, a short-bodied dog, rather cloddy, with a plain, blunt head; still he can go in the field. Chas. H. Goodell's Rock

"LAD OF RUSH SCORES AGAIN."

A scene in the Central Field Trials, 1892.

Noble, vhc., is light in body and needs more rib. Nantucket Kennels' Gladstoner deserved his vhc.; faulty in head—muzzle, good front, nice body, though a little faulty in loin. Dr. James E. Hiere's Albert Beau, h.c., faulty forelegs and feet, head rather coarse, throaty, good action. In bitches (3) Fred H. Clarke's Jessie Noble II., first, is a well known winner, rather plain and short in head, elbows too tucked in and would do with more rib. J. W. Lawson's Princess Novel, second, has won honorable mention before; she has good body, legs and feet, plain head, not enough stop. In puppy, dogs (1), A. J. Lewis's Fred B. had a walkover; a promising son of Prince L. F. D. Freeman's Jean, transferred from open dog class, won in bitches; she has short legs, a rather coarse head, and coat is not correct—not flat enough. A. J. Lewis's Nellie, second, has a better head, better ribbed body, but is a little wide in front, still I thought she won well.

IRISH SETTERS.—With one exception, well-known. They were headed by John J. Scanlan's Inchiquin, looking quite himself. In open dogs (2) Glendyne Kennels' Glen Jarvis, in good shape, won easily. Thos. Cullen's Elcho W., second, very rich color, but his short neck, very drooping stern and rather plain head were too much for his good bone and feet to counteract. The other two entries were absent. Glendyne Kennels scored again in bitches with the well-known Sedan, in anything but show shape, not having recovered from recent maternal duties. J. B. Blossom's Duchess was absent.

GORDON SETTERS.—The entries in these classes were quite numerous and the quality a good average. Smith Brothers' Rexmont had a walkover in challenge dogs and James B. Blossom's Heather Bee, absent at the time of judging, was allowed her challenge win afterward. In open dogs, through absence of the other three entries, Miss S. A. Nickerson's Count Noble took barren honors; he was the Toronto winner and was in beautiful show shape. Henry O'Reilly Fan but for Michael Ryan, Jr.'s Beauty R. would have had a walkover in bitches; the former leads in ribs and straightness of forelegs, is rather light in muzzle, neither have puccinells. For the special, the only one given in the show, Smith Bros' Rexmont won, being better in head and quarters than Count Noble.

COCKER SPANIELS.—A rather mixed lot. The winner in dogs (3) Dr. J. E. Hair's Donovan, has been repeatedly criticised; he beats a nice little red dog, C. G. Browning's Cherry Punch, by the well known Cherry Boy, in head and coat. The other entry was too leggy even for our Hornellsville friend. There was only one bitch, H. D. Brown's Flush, first, nice head, rather long, though, as well as body, but stands on good legs; short of coat. Bull-terriers were judged next, but taking the catalogue we come to

FOXHOUNDS.—Here Dr. Thurber had his usual innings. In dogs (3) the judge got the long-backed Elite first, Deacon second and Parson third. I liked them just the other way about. Elite is a nice fronted dog, but too long-waisted for a hound. Deacon is much better, but inclined to cloddiness, while little fault can be found with Parson behind the head, small, perhaps, but he is on the little and good principle. Dr. Thurber's well known Femur was alone in bitches.

BEAGLES.—It was a pity Mr. Jamieson's dogs did not arrive in time, as then the competition would have been more interesting; as it was, the Glenrose Kennels did most of the

winning. In 15th. open dogs Twintwo was absent in challenge class, but given her prize when she arrived, as there was no other entry. F. W. Cielfield's Deacon Tidd was judged alone at first, but F. W. Wilbur's Music was transferred and class rejected. Deacon Tidd, first, is better in head and hindparts, faulty in forelegs. Music, second, fat and heavy in front, head snipy and plain. In bitches Glenrose Kennels' Parthenia was ready for any competition, but in Vic R.'s absence had to do it alone. Under 13th., Glenrose Kennels showed and won with Paderewski, reserve at Toronto. Forest Hunter, the other entry, absent. That swift little morsel Butterfly, from the Glenrose Kennels, and which "Uncle Dick" allowed was the best he had seen that day, also had this class to herself; as usual she was a little fat, but very pretty. The other entry, Queen Racer, was absent. In puppies F. W. Cielfield showed Deacon Tidd.

COLLIES.—We were quite surprised to see such a good turnout, there being in all thirteen entries. No challenge entries. In open dogs (4) Albert V. White's Fordhook Climax won. He has a ring tail, nice head and front, coat soft. John C. Phillips' Major McDuff, second, but for his large and drooping ears I liked him best; better head and expression; short of coat. Lambert Stansfield's Scot II., v. h. c., carries his tail even, has a coarse head, but good coat, legs and body. The bitch class numbered four, the winner turning up in J. L. Lincoln's Maritana. She is coarse, fat and cloddy. Lambert Stansfield's Highland Floss has a much better head, longer and cleaner, far more quality, but is out of coat at present. B. Alton Smith's Al De Bur Daisy, reserve, is a nice clean, long head and good ears; would do with some rib; fair coat. Lambert Stansfield's Fordhook Dahlia, v. h. c., is small and a bit stumpy in body and head in keeping. In dog pups W. M. Peckham's Leo was not good enough for first and only given second; ears long and carried close; coat inclined to curl. Bitches brought out a little crowd of five, the winner being Al De Bur Daisy. Second, Al De Bur Flurry, by Christopher; good head and carriage of ears. Frank B. Hornby's Meteor, reserve, small. L. Stansfield's Rose, v. h. c., very promising; head and ears carried like a veteran. Ghent Holdsworth's Aurora, h. c., is also young, and in the woolly state, a bit coarse.

FOX-TERRIERS.—No challenge entries; open dogs (3) saw the fight, if fight it may be called, between C. Rathbone's Beverwyck Pinester and The Grove Kennels' Wilton Tripper, the former well known, and was in good fettle, while Tripper is only a pup yet but coming on nicely; he was second in puppy class at Brooklyn, a little on the by yet; F. Noble's Jack was given more than he deserved with three litters, poor head, worse front, big ears, etc. Open bitches (3). Here there was a tight run for first place between Byrne & Bowman's Blackrock Belle and Grove Kennels' Grove Lily with the verdict in favor of the latter; neither are in the front rank but the "only German's" masterly handling pulled it off; Blackrock Belle has a fair front, feet should be closer, bit long in body, ears fairly carried; Grove Lily is cobby of the cobby, bit heavy in front and ears might be carried better, and her muzzle is weak, but she can hold herself well when she likes and she did it just in time at Pawtucket. W. H. Nerr's Nettie v. h. c., weedy, snipey head, big-eared bitch, small size. Wilton Tripper won in dog pups.

BULL-TERRIERS.—Here was a motley crowd, a little bit of everything; two white dogs among them, and these were judged first, with the verdict in favor of H. M. Howe's well-known Comet II., followed by P. C. Pettit's Aristocrat. Neither are very good in front, but I thought Aristocrat had it in body; heads are about on a par. Then E. C. Spink's Boston terrier was given a first; a neat little chap. In bitches, H. M. Howe's Grove Duchess, in the absence of Lady Melville and Lowmont Kit and E. H. Chadwick's Fanny Tyrant had a walkover. In pups W. H. Nerr's Tiger, a fawn-colored dog of the bull-terrier order, was wrongfully given vhc. "for a fighting dog." Mr. Fellows's good heart got the better of his judgment here, especially as he had withheld all mention from a similar one in the open dog class; Boston terriers are bad enough, but this animal was worse.

IRISH TERRIERS.—A capital lot, some of our best, as might be expected with Mr. Comstock's kennel in the district. W. J. Comstock's Boxer IV. walked off with the challenge blue ribbon for dogs, while his Dunmurry was absent. In open dogs (4) competition was keen, W. J. Comstock's Hanover Boy eventually beating by his better front the bow-legged Brooklyn winner, Crib, now owned by Dr. Kenney. W. J. Comstock's Killaloe, vhc., good coat, body and legs, nice head and type, but small-sized. Dr. Kenney's Mickey K. shows too much black. In bitches (1), first to W. J. Comstock's Crate, who now enters the challenge class; short of coat now, just after weaning pups, but she looked well. Dr. Kenney also showed some pups—Jerry and Kathleen. They were firsts in their classes.

BULLDOGS.—Only our old friend Carisbrooke, owned by C. A. J. Smith; this dog looked fit and well.

CHESAPEAKE BAYS.—Two fair specimens shown by Nantucket Kennels; the dog Judge has a good coat but seemed leggy and long in head to the general run of these dogs. The bitch Dawn is small; both won first at Omaha as they did here. A number of Italian greyhounds were entered but had not turned up when I left, and in the miscellaneous class Mr. Chapman expected a basset to complete with a Dalmatian. The spotted one was judged but his spots ran in too much to be a good one; he got first prize, and this completed the judging. H. W. L.

RUSSIAN WOLFHOUNDS.

Editor Forest and Stream:

I have just received a letter dated Moscow, Dec. 10, from an acquaintance, who is an authority on the Barzoi, which partly reads as follows:

"One of our rich noblemen, young and lavish in the expenditure of money, intends to send his entire kennel of Barzois with the hunting outfit to Chicago for competition in the World's Fair. The gentleman is particularly fond of Americans and their customs, and the only thing that could at this time prevent his coming is the fear that it would not be properly appreciated by the busy Americans. He has the largest kennel of Barzois in Russia. The uniforms of his native huntsmen are richly decorated in true Russian-Caucasian style, with pure solid silver ornaments, partly inlaid with precious stones. The horses are the small durable Puzte horses, trained for the wolf hunt. With the native huntsmen and the highly characteristic details it will be a most picturesque outfit.

"The stirrups, for instance, are of solid pure silver, weighing 5lbs. Remember you will have an opportunity to consult the old native handlers of the pack on the true points of the Barzoi; you can arrange a wolf hunt on America's prairie and have lots of sport out of this. All I want you to do is to ask your friends of the doggy world, who are interested in the Barzoi to write you, as secretary of the Great Dane Club, expressing their opinion as to whether or not the idea seems laudable to them, whether the sacrifice His Highness is going to make will serve some purpose, i. e., whether American sportsmen care anything for the proposition made by him.

"He does not care what it costs, but seems to be after the honor of the thing. Can any of the dogs—if prices are reasonable and if the dogs are superior to what you Americans have seen—be sold there? We would not care to take them all back."

So far the letter. Will the Barzoi fanciers address me at 426 Produce Exchange, New York city. The secretary of the National Greyhound Club will also please let me hear from him. I only wish the great Dane people would ever get such an opportunity. A. H. HEPPNER.

New York City, Jan. 1, 1893

DOG CHAT.

New A. K. C. Regulations.

In the proposed new regulations for the guidance of any clubs wishing to hold shows under A. K. C. rules there are some good suggestions.

"Rule I. Applications for dates must be filed with the secretary of the American Kennel Club for approval by the executive committee or such sub-committee as may be empowered to grant dates. Such approval, however, shall be subject to the subsequent indorsement of the premium list as being in accordance with the requirements of the American Kennel Club.

"II. Applications for dates must be accompanied by a fee of \$10, which will be forfeited in the event of the show not being held, or failure to comply with the requirements of the American Kennel Club as set forth herein.

"III. Sec. 1. Advanced proofs of the classification should be submitted for indorsement at the earliest possible moment, in the drawing up of which the following regulations must be observed:

"Sec. 2. The show shall not extend beyond four days, and, should a Sunday be one of those days the show shall not be open to the public on that day.

"Sec. 3. Entries shall close not less than ten days prior to the first day of the show, and any club accepting any entry after date (unless postmarked on the date of closing entries) shall be subject to a fine of not less than \$10 for each entry so accepted. No alteration of the date of closing shall be allowed.

"Sec. 4. The classification shall be confined to established breeds, which may be divided by sex and otherwise as provided for in the dog show rules.

"Sec. 5. No challenge first prize shall be less than the corresponding prize in the open class for the same breed, unless such prize exceeds \$15, in which event the challenge first prize need not be over that amount.

"IV. Sec. 1. The name and credentials of the proposed veterinary surgeon must be submitted with the classification, and if satisfactory he will be licensed by the American Kennel Club to act in that capacity.

"Sec. 2. A qualified surgeon is a graduate of a recognized college entitled to confer the degree of V. S., or one who, without having a diploma, has had at least five years practical experience to fit him for the practice of his profession.

"V. Sec. 1. An additional fee of 1 per cent. on the total of cash prizes offered, including club kennel prizes, but exclusive of all special or donated prizes, shall be forwarded with the proposed premium list. If the premium list is not indorsed as being in accordance with these rules this fee will be returned.

"Sec. 2. No show can be held under the American Kennel Club rules at which the prize money is less than \$500."

The last is a necessary and wise precaution.

The next rule says that no puppy shall be shown under six months of age, or a penalty of \$10 for each puppy so exhibited will be enforced. A move in the right direction.

"VI. In addition to the exact copy of the indorsed classification, the dog show rules of the American Kennel Club, and a list of recognized shows corrected up to the date of closing entries, the premium list must give a list of the officials under whose management the show is to be held, who, with the exception of the paid employees, shall be held responsible for the payment of all prizes within sixty days of the last day of the show.

"VII. No special prize shall be offered except for dogs of established breeds, and none can be offered unless publicly announced before the regular judging has commenced.

"VIII. All prizes must be in accordance with their description in the premium list. Prizes of gold or silver must be of the purity of United States coin.

"IX. No person under sentence of suspension, disqualification or expulsion can be employed in any official capacity, or exhibit, or take a prize, or act as agent for any exhibitor.

"XI. No entry can be accepted of any dog not marked 'listed' or 'registered' on the entry form, as per dog show rule II. Subject to a fine of \$5 for each offense.

"XII. A club may act as agent for exhibitors by accepting the fee for registration or listing, but must make immediate returns thereof to the American Kennel Club. A penalty of \$10 for each day will be enforced for any delay beyond three days from the date of closing entries, in making such returns to the American Kennel Club."

That some such regulation is needed there is no doubt but the above seems rather stiff.

The arrangement of the catalogue entries must be the same as provided for in the regular rules.

"XIV. No record of wins at any of the recognized shows shall be permitted in the catalogue and it is optional with the club to give any, except in the case of any challenge entries which must be catalogued in accordance with rule XVIII. of the dog show rules."

Only A. K. C. Stud Book numbers are to be given in the catalogue and the rules as to objections and suspensions are about the same as in the regular rules.

The proposed alterations in the rules governing dog shows now in force are as follows: To Rule III, is added: "If the dog is already registered in the American Kennel Club Stud Book, the Stud Book number of the dog should be given with the entry."

In Rule XIV. the last word, "discovered," is altered to "alleged." The rule as to challenge classes reads, italics denoting new matter:

"The Challenge Class shall be for all dogs having won four prizes in the open class at recognized shows. One of which must have been won at a show offering not less than \$1,750 in cash prizes. A dog having won three prizes in this class shall have the privilege of the title of champion, without further competition.

"The Open Class shall be for dogs of any age over six months which have not already qualified for the Challenge Class, and for which no Challenge Class has been provided.

"The Novice Class shall be for a breed for which a regular class has been provided, and for competition in which a dog shall not have won a first prize in an Open or Novice Class at any recognized show.

"The Puppy Class shall be for all dogs over six months and under twelve months of age, and no entry can be made for one under six months.

"The Miscellaneous Class shall be open to all dogs of established breeds for which no regular class has been provided in the premium list. Entries in this class must specify the breed of the exhibit.

The Selling Class rule is omitted.

"XVIII. In entering a dog in a Challenge Class it is necessary to specify on the entry blank a sufficient number of first prize winnings to entitle it to compete in such class until such time as it has won in a Challenge Class, after which one challenge win shall be sufficient."

In old Rule XXVII. the same wording is kept until the end, where, instead of "in the kennel name" the new rule reads in their names.

Changes, amendments, alterations or suggestions are invited to be sent to the secretary before the annual meeting, to be held in February next.

Brunswick Fur Club Meet.

Those sportsmen fond of fox hunting are invited to attend the fourth annual meet of the Brunswick Fur Club, which will be held at the Westminster Hotel, Westminster, Mass., commencing Jan. 16 and continuing one week. The hotel is

two and a half miles from Westminster station, on the Fitchburg Railway, and stages connect with all trains. The accommodations for hunters and hounds are excellent, and the rates very reasonable. Westminster is situated in an open, rolling country, about four miles from Mt. Wachusett, and is undoubtedly one of the best hunting regions in New England. The officers of the club will arrive at Westminster on the first day of the meet, and the election of officers for the ensuing year will occur at 8:30 P. M. of that day. Two important questions will be discussed at this meet, viz., the advisability of changing the running rules for the field trials, and the selection of trial grounds for next autumn. This is essentially a hunting meet and members are requested to invite all fox hunters in good standing to attend. Nearly all the fine prize-winning hounds of the recent field trials will be present, and some great running may be expected. Mr. J. H. Baird Auburndale, Mass., is the secretary, and from him all other information can be obtained.

Pawtucket Dog Show.

There is certainly something radically wrong in the way some of our express companies handle the dogs entrusted to their care. Complaints were long and loud at Pawtucket on this score. There was Mr. Jamieson waiting anxiously for the dogs that never came till too late for business. Mr. Blossom's dogs were also delayed. Shipped from New York Tuesday A. M., they should surely have reached Pawtucket by Wednesday morning, instead of that they arrived Wednesday night, also too late for business. This was bad enough, but their last state was even worse than the first, for, shipped on Friday night from the show, they did not reach him in New York till last Tuesday morning. This was not only exasperating to him but cruel in the extreme to the dogs, who would have had little provision made for them for such a short journey—five hours by rail.

The Grove Kennels under the new partnership made its debut at this show and "our only German" had one of his old time twinkles on when he "added up the score, second open dogs, first bitches, first puppies." As if this was not luck enough, Mr. Purroy, Mr. Hopkins's partner, on New Years eve received his appointment to a much higher posi-

MR. LACY'S NOTION OF A HEAD FOR THE OUTSIDE COVER.

tion in the fire department of New York together with increased emoluments. Chief Purroy has had charge of the station at Chambers and Center streets, considered the hardest and most important in the city, and the efficiency of his men was proved when they won the prize at the horse show for shortest time record in coupling up for a fire. But we are getting away from Pawtucket.

Mr. Babcock, the president, informed us that at Providence last year the club lost \$300 over their show, owing to the very poor attendance. They thought this year by giving no money prizes for dogs and holding the show in a manufacturing center like Pawtucket they could command the attendance of a class of people that they could not get in Providence. Another scheme of his was to let the children from the schools in free, and the first afternoon these embryo fanciers overran the building. These little chaps were expected to go home and tell their daddies the wonders they had seen and the daddy would come along with his 25 cents before the week was out. Sharp people in New England. If the club comes out at all right, a good show is to be given next year. Before we leave the subject we must draw the attention of these chicken clubs to the necessity of getting premium lists in time, and further to place them in the hands of dogmen who have and are likely to enter dogs.

The Newfoundland that unwillingly went over the Niagara Falls recently has become the cause of a peck of trouble. It seems a party of actors were viewing the falls, and when near Luna Island they saw the dog come to the water's edge to drink. It slipped and despite every effort was carried over the falls. The party rushed to the overhanging cliff and perceiving the dog buffeting the waves at the edge of the Cave of Winds, descended and succeeded in rescuing the exhausted animal. Carrying him upstairs, they found that beyond exhaustion and some deep flesh wounds the dog had sustained little damage. A physician was summoned and attended to the dog. Out of the crowd slipped a man who said he owned the dog, and as the actor, Mr. Lissner, had rescued it from almost certain death he would make him a present of it. The dog traveled with the company, and the actor taking a personal interest in the dog made arrangements with a liveryman at Warsaw, N. Y., to take care of it till its wounds were healed. Last week Mr. Lissner sent a man for his dog, but the liveryman said he did not know where it was. Then Lissner came on himself, and to him the liveryman said he knew where the dog was, but that a dog that had gone over the falls and come out alive was worth money, and he must pay \$300 before he got the dog. Lissner having received the dog from the ostensible owner thought he was justified in getting out a warrant for the arrest of the dog abductor. The man could not be found, but on Friday he returned to Warsaw, and with him the superintendents of police of Niagara Falls and Ontario and a policeman who claimed the dog was his. Then the policeman had Mr. Lissner arrested on a charge of petit larceny for taking the dog away from the falls. They took Lissner to Niagara and he was held by a justice of the peace to answer the charge. Verily, the way of the good Samaritan seems hard.

A New Kennel Club at Akron.

Yet another kennel club has been organized and 1892 kept up its record to the finish. The Akron, Ohio, people interested in dogs have formed a kennel club and consolidated with the Northern Ohio Poultry, Pet Stock and Kennel Association. They have claimed the dates Jan. 25 to 28, for their first dog show. The secretary, Mr. W. A. Cauldwell, in wishing FOREST AND STREAM a Happy New Year adds that the club has applied for admission to the A. K. C., but missed the last meeting by one day. They will show under A. K. C. rules, however, and hope at the next meeting of the A. K. C. that they will be admitted and their views allowed to

count. The continued organization of these associations in the smaller towns is bound to have an educational influence in kennel affairs that will be far reaching and of permanent value.

Some New St. Bernards.

We took a run up to Col. Ruppert's kennels last Monday, ostensibly to see the new arrivals, but really to find out how Mr. Booth was getting along with the puppy question with which he was confronted the last few weeks of the old year. We found him up to the armpits with work, legal holiday though it was. He showed us the pups first. There was Lady Gladwyn nursing a litter of five by Leister, some smooth, others rough. They are really grand, three dark colored ones being exceptionally good both in head and size, and all well marked. They are three weeks old now. She was also nursing one of Bellegarde's pups by Aristocrat, of the same age. In the next compartment were five of Miss Anna's darlings, by Alton, Jr., and one or two of them will surely turn out well if they live; these are also three weeks old. One bitch pup is simply grand in head, very deep, square and broad, and has lots of bone. Miss Anna is also fostering one of Bellegarde's. This bitch had a sorry time of it, several pups being born dead and more than ordinarily large, having to be taken from her; she was consequently entirely unfit to nurse them herself. In the next place were two of Ellen Terry's babies by Otos, very prettily marked and already sold. Mr. Booth had an anxious time with all these bitches, whelping within twenty-four hours, and the night watch was kept up for a fortnight after their birth. Then he brought out two of Bonnie Kingston's pups, by Aristocrat, only two weeks old, but all looking as if they had a good mother.

The three new ones arrived on the s. s. Gallileo, that came in last Thursday after a voyage of twenty days. That they must have had excellent care is proved by the fact that they are in splendid flesh and ready to show any time. Kingstonian Countess is a litter sister to Mrs. Smith's new dog Eboracum, by Scottish Prince—Lady Glen. She is exceptionally good in body and has a very taking head, besides standing and moving on a good set of legs. She is only 17 months

old. Kingstonian Beauty next came forward. She is by Lord Butte out of Altonella, the latter now owned by Mr. A. H. Moore. I never saw a much better built bitch, very strong in loin and quarters and deep in chest and body. She carries, if anything, a better head than Countess. The dog, Kingstonian Count, then came forward. He is 18 months old, by Scottish Prince out of Septima (first at Oldham). This is the same breeding as the would-be-great-dog Premier. Count stands nearly 34 in., has immense bone, rich color and markings, great depth of chest, and only needs time to make up into a winner. His expression is especially pleasing and intelligent. This kennel's Baroness Cardiff was bred to Marvel last Tuesday week, and Sigma, who is the standby of the kennel in the way of puppies, was also mated to this dog last Thursday. She is an excellent mother, her last litter, by Aristocrat, numbered eleven and all raised, Sigma doing her duty by seven of them. Altogether Mr. Booth and his aide-de-camp, Albert, have their hands full and won't hear of dog shows till next month's show at the Garden. The dogs we must say all looked in pink of condition, and considering the rather confined space they are kept in it must be a hard matter to do justice to so many. A new kitchen has just been built and a steam boiler erected for cooking purposes, which will ease the work considerably.

A New Shooting Club.

On Friday afternoon a meeting will be held at 19 Ann street, by several sportsmen, among whom are members of the Boiling Springs Gun Club, George Jarvis and John A. Finlayson. The idea is to organize a sportsmen club for shooting and fishing, with grounds and club house about three miles from Morristown, N. J. They already have the option on a large farm and almost any amount of shooting ground can be leased in the surrounding country. There is plenty of quail, excellent woodcock shooting and good black bass and trout fishing on several streams running through and near the property. If the club is organized Mr. George Jarvis will have charge of the property and club house. A good selection. By the way, Mr. Jarvis returned last Friday from his jaunt after North Carolina quail. He reports great sport and is particularly enthusiastic over a young English setter owned by Mr. Finlayson and by his Rock Belton.

Paul Gladstone.

Mr. Joe Lewis always had a soft spot for champion Paul Gladstone, and now we learn he has purchased this noted dog from Mr. S. L. Boggs. The last time we saw "Paul" he looked almost as well as ever and seemed good for many a day yet, while his nose seems just as impressionable as ever.

Elmira Show Dates.

Mr. C. A. Bowman, secretary of the Elmira K. C., writes, "Please change dates to March 22, 23, 24 and 25, 1893. The Elmira Kennel Club have made three applications for dates, the first one last February, and have just been awarded the above, while Washington did not think of holding a show until Dec. 15."

A New Kennel Club for Chicago.

A dispatch from Mr. Waters informs us that a new kennel club was formed in Chicago Jan. 2, to be known as the Chicago Kennel Club. It is intended to hold a show in February. Several members of the Mascoutah Kennel Club are interested in the new movement. We thought Chicago could scarcely forego a show on its own hook this year.

Leicester Sold.

We understand that Mr. D. P. Foster has sold his noted St. Bernard, Leicester, to a gentleman whose name is not given and who has him at present "on trial." The Dutchess Kennels were after him.

We certainly supposed Mr. E. H. Moore imported 'Cambrian Princess,' as we remember his letter at the time leading us so to understand. However, honor to whom honor is due. Mr. C. A. Lougest, of Franklin, Mass., imported this bitch in May, 1888, and sold her to Mr. Moore shortly after. At the same time Mr. Longest brought over Gerda and sold her to Mr. Winchell, who bred his celebrated Black Prince from this bitch. He has at present in his kennels two daughters of Gerda, one, Gerda II., threw a litter last July and another on Christmas Day, both to his Ingleside Maximilian, thus breeding two fine litters in five months. His Ella, a litter sister to Gerda II., also whelped recently to the same dog.

We have received from Mr. Paul H. Gotzian, of St. Paul, Minn., an excellent photograph of the noted setter Monk of Furness. This picture is a much better one than that made in England, which did not do the dog justice at all.

The movement in kennel affairs in Detroit is already bearing fruit. Now we hear that Miss Griffin of that city is to make her debut as a St. Bernard breeder. The members of the fair sex are always welcome to the fancy, for they tend to elevate the tone of our shows and afford themselves a pleasant means of recreation as well as profit, for somehow the fair sex manage to make dog raising pay when others fail. We can name several instances. Miss Griffin has started her kennel by purchasing the good will and dogs of the Royal St. Bernard Kennels and Dudley Kennels of Detroit, consolidated both under the name of Belle Isle Kennels. Miss Griffin has also purchased several dogs from the more noted kennels. She is a lady of high intellectual and social standing as well as pecuniary ability, and her debut as a St. Bernard breeder adds one more able enthusiast to the long list of admirers of this noble dog. We wish her every success.

M. E. O. Damon writes enthusiastically about a five months' pup, Fake Corsair, by The Corsair—Jeannie Stevenson, that he has in training in North Carolina. Fake made his first point Dec. 18 and held it till birds flushed. In two hours' work during two other days he made 16 points on birds, and is particularly gratified that a puppy so young should be so precocious. His young dog, The Laggard, will run at the Southern trials, and he hopes to make Rod's Sue and Dot Rogers the belles of the year, change names, as it were. Wisely, however, he concludes his letter by remarking: "But in a trial there is many a slip." There are.

There are anxious inquiries about the Lewiston medals; it is high time they were put in the hands of the rightful owners or another show will be coming on to further compromise matters. A well known exhibitor was in our office last week asking if we knew what had become of the English Setter Club medals. When an exhibitor has to wait several months for a prize it takes the gift off the pleasure of winning it. We know that it is only requisite to call the attention of the officers of the club to the facts to have the matters properly attended to.

A quarterly meeting of the National Beagle Club will be held at the Astor House, New York city, Jan. 16, 1893, at 4 P. M.

There is said to be a new scheme afloat, or about to be floated. The float will come off at Gloversville. They do say Dr. Perry can tell us something about it—if he will.

Mr. A. D. Stewart, of Hamilton, Ont., did not keep his imported fox-terrier Ruby Domino very long, for now we hear he has sold him to Mr. E. K. Hart, of New York.

Another prize-winning Canadian fox-terrier has changed hands. Mr. J. W. Morden having sold his bitch Zig Zag to John Biggs, Cathcart Kennels, London, Ont.

The spectacle of Psosoi huntsmen riding down the festive wolf in silver stirrups weighing several pounds will be unique and beat the Montana statue all to pieces. There is no question that they will take. At any rate it seems an even chance that we shall see some of the Russian dogs, with native trimmings, in the Windy City next June.

We note among the new offers in our business columns the following for sale items: St. Bernards, W. M. Stuke, E. S. Brewer; setters, Oak Grove Kennels, Mrs. J. E. Dager, J. E. Dager, 24 East Twelfth street; fox-terriers, C. F. D.; beagles, W. E. Deane, W. F. Rutter, Jr.; pointers, W. H. Hyland; cockers, George Bell. The Charlottesville Field Trial Kennels offer at stud their champion Rip Rap and Exile; J. E. Dager offers the services of champion Cincinnati and Toledo Blade. The Oak Grove Kennels announce the services of their dogs.

ANOTHER GUN-SHY DOG CURED.

Editor Forest and Stream:

An item in FOREST AND STREAM of Dec. 29, "To cure gun-shy dogs," recalls to mind my experience. I had a fine pointer pup, well home broken, but never shot over. On taking him into the field for prairie chickens, the first shot I made he left, running back an hundred yards or more. I called him to me, but at every shot he would repeat the act. I left the field and the next evening I tied the pup to my waist and taking the rifle, went into the timber, intending to fire at a target as an experiment, to see if by that means I could not accustom him to the gun. A bird sat on a bush. It very much attracted the attention of the pup. I killed the bird and ran to it. The pup was very much pleased to get hold of the bird. I did not fire again. The next evening I went into the field. A night-hawk would make frequent dashes at the dog, which interested him much. I killed the hawk and it fell near the pup. I had no trouble after that time. I have never been able to account for that timidity. He proved to be a dog of more than ordinary courage, would unhesitatingly grapple a wounded buck, having trained him to aid me in hunting and securing wounded deer. H. L.

TONAWANDA DOG SHOW.

THIS little show was held Dec. 27 to 30 at Tonawanda, N. Y., under the auspices of the Niagara Fanciers' Association. There were in all about 50 dogs, litters of puppies, etc., benched. The show was well attended. Dogs were fed on Austin's biscuits and Sanitas did the disinfecting. Mr. W. Wiener, of Buffalo, acted as superintendent. Mr. Fellows, our informant, says the people were nice, and everything was kept clean and sweet. His notes on the dogs are as follows:

ST. BERNARDS.—In rough coats first went to Mrs. Stettenbentz's Hesper's Son, in better shape than at Toronto; also all specials in non-sporting class. Smooths.—First, A. A. Helmer's Chang, good mover, bad head. Second, Kuna, a puppy.

MASTIFFS.—First, A. Amsden's Caesar, fair type, good head, nice mover. Second, M. R. Weiner's Beech Grove Jim, light and shelly, too long in head. Vhc., Greenough's Don Pedro, long head, bad open feet, weak in pastern.

GREYHOUNDS.—First, and special for best in sporting class, Manatang Kennels' Thacher, very good all round. Second, A. and H. Liffey's Nero, good type, weak pasterns.

POGS.—Two very poor ones.

BEAGLES.—Case & Nichols had two fair but large pups, apt to be too high. Doncaster and Robin Hood, first and second in open and puppy classes.

FOX-TERRIERS.—First, Patsy, bad head. Second, Kate,

also bad in head. Miss Belmont, first in puppy class, was the best in the lot.

FIELD SPANIELS.—A very fair dog won first. Don, second, bad in coat and leggy.

COLLIES.—First, Liffy, improved on Toronto puppy form. Two so-called Scotch terriers shown, but n. g.; prizes withheld.

There seems to have been no catalogue, and the show was entirely of a local nature.

POINTS AND FLUSHES.

CHICAGO, Dec. 31.—The field trial season of this year has been a peculiar one in many respects, chief among which are the large number of important trials which have been held—more than were ever held before in one season—and the excellence of the managing and judging.

So far as conducting and judging the trials are concerned, considering them as a whole, they were excellent. These improvements, I think, were the result of having experienced men in charge.

That field trials are at a stage of development, wherein managers recognize the need of trained men in judging, is of itself an indication of general soundness and permanency. The evolution from the trashy theories and weak fallacies which incumbered competitions in the past was a slow one, but it is gratifying to write that it is now almost complete. It is surprising, however, that so many things opposed to common sense on the one hand, and resulting in palpable error in practice on the other hand, should have been cherished so long a time. Let an absurdity once receive the sanction of usage, and, however absurd it is, the public lets it go with the greatest reluctance.

Looking back over the lapse of time covering the evolution of field trial matters in this country, nothing is more inconprehensible than the multitude of opposing ideas which surrounded every detail of the competition. A matter so plain that it seemed self-evident would furnish a subject for columns of controversial matter wherein would be arguments most varied, opposite and irrelevant.

With all the fallacy incorporated in the theory of running, there was the added absurdity that the judges could be so hedged in, prompted and directed by rules that it would be impossible for them to be in error either intentionally or otherwise. Giving the judge a copy of such rules was supposed to make him competent and reliable. It is but fair to mention that this measure was advocated by but a small though persistent party.

There are still a few fallacies left, nevertheless. One is the time limit, a most absurd and unreasoning requirement; obstructive and injurious withal, since it delays the trials, more or less, and entails added labor and expense to owners and handlers. The Central Field Trial Club, one of the strongest supporters, at first, of the time limit, entirely eliminated that feature from its rules this year, except in the Free-For-All Stake, which is a four-hour race specially intended to be a test of endurance. The time limit, however, is being relegated to a place with the rubbish which once hampered the progress of field trials, although the Eastern, once the most progressive of clubs, still adheres to it.

Field Trial Rules.

Much could be done in the way of improving the construction of the rules. Those now in use are nearly the same throughout the country. They could be cut down nearly one-half and yet state the same thing clearer and with more precision.

For instance, the Eastern Field Trials Club and the United States Field Trials Club—and probably other clubs—have the following clause in Rule 9: "Any dog absent during the first series for more than 20 minutes after his number is called shall be disqualified from further competition."

Rule 13: "Each dog must be brought up in its proper turn without delay; if absent more than 20 minutes it may be disqualified at the discretion of the judges."

Here is a matter dealt with twice in two different rules in a conflicting manner. Such is not only unskillful—it is confusing and contradictory.

There is much matter which could be cut out of the rules without the least injury to them, and much other matter which could be better stated in less space.

Under the caption "Instruction to Judges" is a group of absurdities. There are six things therein which the judges "shall" do, one they "should" not do, one they have discretionary power in doing, and five they are "requested" to do, yet they are all called "instructions." Under the head of "Definitions" the judges are gravely told what constitutes "breaking in," "breaking shot," and "chasing." Under the same head retrieving is defined as follows: "Retrieving shall not be required nor considered in any stake."

These are but a few of the careless and awkward arrangements which could be pointed out in field trial rules. It seems that some club ought to take pride enough to engender sufficient energy and industry to make its rules both sensible and accurate. Every club has talent enough in its membership to accomplish this desideratum, but they appear indifferent to the matter. Usage or the sanction of time seems to usurp the place of ordinary good sense in field trial rules. However, when it is plain to all the clubs that the public knows that these silly things exist they will probably take action and correct them.

I have had an opportunity to scan the pages of Major J. M. Taylor's book, entitled "Bench Show and Field Trial Records and Standards of Dogs in America." It is fully what its title implies. To dogmen it is invaluable. The statistics, from the public beginning of doggy affairs in 1874 up to 1892 are fully set forth. The research and labor necessary to accomplish such results must have been enormous. Had the matter been delayed a few years, it would have been impossible to have completed such a work, inasmuch as the data would not then be accessible and no one would have the personal knowledge of doggy matters and the energy to undertake such a work. There is hardly an item of public record but what can be found in this book, all so skillfully arranged in tables as to be readily available for reference. To appreciate its broad scope and thoroughness, the book must be seen. There are portraits of celebrated dogs, sketches and portraits of prominent sportsmen, standards, bench show and field trial records, etc. It is one of the works which have a permanent usefulness.

Mr. E. Thomas, Jr., 87 East Van Buren street, Chicago, informs me that his setter dog Ned was stolen recently from his store. Should any reader of FOREST AND STREAM gain a knowledge of the dog's whereabouts Mr. Thomas will be under obligations if the information is sent to him. Ned is a large orange and white dog, weight about 70 lbs., dewclaws on hindlegs, bad eyes, rough place on nose where a sore healed, 6 yrs. old, thoroughly broken, fine retriever.

The proper food for dogs is a subject which has evoked endless discussion. That some foods are proper is well known. Herewith is given an account of a food which proved fatal to a dog without a known pedigree, which is under such a circumstance (the absence of a pedigree) deemed impossible by some wise prophets. It occurred in Detroit: "Luigi Pessino is an Italian sewer digger who was compelled to invest 25 hard-earned dollars in a yellow mongrel dog much against his will, and in a manner decidedly peculiar. There were two \$5 notes, one of \$10, one of \$2 and a \$1 note. Luigi returned home and laid the pile on a table unguarded, while he and his spouse went over to the grocery a moment. They returned only to find the money gone. They finally

noticed a piece of paper stuck to the dog's teeth that looked like money, and it was proposed to kill the dog and get the precious fragments. The gilt-edge brute was taken down to the woodshed, Luigi held the creature's hindlegs, Luigi's brother swung the axe, and smash! the victim's head was as flat as a pancake. A few moments later the dog's stomach was taken out and opened, and there, sure enough, were the fragments of the missing bills. The pieces were small, but fit nicely. They were pasted together, and for day forwarded by the City Savings Bank with a history of the affair to the Sub-Treasury in New York with a request for redemption." B. WATERS.

DNEONIK OKOTNIKA—DOG BREEDING.

Editor Forest and Stream:

I enclose herewith an article which lately appeared in one of the Russian sporting papers and which I have translated knowing it would be interesting reading to those interested in Russian wolfhounds. I can only add that the Russian rouble, which Mr. Kareeff speaks of is equal in amount in our money to between fifty and sixty cents, according to the rate of exchange at that time. CHAS. STEDMAN HANKS.

To the Editor:

On reading in your esteemed journal the account of the sad fate that befell our psosy dogs in the field trials in America, I cannot pass the occurrence in silence, as it pains my hunter's heart too much. The Americans cannot form an idea of our dogs, as our thoroughbreds, especially the fierce ones, rarely reach them, those who are intrusted with buying them not being willing to pay their value. Mr. Rousseau and others buy dogs at 15 roubles* (and even at 6 roubles) and send whole cargoes of them to America, where from they, no doubt, realize a good profit for themselves. With us a good fierce dog cannot be had under 1,000 roubles, especially nowadays, when but very few have retained fierce thoroughbred dogs. But lately an American offered me for two bitches 300 roubles for each. No doubt I could find dogs at such a price, but I do not wish to compromise my stud; thoroughbred bitches cannot be had under 3,000 roubles. It is to be supposed that no conscientious Russian hunter will ever sell them cheaper. I intend to go to the Chicago Exhibition, and will take with me a whole Russian hunt, that is, six packs of greyhounds and ten packs of foxhounds, and I shall take with me several wolves and show how our dogs take them. If the Americans have no faith in our wolves they may present their own. Though it is against the rules of hunting to have the wolf torn by the dogs, still, if such be the desire of the Americans, I shall show this, too. Three dogs will easily strangle a young wolf; they may be thrown off several times, but in the long run the wolf will be brought to the ground.

Now, in Germany and England there have appeared societies for breeding Russian psosy dogs; in Russia too many wealthy hunters have sacrificed considerable sums of money for the establishment of such a society. The center of this society is to be Moscow or Tamboff, and in about five or six years we shall no doubt again see powerful, fierce psosy dogs and capital catchers. At present the question stands with the person, who shall be able to reside in Moscow, and shall inaugurate this undertaking. Will not some hunter present himself and undertake the business? He will immediately be joined by many psosy hunters. I have already in view a subscription amounting to ten thousand roubles. The object of the society will be the development of the qualities of the Russian psosy dog, as regards its appearance and efficiency for hunting; only two breeds will be developed, the psosy and the christopsoy. It would be a shame not to act thus, having before us the example of our neighbors. I ask those who desire to join this society to inform me thereof by letter; then if the society is established, its regulations will be settled by its members and then published for general knowledge. God allowing, we shall form a family of Russian hunters, who setting to work heart and soul, will re-establish the breed of Russian psosy dogs. The time has come; enough has been done through the medium of the press, we must now help the cause by actual work.

Begging you, dear editor, to insert this letter in your esteemed journal, for I am sure that I shall not have any adverse criticisms to the above. S. S. KAREEFF.

* A rouble is worth about sixty cents in American money.

THE WESTMINSTER JUDGES.

NEW YORK, Jan. 3.—Editor Forest and Stream: The Westminster Kennel Club has invited the following judges for the next Westminster Kennel Club show:

MISS A. H. WHITNEY, to judge St. Bernards, Newfoundland and pugs.

MR. GEO. RAPER, mastiffs, bloodhounds, Russian wolfhounds, deerhounds, greyhounds, foxhounds, English retrievers, poodles, bull-terriers, smooth fox-terriers, Bedlington, Skye, Clydesdale, Welsh, white English, black and tan and toy terriers, toy spaniels, schipperkes and miscellaneous.

MR. G. MUSS-ARNOLD, Great Danes, dachshunds and basset hounds.

MR. WM. TALLMAN, pointers and all setters.

MR. J. P. WILLEY, Irish water, Clumber, field and cocker spaniels.

MR. HENRY JARRETT, sheepdogs.

MR. JOHN E. THAYER, bulldogs.

MR. POTTINGER DORSEY, Chesapeake Bay dogs and beagles.

MR. R. F. MAYHEW, wire-haired fox-terriers, Irish, Scottish, Dandie Dinmont and Yorkshire terriers and Italian greyhounds. JAS. MORTIMER, Supt.

FIELD TRIAL RECORD.

Editor Forest and Stream:

It is very unusual for you to make an error in any of your reports, but I notice that one has crept into your "Record of Field Trials of 1892," wherein you say that Dr. Jas. E. Hair's Albert's Daisy, which won first in the New England Derby, was handled by Mr. F. C. Waterhouse. It would be a great honor to him to have this credit, for she was in superb condition and handled well; but the credit belongs to Mr. Lester A. Pearle, of Hampton Kennels, Hampton, Conn., who also handled Kit Carson, the winner of our Derby in '91, but other papers then gave some one else the credit. Mr. Pearle is, without question, the peer at least of any among handlers in New England. Please insert this in your much valued paper, and simply do justice to all. E. K. SPERRY.

GLOVERSVILLE SHOW.

GLOVERSVILLE, N. Y., Jan. 4.—Special to Forest and Stream: The show opened with several well-known exhibitors on hand, Messrs. Vender, Bell, Fellows, Schmitt, Hopkins, Rathbone, Bollin, Smith, Elliott, Fenton, Green, Tallman, Mrs. Smyth, Mrs. Nickerson, Mrs. Meehan. The quality of the dogs was good, and judging commenced promptly; 146 entries; attendance was fair. H. W. L.

Business.

CHESAPEAKES SELL WELL TOO.

SUITLAND, Md.—Forest and Stream Pub. Co.: My advertisement of the Chesapeake Bay dogs proved a success, as I easily sold the pair to Mr. C. P. Horton of Bourne, Mass., for \$100. I received over twenty-five letters regarding them. A. B. SUIT.

THIS WAS A DOG, MIND YOU!

A CHICAGO dog has been distinguishing himself, recently. He is a member of the canine aristocracy that sleep on cushions in warm rooms, have baths in porcelain tubs twice a week, and live principally on tenderloin steaks. This particular dog is of the spaniel family, and has long since acquired a reputation as a perfect gentleman.

For several days past the servant under whose immediate care this dog is placed has noticed that he seemed unwilling to eat his breakfast in the house. Every morning he took his portion of meat between his jaws, walked to the door, wagged his tail, and looked appealingly into the servant's eyes. If the door was opened in response to this mute request, he disappeared immediately, and was not seen again until luncheon. If the door was not opened he placed the meat on the floor close by and sat guard over it until an opportunity for escape arrived.

The dog's mistress learned of his unaccountable conduct. She was very much interested, and engaged a detective to shadow the dog and report upon his proceedings and conduct. The detective was her brother, so his services were gratuitous. This morning he stationed himself outside the kitchen, and when the dog appeared was careful not to attract his attention. But the dog saw him, and immediately put on an air of dilettante indifference, as though he had an idea of taking a constitutional, but wasn't quite sure whether he felt well enough. So the detective pretended to be busy looking for four-leaved clovers. The dog was a trifle suspicious at first, but the detective was a good actor, and managed to deceive him completely; and presently the dog lounged away toward the gate, and then, when he thought the detective wasn't looking, sneaked out. Down the alley he trotted, a fat beefsteak in his mouth, and presently turned into a vacant shed in the next block.

When the detective arrived he found the dog sitting quietly in the corner of the shed. He seemed rather surprised and a good deal mortified, but was extremely cordial. In another corner of the shed the last piece of steak was rapidly going down the throat of another dog. This dog wasn't handsome. In fact, he was about the homeliest, dirtiest, most unkempt and generally used-up dog the detective had ever seen. There was an ugly sore on his side and his ribs were unduly prominent. But he was a dog, if he wasn't beautiful, and the other dog's charity was clearly his only support.

And this, good people, was a dog. Not a man, blessed with reason and educated in the principles of Christianity, but a plain brute. Yet, how many men, placed in a similar situation, would act the good Samaritan as he did?—Clipping sent by Podgers.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Dan Corsair, Corsair's Prince, Corsair's Foke, Corsair's Trump Corsair's Fanny, Corsair's Girl and Kitty Corsair. By Meadow City Kennels, Northampton, Mass., for white, black and tan English setters, four dogs and three bitches, by Corsair out of Jennie Stevenson. Passaic, Whim's Breeze, Whim, Jr., Whim's Fanny and Whim's Imp. By Meadow City Kennels, Northampton, Mass., for white, black and tan English setters, three dogs and two bitches, by Rod's Whim out of Vidia.

Kent's Queen. By A. E. Davis, Worcester, Mass., for blue belton English setter bitch, whelped Oct. 29, 1892, by Kent II. (Count Howard—Lady Westmoreland) out of Petrel II. (Don Juan—Petrel III.).

BRED.

Prepared Blanks sent free on application.

Rose—Bin Cambridge. Liberty Kennels' (Hyattville, O.) English setter bitch Rose (Don—Sport) to Wm. Fies's Bin Cambridge (Roderick—Nellie Cambridge), Dec. 21.

Pansy's Judy—Eberhart's Cashier. C. K. Farmer's (Indianapolis, Ind.) pug bitch Pansy's Judy (Toodles—Pansy) to A. G. Eberhart's Eberhart's Cashier, Dec. 15.

WHEELPS.

Prepared Blanks sent free on application.

Lady Anne. Mount Vernon Kennels' (Franklin, Mass.) St. Bernard bitch Lady Anne, Nov. 29, seven (four dogs), by their Earl of Beaconsfield.

Yerda II. Mount Vernon Kennels' (Franklin, Mass.) mastiff bitch Yerda II., Dec. 25, seven (five dogs), by their Ingleside Maximilian.

SALES.

Prepared Blanks sent free on application.

Kent's Bang. Chestnut belton English setter dog, whelped Oct. 29, 1892, by Kent II. out of Petrel IV., by A. E. Davis, Worcester, Mass., to F. M. Prouty, Spencer, Mass.

Kent's Fern. Lemon belton English setter bitch, whelped Oct. 29, 1892, by Kent II. out of Petrel IV., by A. E. Davis, Worcester, Mass., to A. H. Knowlton, Spencer, Mass.

Kent II.—Petrel IV. whelp. Lemon belton English setter bitch, whelped Oct. 29, 1892, by A. E. Davis, Worcester, Mass., to H. P. Engel, same place.

Hawatha—Vete whelp. Red Irish setter dog, whelped Oct. 29, 1892, by C. K. Farmer, Hartman, Mich., to Lieut. J. M. Stotsenburg, Fort Niobrara, Neb.

Hawatha—Vete whelps. Red Irish setter bitches, whelped April 4, 1892, by C. K. Farmer, Hartman, Mich., one each to S. C. Kile and W. H. Havens, both of Indianapolis, Ind.

Port Tatton. Blue belton English setter dog, whelped Oct. 7, 1889, by Sir Tatton out of Forest Fern, by A. E. Davis, Worcester, Mass., to Dr. Geo. D. Kelley, same place.

Dan Corsair. White, black and tan English setter dog, by The Corsair out of Jennie Stevenson, by Meadow City Kennels, Northampton, Mass., to Frank Lyman.

Corsair's Prince and Corsair's Fanny. White, black and tan English setter dog and bitch, by The Corsair out of Jennie Stevenson, by Meadow City Kennels, Northampton, Mass., to Geo. W. Lovell, Middleboro, Mass.

Corsair's Girl. White, black and tan English setter bitch, by The Corsair out of Jennie Stevenson, by Meadow City Kennels, Northampton, Mass., to Chas. Kelly, New York City.

Passaic. White, black and tan English setter dog, by Rod's Whim out of Vidia, by Meadow City Kennels, Northampton, Mass., to Chas. Kelly, New York City.

Whim's Fanny. White, black and tan English setter bitch, by Rod's Whim out of Vidia, by Meadow City Kennels, Northampton, Mass., to Frank Lyman.

Whim's Breeze. White, black and tan English setter dog, by Rod's Whim out of Vidia, by Meadow City Kennels, Northampton, Mass., to J. C. Biddle.

Rod's Whim—Vidda whelp. White, black and tan English setter bitch, by Meadow City Kennels, Northampton, Mass., to Harrington Bros.

PRESENTATIONS.

Whim's Imp. White, black and tan English setter bitch, by Rod's Whim out of Vidia, by Meadow City Kennels, Northampton, Mass., to E. K. Sherry, New Haven, Conn.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

E. E. S., London, Ont.—Cannot find Lady Starr's pedigree.

F. G. S., Danneberg, Neb.—In hunting prairie chickens which is proper, for the dog or the hunter to flush the birds, after the dog has set or pointed it? Ans. It is correct for the shooter to flush the bird. Only in woodcock or other shooting where the shooter cannot flush, is it correct to have the dog flush.

E. A. C., No. Westchester, Conn.—I would like to be informed which is the correct pedigree of the noted bitch Bo Peep. You gave me her breeding about a year ago as follows: Bo Peep, by Gladstone out of Juno, by Leicester, out of Dart; Gladstone, by Llewellyn's Dan out of Petrel. A breeder gives her pedigree like this: Bo Peep, by Berguntal's Rake out of Cara Dale by Dash 3d, out of Cornelia, Rake by Dan out of Ruby. There is a mistake somewhere. Ans. The latter bitch is one bred and owned by Mr. Edgar Huidekoper, Meadville, Pa., and

is correct. The first one refers to the bitch owned by Mr. J. M. Arant, Hickory Valley, Tenn.

H. L. W., Adrian, Mich.—1. A Clumber, field or cocker spaniel would about suit your all round work. "Bird dogs" are, as a rule, taught to avoid rabbits. You can never depend on your dog if you allow that sort of work, as it breaks the dog up. 2. A cocker will. 3. The weights are not given in the standards. The setters weigh on an average from 50 to 60 lbs. Gordons are the heaviest; Irish next; then English setters. There is no hard and fast rule. Pointers are divided into heavy and light-weight classes. Heavy, dogs, 55 lbs. and over; bitches, 50 lbs. and over; light, dogs, under 55 lbs., and bitches, under 50 lbs.

A. L. B., Plymouth, Mass.—What can I do for my setter dog troubled with tapeworm? Have given him two doses of areca nut and he has passed a part of the worm, but not the whole. Ans. Areca nut is one of the best vermifuges and if you try it again, after fasting the dog twenty-four hours, you will probably get the rest of the worm. Give two half-drachm doses, one hour apart, and if there is no movement give a tablespoonful of castor oil twenty minutes after the last dose. Castor oil should also be given a day before you give the

nut, so as to prepare the bowels for its reception if the dog is at all costive. See that the nut is freshly ground or it loses its efficacy to a great extent.

J. E. O., Galesburg, Ill.—Gentlemen, will you please favor me with the pedigrees of the following beagle dogs: Duke, Beauty, Thorne, Dandy, Blossom, Maid and Jack. Ans. Blossom not registered. Beauty (A. K. C. S. B., 5,329), by Racer out of Maid II., by Lee out of Maid, by Trump out of Millie (imported). Lee, by Warrior (imported) out of Rosey. Dandy (A. K. C. S. B., 7,602), by Lee out of Venus, by Centennial out of Vesper; Lee, by Warrior out of Rosey, by Sam out of Dolly. Jack (A. K. C. S. B., 12,781), by King out of Switz, by Prince out of Daisy, by Rock Faithful out of imported Faithful; Prince by Ringwood out of Roxy, King by Pedro out of May Queen, by Ringwood out of Collette; Pedro, by Flute out of Victress. Thorne, cannot find. Duke (A. K. C. S. B., 14,534), by Mufinus out of Rarity, by Champer out of Rocket; Mufinus by Driver out of Modesty. Maid (A. K. R., 2,114), by Todd's Racer out of Todd's Sora, by Dodge's Ratlier (imported Warrior—Rowett's Rosey), out of Fenn, by Trump out of Baker's Millie; Todd's Racer by Rowett's Rallye (imported Sam—imported Millie) out of Krueger's Lill, by imported Warrior out of Rowett's Rosey.

MR. STEPHENS' NOTION OF A HEAD FOR THE OUTSIDE COVER.

Canoeing.

THOSE of our readers who have followed the cruise of the Elsa in recent numbers will find it worth while to examine the charts of the St. Lawrence River and Lake Ontario published in our yachting department this week.

CANOE NEWS NOTES.

The Brooklyn C. C. has elected the following officers: Com., F. L. Dunnell; Vice-Com., M. M. Davis; Purser, W. McK. Miller; Treas., Percy F. Hogan; Pres., M. M. Davis; Trustees—M. M. Davis, Thomas G. Buddington and M. V. Brokaw.

The officers of the Atlantic Division, A. C. A., and of the New York C. C. held a New Year reception on Monday in New York.

The New York C. C. has selected Saturday, June 17, as the date of its annual regatta.

Yachting.

THE cold weather of last week made fine ice on the Shrewsbury and Hudson, and also on Orange Lake, a number of scrub races being sailed. Considerable discussion and correspondence has taken place

between the clubs over the dates and arrangements for inter-club races for the various pennants and trophies, and in the meanwhile the rain of Sunday night spoiled the ice for Monday, one club celebrating the day with a pigeon march and dinner in place of a race. The present colder weather gives promise of more racing this week.

THE accident to the Umbria and the usual slow passage of the ancient Bothnia have delayed all our foreign mails until the time of going to press, but the comments of the English papers generally over the Dunraven challenge are closely in accord with the views expressed in the FOREST AND STREAM.

THE most absurd rumor yet heard in connection with the Cup races is to the effect that Col. W. F. McCarthy, of Baltimore, a "naval designer," has been requested by a syndicate of Baltimoreans to design a cutter of 100ft. l.w.l. for the trial races.

THE attention of our readers is called to the competitive design above, which for some reason which we are not able to understand was not accepted. We are confident that our yachting and canoeing readers will agree with us that it is unquestionably superior to all of the others.

LORD DUNRAVEN will have a 20-rater designed by Watson in addition to his new Valkyrie.

A Fall Cruise on Lake Ontario.

If my conception of the perfect yachtsman is correct, one of the ingredients of his composition must be a love for excitement with the line drawn at the safe side of foolhardiness. On the Great Lakes the month of October is conspicuous for two things, viz., strong, and, for the most part, steady winds, and the almost universal laying up of yachts for the winter. Of course the equinoctial storms have their dangerous features, but they are so easily avoided that to those who have enjoyed the excitement of cruising on the Great Lakes, the change of its bracing heat to the more endurable feature of warming the bracing but cool air of the autumn day, it is inexplicable why these fall cruises are not more largely indulged in.

During a cruise of nearly two weeks which two members of the Rochester Yacht Club enjoyed during October last, the weather was all that the most exacting yachtsman could ask. Every day was bright and warm, and the wind, at the extreme eastern end of the lake, was such that the story of our delightful trip may lead others to emulate our example, or at least that it may be of interest to the many yachtsmen who know the places in their summer dress, allow me to give you a transcript of the log of one of the yachts.

Our boat was the Chocotaw, a Burgess 40-footer, brought up to Lake Ontario by us last spring and enrolled in the Rochester Y. C. Our party, which included a husband and wife, a young man, and a child, was the most complete, owing to the instinct of self-preservation on the part of the writer, had better be introduced to you as the Skipper, the Doctor (an unseamanly seaman), the Corporal and Yours Truly, with two seamen and the cook.

Our start was made from Charlotte about 7 A. M. on Monday, Oct. 10, with a fresh S.W. wind blowing. We had our course for Sackett's Harbor, just a hundred miles away, at the extreme eastern end of the lake. Cinderella, another boat well known on the coast, brought from salt water at the same time as Chocotaw, started about an hour later. Including three sailors her crew numbered eight. It must be understood that we intended to combine shooting with yachting, and consequently both boats were well stocked with guns, cartridges, decoys, etc. It might not occur to some that so far as bagging the waterfowl was concerned, the trip would have been just as successful if we had left all this deadly paraphernalia behind.

As the weather looked slightly threatening in the west, we decided to lay our course along the shore to Oswego. We passed Sodas, thirty-two miles distant at 10:40. The wind changed slightly to the west, and the weather cleared and came out fair and bright. So far we had been carrying lower canvas only, but the wind moderating somewhat at 12:30 when off Fair Haven, we set working topsail. At 1:30, with Oswego just in sight, set jibtop-sail, hauled in sheets and laid our course for Sackett's Harbor about forty-eight miles distant.

Dinner call from the cook was responded to with little hesitation, and this meal, like all the others we enjoyed, was attacked with an avidity that showed a total lack of fear from the dire discomforts of *mal-de-mer*. In justice to our cook (or steward as he prefers to be called), it should be explained that he was a special importation from Delmonico, having resigned his position there for the sole purpose of appeasing the locally well known gastronomical fickleness of the owners of Chocotaw.

Coming on deck to enjoy our *post-prandial* pipes, we found the wind still fresh, and that we were making eight or nine miles an hour. We were off Oswego at 2 P. M., having made the sixty miles lying between Charlotte and that port in about seven hours.

About half an hour later we noticed the smoke from a steamer that was evidently coming toward us, but as we were pursuing it was difficult to tell in what direction lay her destination. Her actions were, to say the least, peculiar; as she came nearer and when about a mile away she began whistling at intervals, and we, thinking that it was meant as a salute, dipped our colors and were holding our course in a direction which soon brought us abreast with the steamer and about one quarter of a mile distant.

Up to this time we did not notice anything peculiar beyond the uncertainty with which she was evidently steering, but just then her engine stopped and her pilot came out on deck and began waving his hat frantically in our direction. The skipper in stentorian tones gracefully responded to what we supposed a salute, but this apparently did not satisfy the crazy captain, for the louder our skipper talked the more violently shook for his hat, and though the distance was not so far but that he could have easily made himself heard, not a word did he offer in explanation of his grotesque gesticulations. Thinking that possibly he might be leaking or in some way required our assistance, we came into stays to await developments. But as nothing developed, after a few minutes of questioning on our part we determined to keep her behind. To this day the part we paid away and soon left her behind. The town is a mystery as to that man's wants remains unraveled, though it is possible that being ten miles off shore, he wished to know where he was.

Nothing else of an exciting nature occurring, we passed Stony Point, thirty miles from Oswego, at six o'clock. Here we changed our minds and determined to go into Chaumont Bay and anchor for the night, in order to be on hand for an early attack on the millions of duck that we had been assured were there awaiting our arrival, but darkness coming on and the channel being narrow we again changed our minds and headed for Sackett's Harbor, where we anchored at 7:45, having made the run of over a hundred miles in a little less than thirteen hours.

Cinderella had kept near shore and lost much of the favorable wind that we had had further out, so when off Oswego they determined to stop there for the night rather than run any risk of navigating unknown waters after dark. While John and Anton were furling and stowing sails the Doctor and Corporal went ashore to do the town, an operation which, probably, owing to their proficiency, did not take long, as they returned early overhauling with good spirits and anecdotes from the war of 1812. It is only in the last few years that the remains of an old frigate disappeared that was built (but never launched) to protect our interests from a threatened invasion from Great Britain.

The next morning, after restocking our larder with fresh milk and meats, we got a good start and with a fresh west wind headed once more for Chaumont Bay. After our early start, when the heading for the isthmus, an unexpected calmity overtook us. To this day the matter is a secret, known only to the participants and a few natives, who, actuated by a vision of salvage, assisted in our rescue.

This is how it happened. We had been told that at the extreme western end of the bay there would be the best shooting, and in addition to that, plenty of water for sailing; so trusting to the knowledge of those who should have known better, and relying upon our chart, we were proceeding up the bay with the wind on our quarter. Heaving the lead, which showed an average of three fathoms, which corresponded exactly with the chart, we kept on, unconscious of any hidden danger. We were soon enlightened, however, by a sudden jar and upheaving of our boat, and then an abrupt stop. We were hard and fast on an old sunken crib, which we subsequently discovered had been put there for the purpose of collecting the waterfowl. The event, though for a moment it was a confusion, but the serenity and untroubled countenance of our skipper soon restored our confidence, and all hands immediately went to work to take in canvas. This soon done, we proceeded to deliberate as to the best method, or any method, of getting off the rocks. We decided upon a plan, but it is safe to say that though its success may be partially due to our anchors and windlass, it is highly probable that our task was accomplished by the aid of the wind, which had which he perambulated the topped-up boom to its furthest extremity in order to throw her over on her beam ends was worthy of a Blondin. At any rate, after some eight hours' hard work, we once more were afloat, and proceeded immediately to make our escape from such a dangerous locality. While our confusion was at its height, Cinderella appeared out of the bay, having been driven there, having left Oswego early in the morning. Fortunately for our reputation she did not discover us, but steered further up into Three Mile Bay.

As we still had a couple hours of daylight, the Doctor, the Corporal and the Scribe went ashore to shoot game. But game proved to be as scarce here as elsewhere, and upon returning where we had left our dingy we discovered that before reaching the bay to get an anchorage for the night, as it was coming on to blow.

The Doctor, not relishing a long row after dark, determined he would walk up the road which ran along the side of the bay to a place opposite where the yacht had come in for the night and would get on board from there. Undaunted by the breakers that were rolling in, the remaining two started for the yacht, which day after day had been hiding from our view. Before reaching our destination nothing could be seen but that portion of the shrouds and mast illing, which was illuminated by the anchor light. When we arrived—and we arrived wet, hungry and mad—we found that they had taken supper, but had kindly left us a few delicacies. The inner man appeared, our sunny dispositions prevailed and soon all was once more harmonious. The remainder of the evening was spent in discussing our fortunate escape and in transferring the blame from our pockets into those of our rapacious Skipper in the mild and seductive game of "hearts."

The next morning, after spending a portion of it in another fruitless search for the wary waterfowl, we anchored and stopped for the rest of that day and night at Chaumont, a flourishing little village on the R., W. & O., where by a previous arrangement the Lieutenant was

to meet us. This he did, loaded down with artillery and ammunition. After supper the Scribe and the Skipper went ashore, and while the latter gathered wood for the stove, coal becoming scarce, the former succeeded in bagging a half a dozen of plump plovers. Afterward the usual game of "hearts" was enjoyed, which, fortunately for the Doctor, stopped early. We all turned in and determined to get an early start in the morning for Henderson Bay, where Cinderella had preceded us.

We were awakened the next morning, Thursday, by the Skipper, who indulged in the daily practice of not allowing any one on board to sleep after the sun had begun to show itself through the portholes, but who also considerably lighted the lamps in the cabin in order to induce the other occupants of the boat to arise and clothe themselves, and also made that operation a safe one by imparting a little enthusiasm to the otherwise frigid atmosphere. Such a person is certainly invaluable on board, and especially so in cold weather, and it is a great mistake for a party over to leave harbor without first providing itself with one of these necessary adjuncts. Of course it is not a custom that even the most progressive book of etiquette would sanction, yet the mere act of having your bed clothes suddenly cease their usefulness, and a voice in your ear speaking through the foghorn and announcing "breakfast," is a powerful incentive to immediate wakefulness. Even the elegant Lieutenant soon got in the habit of arising punctually with the first appearance of the Skipper's long red morning gown, and as for the Corporal, he disliked to go to bed at all, through fear of not being able to wake up before the usual time for the Skipper to issue his emphatic invitation to do so.

Such was the general morning régime, with startling variations. On this morning, however, we had determined before setting out for Henderson to once more try our skill with the feathered biped, and were slightly more successful than usual, to this extent that, in addition to a few small snipe, the Corporal, the Skipper and the Lieutenant severely wounded three separate and distinct species of the genus *Anatide*. This gave them great satisfaction, as it showed progression, and we returned with sharpened appetites to breakfast, which was awaiting us. There is, by the way, a very good anchorage for yachts of moderate draft in this little bay at Chaumont. Along the eastern shore is a ledge of rock with deep water so that yachts can moor alongside of it.

The run from Chaumont to Henderson Bay was uneventful. With a strong S.W. breeze, carrying light canvas, we reached White's Bay, a

A MODERN 21-FOOTER.

(Forest and Stream Amateur Photography Competition.)

small cove opening into Henderson, and dropped alongside of Cinderella, which had been there over night. On entering Henderson Bay we passed through the channel between Six Town Point and Snake Island. In taking this route boats should keep about one-eighth of a mile from Six Town Point. There is good water under you there, while one-half mile to the north is a shoal varying from six to ten feet in depth. Boats of greater draft will find a good channel between Horse Island and Snake Island.

In the afternoon we went ashore and selected a few squirrels and a couple of fat chickens, which, together with some blue pike, made a dinner fit for a king. In the evening the owner of the chickens, Capt. White, who lives in the edge of White's Bay, came on board, and, as soon as we saw a lack of hostile intent we concluded that he had not yet missed his chickens and proceeded to make our reception to him as agreeable as beer and Canadian whisky could do, in order to have him retain an impression of our hospitality. We subsequently, in buying chickens of him and paying his price, in reality compensate him for the chickens we had borrowed.

The next day after morning through the woods and getting an idea of the surrounding territory, we again up sail and anchored at Chaumont for the night, where we had made arrangements to have our mail sent. From Chaumont we went to Cape Vincent down the St. Lawrence along Wolf Island, to Port Metcalf, and up the Canadian Channel to Kingston, making this distance, just thirty miles, in three hours, with a strong S.W. breeze. We anchored at Kingston off the Grand Trunk R.R. pier, and, as the steamer Canada was lying there, the N. Y. C. pennant, on her way East. When we left we saluted her with our gun and she dipped her colors in reply.

From Kingston we went up past the Three Brothers, when the wind left us, so we dropped anchor; but it soon coming up again strong in the west, we ran into MacDonald's Cove, alongside Cinderella, who had been a day ahead of us, sailing direct from Chaumont. In the evening we all assembled on board of Cinderella, and listened to some very exciting stories from Captain W. as to how he caught twenty-five pike that morning, each weighing 10 lbs., more or less.

Wednesday morning it was a dead beat to windward to Glenora, or as it is sometimes called, the "Lake of the Mountain." Here we stopped to receive telegrams, Cinderella meanwhile hauling us and announcing her intention of going straight to Belleville to which port she was bound. While round Captain John's Island, just off Deseronto, and holding on the wind for Telegraph Light, our expectations were fully realized by repeated puffs striking us, each one stronger than the one before it; but as we passed by the island we all suppose we had seen the last of the squall.

It is possible that John was taken unawares, through misplaced confidence in the existing bill, but at any rate, without warning a puff stronger than the others, and increasing in force as it struck the boat, put us over on our beam ends in a twinkling. This was so unexpected that it came as a rude shock to the Doctor, who at that time, with the Lieutenant, was below indulging in "nature's sweet, restorer, balmy sleep." The Lieutenant said afterward that it was the last time that he was going to sleep in the leeward berth when the Doctor was in the one to the windward of him, particularly in squally weather, for he is willing to make an affidavit that as the boat went over the Doctor described a graceful parabola, and, just grazing the top of the cabin, finally staked out a claim in the most vulnerable part of his (the Lieutenant's) anatomy and then proceeded, without apology, to traverse a longitudinal section of the said prostrate Lieutenant in his efforts to respond to the request of the Skipper to "let go the jib sheets." The Doctor, who up to this time, it is claimed,

was not fully awake after he had with due despatch let go the sheets, plunged headlong into the foaming water, which was responding acquaintance with the skylight. The jib sheet eased, she responded to her helm and we were soon sailing in our normal position.

During a season of almost continuous sailing of six months this was the first bit of wind that occasioned the necessity of haste in starting jib sheets. For a cruiser we found Chocotaw to answer every requirement, being not only speedy, but very stiff, and that, too, with a larger spread of canvas than her requirements warranted. Cinderella, meanwhile, not liking such disagreeable sailing, came to anchor at Big Island, where we followed her and spent the night.

The next day while Cinderella left for Belleville Chocotaw's crew spent the morning fishing and shooting. Besides a few pickerel and two or three ducks, the Corporal and the Lieutenant again returned with a couple of fat fowl. While the Scribe has his doubts of the veracity of the statement that the water were shot over the decoys, as the Corporal tried to make him believe, a safer course would be for him, instead of remarking upon the singular daily regularity of this particular kind of game that fell to the Corporal's inerring aim, to take his statement *cum grano salis*, and keep "mum."

In the afternoon we reached Belleville, where we found Cinderella had been since noon. The evening was spent on shore, where the Skipper introduced to the Lieutenant and the Corporal a few of the most important sights. He did this with such thoroughness that the most persuasive exhortations of which the Doctor was capable were necessary in order to get them to transfer their allegiance from the Hub. After inspecting Norah, the crack Canadian yacht which Onward, of the Rochester fleet, succeeded in beating this summer, thereby winning the Fisher's cup which Norah has held for eight years, and passing through the Lockport locks the two boats started up the bay for the Murray Canal. With a beam wind both yachts sailed through the canal, stopping just long enough to allow the bridge tender to collect toll and destroy the usefulness of a bottle of Boleman. Passing through Presque Isle Bay channel we once more were in the lake opposite Presque Isle Light and laid our course due south for Charlotte. With a fresh W.S.W. wind for the first eight miles we carried working topsail and large jibtop-sail, but the wind increasing and it looking dark in the west we shortened canvas by taking in jibtop-sail and working topsail and housing the topmast. There was now a big sea on and our lee rail was under. In fact, in the whole fifty miles to Charlotte, which we made in just six hours, our seuppers were awash.

Cinderella, with her cruising canvas and working topsail, had been leaving us, but after we had made these alterations we held her well about five miles distant, and arrived in Charlotte half an hour behind her on Friday night, having been gone just twelve days. F. S. M.

The Bouncer Type.

Editor Forest and Stream:

In October last I had the pleasure of a visit from my old friend John Herreshoff, a man who without eyes can see more than most of the designers I have met with eyes wide open and a telescope thrown in.

Many yachting and boating men seem to have their understanding of a boat's merits bounded by the weight of her keel rather than by her shape. FOREST AND STREAM has, however, of late been doing much good work and yachtsmen are gradually becoming educated. When Mr. Herreshoff was here he spent some time in examining, entirely by touch, a lot of my models.

After he was through I asked him what was the shape of the first boat El Chico below her waterline. For reply he picked up a Bouncer model, and deftly passing his fingers over it, said, "That's her shape." Now, El Chico is quite a narrow boat, while my model showed a beam of nearly half its length on waterline. And this brings me to the point in hand—namely, that two boats, the one wide, the other narrow, may be designed on the same principle, so far as lines or curves for speed, weatherliness and dryness in a seaway are concerned.

It is time that many yachting men, also that some newspapers should be better informed; they have persistently held that a wide and shallow boat cannot sail fast to windward in a seaway and a breeze, but Bouncer and Chippewa have done precisely that thing so thoroughly that narrow and sharp boats have not to be "protected" by a high tariff in the shape of a tax on sail area, concerning which I shall have something to say in the near future.

Some very neat illustrations of small cruising and racing boats have recently been published which clearly show in their lines the educational benefit gained by even a superficial study of the Bouncer principle. I allude to the fairing and symmetrical rounding of the vertical, longitudinal and diagonal lines of the boat's bottom, entrance and clearance. After firing of a good deal of theory and trying many experiments, I find that the best longitudinal curves for a boat to sail on are segments of circles. That is to say, nothing but the segment of a circle (or as near as you can get to such a curve) should be used lengthwise of such portions of a boat's body as are submerged when she is under sail. This is my reply to the hundreds of poor readers who are writing and asking me "What is the peculiar principle on which Bouncer boats are designed?" My reason for giving preference to the circular rather than the cycloidal curve is that when the first named is used the boat can never, when being hard down, get badly, or hurtfully, out of trim in a fore and aft direction. That is to say, she can "heel" or she can "square" to almost any wind yet her shape, as presented to the water she is moving, remains practically the same. This theory is not only sound, practical and scientific, but the demonstration of it is so plain and simple that in ten minutes a very fast, able boat or yacht 15ft. to 150ft. in length can be designed on a piece of paper with the use solely of a thin batten and a string (a bow, in short, and a 2ft. rule). The "proof of this pudding" lies in the fact that the Bouncer and Chippewa boats, which have been designed precisely in the manner named, and not a slow one has yet been produced. Further than this, neither of the two boats named has lost a race when a good sailing breeze was blowing.

If the editor will publish them I will take pleasure in making diagrams illustrating the simple method of designing indicated.

ROSLYN, L. I., Dec. 26, 1892. THOMAS CLAPHAM.

To Chicago by Water.

The project of visiting the World's Fair at Chicago by yacht has been discussed by many yachtsmen on the coast and along the lower lakes, and in spite of the distance and the difficulty of a part of the navigation the scheme possesses some important advantages. The trip itself will be a novel and pleasant one for all who have the time, and is much of interest to be seen on the St. Lawrence River and the Great Lakes, and at Chicago the yachtsmen will be far better berthed aboard his own craft than in the private boarding houses or the great caravansaries ashore.

Much must depend on the facilities for safe and convenient anchorage provided in the vicinity of the Fair, but as we noted recently, this was the case with the Fair at St. Louis, and the same facilities, and most desirable facilities are promised to all visiting yachtsmen. It is also probable that the purely yachting side of the voyage will be a very important feature; the fleet of visiting yachts will make a distinct colony of yachtsmen in the harbor, with opportunities for close social intercourse for all who desire to avail themselves. Arrangements are now being made for yacht races during the summer months, and the lake is likely to be well represented. The distance is too great for the smaller yachts from the coast, and the larger ones are likely to remain about New York or Boston in attendance on the Cup defenders. The Erie Canal is available to the smaller steam and sailing yachts, but all over 100ft. long and 6 to 8 ft. draft will be forced to go by way of the St. Lawrence River and the Canadian rivers.

Most yachtsmen are familiar in a very general way with the main features of this route, via the Gulf of St. Lawrence, the river, and Lakes Ontario, Erie, Huron and Michigan; but to all who may have the trip in contemplation the following more detailed information as to routes and distances will prove useful. We are indebted for it to a Canadian yachtsman.

Chart No. 1 shows the entire route from New York to Chicago; Nos. 2 and 3 show the main portion of the St. Lawrence River and the Lake route, and No. 4 shows the most important section of the canal navigation, that about the St. Lawrence rapids. The distances are as follows. On Nov. 3 an Order of Council was passed by the Dominion Government, on recommendation of the Minister of Railways and Canals, extending the courtesy of free passage through the Dominion canals to all pleasure craft attending the Chicago Exhibition during 1893. All bridges swing, so that there will be no obstruction in height, the only limitation being the dimensions of the locks. In the St. Lawrence canals the lock chambers are 200ft. long, 45ft. wide and 9ft. deep over the sills. On the Welland Canal the chambers are 270ft. long, 45ft. wide and 14ft. deep over the sills. When the enlargement of the St. Lawrence canals is completed, which will not be for some years, the chambers will be of the same size as on the Welland Canal.

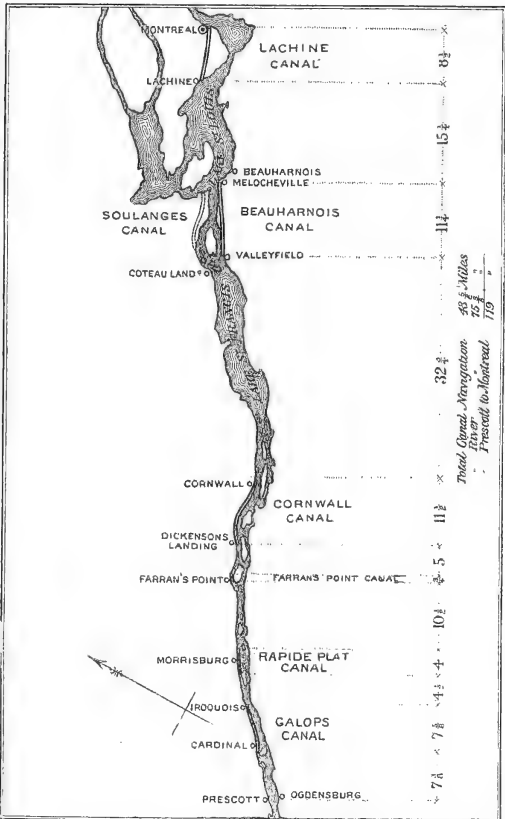

The yachtsmen of the Royal Canadian Y. C. of Toronto, are already planning a cruise to Chicago, one party taking up each yacht of the visiting fleet, living on board while attending the Fair, and then returning by rail to Toronto, leaving the yacht in charge of a second party, and thus until each yacht is finally manned by a crew for the return trip.

ST. LAWRENCE RIVER AND THE GREAT LAKES.

LAKE ONTARIO AND ST. LAWRENCE RIVER.

CANALS OF THE ST. LAWRENCE RIVER.

LAKE HURON.

In regard to the navigation of the lakes and canals, an Eastern yachtsman writes us as follows:
Editor Forest and Stream:
Why will not some of the yachtsmen on the lakes tell us through the *FOREST AND STREAM* of the trials and tribulations that may be looked for in taking a small yacht from New York to Chicago by way of the Erie Canal or the St. Lawrence River? Many yachts have been taken through the canals in the past year or so, and their experiences would be of value to all who contemplate a similar trip. A short time after Mr. Kunhardt went South in the *Coot*, in 1885-6, I followed in her wake with a large sloop and found the information given in the *FOREST AND STREAM* of the greatest value to me. The yacht clubs on the lake could tell us of the weather we would be likely to encounter, the facilities for towing and many other important items.
W. A.
We will gladly give space to any further information that will prove useful to yachtsmen.

See table on page 15.

YACHT NEWS NOTES.

May, steam yacht, owned by Ninian B. Stewart, one of the finest of the new English steam yachts, has been chartered by Robert Goetz for a cruise to the Mediterranean, and in the meanwhile has been sold to an American yachtsman, and the information given in the *FOREST AND STREAM* of the greatest value to me. The yacht clubs on the lake could tell us of the weather we would be likely to encounter, the facilities for towing and many other important items.
W. A.
We will gladly give space to any further information that will prove useful to yachtsmen.

Rifle Range and Gallery.

Rensselaerwyck.

ALBANY, N. Y., Dec. 29.—Some unusually fine scores were made to-day at Rensselaerwyck range by members of the Third Brigade Rifle Association while indulging in the regular weekly practice. Major Gaus made successive scores of 111 and 112 respectively, and Mr. Gomph made the extraordinary score of 115. Shooting was at rest, 300 yds., on Standard American target. No telescope sights were employed. Following are the scores:
Rest.
Major Chas H Gaus.....12 10 12 10 10 12 11 12 12 10—111
Wm C Gomph.....10 12 12 12 9 12 12 11 11 11—112
Leonard Geiger.....12 12 9 9 9 9 7 12 12 10—101
Col Wm E Fitch.....12 11 12 12 11 12 10 12 11 12—115
Chas P Frey.....12 11 12 12 11 12 10 12 11 12—115

The Revolver as a Military Arm.

Is or is not the revolver a military arm? It appears on the list of weapons furnished men in uniform; yet from the way in which it is treated when it comes to applying the rule that practice makes perfect one might reasonably think that no such thing as a revolver ever existed. The Army of the United States has adopted for its use the Colt .45; the Navy, too, has a modification of the same arm, yet the several departments and divisions of the Army have their regular yearly tests of marksmanship with scarce a mention of the revolver or any arrangement for a trial of the proficiency attained in its use. In 1888 General Crook, who from his frontier experience had been able to see just what a revolver can do as a weapon of offense and defense, wished to put on revolver competitions along with the official rifle scores. He was very promptly informed from the red tape home office in Washington that there was no authority for introducing any such matches into the regular meetings and that he must await authorization from the headquarters of the Army before extending any such encouragement to those who might care to perfect themselves in revolver work.
It may be that the regular army control is waiting as it waited 30 years ago for the militia force to lead off in this direction. Then it was the rifle which was the disused arm. Then the rifle, as the revolver to-day, was dealt out to the men, carried by them, drilled with, displayed on parade, but never on any account studied or practiced with as an arm of precision in firing. It would be a waste of space to give the convincing argument used by officers to show any rash inquirers that the way to become a marksman with a rifle was never but as for drilling everybody in its use, that, they assert, is a waste of time. Gen. Robbins, who, as a director of the National Rifle Association, and the head of the Department of Rifle Practice in New York State for many years, may be assumed to have studied the subject, was particularly vigorous in his denunciation of the revolver as an arm for a soldier. He was not alone in this, for it is an opinion very prevalent among those who have the direction of rifle practice that the revolver is a pesky little thing that it were better to keep in the background as far as possible.
It cannot be said in fairness that the revolver will not do good work, and at comparatively long distance, too. The Chevalier Tra D. Paine settled that question very conclusively in the course of his many years of high class marksmanship. In 1888, on the Narragansett Gun Club grounds, shooting against a March blizzard, he spent three days firing at 100 yds., using a .38cal. S. & W. army revolver. The first day the firing was at a 40in. square target on which a black band 5in. wide had been drawn horizontally. This was a test for elevation, each shot being measured vertically up or down to the center line of the band. The band might represent the breast level of a platoon of soldiers coming on shoulder to shoulder toward the firing point. In the diagram of the target made the distances for each of the 10 shots stood as follows:
First shot.....21in. Sixth shot.....39in.
Second shot.....37in. Seventh shot.....31in.
Third shot.....34in. Eighth shot.....17in.
Fourth shot.....15in. Ninth shot.....51in.
Fifth shot.....29in. Tenth shot.....2in.
Total.....344in.
This was an average of 3.44in. per shot, or a fatal fire for the approaching enemy. He fired ten targets of this sort during the day and the grand aggregate average was 4.60in. per shot.
On the second day the test was for line holding, the target now being a 40-inch square with the 5-inch black band standing vertically. This might represent a single man approaching on horse or foot; 100 shots were fired in 10 targets of 10 shots each. In the best target the shots stood as follows by individual measurement:
First shot.....4in. Sixth shot.....3in.
Second shot.....17in. Seventh shot.....2in.
Third shot.....3in. Eighth shot.....1in.
Fourth shot.....17in. Ninth shot.....38in.
Fifth shot.....3in. Tenth shot.....17in.
Total.....165in.
This target gives an average of 1.65in. per shot, or a fatal fire for the day the average was 4.398, or less than 5in. from the center line aimed at. Such firing means that the Chevalier could have kept a single enemy at bay and at this range would have dealt out a great deal of destruction.
On the third day of his test of what the revolver was really capable of doing the shooting was at the standard American target with its

possible 100 in 10 shots. In his first target the score stood 91, and for the 10 targets the total was 651 in the possible 1,000.
The Chevalier set the measure for a high grade of revolver work in this notable three days' test. It must not be said, by those who decry the revolver work that the weapon is a mere toy. Any revolver worthy of the name and likely to be adopted as a military model is fully up to the grade of work set in that three days' shooting. There is another argument urged against revolver practice as compared with rifle work. "I feel perfectly safe with a squad out at rifle practice," says an expert, though somewhat prejudiced instructor in marksmanship, "because I can keep my eye on what they are doing and how they are pointing the arms; not so with revolvers. You can never be certain whether a revolver in a man's hands and the trigger of which he may be clicking is loaded or not." If this argument is against anything it is a strong one against the lack of discipline shown in a mob of rollicking, hammer clicking, cavorting guardsmen present on a range under pretense of getting revolver practice.
"I would have my artillerymen stand by their gun and not desert it to work off their excitement banging away with a revolver," says another officer. "Again it is a matter of discipline, and the argument is that as a good soldier the artilleryman is to be deprived of a possible, and because as a bad soldier he may make what is considered an improper use of it."
Again the cavalry officer says: "I would have my men when mounted use their sabers, and when they are acting dismounted, why of course they will use rifles."
Against all these arguments are the facts that in the recent rising clouds of trouble at Buffalo and Homestead the New York and Pennsylvania militia officers went forward with revolvers privately procured in addition to the publicly provided swords. The U. S. Cavalrymen on the plains are also clever with the revolver. One rencontre between two bodies of mounted men, one with revolvers in addition to sabers and the others with carbines only, will settle the question of revolver use. The great endeavor, in small arm fighting particularly, is to have your men armed as well, or this is the question, in making a trifle better than their antagonists. The man who thinks he has an advantage fights with a confidence springing from that knowledge. This is the explanation in part of the vast sums spent in smokeless powders, in longer range guns and rifles, in magazine and breech-loader devices, etc. May not the revolver come in the same category? But to be worth carrying, practice to some measure of perfection in its use is necessary. It is already in the hands of troops enough to show its advantages when necessary, but the criticism now is against the rustful neglect which is so generally the fate of this compact little side arm. Perhaps some explanation of the present state of affairs may be found in the fact that it is much easier to become an expert, or a partial expert, with the rifle than with the revolver. This ought to make it the officer's weapon as against the rifle, which the officer is supposed to use. It is already in the hands of the commissioned days arrive. One of the most hopeful aspects of this revolver question is the formation of revolver clubs by the officers of many of the crack militia organizations. There is no neater and more satisfactory personal use of firearms than the deft manipulation of a well balanced revolver. To call it a toy is to confess ignorance of its capabilities, and while there is something inappropriate in an officer's drill on the range with a rifle for which he has no use in the making of the revolver the officer's special weapon in all arms of the service and looking for as good results from the more difficult revolver in the hands of officers as from the rifle in the hands of privates.
To gather some information on the measure to which the small side arm had worked its way into recognition, a series of queries were sent to the Adjutants-General of the several States of the Union, and a large number of responses have come in. To be the questions put were:
Are revolvers carried by either officers or men in the militia of your State?
How long have revolvers been an official small arm?
By what officers carried, non-commissioned, line or staff, and in what arm of the service?
What make is issued, caliber, size, etc.?
Under what restrictions and in what quantity is ammunition regularly issued?
Is practice required, and what are the distances and rules for same?
What facilities for practice are provided?
Are prizes offered for merit in shooting?
What records have been made?
Alabama reported by Chas. P. Jones, Adjutant-General, that the artillery and cavalry had revolvers of the regulation U. S. Army pattern in store, and new ammunition was for each company to keep 1,000 rounds in store, and new ammunition was issued only when that in store became used, unserviceable or lost. No practice was required officially, but in some instances the men got up matches and were generally good shots. No official record was taken of the scores. At the annual encampment, if facilities offered, target teams were organized. Gen. Jones says:

"The State appropriates nothing in the way of uniforms, arms or equipment. The appropriation from Congress is used to procure tents, arms and ammunition and uniforms. When troops are supplied with these it is supposed to get more ammunition and have target practice."

Arkansas, through Assistant Adjutant-General Oldham reports: "Revolvers are not used in Arkansas. All officers armed with revolvers simply. Revolvers will be used if legislative appropriation is made. An effort will be made in that direction."

Colorado sends in an approving report when the use of revolvers is mentioned. Gen. John C. Kennedy says that revolvers have been in use since the organization of the force, being issued to line and staff and non-commissioned officers, and to the Signal Corps and Cavalry when called into action. The weapon issued is the Smith & Wesson .45cal., and ammunition is issued as called for to be used in target work. The ranges fired over run from 50yds. to 100yds., and picked teams can average about 70 per cent. Gen. Kennedy closes his report with the remark:

"Our State being on the frontier, many of our men are by force of circumstances, expert rifle and horsemen. I regard rifle practice as most important in the National Guard. Give me men that know their weapon and how to use it and I will guarantee their record in the face of the enemy."

Connecticut issues weapons to the Signal Corps, to the artillery and the Governor's Horse Guards. Colt's .45cal. is the selected arm, and forty rounds per man is yearly issued for each man appearing at muster and inspection. Practice is entirely at the option of commanders of organizations, but there is no organized practice.

Delaware reports by Lieut. Col. John C. Simpson, the General Inspector of Rifle Practice in the State, since June 15, 1891, the revolver has been an official arm by all commissioned and non-commissioned officers; staff officers; also musicians, except of the cavalry arm. No ammunition is issued, since both arms and charges are provided at individual expense. No practice is directly required, but it is recommended at 25, 50 and 100 yds., and an official system and qualification with decoration is contemplated. Col. Simpson remarks on the point under discussion:

"The importance of military officers being equipped with the revolver is fully appreciated, and as time advances it is the intention of this department to restrict competitions with the rifle almost exclusively to enlisted men, reserving revolver competitions for officers."

In his directive in addition to the sword, an order, Col. Simpson goes into the question of a choice of revolver. His remark of a weapon for "a citizen's general use" will strike the average reader as peculiar, particularly when it is Delaware, and not one of the cowboy States, which is under discussion. He says:

"The attention of all officers, especially those of the line, is directed to the importance of equipping themselves with the revolver as a means of defense for protection to the sword. An order would allow little time for procuring a proper weapon, and still less for acquiring practice necessary for effective skill. In order to insure a uniform equipment an arm known as the Merwin Hulbert & Co., automatic .38 cal., 5 1/2 in. barrel revolver, is hereby authorized for the use of all officers, non-commissioned staff officers and musicians. This arm has been selected after a series of experiments, as the best adapted to the purpose for the following reasons: First, because it is effective, and suitable ammunition obtainable everywhere; second, because its moderate weight and model make it comfortable to an officer's other equipments, and thirdly, because its feature of interchangeable barrels adapts it to a guardsman's double capacity of citizen and soldier. With the long barrel the weapon is adapted to military and home defense, while with an additional short (3 1/2 in.) barrel, which is interchangeable with the longer one, the arm is quickly transformed into a pocket revolver for a citizen's general use. Those who have already provided themselves with the same model of arm in .32cal., may continue their use temporarily as to all intents and purposes in conformity with regulation. Members of the Guard wishing to equip themselves with revolvers will find it much to their advantage to communicate with this department."

"Revolvers practice should be directed toward features which are conducive to the most practical utility, and the following line of practice is advised: Standing positions at all distances; at 25yds., use of each hand in alternate scores, double action trigger pull; at 50yds., use of either hand, double action trigger pull. At 100yds., use of both hands, single action trigger pull. Target, that used for 200yds. rifle practice."

The District of Columbia responds by Adjutant-General Theo. Mosher, and the revolver is carried as prescribed in Army Regulations, except that the Light Battery is armed with revolvers in lieu of sabres. This makes the arm the Colt .45.

Adjutant-General D. Lang, of Florida, reports that no revolvers are used there by militia, but explains that "It has been so short a time since the Legislature of Florida recognized the troops as a necessary part of the machinery of the Government, that but little progress has been made in the armament of the militia."

Illinois by General Jasper N. Reece, and Indiana by General Nicholas R. Ruckle, make similar reports. No official recognition of the revolver and no arrangement for practice of any kind.

Iowa, Kansas and Kentucky each reported that there was no official recognition of the revolver.

Adjutant-General H. M. Sprague, of Maine, reports that "Revolvers have never been used in the militia."

Adjutant-General H. K. Douglas, of Maryland, reports his State as not using revolvers.

J. S. Farrar, Adjutant-General of Michigan, reports that there has never been any regulation requiring Michigan State troops or officers to carry revolvers.

Mississippi, by Adjutant-General Wm. Henry, reports that for years the revolver has been carried by Colonel, Lieutenant-Colonel and Major of Infantry, and by Sergeants, also by the Cavalry and Artillery. It is the Colt .45cal., which is adopted and 100 rounds per man per year are issued. There is no practice required, but it is allowed, though no official record is kept of scores.

General A. D. Ayling, of New Hampshire, reports no revolvers there as an official arm.

Nevada with high record for revolver work by the militiamen reports by Adjutant-General J. Ponjede, that "our small arm practice is confined to rifles."

W. S. Stryker, Adjutant-General of New Jersey says: "The officers of our National Guard and the enlisted men of Infantry Regiments do not carry revolvers; we have, however, six gun detachments, sixteen men each, and these officers and men carry a Colt's revolver .45cal." New York with nearly 13,000 men of arms when called upon has not yet put the revolver on a plane with the rifle. There is an issue of the Colt's .45cal. to the members of the Batteries, to the Signal Corps and to the troops, but no provision was then made for any practice, and the ammunition if any is burned must be provided by the men shooting, of course they do no shooting of any consequence. In the recent frontier service, the rifle, not the revolver, was the weapon which was called out for service, took along a revolver and found much comfort in the carrying of it; fortunately there was no exhibition of competency or otherwise in the handling of it.

Pennsylvania during the late emergency there had many revolvers in the hands of the officers who visited Homestead, yet it is not an official arm issued by the State, and no preparations are made for practice with it.

Little Rhode Island has Elisha Dyer as an Adjutant-General, and since 1881 has supplied the non-coms. and privates of the Signal Corps and of the First Machine Gun Battery with Colt's .45cal. revolver. The yearly supply of ammunition is 20 rounds per man, and as for practice, prizes and records there is none of them.

South Dakota issues revolvers to field officers of all arms of the service, and issued 200 rounds per man per year. The model chosen is the Colt Army .45cal. model of 1882.

In Tennessee commissioned and non-commissioned officers in all arms of the service have been permitted to carry revolvers since 1887. The U. S. A. model Colt .45 is the official arm. Ammunition is issued as required, and there is no provision for anything like proficiency practice, as Gen. Neller Anderson, Inspector-General of Rifle Practice, has never issued any orders on the subject of revolvers.

T. S. Peck, Adjutant-General of Vermont, says: "The officers of the National Guard of this State have never carried revolvers, neither have the men to my knowledge, but I am confident that each officer should carry such a weapon with his side arms."

Gen. P. G. O'Brien, of Washington, reports that "Revolvers are not issued by the State to commissioned officers, and only to non-commissioned officers and privates in the cavalry arm of the service." The Smith & Wesson No. 10, .45cal., is the arm selected. Field line and staff may carry revolvers and no provision is made for practice at ranges suitable for the revolver.

Wisconsin has made use of the revolver, and Asst. Adj.-Gen. W. B. McPherson reports that the Light Battery and the company of cavalry are armed with the Army model Colt's .45cal. No regular issue of ammunition is made and there is no provision for practice or prizes to reward it.

Adj.-Gen. Frank A. Stitzer, of Wyoming, says, in explanation of the fact that the revolver has not been designated as an official arm, that, "The National Guard in this State is yet in its infancy; we have only eight infantry companies mustered into the service, some of them not yet a year old."

OUR CIVILIAN AND REGULAR ARMY.

The Civilian Army of the United States is a growing institution. Trouble of an international sort may bring a great army together again in the twinkling of an eye, or should Congress follow the Constitutional direction to provide for such a force, there might be a doubling in a day of the number of our troops. The army of the future in uniform and the possibility of an army the like of which the world has not yet seen. The official figures made up from the last returns

available at the office of the Adjutant-General of the U. S. Army make the following table:

States and Territories.	Infantry.	Cavalry.	Artillery.	Total Enlisted.	Total Commissioned.	Men available for Military Duty (unorganized).

New York Revolver Shooting.

The New York Revolver and Pistol Club has determined to try an experiment in the encouragement of revolver shooting in and about New York. The announcement below will give the details of the match which the club has arranged to fix the championship of this city for the current year. It is an open to all match and ought to gather every man who loves to shoot the handy little revolver. There should be a liberal representation from the arm carriers of the police force, while the light batteries and the troop of our local militia, now armed with revolvers, might with lighter charges give a close call for leadership. The club announcement says:

Gallery revolver and pistol prize shoot of the New York Revolver and Pistol Club, Henry Oehl, president, to be held at its headquarters, No. 12 St. Marks place, on Thursday, Friday and Saturday, Jan. 26, 27 and 28, 1892, commencing at 9 P. M. each day, closing at 10 P. M. on Saturday. Open to all comers. Score tickets, five shots 50 cents, best two tickets to count. Re-entries unlimited. Only one prize obtainable by any one competitor.

Prizes—First prize, a gold medal, emblematic of the championship of New York City for 1892. Second prize, \$10. Third prize, \$7; fourth, \$5; fifth, \$4; sixth, \$3; and \$2 for the best five tickets.

New York Revolver and Pistol Club rules in govern. Any arm with length of barrel not exceeding ten inches; sights open; any pull except hair trigger; any weight; standard American target; distance, twenty yards. Committee: B. Walther, G. E. Janzter, C. B. Bishop. First-class arms and ammunition will be furnished at the gallery by the Zettler Bros. during the shoot.

The Gallery Record.

New York, Jan. 3.—The following took place Friday evening, Dec. 24th, 1892, at Zettler Bros., 219 Bowery, and is now the highest gallery record for 50 shots, 25 ring American target, 250 possible. M. Dorrier and B. Walther were the contestants. Walther's score, 126; M. Dorrier, 218. 217, 247, 248, 250—125. Mr. Dorrier also won trophy for 1892 championship at 12 St. Mark's Place, Jan. 1st, with a total of 2412, average of 241 1/5. THE EAGLE.

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Jan. 12.—Open sweepstake at 50 live birds, \$50 entry, on Erb's grounds, Newark, N. J. Entries, with \$10 forfeit, will be received up to Jan. 10, by C. H. Townsend, 318 Broadway, New York.

Jan. 17-18.—Hamilton (Ont.) Gun Club tournament, live birds and targets.

March 10.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.

May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.

May 23-25.—Knoxville Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.

June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.

Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh.

MR. TOWNSEND'S NOTION OF A HEAD FOR THE OUTSIDE COVER.

Last Sunday's Newark Call publishes the following sweeping challenge from Frank P. Class, of Morristown, N. J.: "I see by the FOREST AND STREAM that Mr. Smith, the father of Harry E. Smith of Newark, says he will back his son, Harry E. Smith, against me for \$250 in a trap shooting match at 100 live birds, Hurlingham rules to govern. Now, if Mr. Smith will back his son I will shoot him one, two or three times for \$250 a race, and if he will shoot three times I will give him the choice of grounds for the first. I will name the place for the second and for the third race will toss for choice of grounds. I will post a forfeit of \$75 with the Sunday Call for the three matches, but if this is not satisfactory I will shoot one match with him for \$250 a side, grounds to be chosen by winner of the toss. Yours truly, FRANK CLASS." Mr. Class is mistaken in asserting that FOREST AND STREAM says Mr. Smith, Sr., "will back his son" against him (Class) for \$250. We stated in our issue of December 22nd that "we were informed that Mr. Smith's father had expressed his willingness to make a match for 'his boy' on the above conditions," but made no positive assertion of such an offer on the part of Mr. Smith, Sr. We have no doubt, however, that Mr. Class will get a match with the young expert.

The New Jersey Shooting Club held a shoot at Claremont on Jan. 2, and five live bird events were run off. The birds were a good lot and had the aid of a brisk breeze from the west. The first match was the second shoot of the monthly series for the club's championship diamond medal. W. J. Simpson captured first honors with a clean score of 20 birds killed. F. C. Moore, who won the honors of the initial contest, took second prize with 19 killed. The other scores were: H. E. Smith 18, A. Walter 18, C. A. Pope 16, E. Childs 13, G. Smith 13. Each of the other competitors had three prizes. The scores: Second—10 birds each. Moore 10, Grouse 9, Simpson 9, Smith 9, Wilson 8. Third—25 pigeons each. Moore 24, Simpson 22, Smith 21, Fourth—10 birds each. Simpson 10, Moore 10, Smith 9. Fifth—10 pigeons each. Smith 10, Simpson 10, Pope 9, Walter 9, Moore 9, Grouse 8, Wilson 7, Childs 5.

The Reading Shooting Association has moved from the Black Bear Inn to Harry Matz's Three-Mile House at Shillington. The club has erected a commodious and well-equipped club house and shooting box on the grounds inside of the driving track, and has splendid facilities for either live bird or target shooting. The foreground is perfectly clear. The club at its recent meeting decided to hold a tournament on February 14th, 15th and 16th, the first two days at targets and the last day at live birds. This will be the second annual spring tournament of the club, and certain it is that all who enjoyed the open handed hospitality of Harry Matz and the Reading boys at their 1892 shoot will be sure to be on hand at the coming affair. The grounds are reached by the Southwestern electric cars from Ninth and Franklin or Third and Penn streets, Reading, the cars running every twenty minutes.

Last week announced in this column, and also in our list of fixtures, that on January 13th an open sweepstake at 100 live birds, \$100 entry, would take place on Erb's "Old Stone House" grounds in Newark. By request of several well-known shooters, the conditions have been changed and the contest will be at 50 live birds, \$50 entry. The division of money will be as follows: Three entries or less, one money; four to six entries, two moneys; seven to nine entries, three moneys; ten to fourteen entries, four moneys; fifteen or more entries, five moneys. Entries, which must be accompanied by \$5 forfeit, must be received up to Monday, Jan. 10, by C. H. Townsend, trap editor, FOREST AND STREAM, 318 Broadway, New York. It is hoped that the above change will induce a large number of New York, Pennsylvania and New Jersey shooters to enter.

Red Bank, N. J., Jan. 2.—The Riverside Gun Club had a shoot to-day, and several interesting events took place. A week or so ago James Cooper, Jr., and E. M. Throckmorton arranged two matches to be shot to-day, the first at 100 targets and the other at twenty-five live birds. The first match resulted in a win for Mr. Throckmorton, getting 67 to Mr. Cooper's 64. The second match was a live bird trap, rapid-fire system. The next match was at live birds, and it resulted in a tie, both killing 18. The tie is to be shot off some other day. H. C. White, E. M. Cooper and John Cooper then went in a 16-bird sweep. White and John Cooper each killed 9 and E. M. Cooper 7. The wind-up was a 5-bird sweep with the same with three entries. E. M. Cooper killed 3 and White and John Cooper 2 each.

The New Jersey Shooting Club held a live bird shoot at Claremont on Christmas, there being a fair attendance. The weather was extremely cold, with a bad wind and light. There were four events, and the records were as appended: No. 1, fifteen birds; F. G. Moore 12, N. J. Simpson 9, E. E. Blomere 7, E. S. Bond 7, R. Sunderman 3, A. P. Compton 3. No. 2, ten birds; H. E. Smith 9, Moore 8, Simpson 8, C. H. Vincent 7, C. A. Pope 7, Compton 7, A. Quail 7, Boulton 7, Sunderman 4. No. 3, fifteen birds; Moore 13, Smith 13, Compton 12, Simpson 12, Quail 12, Pope 11, Boulton 10, Vincent 9, Sunderman 7. No. 4, ten birds; Compton 9, Moore 8, Vincent 8, Pope 8, Quail 8, Smith 8, Simpson 8, Boulton 7, Sunderman 5.

Sportsmen in general and trap shooters in particular will no doubt be surprised to hear that George A. Mosher, the genial blonde who for nine years has been associated with the manufacturers of the L. C. Smith Gun, has made a change of base. On January 1st Mr. Mosher severed his connection with the Hunter Arms Company of Syracuse, N. Y., and is now a resident of New York City. Mr. Mosher is a rattling good shot and immensely popular among sportsmen, and there is no doubt he will prove a valuable acquisition to the Lefever forces. He will be seen at a number of tournaments this season, and is already well versed in the lore of the new Lefever ejector gun.

The opening tournament of 1893 will be that of the Hamilton (Ont.) Gun Club, to take place on January 17, 18 and 19. This club always draws a big crowd of American as well as Canadian experts and amateurs, and there is reason to believe that the coming affair will be as well attended as any of the past. Last season the list of entries was so large in one of the live bird events that it necessitated a tie on two days to complete it. The star event is at 21 live birds, \$21 entry, entries for which will close on Monday, January 16. There are several other live bird events and a well arranged list of target events.

The first of a series of matches for a silver water pitcher and cup took place on the grounds of the Central Gun Club at Branchport, N. J., on December 30. The conditions were ten live birds per man, and there were nineteen entries. The birds were a splendid lot of flyers. The scores were: Elisha Price 10, Wm. Price 10, Thomas Price 10, E. W. Roid 10, Wm. Joline 9, Frank Fleyer 9, W. Barber 9, L. R. Williams 8, F. S. Ferd. Van Dyke 8, E. Francis 8, E. Taber 8, W. N. Mount 7, Ed. Price 6, Ed. Cooper 5, Harry Davis 5, J. Sexton 4, J. Terhune 4, N. Erickson 4.

South Orange, N. J., Jan. 1.—The Maplewood Gun Club held its annual supper and election of officers at the South Orange Hotel last night. These officers were elected: President, J. Warren Smith; Treasurer, T. B. Smith; Secretary, Walter G. Laidlaw; Governing Committee, Samuel D. Till

Comes to us once in a while for a copy of "Game Laws in Brief," but shimplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

That Handicapping and Pots.

AMSTERDAM, N. Y., Dec. 27.—*Editor Forest and Stream:* In the Dec 8 issue of *FOREST AND STREAM* "Fair Play" gives his idea of how to divide the purse at tournaments, and to keep the "wolves" from getting all of the "pot." In this article he gives an example, which, so far as it goes, is all very well. The purse is \$10, ten targets, 10 shooters, two cents each for birds. One hundred birds at two cents would be \$2, leaving \$8 to be divided. He gives the shooters fifteen cents for each target broken, and adding the amount of their winnings is \$8.25, then there was only \$8 in the pot, consequently the parties giving tournament are out twenty-five cents. The example of scores he gives is remarkable, and I do not agree with him that his "example" holds good for any number of targets or shooters. Let me give him a score not altogether uncommon. At the tournament held in this place by the Riverview Gun Club on Oct. 21 (scores published in *FOREST AND STREAM* Nov. 3), in event No. 2, twenty shooters entered, ten birds, \$1.30 entrance, three cents each for targets deducted, which made purse \$20.

6 shooters scored	10 each—60 broken, at 15 cents each.....	\$9.00
3 shooters scored	9 each—27 broken, at 15 cents each.....	4.05
6 shooters scored	8 each—48 broken, at 15 cents each.....	7.30
3 shooters scored	7 each—21 broken, at 15 cents each.....	3.15
2 shooters scored	6 each—12 broken, at 15 cents each.....	1.80

This is "Fair Play's" system, and bear in mind there is only \$30 in the pot. Where does the \$5.30 come from? Low scores are not made these days, and at most shoots from 65 to 85 per cent of the targets thrown are broken, however if enough poor shooters entered to bring down the per cent. of broken targets to 50 or 60, this system would be good, but under the present system of chokeboring and skilful holding high scores predominate, considering and knowing this, I do not think gun clubs would risk running a shoot on "Fair Play's" principle. "Crutty's" plan is the same, but gives the shooters 20 cents for each target broken. If 20 cents had been paid in the contest above \$33.60 would be due the shooters, with only \$20 to pay with. Either their plan is wrong or I do not understand the system. I do not wish to be critical or antagonistic. No one can be more interested in getting the best handicap and will stop "dropping" than I. If one has to divide.

There is much to be said on both sides. To deal fairly with all ought not to be a hard problem, but it looks very much as if it were. The Paul North system of handicapping seems to be the best so far. The amateur has a better chance. No one who cannot make a clean score occasionally ought to shoot for money or anything else, and he ought not to feel hard if he does and get left, for he has taken his chances. Trap shooting is nothing more than a game. If one has the required skill (and luck with him occasionally) he stands a "show" of getting out even.

Unskilled and inexperienced persons cannot expect to win money in a shoot or in any game. It has been tried every day since the world began, but it won't work. If you want to shoot and there is no chance of winning (and if you do get in third hole you won't get but little, not enough to pay your entrance, as there are too many to divide with), my advice is, shoot for price of birds only—and you will be money in your pocket.

Dropping for places is the greatest evil and wrong in my eyes. Let some lucky shooter devise a plan to stop and overcome it, and his name will be legion.

R. M. H.

Live Birds at Reaville.

WM. BELLIS, of Ringoes, and A. L. Case, of Three Bridges, met at Reaville, N. J., on Dec. 28 in a couple of matches at live birds, under modified Furlingham rules. The day was cold and windy and the birds flew hard. Each match was at 10 live birds for \$15 a side, and the shooting was from "H. and T." traps. The scores:

No. 1.	No. 2.	No. 1.	No. 2.
Bellis.....	100212100-6	000111000-4	
Case.....	002121123-5	110010100-6	
Then followed a match a live bird each, for \$5 a side, between J. H. Sipler and A. S. Case:			
Sipler.....	112101-5	Case.....	100212-4
The wind up was in the form of two miss-and-out events, \$2 entry, one money:			
Van Master.....	12 1211 Hill.....	0 0	
Case.....	10 1120 Bellis.....	0 0	
Sipler.....	10 10		

Live Birds at Erb's.

RAW, damp atmosphere, the mercury showing about 28° above zero, a cold northeast wind and a white mantle of snow on the ground, while the air is filled with a thick gray haze, are not combinations the most favorable for trap shooting. The contrast between the dull gray light and the white snow is extremely trying to the eyes. The above conditions were that obtained on Dec. 29, when a goodly number of enthusiastic live bird shooters traveled up Bloomfield avenue, Newark, as far as Erb's famous "Old Stone House" grounds to take part in an all day tournament. The start was announced for 10 A. M., but it was close to 11 when any shooters appeared, and near noon before the first shot was fired. John Erb had everything in tip-top order for the sport, and there were plenty of good old birds at hand.

Among the earlier arrivals were Allen Willey, editor of the Hartford (Conn.) *Globe*, who brought along a new and untried gun, Samuel Castle, the hardy local veteran, who at over three score years of age can keep the same hot pace as that he showed twenty or more years ago; Ferd. Van Dyke, Von Lengerke & Detmold's most expert shooting representative, who brought along a combination of Franconite gun, Schulze powder and a \$10 greenback, with the remark that when the talent had secured the greenback he would stop shooting; Harry E. Smith, with a Greene gun and the famous leader of the Des-chre-shes-kazoo band, Milton F. Lindsley, celebrated also for his American wood powder. During the day there were somewhere about a hundred spectators on the ground, several prominent sportsmen being included.

It was a few minutes before 12 o'clock when the first event was called, this being an extra sweep at 5 live birds, \$2 entry, two moneys. Then came another extra event at 5 live birds, \$10 entry, with three moneys, and a third one under the same conditions as the second. The scores follow in detail:

No. 1.	No. 2.	No. 3.
Smith.....	20011-3	212121021-9
Willey.....	01100-2	3002120121-7
Castle.....	12111-5	111121210-10
Erb.....	10110-2	210121210-10
Van Dyke.....	20132-4	112121212-10
Hollis.....	11114-4	2120211201-8

By this time the attendance had increased and the regular programme was started, event No. 4 being at 6 birds, \$5 entry, four moneys; Nos. 5 and 6 at 10 birds each, \$10 entry, four moneys, the results:

No. 4.	No. 5.	No. 6.
Breitnall.....	1201121-5	1212121212-10
Castle.....	012121-5	011010101-7
Smith.....	010221-4	0121212121-10
Van Dyke.....	212121-6	112001111-7
Willey.....	112222-6	0121212121-10
Hollis.....	210112-5	1012121210-8
Erb.....	220212-5	112121211-10
Liddy.....	010120-3	2201210211-8
Hedden.....	101021-4	1122212120-9
Cannon.....	220002-3	010021210-6
Dutchy.....	2001211122-8	2221210211-9
Cramer.....	11110111-9	2221212120-9
Lindsley.....	22122220-9	2221212120-9

It was interesting to note that the 5 birds, \$15 entry, and that this should be followed by another event at 6 birds, \$5 entry. The falling light, however, caused the cutting of No. 6 to 10 birds per man, and when this was finished it was too dark for further sport, so the shooters reluctantly quit the score.

The shooters pronounced the shoot one of the most enjoyable they had ever attended, there not being a jot of their pleasure. Several expressed a wish for a repetition, and their wishes will probably be complied with.

It was noticeable that Ferd. Van Dyke's face took on a disappointed expression at his inability to lose the \$10 greenback mentioned early in this article. He shot in all the events, six in number, and got 44 out of 51 birds, securing a place in every event and pulling out a little ahead.

W. S. Canon was bothered on his start-in with a very light trigger pull on his right, a severe handicap for a man who has only one hand. Later he shot with Captain Cramer's gun and did much better work.

Milt. Lindsley was awfully anxious to grass his last bird in the final sweep and hit it hard with both loads. It carried the weight to the boundary, however, and fell dead as a mackerel less than a foot outside.

The combination of wood powder and *FOREST AND STREAM* won five out of nine games from the "Old Stone House" and Hartford *Globe* team, and they played on a table with a clear light.

The shooting was rather ragged on the start, but after a couple of "warmers" everybody braced up and did fair work.

Probably a couple of dozen birds had to be flushed, but on the whole they were a rattling good lot. Some were awfully fast and called for pretty work.

"Jimmy" gave satisfaction, both as referee and trap-puller. Erb's corps of assistants would be hard to equal on any ground in any country.

The usual army of "bushwhackers" formed a cordon around the grounds and jeopardized the lives of the shooters as well as travelers on Bloomfield avenue by their reckless firing.

Another all-day shoot will be held on these grounds during the latter part of January.

C. H. TOWNSEND.

Cold Shooting at Pearl River.

The Excelsior Gun Club of Pearl River, N. Y., had some lively shooting on December 29 in a raw wind and a bad light. The attendance was good, there being several members of the Boiling Springs Gun Club, of Rutherford, on hand. These included Messrs. Post, Eddie Collins, J. F. Collins, P. A. Jeannet, Lenore, Lane, Apgar, Seely, James, Greiff and Hobart. The shooting was brisk, and it was not until dark that the enthusiasts could be prevailed upon to pack up their guns. The most interesting contest of the day was a team match between eight men from the Boiling Springs and Excelsior clubs, each man shooting at 25 single bluecock targets. The scores follow:

Christmas Targets at Maplewood.

MAPLEWOOD, N. J., Dec. 27.—The Maplewood Gun Club held an open shoot here yesterday afternoon, the attendance being good despite the extremely cold weather and tricky wind. Among the shooters were R. H. Breintnall and C. M. Hedden, of Newark; R. Walters, of Woodside, and J. W. Smith, of Orange. All the events were at 10 singles, \$1 entrance. The results are appended:

No. 1.	No. 2.	No. 3.	No. 4.

Sweep at 10 singles: Chamberlain 6, Hulsizer 6, Lott 8, Reading 6, W. Closson 0, Moore 0, Emmons 6, Surphen 5, E. Closson 7.

The Fulford-Elliott Series.

THE series of five matches between Elliott and Fulford are over at last, and much to the surprise of Elliott and doubtless of all Kansas City, Fulford won four out of the five matches, killing 13 birds more than did his opponent. And it must be rather galling to Elliott's pride to win only one match after being so confident of his ability to win at least three of the series. The matches, however, were tests of nerve as well as skill, and while Elliott undoubtedly possesses the latter there are many who insist that he lacks nerve when under pressure. His work in his series with Brewer, shot at Marion, certainly looked as though he lacked staying powers when closely pushed. He stated some time ago that if successful in winning a majority of the matches with Fulford he would be willing to return over the same ground and shoot against John L. Brewer in a similar series of matches. His losing his series with Fulford of course puts a stop to any arrangements for a series with Brewer, and it is as well for Elliott that it is so, as John L. Brewer, in form and shooting to win, is at least 3 birds better on 100 than is J. A. R. Elliott.

Ever since the Fulford-Elliott series of shoots were arranged there have been cries of "hippodrome," "gate money fakes," etc., from all over the country, founded solely upon the facts that the matches were to be shot in five different cities, gate money was to be charged in each place and the receipts and expenses were to be divided equally between the two principals. We confess that we do not look favorably upon the custom of shooting for gate money, but nevertheless the mere fact of charging an admission to see a match does not prove that the match is "fixed." Before the series was started we received an offer from a reputable gentleman who knew whereof he spoke, that the matches were to be fair and above board. And it is rather difficult to see where a "deal" could be worked in a series of matches wherein one man wins four out of five shoots.

Another thing that has been published broadcast is the statement that the series were "championship" matches. One paper would state "for the championship of the world," another "the American championship" and still another "the American Field championship." Every trap shooter in America knows that the *American Field* championship cup is the personal property of J. A. R. Elliott and cannot be again contested for. It is also known that the "championship of the world" if there is any such title (which is doubtful), is claimed by J. L. Brewer and also by Dr. Carver, and that in order to shoot for any such title it would first have to be won from one or both of them. As neither Fulford nor Elliott ever shot against either Brewer or Carver for the above title they could not contest against one another for the title. So far as the "championship of America" is concerned no such title exists. While Fulford and Elliott agreed to shoot for \$200 a side each match, with an additional \$300 to the man winning three out of the five matches, the space writers who have up added copy for the lay press have added all sorts of conditions.

The series of matches just ended should prove to the public that E. D. Fulford is able to hold his own, when in form, against a first-class man, despite his showing against Budd in Chicago. His average for the five matches shot with Elliott is 91½, against Elliott's 80. The scores in order as shot were:

Fulford.....	85 95 90 96 90—458	Elliott.....	85 93 93 88 85—445

The Breech-Loader

AND HOW TO USE IT. By W. W. Greener. Illustrated.

1892. Boards, 288 pages. Price, \$1.00.

THE AUTHOR'S INTRODUCTION EXPLAINS

This treatise is written for that numerous class of sportsmen who delight in a day's
 shooting, but have neither the time nor the means to make the sport a life's study. Published
 at a popular price, it will, it is hoped, reach many who have hitherto been deterred from
 shooting, believing it to be an expensive recreation. The author's aim is to induce all who
 can to participate in a manly sport, and to advance the interests of those who can look to the
 gun for pleasure, health or occupation. The book is not written for experts, nor for those
 who have special opportunities for the acquisition of the art of shooting; and in order to
 make it as attractive as possible to the general reader, many matters which would interest
 the enthusiastic shot only have been omitted.

CANOE HANDLING.

By **C. B. VAUX ("DOT.")**

A complete manual for the management of a canoe. The author begins at the very
 beginning, describes and explains the rudiments in the simplest and plainest way possible.
 Everything is made intelligible for beginners and besides this A B C teaching there are so
 many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the
 study of these. The book is complete and concise—no useless duff between its covers. The
 subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and
 rules. The text is further elucidated by numerous practical drawings, and the beauty of the
 book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe
 Building." Price, postpaid, \$1.00.

that Afognak (or Litnik) River, is admirably adapted to salmon hatching, being near a safe harbor in a region where skilled labor is cheap, abounding with fairly good timber, and visited by salmon and trout in large numbers. Moreover, the river is not subject to great changes of level and will furnish ample supply of water by gravity.

The President, at the suggestion of the Interior Department and the Fish Commission, has by a stroke of his pen effected an object, the importance of which cannot easily be over-estimated.

FAMILIAR ACQUAINTANCES.

THE RUFFED GROUSE.

THE woods in the older parts of our country possess scarcely a trait of the primeval forest. The oldest trees have a comparatively youthful appearance, and are pigmies in girth beside the decaying stumps of their giant ancestors. They are not so shagged with moss nor so scaled with lichens. The forest floor has lost its ancient carpet of ankle-deep moss and the intricate maze of fallen trees in every stage of decay, and looks clean-swept and bare. The tangle of undergrowth is gone, many of the species which composed it having quite disappeared, as have many of the animals that flourished in the perennial shade of the old woods.

If in their season one sees and hears more birds among their lower interlaced branches, he is not likely to catch sight or sound of many of the denizens of the old wilderness. No startled deer bounds away before him nor bear shuffles awkwardly from his feast of mast at one's approach, nor does one's flesh creep at the howl of the gathering wolves or the panther's scream or the rustle of his stealthy footsteps.

But as you saunter on your devious way you may hear a rustle of quick feet in the dry leaves before you, and a sharp, insistent cry, a succession of short, high-pitched clucks running into and again out of a querulous "ker-r-r-r," all expressing warning as much as alarm. Your ears guide your eyes to the exact point from which the sounds apparently come, but if they are not keen and well trained, they fail to detach any animate form from the inanimate dun and gray of dead leaves and underbrush.

With startling suddenness out of the monotony of lifeless color in an eddying flurry of dead leaves, fanned to erratic flight by his wing-beats, the ruffed grouse bursts into view in full flight with the first strokes of his thundering pinions, and you have a brief vision of untamed nature as it was in the old days. On either side of the vanishing brown nebula the ancient mossed and lichened trunks rear themselves again, above it their lofty ramage veils the sky, beneath it lie the deep, noiseless cushion of moss, shrubs and plants that the old wood-rangers knew and the moose browsed on and the tangled trunks of fallen trees. You almost fancy that you hear the long-ago silenced voices of the woods, so vividly does this wild spirit for an instant conjure up before you a vision of the old wild world whereof he is a survival.

Acquaintance with civilized man has not tamed him, but made him the wilder. He deigns to feed upon your apple tree buds and buckwheat and woodside clover, not as a gift, but a begrudged compensation for what you have taken from him, and gives you therefor not even the thanks of familiarity, and notwithstanding his acquaintance with generations of your race he will not suffer you to come so near to him as he would your grandfather.

If, when the leaves are falling, you find him in your barnyard, garden or out-house, or on your porch, do not think he has any intention of associating with you or your plebeian poultry. You can only wonder where he found refuge from the painted shower when all his world was wooded.

If he invites your attendance at his drum solo it is only to fool you with the sight of an empty stage, for you must be as stealthy and keen-eyed as a lynx if you see his proud display of distended ruff and wide spread of barred tail and accelerated beat of wings that mimic thunder, or see even the leafy curtain of his stage flutter in the wind of his swift exit.

How the definite recognition of his motionless form evades you, so perfectly are his colors merged into those of his environment, whether it be in the flush greenness of summer, the painted hues of autumn or its later faded dun and gray, or in the whiteness of winter. Among one or the other he is but a clot of dead leaves, a knot upon a

branch, the gray stump of a sapling protruding from the snow, or covered deep in the unmarked whiteness, he bursts from it like a mine exploded at your feet, leaving you agape till he has vanished from your sight and your ears have caught the last flick of his wings against the dry branches.

In May, his mate sits on her nest, indistinguishable among the brown leaves and gray branches about herself. Later when you surprise her with her brood, how conspicuous she makes herself, fluttering and staggering along the ground, while her callow chicks, old in cunning though so lately their eyes first beheld the world, scattering in every direction like a shattered globule of quicksilver and magically disappearing where there is no apparent hiding-place.

Did they con the first lesson of safety in the dark chamber of the egg, or absorb it with the warmth of the brooding breast that gave them life?

Listen, and out of the silence which follows the noisy dispersion of the family you will hear the low sibilant voice of the mother calling her children to her or cautioning them to continued hiding, and perhaps you may see her alertly skulking among the underbrush still uttering that tender, persuasive cry, so faint that the chirp of a cricket might overbear it.

Scatter her brood when the members are half grown and almost as strong of wing as herself, and you presently hear her softly calling them and assuring them of her continued care.

With many other things that make you aware of the changing season, you note the dispersion of this wildwood family. Each member is now shifting for itself in matters of seeking food, safety, pleasure and comfort.

You will come upon one in the ferny undergrowth of the bowland woods where he is consorting with woodcock, frighten another from his feast on the fenceside elderberries, scare one in the thick shadows of the evergreens, another on the sparsely wooded steep of a rocky hillside, and later hear the drum beat of a young cock that the soft Indian summer has fooled into springtime love-making, and each has the alertness that complete self-dependence has enforced.

Still, you may come upon them gathered in social groups, yet each going his own way when flushed. Upon rare occasions you may surprise a grand convention of all the grouse of the region congregated on the sunny lee of a hillside.

It is a sight and sound to remember long, though for the moment you forget the gun in your hands, when by ones, twos and dozens the dusky forms burst away up wind, down wind, across wind, signalling their departure with volleys of intermittent and continuous thunder. Not many times in your life will you see this, yet if but once, you will be thankful that you have not outlived all the old world's wildness.

It is reported that the Maine Legislature will be asked to consider an amendment of the game law, providing for a non-resident license fee to be exacted from citizens of other States who may visit the Maine woods for shooting or fishing. This scheme may have originated with some genius who thinks he sees in it added revenue for his fellow citizens, who make a very handsome thing now out of summer and autumn tourist travel, or it may be an outcropping of a long-standing and persistent natural prejudice some folks entertain against foreigners, and its purpose prohibitory. The Commissioners are manifestly not in favor of the plan, if we may accept the statement of the first quoted paragraph of their report on page 30 as expressive of their views. Not to mention the unconstitutional aspect, there are ten good reasons to forbid the adoption of a Maine non-resident law to one plausible reason for it; and we do not believe that the proposition will ever be given serious consideration at Augusta.

THE first annual meeting of the reorganized New York State Association for the Protection of Fish and Game will meet in Syracuse to-day. The Pennsylvania State Sportsmen's Association is marshalling its forces for reform and progress. Tennessee sportsmen are falling into line with a sensible demand for a State law without county exceptions. The recent Minneapolis convention of commissioners and game wardens representing six States, to consider the attainment of uniform laws, was the beginning of a movement which is full of promise.

THE RESERVATION OF AFOGNAK.

THE establishment of marine preserves for the protection and increase of valuable aquatic animals has been advocated by FOREST AND STREAM ever since these aids to the existence of the walrus, sea lion, seals, sea otter and salmon were first suggested. In our numbers of April 23, April 30 and May 21, 1891, will be found discussions of the subject, both editorially and by various zoologists who are familiar with the requirements of such institutions.

In 1889 Congress directed Commissioner McDonald to investigate the habits, abundance and distribution of the Alaskan salmon and the conditions and methods of the fisheries, with the view of recommending legislation to insure the permanence of the fishing industry. Dr. Bean was placed in charge of the exploration and was accompanied by Messrs. Livingston Stone and Franklin Booth, of California, and Mr. Robert Lewis, of Washington.

During the course of the investigations Messrs. Booth and Stone were detached for a visit to Afognak, to determine the possibilities of conducting a salmon hatching establishment on that island. They were favorably impressed with the advantages of Afognak River and lake, and made reports upon the region which were utilized in the general report of the exploration and published in 1890.

At the New York meeting of the American Fisheries Society in May, 1892, was read a paper in which Mr. Stone definitely proposed the conversion of Afognak Island into a national salmon reservation. This article was published soon after by FOREST AND STREAM, from which journal it was quoted by Commissioner McDonald in his second report on the Alaskan Salmon Fisheries during the same year.

The importance of the plan became manifest to the President; and he directed the Secretary of the Interior and the Commissioner of Fisheries to investigate the subject and report upon its feasibility under the law. They found that he had the authority to make the reservation, and urged him to do so.

The President, therefore, issued a proclamation on Dec. 24, 1892, reserving for timber and fishculture purposes the island of Afognak, Alaska, and its adjacent rocks and territorial waters, including the Sea Lion rocks and Sea Otter Island. The Commissioner of Fisheries has chosen Afognak Bay and the river and lake of the same name, together with the tributaries of the river and lake and one mile of land from the shores of the river and lake, for the purposes of fishculture.

The salmon canneries on the bay will be vacated, but the natives will retain whatever fishing rights they had during the Russian occupation. It is hoped that several important marine species including the sea otter may be preserved on this reservation, and there is no doubt that the half dozen or more kinds of salmon and trout that now abound in Afognak River will be saved from extermination, and will soon increase the supplies of the surrounding region.

From the accounts of Messrs. Stone and Booth, we learn

The Sportsman Tourist.

ON THE PAMPAS OF ENTRE RIOS.—III.

SOME of your readers might be interested in hearing a description of an estancia, or ranch, as carried on in Entre Rios.

Many of these estancias combine the raising of cattle, horses and sheep, as did the one I had charge of. The main ranch generally consists of a cluster of four or five buildings, erected in an inclosure of strong fencing, made by planting posts close together in a ditch and sawing them off evenly about 4ft. from the ground. Sometimes a wire fence is used, but they are very little protection against cattle or horses. All of the buildings are of one story, and are built with either adobe or thatched walls and thatched roofs. The largest, which is a long building containing three rooms, is occupied by the manager. One room is used as a dining room, one as a bed room and one as a store room. Next to the main building is generally an open meat shed; next a wool house, where the wool is stored or bagged. Detached and at one side of the main house is a structure of two rooms, one used as a kitchen and one as a sleeping apartment for the men in bad weather. They sleep out of doors in good weather. There may be one or two other small structures and there is always a large oval brick oven built on a platform 3ft. from the ground. Back of the main house is a wire corral 60yds. square, and in front a small portable one made of board panels. In the large corral is put at night what is known as the house flock of sheep, and in the portable one the breeding flock of fine imported ewes and rams.

The manner of constructing the houses is as follows: Posts are planted at corners and along the sides and ends, at intervals of 3ft., the middle end posts being high and crocheted on the ends to hold the ridge pole. Canes are fastened to the posts inside and outside, about 2in. apart. The hollow wall thus formed is filled in with adobe well worked by being tramped by a herd of horses. The roof is thatched with a coarse grass called *paja*, and the walls coated outside with thin mud, and the house is finished. There is not a nail used in the construction, except perhaps in the doors and windows of the main house, which is the only one that has these luxuries. Everything is fastened with rawhide strips, which have to be well soaked in arsenic water, to make them proof against a small black beetle that destroys them in time. All the houses have dirt floors, and all except the main house, simply two openings opposite one another for doors.

The furniture is of the simplest kind, a cot, pine table, pine desk, a dresser with a few cups, plates, etc. The cooking utensils are very few, a tea kettle, two pots, two frying-pans and an assador. This latter is the most important and most used of all the utensils, and is simply a long iron rod sharp at one end; on it, all meat and game is roasted, it being run through the roast and stuck into the ground before the fire. The fire is built on the ground in the middle of the kitchen, the smoke escaping through a hole in the roof. The seats in the kitchen are invariably horses' skulls. A Goucher will not sit in a chair, in fact they prefer to squat on their heels rather than sit on to anything.

If the estancia has more than one flock of sheep they are put out at what are called *puestos*, which are small straw huts with a large wire fence corral attached. Each flock of sheep is carefully looked after by a shepherd on horseback. The shepherds are generally married men, and live in their *puestos* for months without seeing any one but the manager and the man who brings them a fresh horse every day. They are after their sheep from early morning until nearly night, and on their vigilance and care depends very largely the success of the estancia. Especially in lambing season do they have to pay strict attention to their flocks. We had 5,000 sheep which were divided into six flocks. Sheep do not have that strong instinct that cattle and horses have of returning to their *carenacia*, or place of their birth, or where they have been accustomed to graze for a long time, but will go and stay where they are driven. On one occasion we had a terrible drought, all the water on the place giving out except one small pond. I kept two men on guard day and night over this pond to keep the cattle and horses out of it. This was a difficult job, as the animals were all on the move for water. Our horses and cattle had all gone (except the drove of broken horses which we kept herded for use) of their own accord, to a large lake more than 30 miles off, but the sheep showed no inclination to seek water, and all the flocks had to be driven to the pond every other day. The cattle and horses nearly all returned as soon as there was an abundance of water, and we did not lose more than 175 head. The water in our pond got so bad at last that I made every preparation to move the sheep (over 5,000) to where there was water. But fortunately for us the night before we started a thunder storm passed over a strip of country about a mile wide, and rain enough fell to fill many little lagoons, and we were saved. In a week's time heavy rains had set in and arroyos that had been dry for six months were running bank full, which meant in many places 30ft. of water.

Sheep have many curious ways, and the only time they are quiet is during the middle of the day in clear hot weather from 11 to 2 o'clock. During this time they huddle close together, and only those that are unfortunate enough to be on the outside are restless. They will feed very rapidly into a cool breeze, traveling miles if not headed, and giving considerable trouble. They travel before a storm, and if it is severe they are very hard to stop. During one very bad storm just after shearing we lost over 600 sheep. I gave orders not to let them out, on the morning of the storm, which continued during that day and night and the next day. On the second day I made a tour of inspection to all the *puestos*, and found the sheep were dying in the corrals from hunger and exposure. I sent an extra man to each flock and ordered the sheep to be let out at noon. As soon as the corral gates were opened they dashed through them and out into the pampas. The men had orders not to try to stop them, but simply to check their run, and round them up at night as near home as possible. Their track from each corral could be followed by the dead and dying sheep on the ground. We skinned 600 after this storm, and we got off much better than some of our neighbors.

During the lambing time the sheep are a great deal of trouble, for many ewes will leave their lambs as soon as born. The two shepherds that are constantly with each

flock during this period watch carefully, and as soon as they see a ewe leave her lamb they lasso her, tie her out and put the lamb by her. It not infrequently happens that they do not get the right lamb, in which case the ewe rarely takes it. If this should happen the lamb is brought to the main house and nursed from a bottle. If it lives it never becomes a fine sheep, but is pot-bellied and weak, and is the first to succumb in a storm.

The sheep are counted once a week and thoroughly examined by the manager, for cases of hoof rot or maggoty sores; and if any cases are discovered they are treated at once with carbolic acid or calomel. The sores are caused by a grass called *flechillo*, which has an arrow point and twisted stalk. It works its way into the sheep and causes a small sore, the flies blow the raw spot and in a short time, if the sheep is not doctored, the sore will spread and kill the sheep.

Sheep are very rapid feeders at all times, and the reason they get over so much ground is because they are very greedy and each one is trying to work ahead of his neighbor to get better grass. On the pampas the hoofs of the sheep have to be trimmed frequently, there being no stones to wear them they grow very long and curl up like high Dutch skates, retarding the animal's progress considerably. The lambs when a week old are very playful, frequently jumping over the backs of the ewes and cutting many capers. The ewes recognize their lambs by smell, and it is interesting to watch them pick out their lambs after they have been shut up in the evening. In driving from one thousand to twelve hundred sheep, with six to eight hundred lambs, into a corral they get badly separated, and there is a tremendous bleating for a while. An old ewe will stand in one place and bleat, the lambs that are looking for their mothers will run to her. She smells each one as it comes, and if it is not the right one she butts it off and it runs to another until it finds the right one. When it finds its mother all is serene, it partakes freely of the fluid provided for its sustenance and in a few minutes they are curled up together for their night's rest.

The sheep are shorn once a year in September or October. The shearing is done by companies of men, women and children, who travel from place to place shearing all the sheep on an estancia before leaving for another. They come with their carts and tents and camp out near the main buildings. The flocks are all brought to the estancia house to be shorn and are driven, a flock at a time, into a large temporal corral. From the large one they are put in small points into a smaller one. Here each sheep is caught and by a dextrous trip thrown upon its back. Its fore and hind legs are fastened together and it is lifted on to a horseshide, where the shearer takes it. All hands shear, and each one who brings a fleece to the tyer's table gets a check that represents six cents. The most expert shearer will shear 100 sheep in a day. There are generally about forty persons in a shearing gang, most of whom can shear a sheep. At night during the shearing season it is usual to have a dance. All hands assemble in the *pateo* or front yard of the house and dance to the music of guitars until long after midnight.

The cattle on an estancia require constant attention, especially if they have been recently brought from a distance, as they are all the time working back to their *carenacia*. The corral for shutting up cattle is made very large and very strong. It is constructed by digging a deep ditch and planting high posts close together in it, and is strengthened by having poles lashed across the posts about four feet from the ground. It is only used in branding time or for the purpose of shutting up points of cattle when they are first brought on the estancia. These cattle are very easily frightened and will stampede without a moment's notice. One bright moonlight night while helping watch a very obstreperous point we had corraled, I saw them get into a terrible state of excitement. It was 2 o'clock A. M. and everything was as still as death. All at once every animal seemed to spring to its feet, and surge and jam, first against one side, then the other. The corral bent and creaked, but fortunately held, and after shouting, talking and singing to them they became quiet. At the first intimation of a stampede we all sprang into our saddles, and I with two others took our place at the bars of the corral. Just as we got there we saw a small white pig run out, which no doubt had been the cause of frightening the cattle. If they had not been corraled we would have had a wild night ride, and might not have rounded them up until we had gone many miles.

The vacaros are constantly riding out toward the boundaries of the estancia and driving back cattle that are inclined to wander too far from home. Twice a year or oftener if necessary the cattle are driven in and rounded up on what is called the *rodeo*, which is a high point of land near the cattle ranch. The cattle to be sold are cut out at this time and are counted. The rounding up is always a time of excitement, and men from near by places come in to help. When the cattle are to be branded they are driven into the corral several hundred at a time. It is at this time that the gaucho shows his dexterity with the lasso and his wonderful horsemanship. A wild and vicious young bull will be driven out of the corral and immediately start on a dead run for liberty. He will proceed but a short distance before he is brought up by a lasso tightening around his hindlegs and another over his horns. These pulling in opposite directions lay him flat out on his side. The horses are so trained that they keep up a steady strain on the lasso, compelling the bull to lie still while he is branded, his ears cut and other operations performed upon him. The gaucho who is last near him takes the lasso off his horns and quickly mounts his horse. The animal is then free to get up, and as he does so the other lasso falls off his legs. He, thoroughly infuriated, looks around for a victim, but there being no one about on foot he rushes madly off to join his companions, and meditate upon the cruel treatment he has undergone. Throwing the lasso around the hindlegs is called *piealando* and is only attempted by the most expert lassosists.

The horses used for stock purposes require very little looking after. Twice a year there would be a grand drive, and colts branded and the tails and manes of all adults cut. The fat mares, old stallions and defective horses would then be cut out, and sold to be driven down to the coast where they are killed for their hide and fat. We had at the main ranch a corral into which every morning would be driven the broken horses from which the shepherds were supplied, and the vacaros got their mounts. We generally corraled from 105 to 125 horses every morning. We had a man whose sole business was to break

horses. He would ride out among the unbroken herds, and select a young horse, which he would proceed to capture if he could. He was always mounted on a splendid and fleet animal, and would start off after the one he wanted on a dead run. He would throw his bolas when he thought the proper time had come, and if dextrously done and the horse's hindlegs were entangled in them, he would soon have the lasso over his head and his captivity insured. But if his bolas fell short of the mark, and he had to stop and pick them up there was no hope of his again capturing that horse.

The horse breaker is called a *domador* and his business is to keep the estancia supplied with (so-called) broken horses. When he captures an unbroken horse (mares never being used for work purposes) he secures it to a post with a short halter strap. The poor brute is left tied without food or water for twenty-four hours, at the end of which period the *domador* proceeds to give him his first lesson. He gets a circingle around the horse's body and a rawhide thong in his mouth in place of a bit. All this is accomplished with more or less difficulty, according to the disposition of the horse. Frequently they have to be thrown down to get the circingle around them and the thong in their mouths. When the *domador* is ready to mount he has his assistant hold the horse as best he can while he, with a dextrous vault, lands squarely on the animal's back. The assistant immediately lets go and the circus begins. Such plunging, rearing and bucking is never seen in this country. Unless the horse rears up and falls over backwards, or falls down in some way, the *domador* remains calmly seated on his back. As the plunges and corcovandos cease in a measure from exhaustion, his breaker plies his cruel *rebenque*, made with a broad lash of rawhide and a short, loaded handle, causing the horse to leap and run in all directions, generally ending in a bolt and run far away across the plain. The *domador* always succeeds in bring the horse back, but in a terribly used up condition. He is tethered out near water and where there is plenty of grass and allowed a day or two of rest, while one of his unfortunate companions is put through the same course of sprouts.

After his third or fourth lesson he is called a *redamon*, and is put with a *tropillo*, or small herd of horses. These *tropillos* are formed as follows: An old brood mare that has been partially broken or handled until she is tame is used as a collar mare, and each *redamon*, as he is handed over by the breaker is coupled to this mare with a broad rawhide collar, both of their forefeet being hobbled. He is left coupled in this way for a week and then released. He will never after this leave the mare. Generally the *tropillos* number 10 horses to each mare. In making a long journey the *tropillo* is driven ahead of the riders, and as the ridden horse gets tired he is let go and a fresh one taken. The freed horse will immediately begin to work his way back home, and when the party returns he will invariably be found by his old mare, who is left behind on such occasions. These horses will travel more than a hundred miles back to their *carenacia*.

The only food supplied the men by the estancia is meat, principally beef, as they do not care for mutton. They are very fond of young horse meat, but as it is difficult to catch this "game" do not get much of it. They take large quantities of *maté*, which is made from a shrub called *yerba* that comes from the province of Uruguay. A gourd is used to serve the *maté* in, and it is made by pouring boiling water on the *yerba*, which is packed in the gourd around a metal tube which has a perforated bulb on the end. The gourd is passed around among those assembled and each takes a suck in turn.

All hands on an estancia get up early, at least an hour before daylight, which means about 3 A. M. most of the year. A *churasco*, which is a thin slice of beef toasted before the fire, and a *maté*, are taken by each of the men. Then one of them takes the tethered horse and goes after the *tropillos* of work horses. These are driven in the corral, and each man selects a horse for himself, which he lassos and bristles and saddles. Most of the horses start off bucking, which they keep up until tired, but after they have had their buck they become quiet and tractable for the rest of the day. Each man knows what he has to do, and by sunrise all are performing their duties. At 8 to 9 o'clock those that can come in to breakfast, which consists of either a roast or stew of beef, with perhaps a little *farina* or coarse arrowroot and *maté*. In the hottest weather all hands take a siesta of two or three hours in the middle of the day. All animated nature seems to be at rest during this time, cattle, sheep, horses, birds and insects (except the fleas) take their siesta.

Oxen are used almost altogether for drawing the carts of Entre Rios. The yoke used is a bar lashed behind their horns. The carts are large lumbering affairs, not a nail or piece of metal of any kind being used in their construction. The axles are never greased and the wheels keep up an awful screeching. A caravan of five or six ox carts can be heard several miles at night. Four to eight oxen are yoked to each cart. Breaking oxen is a very exciting operation. The largest and strongest looking steer is selected for the purpose. He is cut out of the herd and driven to near the ox cart. Here he is lassoed and thrown down, and the cart pulled over him, so that when the yoke is tied to his horns the tongue will be alongside of him. At the other end of the yoke is fastened a tame old ox. As soon as the lassos are taken off the wild steer he jumps up, and, of course, plunges and tears around tremendously, but his companion holds him so he cannot run. After the ox is somewhat tired two more yokes are fastened to the end of the tongue and the wild one is compelled to go with the cart. The tame ox on the other side of the yoke keeps him from running off to one side and the lead oxen drag him along whether he wants to go or not. It takes a good many lessons to break a steer so he can be relied on.

A Deer on Conanicut Island.

NEWPORT, R. I.—In your issue of Jan. 5 the article on "Cape Cod Deer" reminded me of something quite peculiar that happened about Christmas. On Conanicut Island, which is just opposite Newport, a man on his way to the ferry saw a deer about three or four years old walking right across the road. On his approach the deer took fright and ran away. Several have been after him but no one has been able to find him. The queer part of the thing is that Conanicut is an island about three miles long and one-half to three-quarters of a mile wide, and how is it that he ever got there, as nobody has ever seen one there before? Maybe some of your readers could answer my question.

TRIANGLE.

KISSIMMEE, CALOOSA, OKEECHOBEE.

PERHAPS a short sketch of a trip that three of us made on the above-named rivers and lake may be of some interest to your readers who consider the lower half of Florida pestiferous, infested by insects and so inconvenient to reach that half the fun of shooting and fishing is lost in discomfort.

We started from Kissimmee, Saturday morning, March 22, on the steamer Arbuckle, after laying in the usual supply of provisions. The steamer was of very light draught, 35ft. over all and about 12ft. beam, with side wheels. The cabin, 8 by 10ft., has four bunks, which we used, while the crew of four men slept where they could. We towed two skiffs for fishing and had a lighter lashed on in front in which to carry wood, ice, etc.

The first night out we passed in the Southport Canal, which is the first of the Okeechobee Land Co.'s system. We had some difficulty getting through it, as the water is 5 or 6ft. lower than usual, owing to the dryness of the winter; here and one or two other places we had trouble, but this was the worst, for the men had to get overboard and push.

The first big-mouthed bass fishing we had was in Lake Cypress, at the outlet of the canal, in shallow, swift-running water. They bit as fast as we could take them off the hooks, and in two or three cases we caught two at a time. They seemed to bite best at artificial minnows, with gang hooks; that is, we caught more on them than on "spinnners," as the fish did not shake them out as easily. We took 25 or 30 and nearly all were from 2 to 3lbs. All the way to the Caloosa River we tried the fishing in different places, lagoons, dead rivers, "cut-offs," canals and rivers, but nowhere is so good as the outlet of a canal where the water was shallow and the current swift. Fly-fishing we only tried one day, at the end of the canal from Lake Okeechobee to Lake Heckpochee. There it was especially fine and frequently two would be taken at a cast—silver-doctors and yellow flies seemed to take their eye the best—which was very good fun on an 8oz. rod.

Mr. Geo. Mixer, a well-known sporting member of the Somerset Club, of Boston, carried off the honors that day by taking a 6½-pounder. We were very fortunate in having the water so low, as all the fish were concentrated and so we didn't have to hunt them much.

In ordinary seasons the Kissimmee River is nothing but a big "saw grass" and "lily pad" marsh, from fifteen to twenty-five miles wide, with a channel or slough running through it. To say that the channel is crooked would hardly do it justice. In the course of half an hour the boat would have headed to all points of the compass, and with the exception of the canals, I don't think we ran three minutes at a time in the same direction.

Alligators were pretty scarce and we only got seven altogether. The largest, 11ft. long, was killed by Mr. Mixer, who is an unerring rifle shot. On the Caloosa River, just above Fort Meyers on the flats, we saw eight or ten "gators" and one crocodile; but we had been previously informed by Mr. Mixer, who is an enthusiastic "gator" hunter and who has studied their habits and using grounds carefully, that we should not see any more and might as well put up our shooting irons. So when they had been cleaned and put away and we happened on this branch, not one more than 25ft. from the boat, a more disgusted individual never seen. He did not forget that unlucky piece of advice for a long time, and we constantly kept it fresh in his memory.

The scenery was fine only in one or two places before we reached the Caloosa River at Fort Thompson. The finest was in Istokpoga Creek, about five miles from the Kissimmee River, in a water oak and palmetto hammock, where the tops of the trees and vines covered in the river almost completely.

The crossing of Lake Okeechobee was not as difficult as we expected, for sometimes it is necessary to wait four or five days for the wind to moderate and sea to go down as these boats are not built for rough weather. The lake, roughly speaking, is 35x40 miles and from 10 to 15ft. deep, so when there is any sort of a wind the sea makes very quickly. We got to the lake about 8 A. M., and stopped to fish and shine a "gator," so did not start across till after twelve. There was a southeast wind blowing which freshened considerably, so that when about half way over we had to run into the saw grass to keep from being swamped. There we tied up for the night and were under way by daylight next morning with a run of about twenty miles to the entrance of the canal, which our guide missed and carried us to Observation Island, ten miles out of the way; the entrance was very easy to be missed, for the landmark was an old tin can on a pole nailed on top of a cypress tree a mile or so back in the saw grass.

Fort Thompson, at the head proper of Caloosa River, was a beautiful spot. A large prairie bordered with pine and oak trees, and a gradual slope on all sides to the lake and river, with here and there a lone oak or cypress, and covered with cattle, will describe it in detail, but the colors and light be left to the imagination. The river here is very narrow, running through lime stone rock, but has been cleaned and deepened by the Okeechobee Land Co.

We were now in an entirely different country from that which we had come through. Pine, oak and cabbage palmetto lined the banks on both sides, which were nearly perpendicular and from ten to fifteen feet high, and were one mass of shells. The Caloosa is as crooked as the Kissimmee River and much more difficult to navigate, owing to snags and stumps that fall in the bank's wash-out. However, we got along all right till we found a "snag boat" working up stream, and then it was plain sailing. We went on board to see her work and found it very interesting, although it seemed a useless expense, as hardly a dozen boats go up during a year, and as the snags were only put on the top of the bank might be easily washed back by the next freshet.

Of mosquitoes and sand flies there were a few, only one night they were bad or bothered us at all, and that was in Lake Heckpochee. Our worthy comrade complained a good deal of them, but he retired every night after supper and what few mosquitoes happened to be in the cabin were sure to find him, although he was rather small, eating little and drinking less.

Such is the outline of our trip through a practically uninhabited country. We were perfectly comfortable from the time we left Kissimmee till we reached Fort Meyers—thirteen days. The only thing we suffered for was vege-

tables and tomatoes in particular, of which our comrade was very fond and for which he searched the river banks to no purpose, they having been killed by the previous frost.

The only one thing of importance that we forgot or was rather forgotten for us was a camera, a thing that is almost necessary on a trip of that kind, and I most emphatically advise any one intending to take this trip to provide himself with one.

E. C. HAMMOND.
NEW LONDON, CONN.

ON RUSSIAN RIVER.

GEYSERVILLE, CAL., Dec. 26.—Cut off from all communication with the outside world, hemmed in by swollen streams, with the sound of rushing waters ringing in our ears, while a steady downpour comes from above, we are spending our Christmas holidays and patiently waiting for the angry waters to subside.

Every little mountain streamlet has become a raging torrent, rushing headlong over rugged rocks, down the sloping hillsides—snatching here and there a patch of earth or an overhanging shrub and carrying it rapidly downward, with which to swell the sum total of the angry flood, which is gathering its forces for the work of destruction going on down the river.

No mail has reached us since last Thursday, and the present outlook is anything but encouraging. On the wrong side of Russian River, with one of the great bridges within our reach minus a span, and the other impassable in consequence of the great volume of water pouring over its approaches, we can only look across the raging expanse and long to reach the post office on the other side. But floods, like winds, are ill that bring nobody good, and the present deluge brought us the finest Christmas dinner that has fallen to our lot for many a year. Had the Geyserville bridge held out another day that delicious Christmas turkey would have been partaken of by certain young gentlemen from the city, while we remained at home in blissful ignorance of its existence. Since the disaster had to come, the bridge had to go, and the county had to sustain a loss of many hundreds of dollars, we are very thankful that the calamity came just at the right moment.

We spent a delightful day ourselves, with no thought of the moisture outside, and our charming young hostesses betrayed no signs of disappointment as, with sparkling eyes and rosy cheeks, they gracefully did the honors of the occasion; and whether administering to the wants of their guests in the dining room or discoursing sweet music at the piano were equally interesting. We left with feelings of thankfulness for their generosity and kindness, and with the sincere hope that the pleasures deferred may be more than realized in the near future.

The fishery question has been causing us considerable uneasiness of late, and just now it is receiving increased attention in consequence of the high water, which always brings the salmon up the streams. During the first heavy rains of the season a few fish ran up, but as usual the seiners were on hand, and straightway scooped them up and were off. For fear that there might be one or two fishes left for the people living near the river, another outfit comes along, and searching out the larger pools where a salmon would be likely to hide his devoted head, administer a dose of giant powder. Evidences of this kind of work are found along the river every season. Whom the offenders are or where they come from no one knows. It is next thing to an impossibility for the people in this locality to get even a taste of salmon.

This is the second winter that we have spent almost upon the bank of Russian River, and with one of its tributaries, a beautiful little trout stream, within a stone's throw of our own door, and yet our eager eyes have failed to behold one solitary salmon taken from these streams. It is no wonder that the fishing in nearly every stream in the State is being spoiled.

I notice that "Podgers" refers to Eel River as "too rapid a stream for seining." Fortunate Eel River! Would that we might give our streams a little extra momentum.

But we know several young men who are getting desperate, and if there is any device known to human ingenuity by which a salmon can be captured, other than with giant powder or seine, we shall hope to see it accomplished within the next few weeks; and, judging from the preparations that are being made, we will not be likely to be disappointed.

As soon as the water has run down and the river becomes clear a party of our friends are going to try salmon fishing by torchlight by way of experiment, and I am one of the favored ones invited to go along and see how it is done. I asked if any part of the entertainment would consist of sitting on the bank and watching the procession go by, but on the assurance that I am to occupy the seat of honor in the bow of the boat, where I can witness the whole proceeding, the invitation was cordially accepted and I am even growing impatient for the time to come.

We saw some wicked-looking gigs the other day, and I am not quite satisfied that I shall enjoy seeing them used, but we have not seen a salmon for a long time and I mean to venture.

Should these expeditions prove unsuccessful, my husband suggests that we try to prevail upon "Podgers" to come up and show us how it's done. If he can persuade a salmon to take a hook in the waters of the Navarro, he might be able to do the same here.

Quail shooting has been very good this season, but judging from the almost continual roar of firearms, their numbers must be rapidly decreasing. We heard one calling early yesterday morning, and we wondered if he had come out to say "Merry Christmas."

The prettiest flock I have seen this year were feeding in a stubble field near the roadside when I was passing by a few days since. I counted twenty-seven little beauties while driving past them, and I was just wicked enough to drive rapidly home and get my sportsman and his shotgun, and we had five little birds for our dinner the next day.

Doves are not plentiful, though we saw a flock of perhaps fifteen or twenty a few days since.

As we were driving along the road last Saturday, we noticed a portly-looking owl sitting on a fence-post and assuming an air of importance entirely out of the proportion to his size, and we began to look about for some tangible cause for so great a degree of pomposity. And we soon found it. But a little distance away lay the torn and mangled remains of a dove.

Two coyotes have been trapped in our vicinity recently.

These little pests of the sheep ranches hold high carnival in the foot-hills, almost nightly, and their shrill barking are plainly audible.

Ducks and geese are scarcely ever thought of in this locality, and we miss the fine shooting always to be had near Sacramento. If we chance to see a flock of geese passing over, they are sure to be a couple of miles skyward, while their well-known cry is heard only in our imagination.

The close of the present year being near at hand, we must beg FOREST AND STREAM to accept our heartfelt thanks for the entertaining and instructive reading matter furnished us during the past twelve months, as well as our most sincere wishes that it may live to enjoy many succeeding happy New Years.

MARION.

THE PARK SCHEME.

THE FOREST AND STREAM is doing a good work by antagonizing the effort of land and mining speculators to obtain permission to build a railroad through a portion of the Yellowstone National Park. * * * The old gift is on again and the same result will be obtained. Congress will not pass the bill. If a misguided majority should ever be found to sanction the scheme, the President, whoever he might be, would promptly veto it. The speculators might as well let the Yellowstone Park alone. It is a pride of the people and it will not be sacrificed even in the smallest way for the benefit of any corporation.—*Columbus (O.) Dispatch*.

We are in receipt of a pamphlet from the Forest and Stream Publishing Co., protesting against measures now pending before Congress for the construction of a railway through the National Park. * * * The greed of the West and land grabbers is insatiable. Let Cooke City find another route to civilization, we say.—*Anderson (Ind.) Herald*.

The FOREST AND STREAM is trying hard to prevent legislation that will seriously injure the beauty and future importance of the Yellowstone Park, threatened now to be cut up by railroads and surrounded by mining villages. This widely known journal calls for aid in defeating the proposed bill in Congress, and presents arguments that are worthy the attention of the legislative bodies of the country. This is the National Park, destined in years to come to be the greatest in the world. It should be the aim of all Americans citizens to make it so and the future generations will be the gainers.—*Pittsburgh (Pa.) Press*.

It is not necessary to dwell on the results of a change that would give poachers easy admission to the game preserve and allow locomotives, with their sparks, to run through the timber. Whoever has traveled one of the Adirondack railroads knows the havoc which railways work in the midst of the sylvan scenery. It is pointed out by FOREST AND STREAM that the animus of the attack on the Park is the desire of Livingston for a road running through Cooke City. Livingston is the point of interest of hundreds of persons who have bought lots for speculation, and want something to turn up. They are begging the government to spoil the Yellowstone Park to give them a "boom." Argument is not necessary; but vigilance is.—*Syracuse Standard*.

Natural History.

A Canada Wolf is Lean and Hungry.

BROOKLYN, N. Y.—Your wolf of Jan. 5 is all right with the exception of its being in too good condition. I have in my time managed to kill, or rather capture, and in some cases poison a number of wolves, and without exception they all seemed in an almost starved condition. Your wolf looks as if he had been fattened on purpose to have his picture taken. Wolves are very plenty in some parts of Canada. Last fall, while taking my usual outing, my chum and I had made our camp in the Nipissing region in Ontario, say about seventy-five miles north from Matawa and about twelve miles westward from the Ottawa River. We had killed a moose, and it did seem as if all the bears and wolves from twenty miles around had collected to feast on the remains. For hours at night and away into the morning we were kept awake by the howls of the wolves. Having a bear trap with us we set it, expecting that a bear would walk in, but either our bait was at fault, or the wolves were too numerous. But instead we were lucky enough to capture two wolves, and with the exception that either from hunger or their natural condition their sides almost met, your wolf of Jan. 5 was almost a counterpart.

It would seem as if a trapper would do well in the region we were in this fall. Bears were very plenty. Nightly we could hear them as they clapped the sides of the logs in their quest for insects, and as \$10 bounty is paid for all wolves killed in the Nipissing region it would pay one to trap or poison wolves for their bounty alone, besides the pelt in season would be worth something. Shooting them is almost an impossibility. To get rid of them is the main thing. One full-grown wolf will kill more deer in a season than a sportsman will in a lifetime. I saw a year ago the remains of over forty deer that had yarded, and the wolves had made a clean sweep of the whole of them.

MEDICUS.

Double-Armored Herrings.

ANIMALS once supposed to be extinct are still being discovered in Australia, the refuge for so many ancient forms of life. The latest announcement is the fact that all the fresh water herrings observed by Mr. Ogilby in certain rivers of New South Wales are doubly armored, i. e., they have a row of scutes on the back resembling the ordinary armature on the ventral border. In the last number of the *Ann. Mag. Nat. Hist.* (Ser. 6, Vol. X., p. 413), Mr. Smith Woodward points out that this is a peculiarity exhibited by most of the extinct herrings of the latter part of the Cretaceous and the early part of the Tertiary period. They are assigned to the genus *Diplomystus*, and have been found fossil in Brazil, Wyoming, the Isle of Wight and Syria. Such herrings do not appear to have hitherto been detected in any part of the world in rocks of later date than the Oligocene, and Mr. Ogilby's discovery in the fresh waters of New South Wales is thus of great interest.—*Natural Science*, Dec. '92.

Camp-Fire Flickerings.

"That Reminds Me."

Turkey for the Currant Jelly.

It was long past the hour for all good sportsmen to be in bed, but the bright moonlight night was so beautiful that we were loth to close our eyes to it. We were taking one last look, when Jim, our guide and companion, remarked that it was a fine night to get a turkey, if we cared to take the long walk that would be necessary. John and I had taken considerable trouble to lug a lot of currant jelly into the woods in anticipation of the numerous wild turkeys we expected to bag, and as there had been no occasion as yet to open a single can of it, we readily assented to the walk.

Jim said we were sure to get one, for he knew where some of the birds were roosting, and we started out with happy thoughts of the glorious dinner we should have on the morrow. We had walked a long while and were almost despairing, when suddenly Jim halted and pointed up to an immense tree which stood at the summit of a steep ridge to our left. Sure enough on one of its projecting limbs sat a large bird, and at sight of the sleeping beauty we forgot any scruples we might have, thought of our currant jelly and decided to commit murder then and there. John and I could not have told that dark figure silhouetted against the sky from a broken or twisted limb; but Jim's sight was infallible, so we cocked our guns, lest their click nearer by might alarm his turkeys, and started toward our victim. When within easy range we held a whispered consultation and decided to take no chances, but to fire all three together; accordingly all guns were leveled at the unfortunate bird, whose outlines were pretty distinct by this time. "One, two, three—bang!" The report of three heavily-charged guns resounded through the silent woods, and the poor sleeper, tumbling over and over from his high perch, struck the ground with a Thanksgiving Day thump that fairly made our mouths water.

John sprang forward with a triumphant shout and we saw him stop and bend over as if to seize the turkey, and then all at once he jumped back and we heard him say something which I fortunately have forgotten. With his hand over his nose and a dejected look on what little we could see of the rest of his face he came back to his astonished confederates. "Why, what's the matter, John?" "Matter! Why, hang it, man, it's a dirty old buzzard." And then we all went back home to look at the box of currant jelly. FAD.

Game Bag and Gun.

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

ANOTHER STORY OF THE OZARKS.

THE hunters who roamed the Ozarks during the Civil War were generally hunters of men. Detachments of both armies raided those fastnesses in all directions, making it extremely tropical for their enemies when they were caught at a disadvantage. Besides, there were several gentlemen of renown who belonged to neither army, but who were credited with doing not a little killing, to say nothing of other devilment on private account, either as a recreation or to avenge a real or fancied grievance, being, as it were, a kind of side show to that terrible drama of blood and desolation.

The hunting parties that had the temerity to invade those regions in search of four-footed game were on dangerous ground. They imperiled their outfit and were lucky if they escaped being made game of themselves, and as a consequence deer and all other kinds of game increased rapidly. When the war was over and peace reigned between the hostiles the hunters who were first in the field reaped the benefit of the long immunity given the deer.

Among those who improved this opportunity was a person who shall be nameless in this narrative—a friend of mine in St. Louis, who had in previous years lived in one of the river counties of Missouri; in fact, was among the early settlers in that section when deer and other game was plentiful in the prairies and river bottoms. Being a man of means and leisure he had often gathered a few choice friends together after the frosts of autumn and divided his time between hunting deer and wild fowl and yachting on the river. He was a princely entertainer and an all-round good fellow in every way, and it was a coveted privilege to be one of his guests. He could ride and shoot like a Comanche and chase a deer at breakneck speed through the bottoms, over logs, through the brush and across the sloughs seemingly in imminent peril of life and limb, but seldom coming to grief.

He had a favorite hunting horse that enjoyed the sport as well as its master, and was as sure-footed as an antelope; when it sighted a deer it would follow it like a greyhound. When the deer were closely pressed by the pack they would often break cover and run across the open prairie to another belt of timber to shake off their pursuers. This was the chance my friend was waiting for. He had been known to kill two deer from his horse, one with each barrel, in a single chase on the prairie before they could get to a place of safety.

At the time our story opens he had exchanged the pastoral pleasures of plantation life for the busy haunts of men and the din and bustle of the city; but when the balmy days of autumn came and the forests were clothed in gorgeous drapery and the earth was carpeted with falling leaves, he could in imagination hear the baying of the hounds, the mellow notes of the hunter's horn, the drive and the shout of victory. Then the embers of the ruling passion would burst into flame, and a longing would come over him to breathe again the free air of heaven and join in the excitement of the chase. Once, in one of these critical moods, he met two members of a St. Louis rifle club, with whom he had a business acquaintance, in one of the gun stores in the city, where they were getting ready for a trip to the Ozarks, and they urged him to become one of the party. "Get a lay off from Blanke & Co. for a few weeks and go with us. It will bring the color to your cheeks and tone up your muscles. You look as if you were going into a decline, and when you come

back your friends won't know you." So an arrangement was quickly made and a day fixed when they would leave the city.

Well, this was "the kind of sardine" the rifleman had run up against. They knew nothing of his skill as a shot and he was too modest to blow his own horn. The rifleman could make a creditable score at a target; but they were far from being skillful deer hunters, though expecting to make up in zeal what they lacked in experience. They had yet to learn the difference between shooting at a bullseye, with sun and wind in their favor, and shooting at a deer running through the brush with the speed of the wind.

One morning of the following week the rifleman and our friend piled a half ton of camp equipage in a baggage car at the Iron Mountain Depot, not forgetting four or five deerhounds they had engaged for the occasion, and were on the way to the scene of conquest. Our friend had a fine Wilmot which had seen service in many a field and had a long list of kills in its favor.

"What are you going to do with that shotgun?" was asked by one of the riflemen. "We are not going to the Ozarks to shoot birds, we are going to hunt deer."

"Yes, I know. I am too excited to shoot a rifle with accuracy and prefer to use a gun that allows me a liberal margin for faulty aim."

The hunters left the train about twenty miles below Pilot Knob, where a friend, whose guests they were and who was to make one of the party, met them with a team of mules and a wagon. A twelve-mile drive brought them to his residence late at night, where they were warmly received. The locality agreed on for the hunt was a two-days' drive westward into the mountains, where a typical Ozarkian dwelt in peace and solitude among his native hills. He was engaged to take charge of the expedition and locate the camp. He knew all the runs and stands in that vicinity and was invaluable as a hunter and a guide. He received the visitors with open arms. "Onhitch yer team 'n' feed. Come right in, all of ye, and take supper with us, an' stay all night. Haint got many beds, but got plenty to eat."

"No, it's getting late and we think we'd better keep moving. If you will tell us where to camp, we'll drive on and fix for the night and save time and trouble."

"Why, bless yer souls, no trouble ter me. Glad ter have yer stay, but if ye won't stop no way, I'll tell ye whar ter go. Foller this yer road 'bout three mile, tell ye come ter ther forks o' ther creek, and turn up ther right hand fork 'bout two mile where the valley widens out, and ye'll find plenty o' wood 'n' water 'n' a good place to pitch yer tent; an' I'll be 'long in the mornin'."

True to his word, he was in camp the next morning for breakfast, when he was invested with full authority as master of the hunt.

With the arrival of the Ozarkian the rifle brigade had received a new and important recruit, and the lone shotgun was in a hopeless minority, and its owner submitted to considerable good-natured chaffing for coming into the mountains with a gun that he used to kill quail and snipe with on the prairies.

"What would yer do ef you seed a bear?" was asked by the Ozarkian.

"Shoot him, ef of course; and if one barrel didn't kill him I'd give him the other."

"You'd a nation sight better shin up er tree; you'll be in a heap more danger 'n the bear would."

He parried their thrusts in the same vein in which they were given, and bided his time, keeping in mind the saying that he laughs best who laughs last.

There was at that time an unaccountable prejudice against shotguns among the Ozark hunters for their supposed want of killing power. "They mout do to shoot a robin or a squirrel, but in the mountains, where you mout run on a bear, a buck, a wildcat or a painter any day, they want in the same country with a rifle." It was useless to discuss the matter.

The gun most popular with them at that time was the old-fashioned, long-barrel, full-stocked rifle, with brass or silver mountings; and these were effective weapons within their range in the hands of skillful men; and as a hunter once said to me, "they're good for any kind of game from a squirrel to a bear." These men had a just pride in their marksmanship, and not without good reason. I have seen scores made by those backwoods rifleman at their shooting matches at 100 yds. off-hand that any city rifle club might well be proud of and few could equal. But things have changed since then, for two lines of railroad have penetrated those solitudes; and the shriek of the locomotive echoes from mountain and glen; and improved firearms are now the rule rather than the exception, with the inevitable result that game of all kinds is rapidly disappearing.

A light fog hung over the valley, the earth was moist and everything was favorable for the morning hunt. In about an hour the captain had placed the men at the different stands to his liking, and the dogs were put out on the trails; but with an eye to business he reserved the best stand for himself, placing our friend on the other side of the stand within easy distance, evidently with the intention of shooting the deer before it came within range of the shotgun.

Our friend, who was as polite in camp as if he were in a lady's parlor, took in the situation at once, and asked the Captain if he might change his position. "Where do you want ter go?" was asked, "Down near the top of that fallen tree in the valley. As we are now, if the deer comes through, we are apt to cross fire and might interfere with one another. It will give you the first shot any way, and if you miss it, possibly I may take it in." "Well, in the first place I ain't a goin' ter miss it, if it comes through this yer stand he's my meat sure; an' if you can write, jes put that down in yer book. An' if I should miss it which ain't no ways ter be considered you couldn't hurt it much with that poke stalk o' yours you call a gun; you couldn't shoot through his hide. Go there ef yer want ter. It makes mighty little difference where yer stand. You mout as well staid in camp."

The hounds began to give tongue slowly at first, but soon got warmed up to the work, and a little later it was evident from their music that they were on a hot trail and were coming nearer every moment, when like a flash a big buck dashed through the stand, fairly spurning the earth with his feet. The captain fired and missed. The buck kept on his way across the valley toward our friend, who was as motionless as a statue; but when the deer got opposite to him, he threw the gun to his face and fired as quickly and with as little concern as if he were shooting

at a snipe. The buck didn't even "drop his flag," but kept on his course as if proof against powder and lead.

One of the rifleman at a stand on the other side of the valley toward which the deer was running gave a derisive chuckle that was not intended as a compliment to the shotgun. It meant, "I told you so, shotguns are no good; just wait and see me drop him."

For some cause the buck turned and ran back on his trail, exposing the other side to the man with the "poke stalk," who improved his chances by shooting the other barrel. The deer ran about 50 yds. and dropped on a "sand bleach" that had been thrown up by some previous mountain torrent, now dwindled to an inconsiderable stream, flowing with musical ripple down the valley. When they got to the deer it was lifeless and motionless, and upon examination it was found that either shot were fatal. First blood for the "poke stalk."

The rifleman didn't show much enthusiasm over our friend's victory. The Captain was especially chaffed at the result and "allowed there was a heap in luck, even in a deer hunt." He declared that his gun had hung fire.

It was the unwritten law in camp that the man who shot the first deer should sleep in the middle and hold the post of honor until some hunter made a better score; then he was to give way to a luckier man. Turkeys didn't count, but they all made room for a bear slayer. He always slept in the middle and had the softest pillow. The man who killed a bear was looked upon as a veritable Samson among his less fortunate camp mates; but as there were no bears killed on this trip our friend kept his place and for the following week the shotgun kept to the fore.

The phenomenal luck of the "poke stalk" excited lively discussion among the rifleman, and it gradually dawned upon their perception that they were being sold; but to all their railery our friend gave a quiet chuckle and held his place. The Ozarkian confidentially admitted, "He can shoot right smart, blamed ef he can't."

Toward the end of the second week the camp was in open revolt and the mutineers were in a majority. Our friend was in a state of siege. They wanted to fall on him and annihilate him in a dozen different ways. It would never do to have the report go back to the city that a man with an "elder gun" had killed the most game. They would be sure to be laughed at, and besides, it might get into the newspapers. That shotgun must be suppressed at all hazards before it killed all the deer in the Ozarks. It was as easy as to bell the cat. If they could only hoodoo it so that it would miss every shot, or secretly load it to the muzzle so that it would kick its owner over into Arkansas, they would be happy and would forgive him on condition that he wouldn't do so any more. But it was now our friend's turn to laugh, and from the double-edged remarks he fired back at them they found that they had caught a tartar, and that he could talk as well as he could shoot.

An accidental, but harmless, discharge of a rifle in camp one morning gave him an opportunity for a lecture on carelessness, which he was not slow to improve, and this was an unlooked-for chance to turn the tables on his tormentors.

And that reminds me of a similar occurrence, followed by more serious consequences, which took place during a trip to that region two years later. One of the hunters who was watching at a stand was wounded by the accidental discharge of his gun and came into camp bleeding and faint from loss of blood. The man in charge gave a long blast on a horn, which hung on the tent pole. This was the signal agreed on for an alarm or an emergency, and the boys left their stands and hurried into camp, and a horseman was sent on the run for a guide three miles from camp to pilot us out of the mountains to a surgeon. Such rude surgery as the camp could furnish was hastily called into requisition. The wounded man was tenderly placed on a pallet in one of the covered wagons and everything made ready for a long night's drive.

It had been a drizzly, wet day, and was now nearing sunset, and the downpour was increasing. It fell to my lot to be one of the party to get him in all possible haste to the nearest surgeon, forty miles distant. The night set in dark and rainy and a heavy fog had settled in the valley. Our guide, on horseback, carried a light ahead of the team that we might better see the way. And such roads—if they could be called roads: a perfect labyrinth, winding in and out among the mountains, every few miles crossing streams swollen by the recent rains, and every jar of the wagon increased the pangs of the sufferer. It was a sorry but literal getting out of the wilderness.

It was 9 o'clock the next morning before we reached our destination. Anæsthetics were given, an operation was performed, the wound dressed, and then the patient was dispatched by rail to his home in Illinois, in care of an attendant. But this is another story.

I will not tire you with the details of each day's hunt. During the three weeks they were in camp they killed twenty-four deer, and our friend with the "poke stalk" grassed fourteen of them. Skill and luck combined to give him the victory. It was a new experience to the rifleman, and they learned there is not so much difference in guns as there is in the men who handle them.

It was now time to break camp. The Ozarkian, who was well paid for the trip, waived all claims to his share of the spoils. "When er man with er shotgun beats me a-shootin' deer, it goes mightily agin ther grain."

"Partner, I feel that way myself. When I started on this trip I didn't think my record as a rifle shot would be lowered by a man with a popgun. But when I look at the deer meat hanging about the camp I think I see where that margin for faulty aim comes in. Who would have thought the genial salesman of Blanke & Co. would play us such a scurvy trick? But as he agrees to make things square by an even divide and has promised not to give us away, we won't charge it up to him, but extend the hand of fellowship and drink his health."

When they commenced packing for the return trip, they found they had overdone the thing; for the camp baggage and venison made a heavy load without any passengers, and having but one team the boys shouldered their guns and marched up the hills like little men, and then marched down again on the other side. After a two days' tramp they reached the home of their hospitable friend. There, with a good night's rest and a bountiful breakfast they rubbed the kinks out of their legs and pulled out for the railroad station with a wagonload of venison as happy as children at Christmas time.

CAMERON.

A GRIZZLY IN THE GLOAMING.

LOUISVILLE, Ky., Jan. 6.—I have just read with great interest the letter of Ira Dodge in *FOREST AND STREAM* detailing his meeting with one *Ursus horribilis* Nov. 2. I think it likely I met the same gentleman a few days before Mr. Dodge did. I saw him before he saw me. Hence I am here to-night dreaming before my library fire and in its coals conjuring a shape which requires little effort to recall at the mention of his name. Hence also I have all my members with me, a fact upon which I congratulate myself after reading of those Big Piney bear's epicurean penchant for hands and legs. Mr. Dodge does not locate the scene accurately, nor does he state if he noted any brands or earmarks on him, but I judge it was the same old Ephraim doing business at the same old stand. Our party was camped at the time on the headwaters of the Piney, about seventy-five miles, I should think, from Big Piney.

Ever since our first day out I had been frequenting the known resorts of the grizzly, but he was always out when I happened in. The first morning we were in camp—or rather out, for we slept that night simply on our blankets and the clouds were our coverlet—the first morning after we left the railroad I arose early, as a man is apt to do, who measures only thirty-two around the waist, and who has pooled issues with a bed fellow who measures three feet through, and who consequently raises the blankets high enough off you for a Rocky Mountain blizzard to play all night along the north edge of your spine. I started up a canon by starlight, and before 7 that morning had killed a big bull elk, with one of the finest, smoothest and most symmetrical head of horns I ever saw—but that is another story. We were not game hogs nor skin hunters, and each man was limited to one elk head, so returning to camp I filled the magazine of my .50-110 Winchester with express cartridges, and then and there announced that I was loaded for bear. John Perry said he had not lost any grizzlies. I said I had. Dan Lockwood said so had he, but that he had seen a man in Idaho, who had convinced him that his grizzly had been found. The coroner's jury, Dan added, found the man came to his death by blanked foolishness. Consequently I called on friend *Ursus* alone.

During the next two weeks we made many camps, and ran around over some of the roughest country in the Rockies, but Perry and Wilson were the only firm who did business with bruin on a close margin. They were hunting together as usual, toiling through a dense and intensely dark tamarack thicket, in a labyrinth of dead and down timber, an ideal place for bear, when something stirred. To their disordered vision the dangerous quarry confronted them, peering over a log which it so well matched in color; and their rifles cracked as one. Crouching they looked through the smoke of the discharge for the hostile demonstration that would surely follow aught but a mortal wound. The head had rolled off the log.

Perry was the first to find voice. "Joe," said he, "that ain't a very big bear."

"No," credulously responded his side partner. "Bout the size of a porcupine. And about the shape of a porcupine. Joe, I believe your bear is a porcupine."

"My bear! Didn't you shoot?"

"Nary a shot," he asserted with that earnestness that can be assumed, but the other's finger pointed with silent scorn at the smoke curling from the rifle muzzle.

"John," said Joe, we will leave the recollection with the remains."

But the story was too good to keep and they told it on each other with the usual embellishments, from which we of course sifted the truth.

At last my turn came. I had stayed out on the mountain later than usual in the twilight that lingers so long and lovingly in those high mountain parks and meadows, long after it had grown dark in the cañons; and as I descended a certain steep and savage slope the shadows gloomed.

There had been an avalanche some years before and rocks, debris and trunks of trees were strewn thickly in disorder and among them a scattered growth of young aspens. Suddenly it seemed in the gloaming that one of the large logs before me rose and rolled over. The light was uncertain, but the creaking and crunching sound came clear and unmistakable. An aspen bush obstructed the view and I started to spring around it, pausing to throw a shell from the magazine into the barrel, when I was suddenly stricken into a death-like rigor by the apparition that at the metallic rattle of the rifle arose from among the dead logs it had been turning over in search of grubs and crickets—a great and grisly shape, whose huge bulk clad in gray was unrelieved against the back ground of dead logs, save by a high hump of silver whiteness.

Over the log he came with loud *hough!* and rearing upward on his haunch the monster stood beating the air with his great paws sharp set with scimitar talons, the incarnation of lumbering alertness.

His small piggy eyes gleamed and rolled in their red setting; his ears were erect and rigid; his square muzzle wrinkled with rage; his long straight upper lip protruded and his great bulk of a head turned in all directions in the

effort to find the source of that metallic sound so unlike aught that had ever before disturbed his mountain solitudes.

For a few steps he moved forward erect, in grotesque and horrible semblance of human posture, and then dropping on all fours went sliding along the mountain side, his gray form quickly merging into the gray shadows.

It was five minutes after he disappeared before I breathed.

FRANCIS J. HAGAN.

SMALL RIFLES AND BIG GAME.

I HAVE been reading with much interest what your correspondents in various parts of the country have to say about hunting rifles of different sizes and kinds. Let me give you a bit of my experience with the .22cal., 15-45 center-fire.

In 1889 I ordered a Winchester .22cal. singleshot rifle from your sometimes correspondent "Iron Ramrod." In due time it came. I have owned many rifles, but within its limitations never a better one than this. Its sighting was a marvel in accuracy. I may say here that I regard "Iron Ramrod" as far and away the most expert adjuster of rifle sights I have ever known. (This is no "puff," for I paid his extremely moderate price for his admirable work.)

A MAINE WOODSMAN—GAME WARDEN JONATHAN DARLING.

I have killed with this rifle many wild turkeys, a dozen or more wildcats and a two-year-old buck. I was out hunting turkeys in the White River bottoms of Arkansas in December, 1890. I was watching a big flock of more than fifty in a cornfield when a young buck walked out of the canebrake and stopped about 20yds. from me. I was sitting in front of—not behind—a big oak. The deer began to feed. I cocked my rifle as he shook his tail, preparatory to raising his head. He stood directly fronting me. Resting my arm on my left knee, I aimed fairly between his eyes; as the white Lyman sight covered the space just between the eyes I pulled the trigger. The hand-loaded cartridge, with 17grs. of powder behind a 45-grain bullet, rang out sharp and clear with a whiplike crack. Down went the buck. Putting in another cartridge, I ran up to the fallen buck. I touched him with my foot. He did not move, for he was dead.

On examination I found that the little bullet had traversed the entire brain. He was as dead as if I had fired a .45-90 charge at him, instead of the tiny load that did such fatal work.

One spring day in March, 1891, I was out looking up a phenomenally big gobbler that a negro had seen that morning in a cornfield half an hour before and stopped to tell me about. I soon found him. He was at the lower end of a field ten acres, or just 200 yards wide. He was certainly 125 yards away from the tent. I knew I could get no closer. So when he jumped up on a log lying in the field with his great breast toward me I cocked my rifle, and, resting it on a fence rail, prepared to shoot. The great bird evidently suspected danger, for he drew himself up to his full height, gleaming and glittering in the morning sun like an opal. There was not a breath of air to drift the bullet. It was a perfectly still spring morning and the sun was perhaps half an hour high. I silently turned up my Lyman rear sight to what I thought to be the right distance, and, holding high up on the breast, took careful aim and pulled the trigger. I was shooting the hand-loaded cartridges, which contained seventeen grains of powder. At the rifle's report he sprang six feet into the air, then with spread wings ran about fifty yards and fell forward dead. The bullet had cut the great aorta, the big vein that leads the blood from the heart, and gone out through the back. A cleaner kill I never made at any distance.

This turkey weighed 23½lbs. on an accurate pair of grocer's scales an hour after he was killed. He had a "beard" 13in. long. So much for the .22cal. rifle when properly loaded.

I find the hand-loaded cartridges 25 per cent. more accurate and nearly that difference in penetration than any I can get from the best factories.

I think the big game of the South must be larger than its kind in the North or West. I have seen two panthers that measured 9ft. from nose to the end at the tail before they were skinned, and helped to kill a bear that on a

pair of big cattle scales weighed 398lbs. The fat on him was an inch thick along the ribs. I killed a barren doe two years ago that weighed 207lbs. with the heart and liver inside, but the entrails out. She was extremely fat, as all barren does are.

These experiences have led me to think our big game South is larger than the same kind of animal in other sections. I attribute the superiority in size to the mild climate and the great abundance of desirable food the wild creatures have in the South, especially Louisiana, Arkansas and Mississippi. I should like to hear what others think of this.

MISSISSIPPI LOWLANDS.

HUSHPUCKANY, MISS., Dec. 27, 1892.

BOSTON AND MAINE.

Death of Capt. C. A. J. Farrar.

BOSTON, Jan. 10.—The Boston evening papers of Monday contained the death of Capt. Charles A. J. Farrar, who died at his home in Jamaica Plain on Sunday night at the age of fifty-one years. Capt. Farrar was well known to the readers of the *FOREST AND STREAM*, as the pioneer of little steamer transportation on the Rangeley Lakes, and also through his guide books to the Rangeley and Moosehead Lake regions. He was also author of several stories, the scenes of which were laid in the backwoods of Maine. He early went to Maine and spent many seasons in hunting and prospecting about her woods and waters. It may be said, in fact, that Capt. Farrar has done more to make the Rangeley Lakes famous than any other man. He was fond of hunting, fishing and adventure, and being fond of writing he spent most of his time later in life in this employment. He built the first steamer ever on Richardson Lake, at a time when such an undertaking involved a great cost and a good deal of hardship. Later he built and run the steamers on Umbagog Lake, and still later a steamer to navigate the dead waters of the Magalloway, by which sportsmen were to reach Parmachenee Lake. He formed the Androscoggin Lake Transportation Co. The railway and hotel interests of Maine owe to Capt. Farrar a debt of gratitude, and yet in his lifetime this debt was hardly more than grudgingly acknowledged.

A Moose Medal.

Mr. Nathaniel C. Nash, the president of the Massachusetts Rifle

Association, has been dined at the Algonquin Club, in honor of his success at the Christmas hunt of the Dr. Bishop party at the Megantic Club preserves. An account of his success in bringing in two fine caribou has already been published in the *FOREST AND STREAM*. The dinner was given by Dr. Bishop, and Mr. Nash has been dubbed "Caribou Tom," or the "Mighty Hunter." An enormous medal had been previously engraved for the occasion, and on presenting it the host said: "We scorn to show our appreciation of our mighty hunter's skill by the deteriorated and base metal silver, whose fluctuation in value could be no criterion of our admiration. We prefer the standard recognized everywhere for what it is worth—block tin."

On the medal was also engraved: "To Caribou Tom, for proficiency in marksmanship, Dec. 26, 1892."

Mr. Nash "wore his honors meekly" and as a "true sportsman should." Among other things in his remarks he paid a handsome tribute to his guide, Leopold Gerard, admitting that without him he should not have done nearly as well.

Maine Legislation.

The subject of fish and game legislation promises to receive more than the usual amount of attention in the Maine Legislature, just convened in that State. The usual committee on fisheries and game has been divided into two, one committee on shore and salt-water fisheries, and the other on inland fisheries and game. Many changes in the fish and game laws will be proposed. A strong effort will again be made to open September for the shooting of moose, caribou and deer, and the measure will be as strongly opposed by the lumber interest, who fear the sportsmen's fires. The Franklin county people propose a measure to prevent the taking of trout at any time from the streams that flow into Rangeley Lake. The idea is that the trout from the lake go up these streams to breed, and are there destroyed by the sportsmen in great numbers, even before the little fellows are sufficiently grown to descend in the lake and become large fish. There is a pond or two, which outlet into the Rangeley Lake, and these ponds it is proposed to restrict from any fishing except with the fly. I hear that it is also likely to be proposed to enact a law assessing every sportsman who visits Maine a license fee before he can be allowed to hunt or fish in that State. With the fund thus raised it is proposed to better protect the fish and game. But I am glad to be able to state that some of the best friends of the sportsmen in Maine, and men whose opinion are much to be respected in such matters, will oppose any sort of license system.

Pickeral Fishing.

There are accounts of good pickeral fishing on the Charles at Dedham. One of the local fishermen, Oliver Smith, caught thirty-two good ones the other day through the ice. He also has a good record of some 300 caught

with rod and reel the past season. Charles Fell has lately caught eighteen in about the same location. Several Boston fishermen—I have not their names at present—have gone to the celebrated Belgrade Ponds, in Maine, for pickerel fishing. There is more of an interest manifested in pickerel fishing than usual this season, and later there must be good catches to report. Indeed the interest in sport with the line and rod is greatly on the increase. Mr. Geo. B. Appleton, of Geo. B. Appleton & Co., the well known Boston tackle dealers, tells me that one of his salesmen, Mr. Sisson, actually sold a full trout outfit the other day, the buyer desiring to be "ready for the next trout season." He bought a fine rod and other tackle.

SPECIAL.

AN ENCOUNTER WITH A DEER.

It was one of those clear, beautiful mornings of a Northern winter. "Old Sol" could be seen just rising through the dense forest of spruce and balsam, casting flickering shadows here and there, giving our place of encampment a cheerful and inviting look. The strong wind moaned as it rushed through the tall monarchs of the woods, bending their gigantic boughs in graceful, bow-like curves. The echoing sound of the chopper's ax as he struck his first blows, and the loud "Gee" and "Haw" of an oxen driver on a near by lumber job warned us that it was high time to rise and prepare for our hunt. Our party consisted of three—our guide Parslow, Ned Courtney and myself.

Breakfast over, we picked up our luggage and strapped it on our shoulders, unchained the hounds and were off. Our path led us through innumerable waterways and swamps covered with flygrass, which hindered our progress considerably. In crossing a treacherous spot on one of the latter we all sank to our thighs in soft mud. It was so massed that it took us nearly an hour to extricate ourselves. Our guide, in trying to free himself, dropped his rifle, which sank almost in an instant. He made desperate thrusts with his hands, till at last he succeeded in grasping the stock of the piece and bringing it to the surface covered with "enameline," as he termed it. Even a hunter's merry tongue could hardly express how comical he looked standing there begrimed from head to foot.

We had twenty miles to make, and at this rate it would take at least two days to complete our journey, so we quickened our pace, endeavoring to avoid as many swamps as possible.

Deer tracks were numerous, there was every indication that the region we were traversing was "chucked full of 'em" as Parslow said, which afterward proved to be true. The veil of night was fast closing round as we neared camp number two.

"The shades of night come slowly down,
The woods are draped in deeper brown,
The owl awakens from her dell,
The fox is heard upon the fell;
Enough remains of glimmering light
To guide the wanderer's steps aright."

Three o'clock in the morning! All were asleep but myself when the report of a rifle broke the stillness. Stumbling to my feet, and at the same time grasping my piece, I rushed to the shore of the stream and peered through the darkness. I could see nothing, but I heard in the distance the snort of an animal. Jumping noiselessly into a small canoe that lay on the bank, I pushed it off and proceeded to paddle up stream, hugging the opposite shore as close as possible. Three or four strokes brought me to the place from whence the sound came, as near as I could judge. I waited fully fifteen minutes, and was rewarded by seeing a pair of antlers and a head rising above the water. Upon seeing me the animal turned and swam toward shore. I waited until his shoulders appeared, and then fired. The ball lodged in the neck but did not instantly kill him. Shaking his head, he gave several graceful leaps—and fell dead.

I took up my paddle and was just about to propel the craft when, to my utter astonishment, two bucks and a doe jumped into the stream. Leveling my piece, I fired at the nearest one, but my hand was unsteady. The ball went far from its mark. Once more I fired, but experienced the same result. I gave up.

Paddling the canoe to the shore I got out. My companions had evidently awakened on hearing the report of my rifle, for not two minutes had elapsed when rapid shots came from their direction. I left the deer where he had fallen and returned to camp. The sight which greeted my eye was a pleasing one, for there, stretched out on the ground, lay two noble-looking bucks, each possessing a magnificent pair of antlers. On fleeing from me they had gone too near camp, and were shot by Parslow.

By the time we had finished dressing the animals it was 6 o'clock. After breakfasting we departed for home. The rapid progress we were making with the heavy load that we carried was simply wonderful. By noon we had covered three-quarters of the distance, and were just nearing Camp No. 1 when Ned fell exhausted. Hanging up the game, Parslow and I carried him into the hut and administered restoratives, which soon set him on his feet again.

The night was bitter cold, and it was all that we could do to keep from freezing. Our stock of blankets was inadequate; I had none and was obliged to resort to physical exercise to keep my blood in circulation. Ned happened to have a pocket thermometer; he looked at it—"ten degrees below zero, boys," said he. "Don't you wish you'd gone home last night!" Parslow said he could stand it if the rest could; so we remained loyal to our determination to go forward. Morning found us nearer dead than alive. We drank a cup of coffee to warm us up and were off. I took the lead and was trying to find the trail, when I discovered fresh deer tracks in the snow. I called back to the rest to wait for me. I then followed it up. It led me to a high knoll.

I stealthily approached and saw the head of a large sized buck behind a clump of brush. Stopping short I fired, but missed. The animal sprang, attacking me with his front legs. Quickly turning my body I succeeded in getting on my hands and knees, at the same time holding my head down to protect it from the sharp blows of the infuriated beast. Had it not been for the padded buckskin coat which I was lucky enough to have on, I should have been torn to pieces ere my faithful hound, hearing my cry, came to my deliverance. In an instant's time he made a spring and buried his teeth in the animal's throat. A desperate fight ensued, in which the hound came out victorious.

The deer fell, the sharp teeth of my rescuer having

severed an artery. As I approached he feebly tried to rise and show fight, but his life blood was fast ebbing away. A moment later and he fell back lifeless. He lay gracefully on his side with his long antlers resting on a great stump, at the back of which was piled a heap of hemlock bark freshly felled. What would I have given at that moment to have had a "Hawkeye" with me! What a grand picture the scene would have made!

In a few minutes my companions came on a dead run. I sat down on a log and proceeded to examine my injuries, which, although slight, were nevertheless painful. In the meantime Ned and Parslow dressed the deer (we had succeeded in disposing of the smallest one to a lumberman at \$5, the price agreed upon).

A very laughable incident occurred during the rest of our tramp. We lost the trail. The snow had blown against the trees and covered the blazed part. Our guide was leading the way when suddenly, to our amazement, we saw his legs rapidly disappearing. We ran to his assistance and pulled him out of the very same hole that but two days ago he had fallen into. We laughed heartily. Not so did the unfortunate and irritated victim.

Our course was south, but instead of going in that direction we made a complete circle, coming out on the swamp.

Two hours later found us in the village, and after making due preparation and wishing Parslow good luck and better (understanding) we departed.

Whenever I meet Parslow I greet him: "Hallo, Pars, can you give me a definition of a swamp?" He isn't in love with swamps.

TAMARACK.

BLACK DUCKS FROM A BATTERY.

THE dusky or black duck—*Anas obscura*—is as cunning and wary in his haunt among the wild oats or in the ponds, or wherever he may be found, as the fox is on the land. By carefully studying their habits and necessities thousands are shot every year along our coast notwithstanding their wariness.

Many are shot by "laying for black ducks" concealed in the shade under a bank or in a hole dug near their favorite feeding grounds. In the evening many are shot while flying up the course of the rivers to the ponds or river banks, where the wild oats are plenty. But perhaps the best time is when a snowstorm is coming on late in the fall. They leave the salt water and fly up the rivers to get the shelter of the wild oats or any other place that will protect them. They seem to be partially blinded by the snow, or rather, the snow prevents their seeing everything, as they always do, under ordinary circumstances. The shooter by lying down or hiding behind a haystack will get many good shots in a short time. One of the best places that I ever knew in the vicinity of New Haven is on the Quinnipiac River, just above "the brickyards," where there are hundreds of acres of wild oats stretching far and wide, where they feed every night. (It is also a most famous place for rail shooting in the fall).

Many black ducks are shot in the winter by the shooter covering himself with a white sheet when the snow covers the shores, and also by lying on a big cake of ice on a blanket near the channel. When the tide rises the ducks swim up the channel to feed on the roots of the sedge and to dig up with their bills the small long clams that are found along the shores.

This practice of shooting black ducks in the dead of winter should be prohibited by law. The ducks are then miserably poor and rank in flavor. The black duck is too good, in its season, to be destroyed in this way. In the fall they are fully as good, and many think better, than the tame duck or the mallard.

Alluding to the extreme wariness of the black duck I never knew of but one exception, and that was nearly thirty years ago.

At New Haven in our open harbor, contrary to their usual habits, a flock of about fifteen black ducks were to be seen feeding every day not more than thirty rods from Long Wharf, nor more than fifteen rods from where the N. Y. & N. H. R. R. depot now stands. Although men and teams were passing every few minutes on the wharf, the ducks seemed to pay no attention to it. This was early in the season.

Whether these ducks were reared near some farmhouse where they saw men and teams every day, with all the usual noises about a farmhouse, and were not disturbed, and so had more confidence and faith in mankind than they did soon afterward, is more than I can say, but it looks to me like the most probable solution of the question. They fed and played about there "with such a shocking tameness" as to attract considerable notice. And I am sorry to say (?) that I was the first one to destroy that faith.

But as all men and ducks find out sooner or later that they cannot put much faith in man, I thought it best to disabuse their minds of that idea at once, and to see its utter folly.

At this time I had a battery, the same as those used on the Chesapeake Bay. I proposed to a storekeeper on Long Wharf, and he was an old duck shooter, the bringing down to his store of my battery, and there to launch it, and he to let his man assist me and to pick up any ducks that I might shoot, which he agreed to do; but he remarked that "Their man would have no ducks to pick up," and all that. "Who ever heard of black ducks being shot on their open feeding grounds from a battery." Well, the battery was launched and towed out to the place I selected. The decoys, about a dozen of white-winged coot decoys, the nearest thing I had, were properly set.

I lay down flat on my back with my head resting on a sandbag, so that I could just look over the edge of the battery, and facing the mouth of the harbor. In less than an hour I saw the ducks coming, a half mile away. On they came, straight toward me, flying very high. I had made up my mind to shoot on the first reasonable chance. As they came it seemed as though they eyed those old coot ducks with suspicion; at any rate they could claim but slight relationship.

They flew past rather out of shooting distance, and circled around toward Long Wharf; it looked to me as though it was my only chance, so I let go, and down came one, winged. The next moment I saw John, my assistant, coming in his sharpie to pick up the first "black duck ever shot on their open feeding grounds from a battery." He had a long chase as he sailed partly on the water and partly on the mud, but he got him.

The next day I went again and had the decoys set as usual, and then lay on my back waiting for anything

that might turn up—or come down. I waited long, but no duck appeared.

Knowing it to be the habit of black ducks to fly up if they hear a gun fired anywhere within a mile, I rose to a sitting position and fired one barrel and immediately dropped back, and peering over the edge of the battery I saw the flock rise straight up, a half mile away, and fly toward the old spot.

I had but one barrel (I used a percussion gun in those days) and they came in the same way they did before, very high up and almost right over me. I pulled and down came one, dead, and struck within 30ft. of me. The wind being favorable, he drifted within reach and I secured him.

In shooting from a battery or a boat it is very desirable to be able to shoot from both the right or the left shoulder. When shooting from the right shoulder, while in a sitting position in a battery, you will find that you cannot twist around and shoot to the right; but if you can shoot also from the left shoulder you can shoot to the right quite well after some practice, by bringing up the gun quickly and aiming at some object without firing. I met with a funny incident in my first practice at shooting to the right from my left shoulder. I had selected one of my decoys that was furthest to the right, but it being awkward work at first I happened to touch the trigger and the decoy went end over end, full of shot.

B. F. ARLINGTON.

PENNSYLVANIA PROTECTION.

PENNSYLVANIA STATE SPORTSMEN'S ASSOCIATION, Harrisburg, Pa., Jan. 6.—*Editor Forest and Stream:* Yours of the 5th at hand. Your kind offer to help our Association in the first united effort for game protection in our State, coming so quickly after the receipt of our circular letter, shows that the deep interest you take in the subject makes you remarkably alert to grasp opportunities to help the cause. "FOREST AND STREAM and game protection" would not be a bad campaign cry. Their interests are identical, and one cannot exist without the other. The way you attack the subject from different standpoints, and air the views of those who wish to have them aired, with occasional pungent comments, shows that you must be a "crank" on the subject, and that is what is needed in our State—a few more game protection cranks. We want it to become a "fad" to be posted on game protection and increase.

We want the feeling to become so widespread that it will be considered more of an honor to be known as a game protector than a killer of game.

We want the sentiment to become so strong that the gourmand who eats game out of season will feel as guilty as the Hebrew tempted to eat the flesh of swine, and we want FOREST AND STREAM's help to spread this feeling.

You can, from your immense store of information and knowledge of the subject, aid the lay press of our State to help intelligently, for they will quote you as a profound authority.

They are ready to help, and have already started the work. Quite a number of editors of influential papers have offered space for anything we may send them bearing on the subject, but a number of them state, while they feel the game must have protection or be annihilated, they are woefully ignorant of the methods necessary to protect it.

So we have the press of the State with us, and with them on our side it is only a matter of time to have the masses properly educated.

We thank you again for your prompt offer of assistance (and you may rest assured we will call on you).

C. E. H. BRELSFORD, Pres.

PIRTSBERG, Pa., January.—The sportsmen of this end of the State are very much interested in the Legislature which began its regular session at Harrisburg January 3. A number of bills affecting the game laws have been prepared including one from New Castle, which makes it a misdemeanor to shoot quails at all. Of course that is out of the question but all sportsmen here agree that our game laws are very bad. The most systematic effort at reformation has been undertaken by the Pennsylvania State Sportsmen's Association, which at its last meeting at Reading appointed a committee on legislation whose duties were defined to be to secure such changes in the laws as seemed to it advisable, and also to secure the recognition by the State government of the Pennsylvania State Sportsmen's Association as the proper body to have charge of the protection and propagation of the game birds and animals of the State. Elmer E. Shaner is the local member of the legislative committee and says the local members of the Legislature and Governor Pattison can be depended on to do whatever the State Association proposes. One of the objects is to secure an appropriation with which to attempt the propagation of game and the protection of what little we have left.

Mr. Shaner says the association wants at least as much protection and assistance for the game as is now provided for the fish. There is a fish commission of six in this State and Mr. George H. Welshons is the local member. They get honor for their salary but have something of an appropriation each year. This they expend in planting the streams and paying the expenses of the wardens, etc. The wardens, of course, direct their energies toward fish, but a few of them, such as J. W. Hague, the warden for this district, wage a desultory war on the game law violators. But he is not paid to do so. The association aims to provide the means for employing men especially to look after the game. Then the association desires to make the seasons for game more uniform. One season for pheasants, quails and rabbits is almost sure to be urged.

Mr. Hague desires to see a bill introduced enlarging the powers of the fish commission so as to give it supervision of the game as well. Then he wants to see an appropriation that will justify good reliable men in accepting the office of game and fish wardens. He thinks \$1,000 a year and the necessary expenses of pursuing and prosecuting offenders is the least sum that should be set aside for one warden. He also thinks the Legislature should empower the wardens to search the persons of suspected hunters. For instance, he would have a warden so empowered that he could go to one of the depots and overhaul any hunter his judgment dictated and ascertain by searching his pockets whether he had violated any of the game laws. Of course such a right would be rarely exercised, but in extreme cases he thinks it is necessary. But there are grave doubts whether a law granting such extraordinary

rights, without the preliminary of some sort of a search warrant, would stand a test of constitutionality. Mr. Hague's argument in favor of the enlargement of the powers of the fish commission, namely that the commission already has all the necessary official machinery and that one warden for both fish and game could do the work of two, one for game and the other for fish, undoubtedly has weight in local circles. The expense for wardens would be only half what it should be under the plan now talked of by the State Association.

One proposed amendment to the game laws which was drawn in this city the other day and is probably in the hands of a legislator by this time deals only with dates. The law stands as it is with the following changes: The season for woodcock which by the present law begins July 4, and ends Jan. 1, is changed to begin Sept. 1 and end Jan. 1; the season for squirrel which begins now Sept. 1 and ends Jan. 1, is changed to begin Oct. 1 and end Jan. 1; the season for ruffed grouse or pheasants which now begins Oct. 1 and ends Jan. 1, is changed to begin Nov. 1 and end Jan. 1. The quail season, from Nov. 1 to Dec. 15, is not changed, nor is the season for rabbits, Nov. 1 to Jan. 1. This brings in the three kinds of small game most sought after in this State, pheasants, quails and rabbits, on the same day, Nov. 1. September is taken from the squirrel hunters because lawless hunters take advantage of the squirrel season to shoot young pheasants. October is taken from the pheasant hunters because lawless hunters take their dogs out to kill quails while ostensibly hunting only for pheasants; while many a rabbit falls at the hands of October pheasant hunters.

It will be surprising and a great disappointment to the law-abiding sportsmen—and no other kind deserve the name of sportsmen—if some change is not made. The scarcity of game last fall is a warning that something must be done. Nearly every sportsman is willing to leave the work to the State Sportsmen's Association, but grave fears are expressed that the committee is moving too slowly. There is always a rush of bills toward the close of the legislative session, and that fact is what prevented a wholesome change from being made two years ago. If the sportsmen should fail again this session we would have two more years of the present game laws, as the Legislature meets but once every two years in this State.

One enthusiastic sportsman wants a bill introduced to make it a misdemeanor to shoot any game bird except while on the wing. Everybody agrees with him as to quail, but in this part of the country the sportsman's code is construed to permit the taking of the grand old ruffed grouse any way you can get him. However, there are none too many of the magnificent game bird left in this section, and perhaps a little special legislation in his behalf would be a good idea. As to shooting quails sitting, the consensus of opinion is that the man who will do it will throw stones at his grandmother and call it sport. M.

OUR '92 NORTHERN WISCONSIN HUNT.

VAN BUREN, Ind.—We were camped on the old ground, on which and near which our old hunters, Cox and Doyle, have hunted these ten or more years, about four miles west of what is known as Beecher Lake, on the line of the Milwaukee Northern Railroad. Beecher Lake is very aptly named, as the sons of the great preacher built a log house near it, and used it for several seasons to spend their vacations and enjoy the atmosphere of the locality, it being highly favorable to those who can enjoy "nature's own breathing." Lake Superior exerts a great influence on this locality, as catarrhal, bronchial and asthmatic troubles are very beneficially affected by even a month's sojourn there in the fall months. This the writer cheerfully and truthfully asserts as his individual experience.

The party this time consisted of Carr, Wright and the writer, with the old ones, C. and D. We arrived at camp in a rain, in time for the season to open and be there when it opened. The weather continued dark, cloudy, with storms of rain or snow until Nov. 17, when it rained all the afternoon and part of the night, finishing with a wet snow of about four inches on everything the next morning. When the small pines were bent to the ground the tops were fastened by the sleet, which made the hunting very disagreeable, for it was almost impossible to get through the woods. Just imagine a tract of pine woods that had been cut over ten or twenty years ago, and grown up with young pines from one to three inches in diameter and as thick as they could stand, then loaded with sleet and snow, and what kind of hunting ground would you be on?

This drove us from camp on Thanksgiving Day, as it was very laborious, tedious and uncertain hunting under those conditions; and while we did not get so many deer as we thought we wanted while there, we are thinking now that perhaps we got as many as we deserved or were entitled to. The first deer killed was by Wright, a nice 175-pound buck, with four points.

As the river was being used to "drive" posts, ties and poles, the waters were kept so high it was impracticable to bridge same for about two weeks. After that we had our "foot log" and used it daily, as our best hunting was across the river.

Mr. Overman arrived at camp at 4 P. M. from Indiana, bringing election news. Two days later Mr. Carr had a telegram calling him home. We were sorry to part with him, as he had proved a good companion in camp, and had shot his first deer, but unfortunately he had lost this, for next day it was not to be found where he had hung it. This was the first instance of theft any of us ever heard of in Wisconsin. We can't think any hunter took it.

Mr. O. proved himself a mighty Nimrod. The first day out he almost ran over a big buck. The fourth day he shot a big one, and under peculiar circumstances. About a mile south of camp was a lake of 30 to 40 acres area, nearly round, and fully 100ft. below the general surface, with timber to the water's edge. The banks were generally at an angle of 45°. It is a beautiful sheet of water. Mr. O., passing on the west side of the lake, saw a deer in sleeping attitude down near the water's edge, and soon he had, as a good hunter would have, his .40-82. Winchester trained that way. He subsequently appeared in camp and owned up that he could not hang his buck. Help was called in by signal, and he was made happy. It was his first deer, though he had hunted in Colorado, New Mexico and Arizona, and had killed antelope, mountain sheep and Rocky mountain lion.

On the day after our sleety snow, Mr. Cox found about two miles northwest of our camp, and about one mile north of the river, lying on the snow, and somewhat

coiled, a snake, frozen stiff. When reporting his find at night, he was mildly chaffed. The next day he had the snake with him, and it was carefully measured with a tape line, by the writer, in presence of all, and its length was 36½ in., and fully 3½ in. around its body at the largest place. How it came there, or where from, was, and is, a mystery to us; we left it hanging near our camping place. Note that the snow fell in the night and the thermometer was 32° at daylight; and it was found on the snow, with no visible depression where it lay, and as far as could be seen no possible place for it to come from. Yet there it was.

The result of this hunt was ten deer, five bucks (one of which was "a spike"), one doe and four fawns.

We had no fishing in river on account of its being used so much, and found grouse very scarce, but plenty of white hares, a few of which we shot, as well as a few porcupines and a pair of Canada grouse, all of which are duly mounted, and shot only as specimens. The birds above are very rare, and this pair were secured and mounted in good shape, and can be seen at the business room of Matt Doyle. S. F. J.

SOME NEW BRUNSWICK TRAPS.—II.

THE fisher trap (shown in Fig. 2) was sketched on the Tobique River, N. B. The one shown in the illustration (Fig. 2) is a characteristic one. A hollow spruce 2ft. in diameter had blown down, leaving a tall, ragged stump. With an axe an opening was made in the side of the stump about 3ft. from the ground. Instead of making a clean cut across the stump (as if the tree were being felled) a thin section was left standing in the middle. If this front post cannot be left in this manner, a separate stake needs to be driven instead. Inside the post there is just space for a bed piece, 2in. thick, 3in. wide and over 2ft. long, to be laid on edge across the front of the opening. Next was cut a "fall," of fir, 4in. thick and 15ft. long. The large end is shaved down to the same thickness as the "bed-piece" and laid upon the top thereof. The other end of the "fall" rests upon the ground, as the

FIG. 2.—FISHER TRAP.

stump stands upon a hillside, but generally a forked stick is necessary to hold the pole in a horizontal position. The manner of the setting of not only this, but all the smaller deadfalls is with the "standard" and "bait-stick" instead of the "figure-4."

For fishers the "standard" is a stick ½ in. thick and 5 or 6in. long. The "bait-stick" is 9in. (or longer) and over ½ in. thick, whittled flat at one end, but with a fork at the other. The bait, a fowl's head, a piece of squirrel, etc., is impaled upon this fork and securely tied there with string or cedar bark. The "fall" is then raised several inches, the "bait-stick" is thrust into the interior of the stump, with the flat end resting upon the "bed-piece," the "standard" is set upright upon the flat end of the "bait-stick" and the "fall" is lowered until it rests upon the upper end of the "standard." Now the trap is set; but the "bait-stick" must be so delicately balanced that it will not spring of its own accord, yet will yield to a slight tug at the bait. These sticks are set up in the middle of the opening, close to the post. A large sheet of bark was laid across the top of the trap for a covering and poles were placed upon the "fall" to weigh it down.

Traps for black cat are built also after the manner of the sable trap, afterward described, although they are, of course, larger. TAPPAN ADNEY.

TREES AND MEN.

THE trout hog and pot-hunter may find enjoyment only in wholesale destruction carried even to the limit of extermination, and too many of this class are offensively conspicuous in wrongly named sportsmen's clubs, whose professed object is to protect and develop fish and game. These, together with a mercenary class recruited largely from the ranks of those engaged in the sale of fishing tackle, ammunition and other agents of destruction, and who delight to masquerade in the garb of sportsmen, usually capture the machinery of the sportsmen's clubs, and as a result depleted streams and empty coverts and a niggardliness that attempts nothing in the direction of restocking either.

The best element in the guild of sportsmen has long since learned that the greatest benefit and pleasure of an outing are not to be measured by the destruction wrought, nor the profit estimated by the dollars and cents which the contents of creel or bag might bring if sold in the market.

No! Despising these, which are at best but incidents in a broader and higher view, the greater pleasure and benefit that come to him who goes afield with eyes and ears open, and whose heart is not withered by avarice,

count for more than mere wanton slaughter. He whose being is so attuned.

"Finds tongues in trees, books in running brooks,
Sermons in stones"—

He realizes that the world is but a vast schoolhouse and all are pupils. In the every-day walks of life he encounters some born with the grin of Momus, who can see only the ludicrous; some with a bent for the serious, who never smile; some who, surmounting every obstacle, ascend to the summit at a single bound, and others who never become more than drudges or drones by the wayside.

He considers how much he has to be thankful for to whom it is given to be any of these as occasion demands, and how deserving of commiseration and sympathy him who can appear but in a single role.

To the thoughtful and observing the book of nature is ever interesting and instructive, its varied leaves stored with amplitude to hold enraptured the greatest intellect, while not repelling the most callow youth. All stations and conditions bring tribute to her shrine and learn from her lessons as diverse as are her devotees. Many an interesting parallel to the every-day affairs of life are discerned in her manifold aspects, and to none do they come with more frequency, force and pleasure than to the lover of rod and gun who worthily bears the name of sportsman. True to the words of the king of English poets, he "finds tongues in trees." He saunters forth gun in hand in the delightful stillness of autumn time, and his pathway leads him along the hillside where he comes to a solitary spreading tree. It is isolated from its fellows, manfully breasting the storms that break over it, its roots striking more deeply and holding more firmly with each encounter, fulfilling its allotted destiny apart from its fellows. Type of the hermit of ancient days, thinks he, a man of fixed principles to which he was ever devoted and loyal, who lived apart from his fellows, who counted not the world's praise nor feared its censure—and on he passes to a grove of conifers.

Here he finds a brotherhood of trees in close communion—the antithesis of the one on the hillside—each in

closest relation but not encroaching upon the other, the soothing of the wind in their branches typifying the orisons of their human companions and their balsamic fragrance permeating all and wafted heavenward like the incense of good deeds ascending from the human brotherhood to the great white throne on high.

Again he sees great giant trees towering above all surroundings, like the noted ones of the world, and others unpretentious, but fruited with abundance like the most valued members of society, the unobtrusive men of good deeds.

There, to be shunned, are noxious trees whose pestilential exhalations have no redeeming quality, and they remind him only of the vagabond contingent and enemies of their kind; others stately and fair to look upon that are rotten within; trees of great height and vast proportions that challenge his attention and command the tribute of his admiration, that are snapped asunder by the whirlwind and thrown to earth, pulling down and crushing everything in their course like many a proud man who started out upon the journey of life in conscious strength and buoyant with the hope of great achievement, who attained to high and envied station, but who in a moment of madness encountered the gale of temptation and fell with an appalling crash that shook the pillars of society and brought ruin and disgrace in his path.

Again, he is surrounded by others that seem fitting companions to the dilettanti whose every thought is of the present, and who always promise themselves a golden tomorrow, but who are swept into oblivion by the winds of adversity, leaving behind not even charcoal embers as a remembrance, as does the consuming forest fire. The towering oak and clinging vine, type of conjugal love and highest earthly affection, escape not his attention nor the lesson it teaches of bearing one another's burdens.

Some he sees are like other members of the human family who have a grand destiny, while others of as great intrinsic value live and die unknown; some are great in a worldly sense, while living by their association with events of importance, and others, like the good ones of the world, are best known and appreciated when beyond its praise.

Putting forth bud and blossom they well typify youth and give promise of a great future, clothed with densest foliage of mid-summer, the days of manhood and strength in the sere and yellow leaf, the autumn time of life, when is garnered the harvest of years, and when their naked branches are assailed by the merciless winds of winter and give back but sad, pensive strains in remembrance, he has a vivid picture of cheerless and defenseless old age, desolate and forlorn, when the charms of life are but a

memory—the friends of other days cast down from the tree of life and gathered into the silent churchyard even as are the leaves by the winds of winter.

But the shadows have grown to extremest length, the day is spent, and here again is our sportsman at the stile over which he took his departure in the morning. His game bag is empty, for his gun has not done the deed of death, but who does not envy him his outing or say his day has been profitless? GEO. MCALFEER.

WORCESTER, MASS.

MAINE GAME.

[From the Commissioners' Report for 1891-92.]

THE result of protection to our game has more than realized our wildest expectations, but in a proportion of the class of persons that it has drawn to our State (calling themselves sportsmen), we have been subjected to most bitter disappointment. We had thought that in making Maine a field of protected game, we should find in every man a fellow workman, sympathizer and partner with us, as lovers of field sports, interested with us in preserving respect and obedience to our game laws. We can enact no alien laws, as can the Dominion of Canada. By the laws of the United States, every citizen of each State can reside at will temporarily in each State, and enjoy equally with its own citizens all the privileges of its State laws.

All the world can come to us and enjoy during the open time of our game laws all the advantages of our fish and game, that pertain to her own born children and citizens, who have been taxed for and paid the expenses of our game laws. No green callow countryman has been more deceived by the wily, purring "bunco steerer," than have we in some of our visiting sportsmen. But we have not lost our faith in true sportsmen. We shall always rely upon them for support in sustaining our game laws. We expect that every true sportsman that visits our State will promptly report to us every infraction of our game laws, that we may send an officer to arrest and punish the offender. The money penalty for the killing of our venison is a punishment only to the offender whose money resources are restricted. We hear the dishonest, canny remarks of a wealthy offender reported to us by good authority, which, if true, should ostracize him from the companionship of all true sportsmen and gentlemen, viz.: "I kill all game that affords me a fair mark. If I am caught I promptly pay up, if not, that is the fault of the State." Complaints have been made to us by gentlemen against such persons, while they must sit quietly by and witness the cream of the hunting enjoyed by such fellows, while the true quality of "noblesse oblige" compels them to sit still and suffer in obedience to the law. It has been suggested to us by a delegation of gentlemen of Kineo that imprisonment be added to the money penalty in such, if not all cases. We have before spoken of the wonderful increase of our moose, deer and caribou. We ascribe much of this to the suppressing of deer dogging. Dogging is as destructive to deer as is netting and spearing on the spawning beds to fish. They have become wonderfully tame and have entered the pastures of the farmers. Many an old doe that has summered with her fawns in the pasture with the farmer's cows has aroused all the farmer's ire when pursued by some city counter-jumper and has applied to the commissioners for protection and redress for his pets.

The caribou and moose seem to have been driven out of their usual fastnesses by the railroad laborers and engineers and the dynamite blasting enterprises.

The moose and caribou are found all over the State and in the most unlikely places in the immediate suburbs of our larger towns. The improvement in firearms, the breechloader, the magazine gun, the cheapness of these arms must tend to the decreasing of all game. We think Maine has a good code of game laws, and if they are rigidly enforced, as they can be, we see no reason why our present game may not be continued to breed for all time, and afford a fine field for sportsmen. We have thousands of acres of land that can never be used for agricultural purposes, which is admirably adapted for the cultivation and home of the moose, deer and caribou. A crop already planted, needing no cultivation, but protection, and from which many thousand dollars can be harvested annually for the benefit of the State. Our game laws can always be enforced, provided we have a licensed class of guides. A case was reported to us a few days since by a guide who complained that his employer had broken one of the laws of the State, in shooting caribou in close time and when neither the meat or hide could be preserved, but left to rot. This led to a discussion among the more reputable class of guides. They concluded that there was a large number of men of bad character acting as guides who were aiding in destroying the game of the State, and would in time destroy the occupation of the guides, by annihilating all the game, that they respected no law, were a worthless class of men, without whom the State would be richer. It was proposed that the guides of the State organize. We think this move would be in the right direction. They should organize and be incorporated and have their own laws and admit only qualified men, after an examination. They should be guardians of the game laws and should report every infraction of the laws to the commissioners and fix their own rules of admission.

There are a large body of men hanging around our prominent places of summer resort calling themselves guides, but few men of character, rarely citizens, mostly Frenchmen from over the border, skin hunters and poachers. We arrested and tried two of them this last season for capturing a newly born moose calf, probably by killing the mother while fighting to protect her young. Their fine was paid by a Greenville man who pleaded that the men were in his employ. The calf was sold to the United States officer in charge at Togus, and now adorns the United States Park at that place in violation of the law of the State of Maine.

As Maine seems to be the only State in the Union that has enacted a regular code of game laws, and is earnestly seeking to enforce them, she has naturally attracted to her forests the sportsmen from all the States. There are varieties of hardy game from other States and climes that readily acclimate here, and can be profitably introduced. We think the jack rabbit of the Western plains would prove a valuable addition, as it feeds similarly with our own hare, and attains a considerably greater weight and is of similar habits. Our prominent sportsmen have been discussing for years

the feasibility of introducing the black cock of Europe, known as the capercaillie, to our northern or black growth forests. Its habits are similar to our ruffed grouse, commonly known as partridge. It nests similarly on the ground, is a hardy bird, has its home in the rough, cold, snowy hills of Scotland, breeds in considerable numbers in the forests of Sweden and Norway.

Our bright, intelligent Minister to Sweden has already brought this matter before the consideration of Congress and proposed that the birds be introduced and distributed at the expense of the United States. We do not think well of the scheme, as our Congress is composed of representatives from widely varied climes and not always of men who are judges of this class of interests. The capercaillie is the inhabitant of a frozen clime and buries itself in the snow to preserve its life in the snowy blizzards of winter as does our beautiful ruffed grouse. We think by the subscription of the sportsmen of Maine and Massachusetts and other of our New England States, our Minister to Sweden could purchase a few pairs of the birds and these could be bred and cared for at Rangeley and Kineo for a few years until semi-domesticated, as is the present pheasant in England, and then turned loose. As for jack rabbits, we would recommend that a few pairs be purchased and turned loose at once in our woods.

Your Commissioners respectfully represent that the salary accorded them is entirely inadequate to the time required for the performance of their duties. The minor officials employed about the Capitol receive larger emoluments. Our work is more appreciated and honored in the other States of the Union than in our own home. Our forest and streams must testify as to the fidelity and value of our work.

THE MAINE DEER SUPPLY.

BOSTON, Mass.—My good friend, Mr. E. M. Stilwell, at the head of the Fish and Game Commission of Maine, a gentleman who has labored most earnestly in that cause, hands me the following letter from a Portland gentleman of high reputation in business and social circles, also a great lover of woods and water sports. Mr. Stilwell writes me that he regards the letter as good and helpful and of value, as coming from one of the most noted sportsmen of New England. To the bottom of his letter to me, including a written permission from Mr. Smith to use his letter, if worthy, though not intended for publication. Mr. Stilwell adds that "all our success in due to the stopping of hounding and market-hunting." The letter is as follows:

WOODBORNS, ME., Nov. 30, 1892.—Hon. E. M. Stilwell: Dear Sir—I have been waiting to write and congratulate you on the general results of "Deer Farming" in Maine, as shown by the crop already gathered this year. From all accounts, there is plenty of "red corn" left for coming years. I learn from the newspapers that over 200 deer have been brought into Bangor this season. I have no figures for Portland markets, but think there has been no day for the last six weeks when venison could not be bought there. Deer have appeared in Cumberland county, and I hear of them in almost every town, and even city, in the county. I here are two or three in this City of Portland, two in Scarborough. One was shot in Portland, and two ago one of the islands in the city limits. Deer are reported to me in Gorham, Gray, Cumberland, Windham, Falmouth—towns in this county. Three were shot at Sebago Lake recently, and with all due allowance for "gunners' stories" there are more deer in this thickly settled, sparsely wooded Cumberland county than there have been at any other time during the past fifty years.

There is no State in the Union that enjoys better results or a larger return than can Maine, for its wise legislation is protecting its deer crop. I have noticed in several papers recently reports of the reappearance of the gray wolf in northern Maine. If true, they have probably been drawn in from Canada and New Brunswick by the abundance of deer, and I would suggest your considering the advisability of any other thing I want to call your attention to. I see that one of our leading growers is advertising among his canned goods "Lobster Roe." From a lasty glance at the Revised Statutes, I do not find the sale of lobster eggs prohibited. Your wardens have been doing good work here seizing short lobsters, but if they can be sold "in the egg," it is bad for the lobster.

Think of it, will you? And if you deem it of sufficient importance, incorporate your views on the matter in your forthcoming report. There is another thing I want to call your attention to. I see that one of our leading growers is advertising among his canned goods "Lobster Roe." From a lasty glance at the Revised Statutes, I do not find the sale of lobster eggs prohibited. Your wardens have been doing good work here seizing short lobsters, but if they can be sold "in the egg," it is bad for the lobster.

I dislike to discredit so high an authority as Mr. Smith, and did he not squarely state that he gets it from the papers I would not mention his wolf fears; but the FOREST AND STREAM has heard this wolf story for several seasons. Indeed I believe that a big reward has been offered for a wolf scalp taken in Maine. People up in northern Maine seem to believe that somehow the coming of the wolves is to be a result of the increase in deer, and consequently that all laws protecting the deer should be repealed. They feel this with one eye on the deer they are not allowed to destroy indiscriminately.

SPECIAL.

Market-Hunters, Indians and Deer.

A CORRESPONDENT of the Cincinnati Enquirer, writing from New Mexico, Dec. 18, 1892, gives this report of wholesale deer killing: "I was hunting and living in a cabin one mile from where I am writing this article just eight years ago. Charley Perry, who then occupied this ranch, and brother, who lived one mile from here, killed that winter (1884-5) over 200 deer and 4 elk, to say nothing of several bears. In the years intervening between 1884 and 1891 Indians and white men have been killing deer, bears and turkeys every fall and winter. Now, in the winter of 1891-2 Bill Lewis killed 92 deer himself. Last September a band of Lagoonia Pueblos came in here and killed many deer. They disappeared for awhile, and returned about six weeks ago. They killed in their two trips about 285 deer, to say nothing of several bear, turkeys and even squirrels. I will also mention en passant that they killed several head of domestic cattle. By what right, however, or law, they are allowed off their reservation over 200 miles in this country, committing wholesale slaughter, is beyond the ken of all here. There are many poor white men in this country who depend on the big game in the mountains for their winter meat. All the deer that were killed that I have mentioned were killed in a strip of the mountains about 12 miles long and about 10 miles wide. Unless the Indians are prevented from coming in here the glories of these hunting grounds will soon be a thing of the past."

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Jan. 7.—The annual report of city game warden Maurice R. Bortree to the Governor of the State is a good one. It is short, direct, not vainglorious, and it shows results. Mr. Bortree is a better worker than he ever had here before, and has done better work than he was at first thought able to do. He has made out of his office the past year the magnificent sum of \$191.40, as the figures show, and has lost far more than that out of his private business, but he has done sport and sportsmanship far more good than could be measured by that sum or by any sum far greater. Following is the text of the report, barring the legal returns, the latter being summarized:

CHICAGO, Ill., Nov. 1, 1892.

TO THE HONORABLE JOSEPH W. FIFER, GOVERNOR OF THE STATE OF ILLINOIS: DEAR SIR—In compliance with the law of the State of Illinois, I present to you this, my first annual report, as game warden for the city of Chicago, beginning with the time when I received my commission about Aug. 18, 1891, and ending Nov. 1, 1892.

In addition to the work of prosecuting offenders, I have also had cards and circulars printed containing the game laws of our State. These I have had distributed among the sportsmen and game dealers in the northern part of the State. I have also had the express companies issue notices to their agents not to accept in transport game in violation of game laws. This has had a tendency to diminish the traffic in game. Nevertheless, our markets are full of trapped quail from Kansas and other Western States; also large quantities of venison, none of which is in condition to be marketable. The wanton destruction and waste of game is evident to any one making a journey through our city and noting the great quantities exposed everywhere. I have found but few persons who are willing to assist in transporting game in violation of game laws. I have received quite a number of anonymous letters containing more or less worthless information. Nearly everybody seems to want some one else to enforce the laws. The game and birds of this State belong to the people, and they are a valuable heritage and worth saving, but are sure to be exterminated unless vigorous measures are adopted soon.

It is my opinion that our game warden law should be amended. There should be a deputy warden in every county of the State, who should be held accountable for a strict performance of duty. These deputies can be appointed by a chief warden or by the Governor. The amount of time and labor necessary to give to this work should entitle each warden to all fines imposed in cases of successful prosecution by him, and not one portion of the fines, as is now the case. I have found the school fund or any other fund. Past experience has shown that neither sportsmen nor any other class of persons can be depended upon to enforce the law. The wardens should also have power to seize illegal game on sight. The game laws should also be amended. The season for sale of all kinds of game should close in the State Jan. 1 of each year instead of Feb. 1, as it is now. There are several reasons why this should be done: in nearly all of the Western States the close season begins on Jan. 1 or before, on all kinds of game excepting duck. The winter season is at hand, when immense quantities of prairie chickens are trapped. Our market remaining open is an invitation to the market hunters and game destroyers to dispose of their game here. The sale of duck killed in Illinois should be prohibited at all times.

If these suggestions were carried into effect it would greatly lessen the game in the surrounding States, and we should cease to be looked upon as the exterminators of our game. It is my opinion that the extermination of our game is largely, if not entirely, to be charged to the market-hunters and the great market center of the United States. It seems to me proper and feasible for our State to have a game commission to see to the introduction and propagation of new game and song birds. I trust that this last suggestion will receive some attention during the next session of the Legislature.

I most cheerfully acknowledge the hearty co-operation of ex-President Abner Price and President R. B. Organ, of the Illinois State Sportsmen's Association, for the assistance in the performance of my duties, and also to the Hon. F. S. Baird, attorney, for legal advice and help in prosecutions.

All of which is most respectfully submitted.

MAURICE R. BORTREE,
Game Warden, Chicago.

Following are the firms found selling illegal game, the amounts of same, and the legal penalties imposed: B. Aaron & Son, 131 prairie chickens, \$40; John B. Warden & Co., 2 fox squirrels, \$10; C. W. Roth, 1 deer and 4 prairie chickens, \$25; Price & Keith, 2 fox squirrels, \$10; D. R. Shirely, 1 antelope, \$10; Henry Spitz, gray squirrels, \$10; Fred Paegel & Son, 1 wild swan, \$5 (costs only); American Express Co. (carrier), 180 prairie chickens and 10 fox squirrels, legally sold by consent, netting \$71; Moses Gray & Co., 40 prairie chickens, \$125 and costs; John C. Ender, 40 prairie chickens, \$270, less costs. Total fines, \$529.58. Warden's net emoluments, \$191.40.

The letter from Mr. Randall, of Alton, Ill., published last week, will be of special interest to Mr. Bortree in his enthusiasm on the idea of new game birds. Can Mr. Randall help us out with a word to his local representative in the Legislature? It is very likely the sportsmen will this winter ask for a three years' close season on Mongolian pheasants—a measure so reasonable that it is hard to conceive how even a game dealer could object.

Apocryphal of the Toledo English pheasants, it may be remarked that the Mongolian pheasants were offered for sale on South Water street here two years ago. This bird is established in the Northwest coast country, and it may possibly be established here. That it should have had commercial value here so long ago is comment enough on the desirability of protection if it is to be given a fair chance here.

Not Very Fresh.

Last week I mentioned a story of a fresh buffalo skin said to have been brought in for mounting. This item I ran down after a long search to-day, and I find there is nothing to it. Mr. S. Taylor, at whose shop the skin was reported to have been received, said that he had seen no such skin. He had only one buffalo skin, the last left of five, which he had had for over five years. One of his workmen probably started the fresh robe story.

Elk and Buffalo in Chicago.

It is, however, a fact that quite a good-sized bunch of buffalo may be seen at the Union Stock Yards of this city, and also a band of 15 elk. The latter are for sale, and 7 out of the original 22 have been sold at \$125 to \$150 each, to different parties over the country. A friend in business at the yards tells me, in a note quite too brief, that these elk were caught in the snow last winter by a Mr. Hitt, in Brigham county, Idaho, or at least they were shipped from there. The buffalo are wintering at the yards. One tremendous bull was killed Christmas Day. The carcass weighed over a ton. The modern ignorance of buffalo is shown by the fact that the expert butchers of the yards had to shoot the old fellow four times before they killed him. There are 20 buffalo in the bunch, and they belong to the Buffalo Bill outfit, I am told. Two of the elk are broken to trot in harness at a clipping gait.

Two elk and two moose have been placed in Lincoln Park for wintering, by a fur house here, whose agent secured the animals in Manitoba. They were shipped from Winnipeg.

Off for the South.

Mr. C. E. Willard, Western representative of the Colts Patent Fire Arms Mfg. Co., starts on his first trip South for his firm this week, and will be gone some time. He will go out as far West as Texas, and the trip will do him good, his health having been bad for some time here.—I

have given Mr. Willard a letter to the famous market-shooter Billy Griggs, now shooting canvas on Corpus Christi Bay, with the careful instructions to the latter to see that Mr. Willard gets upset in the Gulf of Mexico where the wading is poor. I hope they will have a good time.

Messrs. C. W. Lee and J. Herbert Ware, of this city, start next week for Lake Worth, Fla., for a stay of two or three weeks. They go with the firm determination to catch and eat more fish than anybody else ever did, and are buying outfits for bodily snatching anything but an overgrown tarpon square out of the briny deep. "There will be no foolishness about this," says Mr. Ware. "We need fish to eat and got to have 'em. We can't wait to play the fish, not hungry as we are." Mr. Lee and Mr. Ware are both in a bad way, hard work having pulled them down. They go together and travel in close company, so that they can tell what time it is in the woods. It takes them both to cast a shadow, and they have to hunch up pretty close to do it then. I trust these two emaciated young men will be able to get all the fish they want to eat in Florida. I do not need to add that a principal part of each outfit is a canoe about as long as a minute and heavy as a hat box. If they slam fish around the way it is dreaded, they will ruin their canoes. They ought to be more careful, and probably will be when the keen edge of their appetite is partially dulled.

E. HOUGH.

175 MONROE STREET, Chicago.

MR. BROWN'S DEER.

GRAND VIEW, Tenn., January, 1893.—It was many years ago that Hosea Brown lived on the outskirts of a tract of woodland, which covered about two miles square, in western New York. Thickets of underbrush had grown up among the heavy timber, which sheltered a few deer that occasionally came in there from a much larger tract of forest land. Now, Mr. Brown had never hunted deer very much, but he was an inveterate trout fisher and bee hunter. He kept a shotgun, with which he hunted pigeons, also chipmunks around the cornfield.

It was early in October, when a damp snow had fallen during the night, that one morning Brown announced to the family that he was going out for deer. So he loaded his gun with some buckshot and started for the woods. Others, he said, had killed deer there; and his chance was as good as theirs. After traveling a roundabout course through a labyrinth of brush and snow for hours, he came suddenly on to a doe and two fawns, which jumped out of their beds from almost under his feet; and at the first or second bound one of the fawns ran against a tree with such force that it fell with a broken neck.

Have any of the FOREST AND STREAM readers ever known or heard of a similar occurrence? Brown was very much surprised, as he said, not because he had nearly walked over three deer, but because he had killed one deer, or rather it had killed itself, before he had taken the gun from his shoulder. Taking the entrails out and running a withe through the jaw was the work of a few minutes, when he was ready to haul the deer out of the woods.

The ground was tolerably level, but it was a dark day and the trees and brush were loaded down with snow, so that he could hardly see more than four rods ahead; but he rather thought that he could strike a pretty straight course for home. After hauling the deer quite a long distance, he struck a trail where another deer had been dragged along. He was somewhat surprised at this; he had heard no report of a gun; and he wondered how far that deer had been hauled. As the trail led off about his course, he determined to hurry up and perhaps overtake the hunter. So he pulled on until he thought he had traveled far enough to bring him out, when he discovered the plain trail where still another deer had been dragged in on the old trail.

This was more than he could stand. As he himself stated it, he was "knocked all into a heap." The old man had always rather prided himself on his correct judgment on courses and distances, but his judgment was at fault now, and his heretofore keen perceptive faculties were sadly muddled. The disagreeable fact began to dawn on his mind that he had been dragging that deer around on a circle for several hours. But perseverance was a prominent feature in Brown's character, so he made a break at a right angle from his present course, determined, as he said, to haul that deer out of the woods, straight or crooked. At last he did come out, but at some distance from home and at a rather late hour.

The old man was quite reserved at first about mentioning the particulars of that hunt, but he finally came out with the whole story as above related.

Mr. Brown moved from western New York to the State of Missouri some twenty years ago. I hear from him occasionally, the last time in October of '92. He had passed his one hundredth birthday about the middle of last August.

ANTLER.

How Is This?

Editor Forest and Stream:

From the recent communications in your shooting columns from your Canadian correspondent I infer that the ethics of shooting grouse from trees are determined by conditions of latitude. The practice appears to be looked upon as quite correct if you go far enough north.

Now, I would like to know about shooting ducks on the water. I am new at duck shooting; but my notion has always been that it was considered unsportsmanlike to pot your fowl resting on the surface. I see, however, that many of your contributors appear to shoot into a bunch of wildfowl when they are not on the wing. I believe that even Mr. Wilnot Townsend, whose pencil has given us those charming wildfowl drawings, has once or twice mentioned a good shot on swimming fowl. How is this?

BEGINNER.

Iowa Notes.

MATLOCK, Ia., Jan. 6.—Game in this part has been fairly plentiful the past year. Ducks were very scarce. Chickens were scarce early in the season but were plenty later on, in October and November. Quail were fairly plenty, but no large bags were made. Rabbits (jacks) are on the increase every year. The game laws are only fairly enforced, but each year there is a little improvement.

UNION MACHINE.

A SUGGESTED "TRUE TEST."

TRAVERSE CITY, Mich., Dec. 28.—*Editor Forest and Stream:* I notice in your issue of Dec. 22 what "A Native" has to say about market-hunters and game club shooters. I do not think that as a rule you will find the wealthy shooter considered the only "true sportsman." Mr. "A Native" wants to know what others think of his plan of selling game to cover the expenses of a vacation. If I could not afford a vacation without defraying my expenses by selling the game captured, when game is getting so scarce, I would stay at home unless my health demanded an outing.

If I had spent a lot of money buying a preserve and keeping it up, and for all the accoutrements thereunto appertaining, I should consider that I had a perfect right to kill all I could kill in what to a man so situated would be a sportsmanlike manner. But from my present standpoint I should hardly feel right over a bag of 75 or more ducks in a single day, unless I had only one day in the season to hunt. A man should be looked on as no less of a sportsman because he can only afford a \$3 muzzle-loader, and crawls on his stomach through reeds and mud, and shoots his duck before it has a chance to rise. The exhilaration is probably as keen in one case as in the other.

An intimate friend of mine who is wealthy, and than whom I never had a better companion on a cruise, did not catch many trout because they would not take his flies, but he did not object to my putting on a plebeian hackle, and he ate his share of the fish.

If Mr. "Native" had the money and the preserve and the chance, would he stop before dark or until his shells had given out? Come, now, get right down and be honest. That's the test, "Would I do likewise if I were in his place?"

I only went trout fishing part of three half days the past season, and the pesky things would not look at any fly that I had to offer, so rather than go home bowed down with disappointment and to disappoint the little ones at home, who dearly love a crisp beauty that "papa caught," I used every plebeian lure that I could secure, and didn't feel hurt when, after supper, I picked up my FOREST AND STREAM and read of some man declaring that no true sportsman would use anything but a fly. I pitied him instead.

The last time I went after partridges was more than a year ago. I could not afford the time this year. I had no dog, so tramped through miles of swamp and finally drove one out and into the more open woods, where I located him on the limb of a tree. I committed murder right there, and in great haste, too, for I was afraid he might fly and I would miss him. How the wee ones at home did squeal with delight. They had his tail for a fan, his wings and other feathers for their hats, and oh, how good he did taste, what there was of him among so many, and how I wished I could only have got just one more so as to be able to take a little bigger mouthful.

Brother members of the great family of lovers of FOREST AND STREAM, have patience with our failings, if they seem to you such, but let us not sell our game. There is not enough left to go around as it is.

V. E. MONTAGUE.

We Never Heard of this Superstition.

THE Bangor (Me.) Commercial tells this in illustration of what it says is a popular superstition. The speaker is an Augusta man, and he is talking about partridges: "One flew on our premises and was captured. Then came up the question whether we should kill the bird or allow it to live. At that time there was a general superstition that if a partridge came to a house where a sick person lay and the bird was killed and the sick person ate the broth, it would effect a cure. There was a girl sick at our house and the doctors had given up her case as hopeless. Some of the family said kill the partridge and give the sick girl the broth. But the sick girl and others were for permitting the partridge to live. We were equally divided and agreed to let one of the neighbors whom we saw coming to the house decide whether the partridge should be killed or not. He said kill it, and we did, and the sick girl ate the broth and got well."

And here is another bit of superstition, noted by Prof. M. J. Elrod, in the *Bloomington Eye*: "Clavigero, in his 'History of Lower California,' relates that the first missionaries there found the peninsula overrun by them, the Indians having such a superstitious regard for them that not only were none killed, but they were not even disturbed. The Indians believed death would at once overtake the slayer of a puma. This superstitious reverence for the puma probably grew out of the knowledge early man had of the puma's friendliness for him."

Antelope Wreck an Engine.

SPOKANE, Wash., Dec. 30.—The Great Northern passenger train which arrived from the East yesterday ran into a large herd of antelope near Black Foot, Mont. The herd numbered more than 100, of which seven were killed. The engine was disabled by the collision and another engine had to be obtained before the train could proceed.

W.

Ducks at Virginia Beach.

VIRGINIA BEACH, Jan. 5.—There are great numbers of ducks and geese coming in here every day. Many sportsmen going down every day or two to the ducking grounds. A gentleman told me yesterday on his return that one would think all the ducks and geese in the United States were there.

S. E. CRITTENDEN.

Florida Quail Shooting.

CLERMONT, Lake Co., Fla., Jan. 4.—Dec. 26 Ed. J. Lawes and myself shot 63 quail. If any one wants good quail shooting refer him to Clermont; two good shots with good dogs can easily kill 100 in a day. On the 26th it rained from 9 A. M. till dark. Duck and turkey scarce.

WALTER F. MICKLE.

Florida.

THE Brock House, whose card will be found in our hotel column, is delightfully situated on an enlargement of the St. John's River known as Lake Monroe, which affords magnificent views over a water stretch fifteen miles long and five in breadth, bounded by shores clothed with tropical vegetation. This is an especially desirable stopping point for sportsmen. The fishing is excellent, while quail, snipe, deer, and turkeys abound. The appointments of this hotel are first class in every respect.—*Id.*

Sea and River Fishing.

ON THE NORTH SHORE.—I.

The Trip Up.

"Some sing of the bass with the glistening mail,
Or the giant tarpon with silver scale;
But the angler's joy and the artist's dream
Is the spotted trout of the mountain stream."

AFTER having made two successive trips to the North Shore I again, when the sultry days of summer came, longed for the stormy lake, where the winds howl and the speckled beauty reigns monarch in his aqueous realm. The tempestuous trip Ned and I made the previous season had no terrors for us, so on the 4th day of July we again left the "Soo" in a Mackinac well provisioned and with two half-breeds, whom we were taking for the first time, having discarded our old boatman of the former trip.

It was near meridian when we left the mouth of the "Soo" canal, it being almost an impossibility to get an earlier start, owing to the multitudinous delays the tawny-hued boatmen create for you. They are the embodiment of procrastination, and if you are not of a gentle and patient nature you will soon fret yourself into a case of aggravating fever and incipient grip. Ned swore roundly at the delay, while I stood encouragingly by. This exhibition of sturdy Saxon was not a comparison to what followed when the apology of a sail developed, as it was drawn in position, such a miserable piece of dirty patch-work. Then it was that Ned discounted a Billingsgate fish-woman in the use of objectionable adjectives. They came rolling from his tongue both fast and furious and without any regard whatever for proper classification. The sail—heaven save the mark!—was not only ragged, but really rotten, and had as many weather-stained colors as it had patches. As a design for a crazy quilt it was an eminent success assuredly, deserving a premium, but as a sail, Ned forshadowed it would send us all to "Davy Jones's locker."

The half-breeds, during Ned's indignant recital of polite literature, became as meek as kindergarten children, and by way of a truce promised to strengthen and renew the sail at the first camp. It was either abandon the trip for a day or two or onward to the "home of the trout." As I was eager to cast my maiden fly of the season I insisted on an advance. Ned, after solemn deliberation, finally weakened and gave his consent, and then the tattered old rag was thrown to the breeze, and away we went over a river of sparkling silver that murmured from cliff to crag a refrain of tinkling music.

The weather was sufficiently fine to have rejoiced the heart of a lotus eater, there being a bright, warm sun, a sky with a delicate interlacy of cloud which had settled in the east, and a breeze soft and caressing, just enough to throw little rolls of foam from the shapely bow. We had expected to take a tow with some passing steamer, but none showing up, we somewhat dreamily and lazily sat in the shade of that tattered and torn canvas and watched the white gulls as they sailed along the serrated shore, the deep recesses of the wooded land, the sunlight as it sparkled on the emerald green, and the small boats with the gleam of their white sails giving life and variety to the picture which was in calm and liquid beauty.

"Crystal waters, who can paint thee,
With thy scenery wild and grand;
It would take a magic pencil
Guided by a master hand."

Our destination for the day was Gros Cap, but at the speed we were then going we would hardly have made it, as the sun came down with such a tropic warmth as to almost allay the breeze. A suggestion was finally made to use the oars as an auxiliary, and this was promptly acted upon and our speed thereby doubled. The steady stroke of the oar, which fell with clock-like regularity, began to tell upon the swarthy boatmen; but to their credit be it said, they never whimpered nor faltered, but stuck to the arduous work like galley slaves. Notwithstanding the unfortunate incident of the unsuitable sail, I began to think, after all, that we had drawn in our selection a prize of considerable value. The twain were uncle and nephew, the uncle rejoicing in the euphonious name of Emery Bussinean and the nephew that of Peter Bussinean. Peter was the leading and younger man, and though of rather slender frame, was strong as an athlete and active as a cat. He had a very prepossessing face and was as mild-mannered a half-breed as I ever met. Not an ugly word or a scowl ever came from him and he was as obedient as a subaltern. He knew his place and kept it. Emery, the uncle, was well up in years, say 55, much heavier in frame, less active and inclined to be quite slow in execution of an order. Like Peter, he was pleasant and courteous, but predisposed to boss it over his nephew. He was, however, very timid on the water, standing much in dread of threatening weather and always inclined to close companionship with a harbor. To sum up, they were both good, and safe boatmen, and if I am ever fortunate enough to make another trip to the North Shore would be pleased to have them with me.

The intense heat finally gave evidence, by sombrous clouds gathering in the west, of a change in the weather, and soon there was a visible increase in the wind, and then a few white caps began to shake their snowy plumes and a mass of creaming sea toppled over from the bow, much to the delight of our boatmen, who were well worn with the toil at the oars.

Point aux Pines was soon reached, then the lighthouse came out in bold relief, and when we had reached it the wind had shifted and bade fair, on turning the point, to be dead ahead. We however continued our course until we had the breeze in our teeth, and then being satisfied that Gros Cap could only be reached on a tacking course, retreated and ran into a beautiful little bay radiant in crimson glow and smooth as quicksilver. Here we disembarked, and pitched our tents amid some wild grasses that were bending to the breeze, which swept over the stretch of land in our immediate front.

As we had not partaken of food since early breakfast, the boys promptly began to prepare a meal for us. Being

ravenously hungry, when it was announced as ready we sat down to it—

"And fell upon whate'er was offer'd—like
A priest, a shark, an alderman, or pike."

This outdoor life gives the palate such a razorlike edge, that napkins and finger bowls and all the polite etcetera of a first-class *menu* are relegated to the rear. It is, however, the panacea to restore a lost appetite and make the eyes sparkle and the cheeks glow with the very essence of health.

We found on our arrival a Mackinac which had brought a time-honored angler from the classic land of Daniel Boone, and soon another with a coterie of 800 citizens, also disciples of Sir Izaak, landed to await a favorite turn in the breeze. We evidently had company, and, like all anglers, found in it our affinity, as a sort of Free Masonry always exists among the guild.

Ned advised me to put my rod together, and with light tackle and choice flies try the waters immediately in front of the lighthouse, as it was known to harbor some of the freckled fraternity that sported radiant scarlet. I acted on the advice and soon had my flies dancing on the water. It was not long before one of the infantile class rose to the lure, but it being uncommonly large for small fry, failed to impale him. Again I cast and again he rose, and again he escaped. The third trial met with the same result, and in consequence the trout and angler were as far apart as ever. I cared little for his capture, as I was on a mission for big game, and preferred he should grow to trouthead rather than sizzle just then in a larded skillet.

An hour after, as I was seated on an old log the waves had washed ashore, watching the clouds mingling their hues as they raced o'er the celestial archway, and in listening to the flute-like melody of a warbling black-cap poised on a swaying branch near by, along came the Kentucky gentleman, dressed in knee breeches and fustian short coat and vest, whipping the waters with his Leonard rod in hopes of exciting the curiosity of some wandering trout. As he reached my place of observation he stopped and conversed awhile, and then took up his pleasant tramp, and sought more earnestly than ever to induce some golden fin to arise to his fly. In about a half-hour he returned with one so small that it would require a magnifying glass to make it sufficiently large to reach the legal size. He was pleased with it, however, and had his boatmen prepare it for the table. After he had departed I found on the gravelly beach one of his flies he had whipped off with a part of his leader attached. Showing it to Ned, he declared the ardent angler knew nothing about knots, provided he had tied it, and so taking the fly over to him, took the opportunity of showing him, even at the risk of affronting, how to skillfully connect the two. The lesson was received with the same motive in which it was given, for our acquaintance from the land of bourbon was a very Chesterfield in manners.

Late in the afternoon I was luxuriating in the Mackinac, which was moored in the bay, intently watching the flight of little cloudlets and indulging in dream-like musings until my imagination led me to fancy, as I looked out upon the long sheet of shimmering water, of the Nereids, of the sounding conchs, of Tritons, of blonde, disheveled tresses, and of white bodies streaming with foam, when an unusually loud report from a discharged gun awoke me to the stern realities of life. Looking from whence the report came I saw a frightened tip-up flying frenziedly across the bay and a tall, straight, manly-looking young man emerge from the bushes, gun in hand, with a somewhat disappointed air at his failure to bag the little bird.

"Loud sounding gun that of yours," I said, as he approached.

"Not only loud, but a kicker from way back," he smilingly replied, as he raised his left hand to rub the painful shoulder as evidence of the sincerity of his remark.

This paving the way for palaver, he informed me during the conversation that he, with two others who were students at the Ann Arbor University, had just arrived in a Mackinac with two half-breeds from the "Soo," and were bound for the West Shore on both a trouting and a hunting trip, the latter of which meant much mountain toil, and big game that would assuredly fall before the prowess of these mighty nimrods. Giving him directions on inquiry as to the pathway which led around the bay, he started, with blood in his eye, in search of the feathered game, and doubtless with a hope of finding the affrighted little bird which he had so barbarously disturbed on its feeding grounds. I saw no more of the young man nor any of his party during our stay here, as they had their camp and boat some distance away, waiting, as we all were, for a propitious wind.

The stiff breeze lasted all the afternoon, and just before twilight set in, the sun broke through a rent in the broad smoke cloud that hung in the western horizon and gave us a glimpse of cheerful light and a sunset of incomparable grandeur that

"Drew the dense banks of ponderous clouds, and spread
A mantle o'er them of royal red,
Belted with purple—lined with amber—tinged
With fiery gold—and blushing purple fringed."

Twilight followed fast, the stars came out and the darkness of night fell upon us, and we then sought our blankets where we enjoyed that slumber "that knits up the ravel'd sleeve of care."

The dawn disclosed the wind still in the northwest with fair prospect of another day of its continuance. Ned, the "Peep o' Day boy," was up early and supervised the breakfast, which he had ready by 6 o'clock.

After breakfast I tried the beach in front of the lighthouse again in hopes of hanging some red-coated beauty of respectable size, but all the reward was a rise from another baby trout, which I failed to capture. The hook was too large and I was too proud to exchange it for such fingerlings, and so perforce the infantile race remained unharmed and sported with playful impunity over the shining sands. I, however, informed the Kentucky angler of the rise as he came along with his rod, and although he failed to catch that particular trout he captured one much smaller some distance above, which he proudly carried to his *chef* with the air of a conqueror. I was satisfied to let him wear the laurels which he held for some time.

Abandoning trouting, I sought my old log, and there watched the sunshine as it painted the crested waves, the bound azure expanding on all sides into infinite space, and the deep radiant blue which the moving masses of swift flying clouds were now making the spat of the wind

we so earnestly prayed might change its course to our advantage. Tiring of these ethereal beauties, I sought the tent, and unstrapping my valise, at random took out a book to while away a few hours over its contents, the volume turned out to be "Lucie's Mistake," by W. Amburg. After wading through a few chapters I realized that it was a love tale, full of tender sentiment with many exquisite passages, very pleasing and picturesque, the personages clear, strong and natural, drawn by a master hand that knows human nature and human passions well.

As no trouting of any consequence was to be had here, we grew quite impatient waiting for the wind to shift to our notion, and tried everything possible to make the idle hours pass pleasantly. There being a little stream that emptied its crystal waters into the bay, I was sure there must be abundant perch near its mouth. On inquiry I ascertained that I was correct in my surmise, so securing some worms from the "Soo" party, who had a large

THE SCIENTIFIC ANGLER.
Modeled for the Angling Exhibit.

bucket full which they intended to feed to the trout further up the lake, I was ready for the venture as an auxiliary time killer. Immediately after a late dinner I started in the boat, with Emery as oarsman, for the waters where the stream rippled. Reaching what we considered a favorable spot, I commenced the angle, and after a tedious wait, hooked one about as long as my little finger, and soon another, and still another of the same size, and then the craving for perch departed.

Not wishing to return without a fin of some sort that did not require enlargement under a glass, I concluded to take the boat down to an old rotten pier about half a mile distant, and there try for some brook beauties. It was but a trip of a few minutes, and on Emery landing, this side

THE IDEAL STILL-FISHER.
Modeled for the Angling Exhibit.

of the old dock, we both got out and prepared for the onslaught, by catching a few nimble grasshoppers for bait, as my fly-book was at camp, and the trout, so Ned stated, never rose here to a fly—a statement that assuredly will not hold water. We soon had enough of the jumpers and then went to the decaying timbers, and taking position on a tottering plank on the outside, I tossed the baited hook into the rippling water with a hope that some hungry trout would endeavor to make a banquet of the impaled grasshopper. Much to my surprise I had a proposition for the delicacy, and then, with a slight twitch of the wrist, was gratified to find I had hung the feasting trout whose spangled sides glittered in the bright sunlight when I lifted him from his legal limit and that was all. After two hours steady fishing, I caught three more of about the same size, and then with the addition of two quarts of strawberries, which I purchased from the lighthouse keeper, returned to camp with the air of a conqueror, and an eager desire to call on our near neighbor, the polite Kentuckian, and talk o'er the battles in which we had been crowned with such admirable success in adolescent trophies. Ned was really not in it, as he simply posed as a director-general, bestowing praise or censure as deserved.

After supper, in which the toothsome trout and luscious berries disappeared, we enjoyed the luxury of a Regalia and the beauty of the descending sun as it sank to the horizon in a blaze of lurid light. Soon the song of the crickets were heard, and then the mosquito blew his shrill little trumpet and the sand fly began his insidious longing for blood. Ned dropped his half-lighted cigar and the poetic sentiment of the twilight at one and the same time and hastened with rapid strides for the repulsive fly-repellant with which to freely anoint his face and hands. I joined him in the laving with the loud-

smelling liquid, and when we were both through sat and defied the entire army of buzzing and boring insects and then relapsed again to the loveliness of the scene, which with the now jeweled sky was an inspiration for poet and painter.

Shortly after we had sought our beds the ground squirrels, which were quite numerous here, began to make a playground of our tent and raced o'er it to such an extent that sleep was almost impossible. Ned, who was anxious to close his eyes in slumber deep, cried out in sympathetic tones:

"Silence reigns where katydids have sung
And the pollywogs their tails do wag."

"But the nimble squirrel is evidently tireless and a stranger to a sweet siesta."

This was quite moderate for the afflicted Ned, but in about half hour after he rose to the occasion with a commanding ability that consigned the little pests to the flaming horrors of consuming fires. They evidently must have been duly impressed with the terrible anathemas, for with one accord they departed, and then sweet sleep and rosy dreams fell upon the camp.

ALEX. STARBUCK.

[TO BE CONTINUED.]

THE BARNYARD HACKLE WINS.

In a town of northern New Hampshire, immediately north of the main range of the White Mountains, lived a crafty brook trout who had grown fat-sided and long-jawed through laughing at the threadbare devices of the anglers of his acquaintance. Everybody knew old Speckles and nearly everybody had given up hope of his capture. He had taken quiet lodgings under a steep bank, near a broken dam, and he seldom responded to a ring at the alley gate or a knock at the front door. It is highly probable that even the beautiful creations of "Favorite Flies" would have excited no responsive chord in his unsympathetic breast.

The world of waters is not wide enough to conceal a big, conceited trout. In this same New Hampshire town dwelt a fisherman of note—one who was not easily disconcerted by trifling failures nor cast down by severe disappointments. It so happened that this angler made up his mind to circumvent old Speckles, and regularly take him in.

What was his plan of attack? Did he cast the feathery lure with the precision of a sunbeam and the lightness of a snowflake? Did he tempt the æsthetic soul of his subject with a coachman, a professor, a scarlet-ibis, a grizzly-king, or any other fancy of a poetic nature? By no means. He knew by long experience what the crafty old fellow wanted, and that was worms. He resolved to fall in with Speckles's humor and convert him into a brown trout, or in other words "do him up brown" by means of these homely objects of a depraved taste.

Our scientific angler first ascertained that his troutship was at home and then went into hiding at a safe distance up stream. He sent down with the current a fine fat worm which reached the spot intended. The trout took no notice of it at first, but soon smelled the lure and went back to his quarters. Then he repeated this process, and finally took the worm with evident satisfaction. Several more worms were floated down and Speckles swallowed all with a broad grin of thanks for the diet of worms which had allayed his sharp hunger. The last lumbric that floated troutward was loaded with a small hook, and Speckles took it before it touched the bottom.

There was a battle, of course, but it went against the hero of many intrigues, and *S. fontinalis* alias Speckles, transferred his haunt from the overhanging rock to a suspended reel, and our friend from the White Mountains cut another big notch in his tally of victories.

A TROUT POOL.

PORT JERVIS, N. Y.—I succeeded in making my escape to the hills during the heated term, and was in the habit of lounging on the shady side of things generally. One sultry afternoon my friend, philosopher and guide, to my great dismay, proposed a walk. Noticing my reluctance he promised to show me something worth seeing. I was still apathetic, but when he added, "more trout in one place than you ever saw in your life," I was on my feet in an instant.

The Shingle Brook Road is a log road, and, like the moody little stream beside it, winds along in the hollow until its origin is lost among the hills. After leaving the main road, we went through the fields for a half mile or so between tiers of heavy logs, crossing three or four times the never far straying brook, over bridges whose span was rarely more than a rod. They were of simple construction, planks laid on heavy stringers, with a log on either side to keep the plank in position.

The sun shone fiercely, but we always lay down on the bridges to watch the trout swimming under them.

"Better not delay out here," remarked my companion. "There is little water in the brook at present. If we should see any trout larger than fingerlings under these bridges it is safe to assume that they are on the tramp, working up into the woods from the larger stream in the valley."

The grass was high in the roadbed and ground hogs had made their burrows there. Pheasants dived and drummed on the rotten logs. The omnipresent chipmunk gave fresh alarms at almost every rod of our progress, and the wood birds were heard fluttering away—except the bluejays. The latter congregated and clamorously disputed our right of entry.

We reached our objective point at last, and seated ourselves on a log beside an old hemlock, which served as a buttress to stay the road from sliding into the brook. Before us was a pool some 60 ft. in diameter. Yellow birches leaned their graceful shafts from all directions to form a canopy of foliage over it. Rock bottom, shelving from a few inches to several feet in depth, the water was bubbling to the very brink; it came purling over a huge boulder wedged between the ledges.

Here were trout of all sizes, greedily enough, too. Where the water began to ripple away there was a patch of sunshine; there the insects were gathered—and how they were jumped at!

We observed a big trout lying beside a rock at the lower part of the pool. He was resting on the bottom and not moving a fin. How plump and sleek he looked! There was something forbidding in his aspect. The little fellows

never ventured near him. When the larger ones fell down with the current they glanced around and whisked off.

The old fellow was a cannibal trout. Like the man-eating tiger who never varies his diet, he had given up the ordinary diversions of trout life to become the slave of a voracious appetite.

Hundreds of sizable trout were in sight, besides multitudes of little fellows. The latter were swimming about the waterfall, and many of them discovered a passage, for they were continually appearing above and moving up the stream.

The Shingle Brook is itself a tributary of one of the best known trout streams in the county, probably owing to what at first seemed to me a singular fact that the people of the vicinity have a prejudice against eating trout during the summer months.

"Why," explained my friend, "they are full of pinworms," and to my surprise he promptly caught one from the water trough, and with his penknife readily extracted from its back a number of white thread worms, varying from $\frac{1}{4}$ to $\frac{1}{2}$ in. in length, after which he returned the fish to the water apparently uninjured.

Time is busy sweeping away in our very preserve the scenes of childhood. Though the American may live and die near the site of his paternal home, not less will he seek in memory for the landscape of his youth than his neighbor between whom and his native shore stretch a thousand watery leagues.

Come hither at this season some years hence and you will probably find no flow. You may find water in the pool, but the trout will be gone. Indeed, it is plainly advertised to who ever can read nature's hand, that the pool itself must soon be a thing of the past.

The bed rock here is a soft slate. The layers shelve toward the center of the pool, and one may descend by easy steps several feet until directly under the waterfall. Nature has been excavating this hole for a long time. It is to be a sepulchre. If there be no intelligent purpose in the work, the result, at least, is intelligible enough.

What think you will be entombed in that rock grave? Plainly, the huge gneissic block over which the water is falling. The edges of the rocks between which it is wedged are slowly melting away, and every spring the torrent gives it a push forward; at last it will slip from the vise that now clamps it, and plunge to the fate that awaits. Then nature will fill the grave, smooth it over, and the pool will be no more. B. F. H.

THE MECHANICVILLE FISHWAY AFFAIR

Editor Forest and Stream:

In pursuance of my promise to reply to A. N. Cheney's charge against me in your issue of Dec. 29, I now desire to answer his article seriatim.

A. N. Cheney's statement: "My information in regard to some one who attempted to impersonate a New York Fish Commissioner * * * was of course most reliable."

I acknowledge I am the "some one," but emphatically deny that I "attempted to impersonate a New York Fish Commissioner." The arrogance of the rest of the sentence is characteristic. Since when has Mr. Cheney's information been "most reliable," so as to be a "matter of course"?

Statement of A. N. Cheney's unnamed "correspondent": "The man appeared to be under the influence of liquor."

My worst enemies will not accuse me of intemperance in drink, and I emphatically deny the cowardly insinuation. Moreover, I will give a hundred dollars to any charity FOREST AND STREAM may name if Cheney's correspondent can prove I drank any intoxicant on the day referred to, namely, June 23, 1892, or can prove I was ever under the influence of liquor.

Statement of the correspondent: "He wanted a gun or spear with which to kill it (the salmon), as he said he had been notified by the Fish Commission to get them a salmon in any way that he could and send it to them."

This is a lie and out of the whole cloth. I deny it in toto that I wanted the gun or spear or so asserted. I deny that I said I had been "notified, etc.," but assuming for the moment that I did say so, does not this admission on the part of Cheney's correspondent put him out of court as regards the "impersonation" charge? How could a member of the Fish Commission be notified by the Fish Commission to "get them a salmon?" This writer is aware that I only gave my correct status and inadvertently corroborates my version, which I will give presently.

"The watchman at the plaster mills says that the next morning about 4 o'clock the man still calling himself Barber was at the mill and asked for a spear, but the watchman had nothing to do with him, although Barber offered to watch while Wheeler went for a spear."

This is another sample of the "most reliable" information published by A. N. Cheney. I emphatically deny the statement. I was not at the mill next morning at all, but drove home the same day through a violent thunderstorm along with my wife and little nephew, who accompanied me.

"No one has been here to examine or inspect the fishway except Commissioner Barber, and he is a daisy."

It will be observed that this correspondent himself makes no charge of impersonation, but attaches the handle to my name out of his own inner consciousness. It is Mr. Cheney's statement that I "attempted to impersonate," and I need not say the charge is a serious one. I may certainly be a "daisy," to use the writer's elegant and flattering phrase, and I won't deny myself the compliment, seeing it is the only one offered, but I am not, and never said I was "Commissioner" Barber.

So much for the correspondent. I now pass on to the comments.

A. N. Cheney's comments: "He was simply an imposter masquerading as a Commissioner." That he fooled my correspondent is evident.

These are assumptions only, and are not borne out by the quoted letter from the Mechanicville correspondent.

"Whether this (Barber) is the man that appeared at Mechanicville and called himself a Fish Commissioner desired to kill a salmon illegally of course I cannot say."

This is the way A. N. Cheney shoves the responsibility for publishing "most reliable" evidence. All along he assumes the absolute truth of the Mechanicville report, and then saves his own skin with the "of course I cannot say." I am the man referred to and the charge is a lie

and doubly so because it is mixed with the very slightest grains of truth only. "A lie that is partly the truth is ever the blackest of lies."

Here is my plain and unvarnished statement of the case. On June 11, 1892, I was directed by Chief Game and Fish Protector Pond to visit the fishways in my district, viz., Mechanicville and Northumberland. On the 21st I visited Northumberland and duly reported thereon. On the 23d I visited Mechanicville. On my way down the river I had heard repeatedly that salmon were both shot and speared at the dam. I made up my mind if possible to find out. At the pulp mill and throughout my visit I distinctly stated that I was the game and fish protector, giving also my name and address. I had no reason for doing otherwise. It was at noon when the gate was shut down that I and a dozen or so of men saw a large salmon. I purposely made the remark, to no one in particular, "I would like to have that fish for the commissioners." This was a part of my perfectly legitimate plan to find out the possibility of getting it illegally and to ascertain the sentiment of the men. As I expected, it provoked an offer to get a gun to shoot the fish, which I neither accepted nor rejected; a man started off, I think, for one, and just then the whistle blew for work to recommence. And that is all there is in the charge brought with so much circumstantiality against me.

In my report to the Commissioners of this visit I said (and this is, perhaps, one of the causes for animus in this case): "In my opinion there is altogether too much dye stuff, lime and refuse running into the river at this point to be of benefit to the fish that are trying to get through the fishway, and I think it wise for you, with some member of the Commission, to visit this point at an early day. * * * The day I visited the fishway I, in the presence of ten or twelve employees of the pulp mill, saw a salmon at least 4 ft. in length." This was written a day or two later.

In conclusion, I would add a word to my assumed total unfitness to hold my position. That is a matter for my present superiors to judge of, and I certainly shall not be dictated to by A. N. Cheney or by the "late Commissioner" he quotes, as to my duties. As a piece of news acceptable to the readers of FOREST AND STREAM, I may, however, be allowed to state that since my assumption of office (a period of seven months) I have arrested over 80 parties for violating the laws and have convicted over 60, imposing fines amounting to more than \$700. Of the 20 or thereabouts unaccounted for, 6 were discharged, owing to intimidation of witnesses, 3 sent to jail in default of fines, 3 decamped to Vermont and 8 were discontinued on account of the irregularities of a justice. I have also 7 important cases more pending. There is not much of the "daisy" pattern in all this, I think.

CHARLES H. BARBER.

Game and Fish Protector 17th Dist.

ANGLING NOTES.

Pike Fishing Through the Ice.

UNTIL the New York fish and game law was passed last year there was a close season for pike, which cut off pike fishing through the ice. When that law was in force there was much opposition to it and considerable ill-feeling in consequence. A game protector consulted me about making an arrest, as he had evidence against two men for fishing in the Hudson, where there was no close season for pike, with tip-ups. He claimed that if two or any number of men less than thirty cut thirty holes in the ice and put thirty baited hooks and lines into the holes that they were using set lines. I advised him not to make the arrest and told him if he was placed on the stand under oath he would describe an entirely different outfit as constituting a "set line" under the law. He said I had advised him for fifteen years and for the first time I was wrong, but he did not make the arrest.

That same winter or the following spring the Supreme Court of New Hampshire decided that fishing through the ice with tip-ups was fair angling, and that any number of lines so used by men who were present to watch the tip-ups were not set lines. I cannot now refer to this decision, but presume it can be found easily by those who may be interested in it. Already this winter I have been asked more than a score of times if it was legal to catch pike through the ice in the lakes where formerly pike had a close season, and in all cases I have said yes as to one of the lakes, but another law prevents fishing through the ice in the other. The local game protector tells me that he will arrest any man found fishing through the ice for pike with more than one line, as the chief game protector of the State has decided that the use of tip-ups does not constitute angling, and a rod must be used.

I think that the chief game protector is not correctly quoted in saying a rod must be used. In Section 271 of the New York law definitions are given of the terms used, and Article 4 reads: "Angling is defined to mean taking fish with hook and line or rod held in the hand, and does not include set lines." Of course the chief game protector's decision is final, unless the courts should construe the law in a different manner, but we all know that tip-ups are not set lines in the meaning of the law, for set lines are long, strong lines with short baited lines to the number of several hundred, sometimes, attached, which are anchored out over night. If a tip-up that a man is watching is a set line, then a baited rod that the fisherman puts down in the boat from which he is fishing, while he takes a drink or eats his lunch, must also be a set line.

Schoharie Creek Salmon.

Replying to Mr. Robert Hartley's request for information regarding the salmon seen in Schoharie Creek, Judge Fitz James Fitch, of Prattsville, N. Y., reported the fish as having been seen, not caught, by Rev. Charles G. Adams, of New York city. Mr. Adams was fishing just below Devasago Falls, near the village of Prattsville, last September, and saw the salmon, a fish nearly 3 ft. long, swimming near the surface of the pool, with its dorsal fin out of water. Judge Fitch is an accomplished angler and a prudent man, and a remarkably well informed man concerning the fishes of the salmon family, and when he said that the fish seen was a salmon I had no hesitancy about accepting the statement, knowing well that he would not report the salmon without first investigating and satisfying himself of the identity of the fish.

After hearing of the fish seen by Mr. Adams, Judge Fitch "learned from an authentic source" that previous to Mr. Adams's discovery, another salmon, or the same one, was seen four or five miles further down stream

at the foot of Gilboa Falls. Judge Fitch says: "I know of no obstruction in the streams named (Schoharie Creek and Mohawk River), in time of flood, that would prevent its passage to the point where it was seen by Mr. Adams, unless it be Cohoes Falls." I had serious doubts about the fish being able to pass Cohoes Falls and the Schenectady Dam in which I knew the fishway was useless, but afterward I had a call from Judge Yates, of Schenectady, and he told me that it was not necessary for fish to try the falls or the dam, for striped bass and white perch came up in to the Mohawk through the canal locks and of course the salmon could follow that route also. A. N. CHENEY.

THE METABETCHOUAN WINNINISH.

Editor Forest and Stream:

What information can you give me as to winninish fly-fishing in the spring in the rivers running into Lake St. John, the Metabetchouan or the Mistassini or the Peribonca, but more particularly the Metabetchouan? I have fished the latter stream last August with splendid results, and as I will not be able to go the coming year in the fall I would, if fishing is good in the spring, go there. I fished the Metabetchouan a week or so before the party from Hudson fished it, the party that published the article in your paper. Any information you can give me will be greatly appreciated.

M. C. LUCKENBACH.

[In FOREST AND STREAM, Aug. 21, Sept. 18, Sept. 25, 1890, will be found many details about winninish of the Metabetchouan. Perhaps nothing else is of greater interest to the angler than some experience of a "brother angler;" therefore we have applied to Mr. Geo. H. Dana, a member of the Saguenay Fishing Club, for information about spring fishing at the club house, foot of Alma Island on the Saguenay. Mr. Dana was on the grounds in June. On the 25th, and for about a week thereafter, the killing fly was the Cahill; this was followed by the professor. On the first day's fishing Mr. Dana's companion took 25 lbs. of winninish, and his own rod killed 20 lbs. The fly was tied on No. 6 sprout hooks. There is no reason to doubt that the same fly would prove equally effective for the northern winninish wherever found.]

Drowned by a Shellfish.

AMONG the showy shells of the Pacific coast of the United States none are better known or more widely distributed than the sea-ears or abalones, and none are more eagerly sought for by Chinese fishermen. One would scarcely anticipate danger, much less disaster, from the pursuit of an object so harmless in itself; but it is reported that a Chinaman once lost his life near Bartholomew Bay, on the coast of Lower California, while gathering abalones.

The foot of this shellfish is capable of taking a firm hold on a flat surface, and in most cases it becomes almost impossible to detach the shell without breaking it into fragments.

The unfortunate fisherman referred to was collecting the shells under a shelving rock between tides and had thrust his arm around a sharp edge, to dislodge a large one which he saw on the surface. Having no stick convenient to pry off the abalone he placed his fingers under the shell and tried to detach it by a quick motion. The abalone, however, contracted suddenly and held the fingers of the Chinaman so tightly that they could not be pulled away. The tide rose and the man was drowned. His companions returned to search for him at the next low tide and found his body still imprisoned by the powerful grasp of the abalone upon the rock.

Ice Fishing for Pickerel.

THE cold of winter has not overcome the ardor of the fishermen. From the northern counties of New Jersey and Pennsylvania come reports of fishing with the tip-up and the more unsportsmanlike axe. Even at a zero temperature holes have been cut through ice 18 in. thick on lakes of Pike county, Pa., and tons of pickerel have been caught.

Mrs. Romaine Whittaker has distinguished herself on Porter's Lake by capturing seventy-five pickerel during a forenoon, although the cold was so severe as to freeze the holes almost as fast as they were opened. Brink Pond has been a favorite fishing ground, and it is claimed that five tons of fish have been caught there during the last month of 1892.

On the ponds of Bergen county, N. J., the fishing outfit comprises an axe and a pair of skates. The perch and pickerel are found at the surface of the water under the ice and are stunned by sharp blows of the axe, after which holes are cut and the fish secured. This is doubtless exhilarating to skaters, but not worthy of the name of sport.

New York Game Law Enforcement.

NEWBURGH, N. Y., Jan. 7.—The following complaints made by State Game and Fish Protector Willet Kidd have been settled:

Thomas Cuddeback paid \$100 penalty and \$40 costs for having an eel rack in the Bashers Kill, a trout stream that empties into the Neversink River.

The Romer & Tremper Steamboat Co. paid \$50 and costs for transporting a deer.

Henry Hulise paid \$100 penalty and \$16.50 costs for having an eel rack in his mill at Phillipsburgh on the Wallkill River.

Three other eel racks were removed from the Neversink River.

Russel Headley, of Newburgh, was employed as special counsel by Protector Kidd.

Iowa Lakes.

MATLOCK, Ia.—Our fish commissioner, Mr. T. J. Griggs, is a "hustler," and did good work the past summer in stocking streams and lakes with fish, mostly black bass. There is fair fishing in all the streams here, the principal fish being pickerel or pike and rock bass. Spirit Lake and Okoboji are the great fishing resorts of this part of the State; pickerel, wall-eyed pike and bass are the fish mostly caught.

UNION MACHINE.

Ideal Fishing Figures.

DR. JAMES A. HENSHALL sends us photographs of two figures, which he has had modeled for the Angling Exhibit of the World's Fair, one representing the "Scientific Angler" and the second the "Ideal Still-Fisher." The photographs are by Mr. J. E. Halle.

FIXTURES.

DOG SHOWS.

Jan. 25 to 28.—Northern Ohio Poultry and Pet Stock and Kennel Association, at Akron, O. W. A. Caldwell, Sec'y.
Feb. 21 to 24.—Westminster Kennel Club, New York city. James Mortimer, Supt.
Feb. 28 to March 3.—Keystone Kennel Club, at Philadelphia. Pa. James Watson, Sec'y.
March 7 to 10.—Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderfer, Sec'y.
March 14 to 17.—Washington, D. D. F. S. Webster, Sec'y.
March 22 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
Sept. 7 to 10.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 7 to 10.—Hamilton, Ont. A. D. Stewart, Sec'y.
March 21 to 24.—City of the Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.

FIELD TRIALS.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgariff, Sec'y.
Jan. 16.—Fourth Annual Meet Brunswick Fur Club, at Westminster, Mass. J. H. Baird, Auburndale, Mass. Sec'y.
Feb. 6.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y.
Feb. 13.—United States F. T. Club Trials, New Albany, Ind. P. T. Madison, Sec'y-Treas. Indianapolis, Ind.

COL. ARTHUR MERRIMAN AND H. B. DURYEA.

Judges at Eastern Field Trials, 1892.

POINTS AND FLUSHES.

The Chicago Dog Show.

CHICAGO, Ill., Jan. 7.—I mentioned in a brief note last week that the Chicago Kennel Club was organized on Monday, Jan. 2, in this city. This club intends to hold a dog show in the first half of the month of February, there being therein dates which are unclaimed. The club will have a new departure in the premium list. The classes for the smaller breeds, which almost invariably have but two or three entries, will have small prizes, and the more popular classes, which fill well, afford a revenue to the club from entry fees.

WANKIE KENNELS' SCOTCH TERRIER KILROY.
First, Gloversville, 1893.

and are a drawing card as a public attraction, will have largely increased prizes. I have been informed by one of the officers of the club that a most attractive premium list is contemplated, one which will be so valuable as to be a surprise to show goers.

The list of officers is as follows: President, W. E. Hagans; Vice-President, J. Locke; Secretary and Treasurer, G. H. Goodrich. J. W. Munson is managing director.

Pointers will not be classified by weight, which is a most sensible departure.

It was thought by some that a dog show held as part of the winter circuit might in some manner affect the World's Fair dog show, or vice versa. The two shows could not possibly have conflicting interests. The World's Fair show stands alone by itself, so far as its interests are concerned. Moreover, Chicago is large enough to hold two good shows in one year on its own responsibility. A gentleman who is a leading and active spirit in dog show matters in this city assured me that Chicago could successfully give a successful dog show each month in the year. There is one thing certain that if a show is once arranged here it will be held.

Classifying Pointers by Weight.

The pointer, heavy or light weight, is considered as being a working dog. In practical field work pointers have no weight classification. Setters and pointers have a value according to their ability from a working standpoint.

A distinction which divides pointers into heavy and light

weight is arbitrary and artificial. It has no purpose outside of a dog show competition, and therein its mission is simply to multiply winners and increase the prize money, there commonly being, by the heavy and light weight provision in the prize list, twice as much money allotted to pointers as to setters, since there are challenge classes, open classes, etc., for each breed respectively.

It is true that there is underlying all this a pretense of improving the breed by giving the owners or breeders of large dogs a chance in the competition. It is said to be more difficult to breed a good big dog than it is to breed a good little one. The same is equally applicable to setters, if it is applicable at all to either breed. But, heavy weight or light weight, the pointer is a working dog, his work being of such a nature that no distinction founded on weight is possible, nor is it known in field work or field trial competition. Moreover, there is no more reason for the weight classification in favor of the pointer at dog shows than there is for the same in favor of English, Irish and Gordon setters. I am inclined to think that there is a great deal of fallacy in the saying, so far as it concerns pointers, that it is harder to breed a good large one than it is to breed a good small one. Even if the saying were true, is the interest of sufficient value to treat the heavy weights and light weights, in the prize money, as if they were two different breeds? There is a great deal that is artificial and superficial in the whole matter of pointer classification.

A most remarkable litter, in respect to number, is that recently whelped by Mr. Arthur Massey's bitch, which whelped seventeen puppies by O'Rourke. Mr. Massey is well known in the sportsmen's world as the famous slipper at the American Coursing Club meetings.

The announcement of the Philadelphia Kennel Club's meeting, one of which was received at this office, contains forecasts of a most pleasant nature. The *Item* punch bowl, which is to be filled with thirst assuager, named after the winner of the club's Members' Stake, and in conjunction with a supper, will make all glad. Mr. S. Murray Mitchell was the fortunate winner of the Members' Stake.

B. WATERS.

The W. K. C. Judges.

The list of judges for the W. K. C. show at New York in February is quite a strong one. Miss Whitney for St. Bernards seems to have become a settled feature, and is probably as good a selection as can be made. Mr. Raper's selection lets the club down easy on a lot of breeds for which good judges are somewhat difficult to find in this country. We always understood Mr. Muss-Arnolt was more of a pointer man than anything else, but of course we must be mistaken, as he is down for great Danes, Dachshunds and bassets. Mr. W. Tallman has undertaken a task that will test his well known abilities to the utmost, and whether it is a wise move at such a show as New York to assign such important breeds and classes with such large entries as pointers and setters to one man will be better answered after the show; pointers might well have been given to some one else and so facilitated the judging. Instead of Mr. Willey, Mr. E. M. Oldham will judge spaniels. Mr. Jarrett for sheepdogs was, probably, the best selection that could have been made, but as we go to press we learn that Mr. Raper will take these classes. Mr. John E. Thayer for bulldogs sounds just right, and as the Bulldog Club can have no excuse here on the score of Boston terriers, as they had at Boston once, it is to be hoped that a bumper entry will make some amends for the slight that the club imposed on one of its members at the show of 1891. The beagle men, so they say, will have to ransack their kennels for their biggest and most workmanlike dogs to put before Mr. Dorsey. At the same time they may find themselves mistaken, and while this well known breeder may have his penchant for the larger and coarser dog for work, when it comes to the sawdust ring he may prefer to stick to the standard. Mr. R. F. Mayhew finds himself among the hard haired division this time, with the exception of pointers, setters and St. Bernards, he will soon have run the whole gamut of the show. Altogether the list, as we remarked, is a strong one, and there should be no fear of seeing some of the blunders repeated that have been made at this show in years past.

Akron Dog Show.

We mentioned recently the formation of the kennel club in connection with the Northern Ohio Poultry and Pet Stock Association at Akron O., and now we have the premium list of their first show, to be held Jan. 25 to 28. The prizes will be sixty per cent. of the entry fees to first and 40 per cent. to second. Mr. John Davidson will make the awards. Every breed is, in addition, well taken care of with cash specials of from \$2 to \$10, which should serve to draw a good entry. Entries close Jan. 18 with W. A. Caldwell, Akron O. Although not yet admitted to the A. K. C. they have been advised by the A. K. C. people to hold the show under their rules, and that in all probability the wins will count as they will be admitted at the February meeting. Mr. H. F. Peck will superintend the show.

The Chicago Dog Show.

The FOREST and STREAM was the first to call the attention of the public to the fact that Chicago would have a new kennel club and an extra show in February next. Referring to our advertising columns we find that the show will be held Feb. 7 to 10 in Battery D, and that \$50 cash prizes will be given for the larger dogs. The show will just fit nicely. G. H. Goodrich is the secretary and treasurer and John W. Munson managing director. Premium lists will be issued shortly. Entries close Jan. 27.

Bulldog Courtesies.

Mr. C. W. Cugle has just received a letter from Mr. Samuel J. Smith, honorary secretary English Bulldog Club, saying that Messrs. John H. Matthews, H. D. Kendall, E. A. Woodward and C. D. Cugle had been placed on the honorary membership list of that club, "in recognition of the position you hold in the American bulldog fancy, and as a token of our high appreciation of the good feeling which so happily exists between the clubs of the old country and the new."

Wolf and Setter.

According to *Stock-Keeper* an interesting litter is shortly expected in the kennels of the Duke of Newcastle, as one of his setters is due to whelp to a wolf. There appears to be no doubt as to the parentage of the coming litter and the result will be interesting, though probably it is only a case of history repeating itself.

Mr. Chas. Stedman Hanks, who is journeying leisurely toward Florida, where he will pass the winter, called upon us last Monday. Among other things he told us that the Russian wolfhound he has shown as Servanates is really Groubian, one of two dogs imported during the summer. The labels having become mixed during their transportation to this country he attempted to decide the question by calling them by name to see which was which. Mr. Hanks' Russian accent being evidently defective led each dog to suppose he was the other. The real Servanates is said to be a much better dog than the one shown at Brooklyn. Mr. Hanks has taken the necessary steps to have the names changed and the matter set right with the A. K. C.

GLOVERSVILLE DOG SHOW.

A CAPITAL little show was held in the rink at Gloversville, N. Y., Jan. 3 to 6. This was the result of the enthusiastic efforts of the good men and true who make up the association known as the Mohawk Valley Poultry and Kennel Club. This club was organized in 1891 as the result of a split in another association, the party of the second part forming the New York and New England Poultry and Kennel Club at Albany.

Some people have an idea that dogs and chickens will not mix. This is true in the main, as we have found to our loss; further, dogmen and chicken men do not, as a rule, amalgamate very lovingly. Gloversville, however, seems to have been the exception to prove the rule. We never attended a show where the hen enthusiasts and the dog cranks mingled more freely, and many friendships were made which are sure to redound to the benefit of both feather and fur. Perhaps this good feeling arose through the efforts of President A. E. Blunck, one of the foremost breeders of game fowls in the country, which led some one to get off a little joke, remarking that "though Mr. Blunck was not a dogman, he was game and his hackle was the right color." To bring the boys together this gentleman gave a supper at the Alford House on Wednesday evening at which most of the exhibitors did full justice to the good things provided by Landlord Davis. The poultry contingent was strongly represented, the few dogmen present being completely absorbed in the crowd.

We have not space to give the names of all, but those particularly known to us were Messrs. Fred Schmitt, Ed. Rosa, George Rosa, L. W. Clute, R. M. Fenton, J. Otis Fellows, F. W. E. Clarke, German Hopkins, E. B. Elliott, W. Tallman, J. H. Drevestadt, R. T. Harrison, J. W. Miller, James W. Green, and about twenty of the feathered fraternity. Mr. E. B. Thompson was installed toastmaster, filling the position very acceptably, although he at first protested his inability. He first called upon Mr. Blunck, who spoke for the presidency, an office which he has filled for the last two years. He dwelt facetiously upon the honors and emoluments (?) of the position, all of which he has enjoyed and some of which he has settled for. In summing up, however, he found that the satisfaction derived from association with the members of the club had more than compensated for the labor involved and the money expended.

Mr. E. C. Rockenstye then spoke about the "Freaks of Poultry," which peculiar subject seemed to please immensely. Editor Ross of the *Gloversville Standard* then gave a ten minutes' discourse on things in general. As a break in the proceedings German Hopkins told us in his inimitable style about the "Lad that's Free and Easy," and was enthusiastically encored. Then Mr. Ben Thornton, not a bantam weight in the fancy by any means, told us, confidentially, "How I was Duffed," which was quite a personal affair. The toastmaster then called upon Mr. A. A. Parker to answer the question, "Is New Jersey Really in the United States?" This point was evidently settled in the affirmative, but when Mr. John H. Warner was asked to discourse on the "Asiatic Classes," he excused himself on the plea that his constitution was too weak to admit of his speaking. Subsequent events proved this to be a very frail excuse. Mr. F. W. E. Clark then spoke on "Dogs in General, and Fox-terriers in Particular," in a quiet and impressive manner. Mr. E. B. Elliott, by special request, sang "The Jubilee," and Mr. Gaylor, of Gloversville, spoke quite feelingly on the "Absurdity of Prohibition." Altogether it may be imagined that the gathering was an enjoyable one, and toward the "wee sma' hours" the early sleepers in the hotel were roused by the cheers which were heartily given for the president and the club.

Gloversville is a very interesting, bustling little town of some 16,000 inhabitants, and is given over entirely to the manufacture of gloves and the production of sole leather and kindred commodities. Incidentally Gloversville is termed "the Queen City of the Adirondacks." The surrounding country, and in fact all Fulton county abounds in historical relics. Johnstown, three miles distant, is headquarters of one of the oldest Masonic lodges in the country, its charter dating from 1766, and they still have the insignia jewels presented to them by King George III.; then there is the old fort which was built in 1735, besides many other interesting objects which lead one to suppose Oscar Wilde was not fully informed when he made his famous remark about the lack of ruins in America. Gloversville does a \$10,000,000 business in gloves and is evidently a town with a future. Some of the exhibitors spent a pleasant afternoon in going through Messrs. Quackenbush's factory, where, under the guidance of Mr. A. V. Quackenbush, they saw the sixty different processes through which the skin must proceed before it becomes the finished kid of commerce.

The weather at Gloversville was intensely cold and the building in which the show was held had been used as a storage place for skins, and until the stoves had been kept for a couple of days at fever heat the atmosphere and the flooring were chilling to a degree. The benching was of the old and primitive sort, but substantial and clean. The dogs were benched in the forepart of the building, the chickens, of which there was an excellent collection, covering the space in the rear. A good-sized ring was inclosed at one side of the hall for the dog judging. Mr. F. B. Zimmer, the secretary, was a busy man and was untiring in his efforts to make every exhibitor at home. He is the owner of some workmanlike beagles, calling his kennels the Debonair Beagle Kennels. Mr. Ray Hillabrandt was the superintendent and kept the aisles measurably clean and the dogs well bedded. The feeding was excellent, Spratts biscuits being well prepared with appetizing soup. "Sanitas" kept the hall free from offensive smells. The judging did not commence till about 11 A. M., and Mr. C. H. Mason officiated as judge, giving, with few exceptions, entire satisfaction.

The number of entries was 146; there were about 15 absentees and some duplicates. The quality of the dogs benched was noticeable in a show of this size, the beagle and fox-terrier classes being especially good, and with the St. Bernards, Scotch and Dandie Dinmont terriers, were the principal attractions. Spaniels, although few in number, were choice. Many, in fact, most of the classes had but one or two entries. The Connecticut Valley, Rockland Beagle, Iolanthe, Waukie and Hentley, Swiss Mountain, Hell Gate, Mount Zion and George Bell's, F. F. Dole's and Beverwyck were the principal kennels represented. The judging of the classes was completed by 4 P. M. and by 10 P. M. most of the numerous specials were awarded, leaving a few for the next morning's work. Many of these specials followed the regular awards, but there were a few that required careful judgment. For instance, that for best kennel in the show was a hard nut to crack, finally narrowing down to a struggle between the Scotch terriers belonging to Mr. Henry Brooks and the Iolanthe Kennels' fox-terriers; the former were a more sorry lot, but eventually the merits of Ripon Stormer and

May Storm evidently pulled the Iolanthe Kennels through a winner. The competitions for the best dog and best bitch required considerable weighing. For the best dog Mrs. Smythe's coming dog, Scottish Leader, the smooth St. Bernard, finally proved the victor, and the mastiff, Lady Coleus, despite her rather poor condition, was chosen from a lot of no mean competitors as the best bitch.

The attendance throughout was very fair and the show seemed to take well among the local people. Mr. Ed. Rosa, of Schenectady, acted efficiently as steward of the ring. Among the dogmen of the club we may mention Ed. Rosa, setters, hounds and beagles; H. C. Alvord, Gloversville; F. B. Zimmer, Gloversville, beagles, etc.; Lyman W. Clute, Ballston Lake, N. Y.; George Rosa, Schenectady, setters and beagles; and Ray Hillabrandt, of Johnstown. Mr. C. E. Rockenstye acted as general superintendent, but his sympathies were with the poultry section. The stalls were all numbered and catalogue out in good time, and on the whole it was well arranged, with few mistakes. This was the work of the president, who, among his other duties, runs a daily and a weekly paper in Johnstown.

Mastiffs had but two claimants for honors, a dog and a bitch; they were, however, good ones. The well-known Lady Coleus, in the challenge class, made her first appearance under her new ownership. Those warts on her body seem to be increasing, and she was not in as good show trim as we have seen her. King Caution, in the open dog class, has a fairly good head, a dog above the average, rather light in bone and short in body, good action. He won here last year.

In rough-coated St. Bernards the order was the same as

A. E. BLUNCK.

President, Mohawk Valley Poultry and Kennel Club.

last week at Pawtucket, the handsome Otis first, Roland, Jr. second; King Regent third, with a better chest, head, body and bone than either, was as usual put back for his faulty understandings. Kamehameha I., that queerly named dog of Mr. Graham's, was absent. There is a rule in the A. K. C. that when a dog's name is changed his former name shall also be given until he wins under his new name. *Verb sap.* The sweet-headed Florette, though short of coat, with her good coloring, head, nice type, though a bit narrow in muzzle, good chest, body and legs, had little difficulty in beating Lady Bountiful, who loses to her in front. Mrs. Nickolson won third and reserve with Mr. Zion Leila and Thora; they are both almost white, excepting in heads, and both lose to the winner in body and head. Thora is a bit slack in back; both well off for bone and move well; their owner, however, should breed out of this whitestock, too much of it is dangerous to type. Queen Kate has black markings and that won't do at all. Jess Bedivere, the pup, dips in back a bit, is open in feet, fine muzzle, but all white with exception of head and spot on rump.

The smooths came next; in dogs, Melrose, though entered, stayed at home, and this left barren honors for Scottish Leader, who was fit to battle for his life, in elegant condition, and it will take a crack-a-jack to beat him; his head is toning down wonderfully, and except when very excited, has lost much of that squariness he used to have. He quite deserved the special for best in show. In bitches, with Miss Alton absent, Debonair Hope had the class to herself; she carries a good deal of coat for a smooth, as well as too much white; she stands on good legs, but would do with more bone, but she is only 12 months old yet.

With a Greyhound Club judge up it is surprising that more greyhounds did not show up, especially as the N. G. C. offered one of their handsome medals. Only one entry, Lady Jane, and she was so ordinary that first was withheld, she is flat behind, coarse tail, with a brush like a beagle, a nice head and neck, but back of that is poor.

In deerhounds one expected to see the Hillside Kennels on hand, but the Iolanthe Kennels furnished the two entries, dog and bitch; they were both at Brooklyn. Dunsloy was in good coat, but Madge Mac was out of it, having just weaned puppies.

Although an N. G. C. medal and other specials were up for Russian wolfhounds there was no entry. The bloodhound and Newfoundland classes were also drawn blank. Then came the American foxhounds with three in open dogs. Brave's Boy, the winner, stands back on pasterns, toes not close enough, plain head, throaty, fair body but soft in coat. Punch, second, open in coat, fair head, throaty, wide in

front and faulty tail. Crook, but for the lack of tail tip was an easy winner, as he is a capitally made hound all round with an excellent head and expression, he is a Walker hound and said to be a stayer. In bitches (6), Fly, the winner, lacks bone but stands on good legs and feet, and is especially good in quarters and second thighs, she beats Daisy Nightshade, the latter's neck being short and not clean enough, skull too broad, but the rest fairly good. Fanny, third, is too short in head, and but for a little weakness behind is all right. Femur was absent. One fair pup was shown but the other's legs were all over the ring and there is no hope for him.

Pointers came next, some individual specimens good, but the majority only moderate. An old friend, Lancelot, was the challenge winner, and he looked well, too; he is not square enough in muzzle and too heavy in shoulders for the first flight. Three appeared in open dogs, the winner being Duke of Kent II., who was at Pawtucket, and whose picture showing him in another walk of life, appears in this issue. Touchstone followed, he is wide in chest, his legs and feet could be better, good ribs, loin and quarters, but his head is plain. Nick C. took e., he is too weedy to expect much more. Vesta C. won in bitches over five opponents; with a nice head, excellent ribs, quarters and hindparts, her faults are toes not close enough and ears hung a trifle wide. Countess Vernon followed close, she is a little weak in muzzle and her tail is short and coarse, but good front and well made body. Fatinitza, third, I would like better had she better pasterns and feet, a squarer muzzle and a little narrower in chest; her quarters, too, are faulty. Luna T., vhc., has a plain head among other faults, and Skylark, he., is too long-waisted and in face light throughout. The winning pup, Judge, has good bone and a fair head. Nora M., second, is too heavy in shoulders.

The English setter division was not remarkable for any display of great merit, though there were some useful animals among them. No challenge entries, but in open dogs there were four on hand. Prince L. this time got his deserts; if standard, type, well-formed head and good coat go for anything he was well ahead of the others; there is, however, something cloddy about him that impresses one with the fact that the second winner, Max Noble, though a bit leggy, would range all round him in a day's work, this one has rather a plain head, nice body, limbs and shoulders, but short of coat. Choice Bondhu, third, but for a rather domy skull, would have a good head, shows quality, good front, but quarters droop too much. Buck Bondhu, he., is not furnished yet, has a head on the Irish type rather. There were three bitches with Flossy Foreman an easy winner; good head, coat and legs. May Bondhu, second, should have more stop, though head otherwise well shaped, very good bone, though not very strong behind. Daisy Buckellew is narrow throughout, and short of coat. Choice Bondhu was the winning pup, with Nutmeg, coarse in skull, second, while Buck Bondhu came third, and Faneon, reserve, is too fine in muzzle and not quite straight in front.

There were but two Irish setters, though pretty fair ones. Mack D., the dog, is rather strong in head, broad, flat ear, and feet too flat, the rest good, color rich, and an active mover. Maud is a big, but not a badly made bitch, lacks depth of muzzle and feet should be put down straighter.

The only Gordon, Jim Jackson, should have more stop, good neck, but shoulders straight, quarters fall away too sharp, fair tan. A native setter was shown, a big black and white dog that "Billy" said had many of the attributes of the old tribe.

There was lots of quality in the spaniel department, though with the classification and Spaniel Club specials there should have been a bigger entry. Mr. Bell furnished the challenge winners with the well known King of Obos and champion I Say, though he had only his second string out. Open black dogs had only two entries. Middy was an easy winner, a trifle long in muzzle, nice skull, but too much hair on it, good cocker body and nice front. Say Boy, second, is domy in skull and muzzle not deep or square enough, good front, but bad behind, hocks weak and light in loin. The bitch class was stronger, Miss Waggles improving all the time and in rare fettle; she is a nice type throughout, a bit high in brow, but a cocker all over. Woodstock Dora loses to her in muzzle and correct length of body, also in straightness of forelegs. Woodstock Daisy is bad in front, too crooked, head a bit too long, excellent body, but not quite flat enough in coat. Queen of Spades, reserve, was rather outclassed here; too long in muzzle and body and shown fat, good legs and coat.

In any other color open dogs, Chestnut, the shadow of his Brooklyn self, was out of coat and rough; he is only just over distemper; he will look much better another time probably. In bitches a sweet little Beauty won easily; a rare little light red cocker, excellent skull, muzzle just a trifle plain, but otherwise good all round; Busy, second, is probably a good field dog, as "Uncle Dick" states, but she is leggy, light of bone, stop too sharp and coat inclined to curl.

Judge and Dawn, the two Chesapenkes, were described at Pawtucket last week.

Bulldogs had one entry in each class, and both were described at Brooklyn. Rustic Sovereign was the dog; not broken up enough in face, a bit plain and not out enough at shoulder. Maggie, the bitch, has a pretty good head, good lay back and cushion, skull would do with more volume; nicely out in front, good legs, fair body and swing, long tail.

Bull-terriers had three entries in dogs, led by Aristocrat, who somewhat easily defeated Woodcote Scamp, whose thick, round skull and cheek and poor condition of coat were against him. He is quite as good on legs as the winner, tail coarse. Crib is not of the correct color. That capital little bitch, Edgewood Wonder, is good enough for any company of her weight, but here she was alone. She might be improved in muzzle. Woodcote Scamp was the only puppy.

Dachshunds were represented by Mr. Manice's pair, Zulu II., in the challenge class, and the young dog, Don Quixote II., in the open. He was described at Brooklyn.

A very moderate Basset in Rodeur was favored with first prize. His weak forelegs, lack of depth of chest and short back are bad faults. We expect something better from the Glenrose Kennels.

Beagle classes had the best entries in the show and were a good lot. The Rambler led off in challenge class, being alone. Then champion Lon, Twinkle and Twintwo came in. Twintwo is getting cloddy while Twinkle shows age but is typical, though loaded in neck and standing too wide in front. Champion Lou won fairly all round, though the cold puckered up her hindparts worse than ever. The open dogs showed five. Chimer Don and Jubilee were found to be over-size. Rockland Boy beats Forest Hunter in loin and coat, though in head and action the latter is superior; Boy was too cold to show himself, however, while Ransack, third, got scared by the judge handling him too roughly; he is a little long in head, stands back on pasterns, fair body and coat but

not enough brush; a promising young dog. It is hard enough to show a dog sometimes with every advantage, and a judge can not be too careful and quiet in the way he approaches and handles the dogs he judges; this is a fault of Mr. Mason's that he should remedy. The bitch class was a hummer with Emeline, shown very well, an honorable winner over Myrtle the Mouse, beating her in front, quarters and brush. Mouse has a capital body and gay action. Minnie Mite, third, has an excellent front, a little light in muzzle, nice ear and skull, capital body, needs more muscle behind; a very nice stamp; she might have changed places with the second. Vic R. and Gypsy both lose in type to the others. Ransack was the only pup.

Fox-terriers were a capital lot and so even that it made the gauging of merit a considerable task. There were no challenge dogs, but in open dogs the fight between Ripon Stormer and B. Punster was keen with the decision in favor of the former. He beats Punster in head—muzzle especially, and in quarters and hocks, Punster turning in slightly there. Joe Hooker, third, needs more swell of rib and body is rather long, good front, but is a little high in skull and is rather large sized. Mark Twain, reserve, should be stronger in muzzle, and Dusky Tray, a smart terrier, is too high in skull and to open feet is added a rather bowed front. The Iolanthe Kennels went one, two in the next class, May Storm and Ripon Regina being the winners; there is little between them; May is a bit plain behind and carries a large ear, while Regina is not straight enough in pasterns and ears not carried close enough. Regent Easter is pinched in muzzle and short. Beverwyck Moonray is well-known and Hillside Treasure while perhaps deserving his letters, is small, light of bone and short faced, soft coat. Beverwyck Boy was the only pup.

Wire-hairs showed up well. The winner, Jack Frick, beats Dandy Jack in head, but is beaten in body and coat. Carn Brea Prince is a little pigeon-toed and down in quarters, and rather coarse in head. Jess Frost, the winner in bitches, won at Brooklyn; she is a bit wide in skull, otherwise fairly good. Second went to Floss III., small and soft in coat, and should have a longer head. Roath Rags is not straight in front and is small.

In black and tans (2) Queen III. beats Lady Salisbury in front, which is too wide, is dark in head, too, and thumb marks not distinct enough.

The Wankie Kennels furnished the Scotch terriers, Kilroy beating Kilree as before. In bitches Cullbean should have

CH. RUBY GLENMORE.

Owned by Mr. E. B. Bishop, Coffeyville, Kan.

beaten Wankie Daisy; better and stronger in head, ears, body and legs, though losing in coat.

The Dandie Dimmuts were all from Mr. E. Brooks's kennel and are now all well known. King of the Heather in challenge dogs, but Heather Madge had gone to happier hunting grounds the day before, Heather Amphion in dogs and Ansty Daisy in bitches won alone in their classes; the latter was lame in the rear hindfoot.

Skye terriers had one entry, Nellie; small, short in body and soft in coat, weak in muzzle, nice ears, well carried.

Irish terriers had one in each class; Jackass, the dog is wide in skull, while Red Rags could be longer in head; still, she is a capital sort, stands on good legs, nice body and coat.

Nellie Bly, the challenge pug, is outclassed by some of those in the open division. In open dogs (3) Ivy Boy has a nice little head, plenty of wrinkle, very short, square muzzle and nice skull, legs not very good; he beats Otsego Duke in head; the latter is also leggy but carries a good curl. East Lake Sister was the only bitch; she is fat, small in eye, not right in skull, but has a fairly good shaped muzzle.

A sweet little toy won in the miscellaneous class.

Strange to say, not a collie put in an appearance, though five were entered for the Chestnut Hill Kennels. This is something that has never, we believe, happened before at a show in this country. The Collie Club had put up one of its medals, but even this did not fetch them. H. W. L.

LIST OF AWARDS.

MASTIFFS.—CHALLENGE—Bitches: 1st, W. Wade's Lady Coleus.—OPEN—Dogs: 1st, J. W. Miller's King Cautious.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, 2d, F. Schmitt's Otis and Roland, Jr.; 3d, Swiss Mountain Kennel's King Regent. Bitches: 1st, Swiss Mountain Kennel's Florette; 2d, F. Schmitt's Lady Bonifant; 3d, and reserve, Mr. Sion Kennel's M. Sion Lelia and M. Sion Thora. Puppies: 1st, Mt. Sion Kennel's Jesse Bedivere.

ST. BERNARDS.—SMOOTH-COATED—Dogs: 1st, Swiss Mountain Kennel's Scottish Leader. Bitches: 1st, E. H. Moore's Miss Aton.

GREYHOUNDS.—Bitches: 1st, withheld; 2d, Connecticut Valley Kennel's Lady Jane.

DEERHOUNDS.—Dogs: 1st, Iolanthe Kennel's Dunsloy. Bitches: 1st, Iolanthe Kennel's Madge Mac.

GREAT DANES.—Dogs: 1st, P. Clagstone's Standley; 2d, W. H. Sheppard's Duke. Bitches: 1st, Mr. Pogeys's Nora.

AMERICAN FOXHOUNDS.—Dogs: 1st, Connecticut Valley Kennel's Brave's Boy; 2d, C. L. Place's Punch; 3d, Willow Brook Kennel's Crook. Bitches: 1st and 2d, Connecticut Valley Kennel's Fly and Fanny; 2d, Willow Brook Kennel's Daisy Nightshade. Puppies: 1st, John Brownell's Rex.

POINTERS.—CHALLENGE—Dogs: 1st, Connecticut Valley Kennel's Laurelcol.—OPEN—Dogs: 1st, H. C. Dutton's Duke of Kent II.; 2d, W. H. Hyland's Touchstone. Com. W. W. Bainbridge's Nick C. Bitches: 1st, Willow Brook Kennel's Vestal G.; 2d, Connecticut Valley Kennel's Countess Vernon; 3d and high com., Albany Pointer Kennel's Patinza and Skylark. Very high com., Connecticut Valley Kennel's Lama T. Puppies: 1st and 2d, Connecticut Valley Kennel's The Judge and Nora M. High com., Albany Pointer Kennel's Skylark.

ENGLISH SETTERS.—Dogs: 1st, A. J. Lewis's Prince; 2d, E. C. Smith's Max Noble; 3d and high com., J. Feulner's Buck Bondhu and Choice Bondhu. Bitches: 1st, Connecticut Valley Kennel's Flossy Foreman; 2d and 3d, J. Feulner's May F. Bondhu and Daisy Buckell. Puppies: 1st and 3d, J. Feulner's Choice Bondhu and Dick Bondhu; 2d, Connecticut Valley Kennel's Nutmeg. Reserve, Philip Daly, Jr.'s, Fanchon.

IRISH SETTERS.—Dogs: 1st, Connecticut Valley Kennel's Mack D. Bitches: 1st, J. D. Van Anken's Maud.

GORDON SETTERS.—Dogs: 1st, Connecticut Valley Kennel's Jim Jackson.

NATIVE SETTERS.—Dogs: 1st, H. Lyke's Nig.

BLACK COCKER SPANIELS.—NOT OVER 25 LBS.—Dogs: 1st, Swiss Mountain Kennel's Middy; 2d, J. Donovan's Say Boy. Bitches: 1st, Swiss Mountain Kennel's Miss Waggle; 2d, Thomas & Dale's Woodstock Dora; 3d, J. Donovan's Woodstock Daisy.—ANY COLOR—NOT OVER 25 LBS.—CHALLENGE—Dogs: 1st, G. Bell's King of Otto's. Bitches:

1st, G. Bell's I Say.—OPEN—Dogs: 1st, G. Bell's Chestnut. Bitches: 1st, Swiss Mountain Kennel's Beauty; 2d, Hornell-Harmony Kennel's Busy F.

CHESAPEAKE BAY DOGS.—Dogs: 1st, Nantucket Kennel's Old Judge. Bitches: 1st, Nantucket Kennel's Dawn.

BULLDOGS.—Dogs: Iolanthe Kennel's Rustic Sovereign. Bitches: 1st, C. E. Cox's Magpie.

BULL TERRIERS.—Dogs: 1st, P. C. Pettit's Aristocrat; 2d, F. F. Dale's Woodcock Scamp. Bitches: 1st, F. F. Dale's Edgewood Wonder. Puppies: 1st, F. F. Dale's Woodcock Scamp.

DACHSHUNDS.—CHALLENGE—1st, E. A. Manice's Zulu II.—OPEN—1st, E. A. Manice's Don Quixote II.

BASSET HOUNDS.—1st, Glenrose Beagle Kennel's Rodeur.

BEAGLE HOUNDS.—CHALLENGE—Dogs: Rockland Beagle Kennel's The Rambler. Bitches: 1st, Rockland Beagle Kennel's Lou. Reserve Forest Beagle Kennel's Twinkle. OPEN—Dogs: 1st, Rockland Beagle Kennel's Rockland Boy; 2d, Forest Beagle Kennel's Forest Hunter; 3d, Debonair Beagle Kennel's Ransack. Bitches: 1st, Rockland Kennel's Emeline; 2d and 3d, Debonair Kennel's Myrtle the Mouse and Minnie Mite. Reserve, Forest Beagle Kennel's Vick R. Very high com., Glenrose Beagle Kennel's Gypsy A. Puppies: 1st, Debonair Kennel's Ransack.

FOX TERRIERS.—Dogs: 1st, Iolanthe Kennel's Ripon Stormer; 2d, C. Rathbone's Beverwyck Punster; 3d, R. Morrison's Joe Hooker. Reserve, Kennytto Kennel's Mark Twain. Very high com., Louis Cramer's Dusky Tray. Bitches: 1st and 2d, Iolanthe Kennel's May Storm and Ripon Regina; 3d, Fred H. Cramer's Regent Easter. Reserve, Iolanthe Kennel's Miss Domino. Very high com., C. Rathbone's Beverwyck Moonray. High com., Kennytto Kennel's Hillside Treasure. Puppies: 1st, C. Rathbone's Beverwyck Roy.

WIRE-HAIRED FOX TERRIERS.—Dogs: 1st, T. S. Bellin's Jack Frick; 2d and 3d, Iolanthe Kennel's Dandy Jack and Carn Brea Prince. Bitches: 1st, 2d and 3d, Iolanthe Kennel's Jess Frost, Floss III. and Roath Rags.

BLACK AND TAN TERRIERS.—Bitches: 1st, F. F. Dale's Queen III.; 2d, Iolanthe Kennel's Lady Salisbury.

SCOTCH TERRIERS.—Dogs: 1st and 2d, Henry Brooks's Kilroy and Kilree. Bitches: 1st and 2d, Henry Brooks's Wankie Daisy and Cullbean.

DANDIE DIMMUTS.—Dogs: 1st, Heather Kennel's King of the Heather. Bitches: 1st, Heather Kennel's Madge.—OPEN—Dogs: 1st, Henry Brooks's Heather Amphion. Bitches: 1st, Henry Brooks's Ansty Daisy.

SKYE TERRIERS.—Bitches: 1st, J. L. Hooley's Nellie.

IRISH TERRIERS.—Dogs: 1st, Iolanthe Kennel's Jackanapes. Bitches: 1st, Iolanthe Kennel's Red Rags.

PUGS.—CHALLENGE—R. T. Harrison's Nellie Bly.—OPEN—Dogs: 1st, J. Bowden's Ivy Boy; 2d, Mrs. J. Feulner's Otsego Duke. Bitches: 1st, J. Bowden's East Lake Sister.

MISCELLANEOUS.—Bitches: 1st, R. T. Harrison's Gypsy. Puppies: withheld.

SPECIALS.

MASTIFFS.—Best dog, J. W. Miller's King Cautious. Best bitch, W. Wade's Lady Coleus. Best in show (2), W. Wade's Lady Coleus. Best owned by member of M. V. P. & K. Club, J. W. Miller's King Cautious.

ST. BERNARDS (ROUGH).—Best dog and best in show, Fred Schmitt's Otis. Best pair, Fred Schmitt's Otis and Roland, Jr. (Smooths). Best dog and best in show, Swiss Mountain Kennel's Scottish Leader. Best bitch, M. Conolly's Debonair Hope.

GREYHOUNDS.—Best bitch and National Greyhound Club's medal, Connecticut Valley Kennel's Lady Jane.

DEERHOUNDS.—Best dog (2), Iolanthe Kennel's Dunsloy. Best bitch and National Greyhound Club's medal for best in show, Iolanthe Kennel's Madge Mac.

GREAT DANES.—Best dog, Paul Clagstone's Standley. Best bitch, Mr. Pogeys's Nora.

AMERICAN FOXHOUNDS.—Best dog and best in show, Connecticut Valley Kennel's Brave's Boy. Best bitch (2), Connecticut Valley Kennel's Fly. Best couple, same owner's Brave's Boy and Fly.

FORESTERS.—Best kennel, Connecticut Valley Kennel's. Best dog (2) and best in show, Connecticut Valley Kennel's Laurelcol. Best bitch (3) and best owned by member of club, Willow Brook Kennel's Vestal C.

ENGLISH SETTERS.—Best Kennel (2), John Feulner's. Best dog and best blue belton in show, Andrew J. Lewis's Prince L. Best bitch, Connecticut Valley Kennel's Flossy Foreman.

IRISH SETTERS.—Best dog, Connecticut Valley Kennel's Mack D. Best bitch and best owned by member of the club, J. D. Van Anken's Maud.

GORDON SETTERS.—Best dog, Connecticut Valley Kennel's Jim Jackson.

NATIVE SETTERS.—Best dog and best in show, Henry Syke's Nig.

SPANIELS.—Best kennel, George Bell's. Best dog and best in show, Swiss Mountain Kennel's Middy. Best bitch, Swiss Mountain Kennel's Miss Waggle. American Spaniel Club's special for best brace, Swiss Mountain Kennel's Middy and Miss Waggle.

CHESAPEAKE BAY DOGS.—Best dog and best in show, Nantucket Kennel's Old Judge. Best bitch, Nantucket Kennel's Dawn.

BULLDOGS.—Best dog, Iolanthe Kennel's Rustic Sovereign. Best bitch and best bulldog in show, Iolanthe Kennel's Magpie.

BULL TERRIERS.—Best dog (2), Paris C. Pettit's Aristocrat. Best bitch and best bull-terrier in the show (2), Frank F. Dale's Edgewood Wonder.

DACHSHUNDS.—Best dog and best in show, E. A. Manice's Zulu II.

BASSETS.—Best dog, Glenrose Beagle Kennel's Rodeur.

BEAGLES.—Best kennel (2), Rockland Kennel's. Best dog, Rockland Kennel's Rockland Boy. Best bitch (2), Rockland Kennel's Lou. Best dog pup, Debonair Beagle Kennel's Ransack.

FOX TERRIERS.—Best kennel (2), Iolanthe Kennel's. Best dog and best in show (2), Iolanthe Kennel's Ripon Stormer. Best bitch (2), Iolanthe Kennel's May Storm. Best bitch owned in Fulton county, Fred H. Cramer's Regent Easter. Wire Hairs.—Best Kennel, Iolanthe Kennel's. Best dog, T. S. Bellin's Jack Frick. Best bitch and best show, Iolanthe Kennel's Jess Frost.

BLACK AND TAN TERRIERS.—Best bitch and best in show, Frank F. Dale's Queen III.

SCOTCH TERRIERS.—Best kennel (2), Henry Brooks. Best dog (2), Henry Brooks's Kilroy. Best bitch, Henry Brooks's Wankie Daisy.

DANDIE DIMMUTS.—Best dog, E. Brooks's Wankie Daisy. Best bitch, E. Brooks's Ansty Daisy. Best brace of dogs, E. Brooks's King of the Heather and Heather Amphion.

SKYE TERRIERS.—Best bitch, J. L. Hooley's Nellie.

IRISH TERRIERS.—Best dog and best in show, Iolanthe Kennel's Jackanapes. Best bitch, Iolanthe Kennel's Red Rags.

PUGS.—Best dog, Jos. Bowden's Joy Boy. Best bitch, Jos. Bowden's East Lake Sister.

MISCELLANEOUS.—Best bitch and best in class, R. T. Harrison's Gypsy.

Best kennel of four, any breed, Iolanthe Kennel's smooth fox-terriers. Reserve, Henry Brooks's Scotch terriers. Best dog, any breed (2), Swiss Mountain Kennel's Scottish Leader. Best bitch, any breed (2), W. Wade's Lady Coleus. Best dog or bitch shown by member of club, J. W. Miller's King Cautious. Exhibitor showing largest number dogs (2), Connecticut Valley Kennel's. Best setter, any breed, Connecticut Valley Kennel's Mack D. Homeliest dog in the show, Geo. S. Robbins's Jack the Ripper (mongrel bull-terrier). Largest number of entries by member of the club, Debonair Beagle Kennel's. Best kennel, any breed, owned by any member of the club, Debonair Beagle Kennel's.

Bexar Field Trials.

The Bexar Field Trials will be held near Floresville, Wilson county, Texas, this week. It is expected that thirty-five members, with some forty or fifty dogs, will be present.

A few corrections are necessary in our Pawtucket report; the more or less confusion during the judging is the cause of the mistakes having been made, there being no catalogues or anything but the secretary's book to go by at that time. In cocker dogs Cherry Punch won first, and in bull-terriers Aristocrat beat Count II., carrying out our criticism. Count Noble won the special for best Gordon setter, and we certainly understood that Inchiquin was at the show.

NOTICE.

Greyhound and Foxhound Fanciers.

F. G. Stewart is no longer in my employ as superintendent and kennelman.

Hereafter, please address all communications relative to the dogs bred by me to Whit Oak Kennels, Poland, Maine, or to me, 241 Park Place, Brooklyn, N. Y.

I should be pleased to hear from all parties that have been in correspondence with this man Stewart, with reference to any of the dogs in these kennels. N. Q. Pore.

—Adv.

DOG CHAT.

The W. C. K. C. Show.

The building heretofore used by the Washington City Gun Club is not in a very good location, and there is more or less objection to it on this score. It is more than probable that a new hall will be secured for their next show. This is a hall over the market, situated in a central location. It has a floor about 260ft. long and 200 wide, without a pillar, and is admirably adapted for a show. The club, if they secure this building, expect a much larger entry, especially as they intend to materially increase the prize list. Mr. F. S. Webster, the secretary of the W. C. K. C., has quite a large taxidermy establishment in New York. A stroll through the various rooms is most interesting to a lover of natural history. In our stroll through the rooms we came upon a moose that had just been parted from the flesh. In life this animal stood 16½ hands high, and his head and antlers are particularly fine. Bear stories can always be stretched when in the skin, as it were, but here we saw the biggest grizzly skull that probably nine out of ten men ever saw. From muzzle to stern it measures 9ft. 8in., and across the shoulders and forelegs 11ft., and when on all fours the grizzly would have touched the bar at 4ft. 9in. The bear was killed near Port Townsend, Washington, some three years ago, and will now adorn the floor of Austin Corbin's residence. Mr. Webster has also an interesting collection of horses' hoofs that have suffered from bad shoeing. It is the intention of the government to make a display of them at the World's Fair, with the intention of showing the evils of ignorant shoeing and the remedy.

New Jersey Kennel League.

Mr. R. R. Moore, owner of Kent's Rex and other dogs, has been elected secretary in place of Mr. Christopher, who resigned. There is a movement in the club to hold a show in connection with the proposed horse show in Newark; this should go well if properly handled. It is the wish of the club to give sheepdog trials and whippet racing at the World's Fair show in June, and while in Chicago this week Mr. W. O. Ruehler, one of the executive committee, will call

MR. H. DUTTON'S DUKE OF KENT II.

Divided third, N. E. Field Trials, All-Age Stake, 1892. First, Pawtucket, 1892, and Gloversville, 1893.

On Mr. Buchanan with a view to arranging the preliminaries for such trials. If Mr. Bowden carries out his intention of bringing his working teams over, these events should prove very interesting and do a great deal of good to the collie interests among the bucolic element that is sure to patronize the Fair. It is also the intention of this club to charter a special car from Jersey City to Chicago in charge of a competent man, for the benefit of the dogs owned by members exhibiting at the World's Fair. The club has numerous irons in the fire and we trust that some of them may become heated. New Jersey is falling back in kennel affairs, and there is a fillip needed.

N. E. Field Trials Club.

The annual meeting of the New England Field Trials Club was held at the Hotel Thorndyke, in Boston, on Jan. 3. The following officers were elected: President, J. W. Hayward, Taunton, Mass.; Vice-Presidents, D. A. Goodwin, Jr., Newburyport, Mass.; E. O. Damon, Northampton, Mass.; Edward Brooks, Milton, Mass.; A. M. Tucker, Charlestown, Mass.; Secretary, W. M. Lovering, Taunton, Mass. Treasurer, W. C. Davenport, Taunton, Mass. Board of Governors: W. A. Power, Boston, Mass.; F. W. Whitlock, Great Barrington, Mass.; G. W. Lovell, Middleboro, Mass.; E. K. Sperry, New Haven, Conn.; A. N. Sharp, Taunton, Mass.; J. L. Wells, Attleboro, Mass.; W. C. Baylies, Taunton, Mass. Resolutions were adopted expressing to the retiring president, Dr. W. A. Power, the appreciation of the club for his efforts and help in making it a successful institution. A subscription was taken up and a committee appointed to present to Dr. Power a testimonial. The following new members were elected: Hobart Ames, North Easton, Mass.; Oliver Ames 2d, North Easton, Mass.; Hollis White, Braintree, Mass.; A. Cleveland Bent, Taunton, Mass. There are at present on grounds leased by the club a number of coverts of quail, which are being regularly fed. Also a large number of quail have been contracted for, which are to be delivered in time to be let out in the early spring. Altogether the outlook is extremely good for an ample supply of birds on which to run the trials next fall.

Gloversville Show.

The operator, not the printer this time, was rather at sea with the names of the dogmen at this show, given in a dispatch last week, so we will give them again: Messrs. H. L. Kreuder, R. T. Harrison, C. H. Mason, German Hopkins, J. Otis Fellows, Ed. and George Rosa, F. W. E. Clarke, Clarence Rathbone, James W. Green, George Bell, R. W. Fenton, W. Tallman, E. B. Elliott, Fred Schmitt, F. S. Bellin, Mrs. Smythe, Mrs. Meecham and Mrs. Nickolson, Mr. Bender and Mr. C. A. Whitney. It is probable that the next show of the Mohawk Valley Club will be held at Utica. It will seem like old times to have a show at this city again.

Several fanciers in Montreal are trying to organize a kennel club in that city with the intention of holding a show in September next. There are lots of dogmen in Montreal, and a properly conducted show would be well patronized, no doubt.

We are indebted to Mr. W. F. Lamonby for several numbers of the monthly supplement of the Greyhound Stud Book, of which he is the keeper. As a reference for coursing

men on both sides of the water it is most useful. In them we find addresses of well-known greyhound men, the members of the National Coursing Club and the entries for the last three months of 1892, together with the winners, dividers and runners up for all stakes run during the last four months. In the October number is given a table of the winners of the Waterloo Cup, Plate and Purse since 1857. Names and addresses of judges, slippers and trainers are also given.

We should like nothing better than to join the jovial spirits who will surround the table in the Aldine's cosy library this evening (Tuesday) after a meeting of the Philadelphia Kennel Club. The *Item* bowl will be filled and honors done to Mr. S. Murray Mitchell's Nannon, the winner of the P. K. C. Members' Stake. Though the stake was run off in seclusion there is no mistaking the open-hearted, cordial welcome to test the result.

Detroit is to have two shows this year. A small show in connection with the Michigan Poultry Breeders' Association was opened on Tuesday last. The show is held in the Auditorium, and Mr. Tom Blake, of whippet and terrier renown, will superintend. Mr. John Davidson will adjudicate upon all classes. This show has no connection with the regular one to be given by the newly formed kennel club in Detroit, which is to hold its show in March.

Mr. Geo. E. Gray, the Irish setter field trial handler, writes us that he will make Blacklands, Miss., his headquarters this winter, where he will handle dogs for next year's trials.

A dog show will be held at Indianapolis this week from Jan. 12 to 18 in connection with the Indiana Poultry Association. Mr. F. C. Wheeler, of Cincinnati, will judge all classes and Mr. J. R. Dougherty is the superintendent.

The Columbia Poultry and Pet Stock Club, of Columbia, S. C., will hold their first annual exhibition of poultry, dogs, etc., Jan 18 to 20. The exhibition will be largely local, but will be patronized by owners of the best stock in the State and will comprise some hundreds of entries, and by present indications will be a success. Mr. Loring Brown, of Bolingbroke, Ga., who has a large kennel of beagles and Scotch terriers, will judge. There are a number of fanciers down there, among them Mr. W. Lykes, whose fancy turns to pointers. Mr. John M. Daniels is the president and from him further information can be obtained.

Lady Gladwyn had six pups, three dogs and three bitches, and Bonnie Kingston four, two of each sex.

The advertisement of Ormonde, the Irish setter, now appearing in *Shooting and Fishing*, is strictly misleading. It reads: "Ormonde, a son of the great Sarsfield out of Red Bess. Same litter as champion Kildare, challenge Beau Brummell and challenge Seminole, Ormonde is thoroughly, etc., etc." Ormonde is not of the same litter as Kildare and the others; they are by Elcho Jr. out of Red Rose. Later we find that Mr. Washington has sold Ormonde to a Mr. Mayrick, Portland, Ore., who will probably run him in the Pacific Coast field trials. Comment is unnecessary.

Some time since we noted that Mr. Coleridge C. Vickery intended going in for Newfoundlanders. He was unable to give the attention to the subject he intended to while in England but advised us that Mr. J. W. G. Houghton, of St. Johns, N. B., had a kennel which he intended to bring to the front. We trust he will, and that Mr. Vickery may still follow out his intentions, for this noble breed is sadly neglected and should receive attention at the hands of some budding fancier if not an old one.

A dispatch says that everybody is sleighing at Sault Ste. Marie, Mich., where there are more than 250 dog teams, to say nothing of the horses, but there are more dogs than horses. They drive them tandem and double; the dogs are of all kinds and colors and no attention seems to be paid to blood. The more mongrel a dog is the better he is liked for a sled team. They use the teams for delivering milk, for lighting street lamps and for every other purpose.

Jas. L. Keath, of Indianapolis, Ind., lost his St. Bernard Hospice by death last week.

We regret to hear that Mr. F. S. Bellin's promising young wire-hair Carlisle Glory succumbed to pneumonia last Wednesday, at Mr. Hopkins's kennels at Hempstead, L. I.

We have it on good authority that Mr. J. P. Willey will not judge spaniels at the New York show. In view of the fact that Mr. Willey, by his own desire, is not on the list of Spaniel Club judges, the choice is rather peculiar. A meeting of the executive committee of the Spaniel Club is to be held Friday evening at 6:30 at the Bartholdi Hotel, New York, to overcome this difficulty, the idea being that Mr. Willey would judge.

The poison fiend is abroad at Flatbush, L. I. Smoked pork covered with arsenic seems to be the medicine. Several valuable dogs have fallen victims, and it is supposed to be the work of some crazy person with a grievance.

Yet another black and tan terrier club has been formed, this time at Manchester, England, that is popularly known as the headquarters of the breed.

The South London Bulldog Society is trying to arrange a match between the bulldogs Dockleaf, Bedebury Lion and His Lordship, the three best bulldogs in England. The society will put up a \$25 cup for the winner, the owners to choose two judges and the society a referee. The match between Dockleaf and His Lordship will now take place, as Mr. Smith has posted \$50 with the *Stock-Keeper*, and for this these cracks will compete.

We have received the catalogue of the Oak Grove Kennels. It is only natural with such a fine array of Irish setters as the Moodus Kennel can show that the catalogue should be one in keeping with the quality of the kennel. Excellent half-tones are given of champion Kildare, Seminole, Duke Elcho, Kildare Glenmore, Alice Kent, Edna II, Norina and the views of the farm and kennels.

Our readers will find some excellent stock offered in our business columns this week. Among the new offers for sale are some well-known and well-bred trained and show pointers from the kennels of J. H. Winslow; Edgewood Kennels, gilt-edged English setters; Wm. Firth, St. Bernard and collie pups; Herbert M. Howes, his entire kennel of bull-terriers, which comprise some well-known prize winners; Meadow City Kennels, their well-known English setter Rod's Whim; Jas. M. Shaffer, five foxhounds; Fieles & Bro., trained rabbit dogs, pointers and foxhounds; Manatung Kennels, greyhound, and Henmore King at stud; Jas. Wrinkle, pointer dog; Maumee Kennels, the pointer bitch Barmad, some pups and another well-bred bitch; Scottswood Kennels, noted English setter Pembroke's Blue Grouse; Maumee Kennels, well-bred pointer pups; John T. Hyland, pointer bitch, Exchange; A. A. Mentzer, greyhound pup; J. G. F., two English setters. Wants: Geo. Young, thoroughly broken English setter. We also draw attention to Geo. Thomas's notice about handling dogs for shows.

Mr. Mercer's Russian wolfhound Orloff died last Saturday from inflammation of the lungs and bowels.

Mr. Brough, the bloodhound exhibitor, has made an enviable record this past year. Exhibiting eight times and making twenty-nine entries, he has won twenty-seven firsts, two seconds and ten specials.

Death of Heather Madge.

There are not many good Dandie Dinmonts in this country and this makes the sudden death of this well-known prize winner all the more deplorable. The first day of the Gloversville show Mr. E. Brooks's attendant was exercising his dogs in the street when a sleigh ran over Heather Madge, killing her instantly, the runner passing over her back. Mr. Brooks has our sympathy in his loss, particularly as this breaks up his team to some extent. Madge was imported by Mr. Brooks and was brought over by Mr. F. F. Dole, together with King o' the Heather in 1891.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

J. F. C. T., Crowners Hill, N. J.—I am an amateur sportsman, and am unable from lack of knowledge of such subjects hereinafter mentioned to decide for myself. 1. Should have mentioned also that there is selfish spirit predominant in my locality; old sports do not care to enlighten, and would rather send an amateur off on the wrong scent than have another added to their list. 2. The subjects I wish information on are as follows: What breed of hounds are generally speaking, the best for rabbit hunting? 3. What breed of dogs are the best for general bird gunning—rail, reed, black, quail, pheasants? 4. Do you advise teaching them to retrieve or simply stand? I can understand that when a dog "stands" pheasants or quail after being shot that they can be picked up without much trouble, but when you shoot reed, etc., it seems to me they ought to retrieve. I am told that a retrieving dog will, in time, either swallow or get "hard mouthed," and "mash" or crush them. 4. Can a dog be taught to hunt for the two classes of birds, or is it necessary to have a dog for each class? Ans.

"MAKE DAISY GET OUT OF MY CHAIR."

Amateur photograph by F. E. Hege, Salem, N. C.

1. Beagles. 2. Pointers and setters, although blackbirds and reed birds are not considered game birds or birds which a dog will hunt. 3. A dog should be taught both to stand and retrieve well. A retriever is indispensable to successful sport or profit, therefore, where one owns but one or two dogs, retrieving should be enforced. A properly trained retriever will neither swallow the birds nor mutilate them in his working life, if his handler is not so unskillful as to spoil him. 4. A dog will hunt all kinds of game birds if given an opportunity to learn their value. If worked continually on one kind of birds a dog may acquire such a fondness for that kind that he will refuse to work on other birds, or will work on them in an inferior manner.

CONSTANT READER, Chicago, Ill.—Please advise ailment and treatment of my English pointer bitch, sixteen months old. About three months since noticed her vagina was swollen to twice or three times its natural size, which I treated with an injection, which seemed to decrease the size; but now I notice it is increasing, also swelling extending upward toward her rectum. Vagina has assumed the form of—as near as can express it—a pear. Her general health seems good and she suffers no inconvenience from this enlargement. Ans. Very probably a prolapse of the vagina in which case an operation will be necessary. Consult a veterinarian.

C. R., New York City.—1. The weight of evidence is so far against the idea that a mesalliance will affect a future litter if bred true afterward. 2. As soon as she comes in season, about three months from the time of whelping. 3. It is always advisable to leave a pup or two with the mother to draw the milk and prevent fever. You can facilitate matters by drawing off the milk, to some extent.

C. L. S.—Yes, most of the leading kennels furnish catalogues describing their dogs.

A Handsome Paper.

WASHINGTON, D. C.—The new dress of the paper is capital. It speaks its own merits as loudly as the suggested but discarded headings do the childlike and guileless modesty of their designers. C. C.

LANCASTER, N. H.—Allow me to congratulate you upon the improved appearance of our paper as it comes to us this week. You seem to have reached the *ne plus ultra* of a sportsman's journal. I have been a subscriber for sixteen years, and have nearly a complete file from that time up. To-day I was comparing the current issue with a copy of fifteen years ago, and I was forcibly struck with the vast amount of work necessary to successfully bring the journal up to its present position. Long may the FOREST AND STREAM live and prosper and bring each week its glad tidings to all sportsmen. Rob.

CLAREMONT, South Dak.—While you promise us something better the coming year we all received our money's worth the year just past, and I never regret the money sent for your much-enjoyed paper; not only enjoyed by myself, but several others who have the privilege of looking it over. E. B. B.

130 Miles in 121 Minutes.

THE New York Central keeps actively employed snatching time records. Last week the Empire State Express left Peekskill late, and, pursuant to instructions to make up lost time, the engineer speeded the train from Peekskill to Albany, 101 miles, in 96 minutes, an average running time of over 63 miles an hour. The stretch from Hudson to Albany, 28.43 miles, was covered in 25 minutes, an average for the distance of over 68 miles an hour. The recent wonderful performances of the Empire State Express and other fast trains of the New York Central have commanded attention and applause from all parts of the globe. It is interesting to note, from published comments on this subject, how much stress is laid upon the advantages enjoyed by the New York Central, by reason of its four tracks, level and straight roadbed, and to these are attributed the results accomplished, quite as much as to the powerful motive power employed.—*Adv.*

IF YOU HAVE a friend, good and true, whom you would like to remind of his friend, fifty-two times in the year—once every week—why not ask us to see that a FOREST AND STREAM wrapper has his name on it, with your initials in the corner of the address label?

Yachting.

A VERY good example of the utter absurdity of the soaped windows and locked doors affected at times by designers is found in the case of the Coggeshall steam yacht built last winter at City Island. The builders were bound to secrecy, the one door of the shop was kept locked at all times and every possible precaution was taken to conceal the particulars of this latest wonder from prying eyes. Now, any one who wishes to study the very latest developments of naval architecture may do so at the small expense of a trip to City Island, where the yacht, which has never been launched, lies on the beach, only partially covered by light canvas. There seems to be a sort of reflex action about this excessive secrecy which acts as a veritable hoodoo against the yacht's future success, as in such noticeable instances as Thistle, McFluffy's canoe and the craft here mentioned.

From the reports in the various daily papers, the coldest blizzards of Manitoba fail to cool the blood of the ardent ice yachtsman, who, in default of sailing, keeps up the excitement by a spirited controversy over challenges. We really have not the most remote idea of the merits of the quarrel between the Orange Lake and the Shrewsbury men, but assuming that it is simply a misunderstanding between good sportsmen, as such disputes usually are, it seems a great pity that all details of challenges and dates could not be finally settled in warmer weather, so that the very few days on which ice yachting is possible might be utilized in sailing races rather than in writing letters and talking to reporters.

Among the stray rumors from the other side is one of a new cutter of large size for A. D. Clarke, a British yachtsman, owner of the 60-rater *Reverie*, designed by J. M. Soper and built by Fay & Co. The other report is that if sufficient inducement should be offered in the way of prizes the crack 40-footer *Queen Mab* will visit Chicago. Such a visit would be very acceptable to American yachtsmen, who have heard so much of the Watson centerboarder, but there is not a yacht on the coast, much less on the Lakes, that could make a good race with her. *Wasp*, 13ft. shorter on waterline and 3ft. narrower, would hardly be a satisfactory competitor, and the only modern yacht anywhere near 50ft. is *Katrina*, of 70ft. The news also comes of a 50-rater cutter of the larger class for Mr. John Clark and others of a Scotch syndicate. The new yacht will serve as a trial boat for *Valkyrie* and also as an opponent of the *Carroll* boat.

ALL speculation as to the skippers of the new yachts is set at rest by the news that Mr. Carroll has engaged Capt. Charles Barr for his yacht, *Capt. Barr* will sail the *Rogers* craft, while Gen. Paine has engaged Capt. John Barr for *Volunteer*.

WHILE Boston wants the America Cup displayed on exhibition in Faneuil Hall, Chicago professes the suggestion that the coming international races should be sailed on Lake Michigan instead of outside New York Harbor.

Seawanhaka Corinthian Y. C.

THE annual meeting of the Seawanhaka Corinthian Y. C. was held at the city club house on Jan. 10, with Vice-Com. Stanton in the chair. The reports of the Board of Trustees, the officers and the various committees, were very complete and satisfactory, showing the successful result of the first year of the Oyster Bay scheme. The treasurer's report showed a material balance of receipts over expenses, although the latter included many items of unusual expense incurred in the experimental work at Oyster Bay, and also a cash balance on hand. Several plans were suggested by the committees for improving the various departments. A letter was read offering on behalf of Mrs. Alfred Roosevelt the sum of \$1,000 to be invested for the purchase of an annual cup, to be known as the Alfred Roosevelt Memorial Prize. Messrs. Rouse and Wetmore renewed their offer of prizes similar to those of last year.

The following officers were elected: Com., Francis H. Weeks, schr. Montauk; Vice-Com., E. C. Benedict, str. Onedra; Rear-Com., Herman Clark; Secretary, J. Frederic Tams and Henry Stanton; Sec'y, Leon F. d'Oremieux; Treas., Walter C. Hubbard; Meas., John Hyslop; Fleet Surgeon, J. West Roosevelt, M. D.; Fleet Chaplain, George K. Vandewater, D. D.; Race Committee, Irving Cox, Robert W. Gibson, Walter C. Kerr, Wm. Emlen Roosevelt and Robert C. Townsend; House Committee, George Bullock, Sidney Chubb, Auguste B. Montant, Francis T. Underhill and Frederic D. Weekes; Committee on Lectures and Entertainments, President H. Butler, Lieut.-Commander Leonard Cheney, U. S. N., and Charles A. Post; Committee on Lines and Models, John Hyslop, A. Cary Smith and William P. Stephens; Library Committee, James T. Horn, Henry Marquand and Edward M. Townsend, Jr.; Committee on Exhibits, Wilnot T. Cox, Wm. Gardner and W. Kintz Post; Law Committee, Sidney Chubb, Alfred Ely and Arthur D. Weekes.

An Old-Time American Yacht.

IT is a relief to turn from the everlasting discussion on the rating rule to the more genial aspect of the cruising and social attributes of yacht clubs. The possibilities of small clubs in the way of cruising have been strikingly exemplified by the ubiquitous *Minima* Club, and the London Sailing Club has now resolved to establish a branch house at Burnham-on-Crouch, where we are sure its members will be quite able to fancy themselves "out of the world." We just spoke of a "branch house," but the "house" has only been decided upon after failing to obtain the American yacht *Gypsy*, which for some years has done service as the "club house" of the Erith Y. C. This yacht is, we believe, 94ft. on the waterline and 22ft. beam, measuring about 300 tons. She was built at New York in 1853, and created some little excitement on the Solent when she arrived at Cowes in 1893. Her owner, Mr. Morse, desired to try her speed against some of our crack schooners, which happened at that time to be *Alarm*, 238 tons; *Aline*, 216 tons; *Albion*, 150 tons, and *Galatea*, 140 tons. The conditions of our matches were not, however, quite agreeable to the owner of the *Gypsy*, especially as his handsome schooner was in cruising trim. Still, he gave way to his sporting proclivities so far as to have a friendly match with the crack of the day, the "old *Alarm*" from Ryde round the Nab and back, the *Alarm* winning by 7m. only. After this the *Gypsy* accompanied the R. V. Y. C. fleet in a match to Cherbourg, and would have made a good finish had she not carried away some of her headgear when sailing a close second to the *Galatea*, which led the fleet across Channel. After this the *Gypsy* became "naturalized," and, as before said, she is now usefully employed as the floating home of the Erith Club. We dare say many of the members will regret, when they think over her days on the Solent, that they cannot still accompany Channel matches in her.—*Field.*

The Meteor Shield.

THE "Meteor Challenge Shield," presented to the Royal Yacht Squadron by His Imperial Majesty the German Emperor, is of embossed silver ornamented with thalers of different periods, some of which are rare coins. The year 1888 is represented by three twenty mark pieces bearing the heads of the Emperors William the First, Frederick the Second and William the Second. The Imperial Arms are displayed in the center; the shield rests on a velvet mount with the imperial crown above, and the emperor's presentation inscription below the shield.

The condition under which the shield may be won will be made known in the course by the Royal Yacht Squadron.

The race will be open to all yachts of any rig, rating not less than 100, belonging to any European yacht club; no handicapping, time allowance according to Yacht Racing Association rules; to be sailed in cruising trim in or across the Channel, distance 80 to 100 miles; no race unless six yachts start.

The conditions will be that the shield goes to the winning yacht, which has to defend it the following year; if won three times by the same yacht it remains in the possession of the owner.

Measurement Rules.

Although all of the large American clubs have standing committees on the subject of measurement changes, there has been little action or discussion within the past year, and there is no indication of a resumption of active measures for any change of rule during the present year. While it may seem at the first glance that there is cause for congratulation over the cessation of the heated discussions and vehement arguments of three years since; a little closer investigation will show that this state of affairs arises not from the perfection of the present conditions, but merely from the fact that so long as there is no racing it matters little what the rules may be, and just now class racing is all but extinct.

For two seasons there has been no 70ft., no 40ft., and no 35 or 30ft. racing about New York or Boston, the limited amount of racing being confined to the 90ft. schooner class, the 40, 21ft., and the 25ft. corrected length class. Of these four, the schooner class is protected from extreme outbuilding by several conditions depending on its size, and there is no danger of the introduction of any greater extreme than the large sail plans to which American yachtsmen are well accustomed. In the 40ft. class the competition has been limited to two or three yachts, but one of them built this past season. The 21ft. and 25ft. classes are composed entirely of racing boats, so that the questions of seaworthiness and accommodation are hardly involved.

Until there is a general revival in the classes from 70ft. down to 30, with the building and racing of at least six to ten boats in a class, there is no special necessity for a resumption of the measurement discussion, and none is likely to occur. At the same time however the subject is one of pressing importance to all yachtsmen, and with the rapid drawing together of models and rules on both sides of the Atlantic, there is much in the recent discussions that have taken place in France and Great Britain that is of immediate interest to Americans.

The main point of the discussion on this side, the merits of the two systems of classification, by waterline length or by sailing length, or to state the question more accurately, by the employment of two distinct units for the bases of measurement and classification, or of one common unit for the two, has not appeared on the other side, the desirability for a common basis for measurement and classification being universally conceded there. An important proposition has, however, been made, to adopt the formula of the Seawanhaka rule in place of the Y. R. A., as being easier on sail. Even as they stand, the two rules have much in common, while the alleged evils of very small displacement and excessive length, complained of abroad, are felt in part here and would become more apparent should the fin-keel type become prevalent in the larger classes.

The editor of the Field has long been recognized as an authority on the history of racing rules, as well as an able exponent of the mathematical side of the subject, and we reprint from the later numbers the following extracts. In commenting on the rule proposed by Mr. Herreshoff Mr. Kemp says:

"In 1883 we proposed a very similar rule, modified as follows:

$$L \times \left(\frac{3}{100 \text{ Reg. Tons}} \right)$$

"We at the time pointed out the practical objections to using registered tonnage, as it varied, according as to whether the vessel was iron or wood built, and also upon her floor construction, and above all, upon the careless way the Board of Trade measurers arrive at registered tonnage. All these objections could be overcome by taking the outside measurements (as the New York Yacht Club did in 1871 onwards), and by employing special measurers.

"The next point is, what sort of a vessel would it tend to produce? In 1883 we pointed out, in comparing the beamy, shallow under-water bodied sloop Gracie with the deep-bodied cutter Tara, that the rule might tend to produce a shallow-bodied, beamy vessel with a big top body, due to beam and freeboard. The Gracie is of 51 registered tons and Tara 40, and consequently, if the length and sail area be equal, the Gracie will be the smaller vessel. This feature is again shown in the table which follows in the case of Creole and Queen Mab. These boats are of equal length and sail area, but Queen Mab, owing to her greater beam, and perhaps greater height of freeboard, would measure smaller than Creole. Queen Mab may be a shallower under-water bodied vessel than the Creole or Tara, but her actual bulk of body (immersed and unimmersed) is larger than either. Of course the inference is that, with a Sail rule boats of the Queen Mab type would be found to beat boats of the Tara or Creole type.

"So long as there is a tax on sail the inducement will be to cut down displacement, because displacement is taxed through the sail; but this in a rule like Mr. Herreshoff's proposed, or like we proposed in 1883, is an inducement to make the bulk of body large, because it is employed in reducing the rating; but it is plain that if sail is taxed, and indeed if it is not taxed, as little of this bulk will be put under water as possible, and the Queen Mab type must prevail.

"The question here arises, is the Queen Mab or the Tara type the best to encourage? Years ago the Americans used to argue that their yachts were the best, easiest, and driest sea boats, because they were made to sail over the water and not under it. We, on the other hand, believe that our deep-bodied, heavily ballasted vessels were the best sea boats, because they could be driven through any kind of sea. In short, looking at the prevailing weather here, we regarded the Tara and Creole as the result of natural selection, and not as the product of the sailing rule of the period. This is the question which Mr. W. G. Jameson answered in his speech at the Y. R. A. meeting last week. The Tara is 60ft. long, with a sail spread of 5,282sq. ft., and a displacement of 75 tons; the Queen Mab is 59ft. on the waterline, with a sail spread of 4,053sq. ft., and a displacement of probably less than 60 tons. Which is likely to be the better sea boat? Mr. Jameson declared in favor of Queen Mab in unmistakable terms.

"We should like to point out that the Council of the Y. R. A. indicated, by some of the questions they put to the yacht designers, that they doubted if, for any given length, making a boat (say, a 5-rater or a 40-rater, like Dacia or Queen Mab) shorter, and of greater displacement, and giving her a larger sail spread and heavier spars, would improve her seaworthiness. There is really a very great deal to ponder over in this.

	Length-Beam	Reg. Tons	Sail Area	Y. R. A. Rating	Sail	Y. R. A. Rating	Herreshoff Rating	Corrected Length
	L.W.L.							
Meteor...	85.2	30.3	101	8157	116	107	111	
Ivema....	83.5	19.0	85	8458	118	115	117	
Tara.....	66.0	11.5	40	5282	58	73	93	
Yarana...	65.4	15.0	46	3312	58	70	89	
Creole....	59.2	13.3	35	4918	49	59	83	
Queen Mab	59.2	11.0	16	4053	40	50	72	
Dragon...	45.7	11.0	16	2624	20	34	62	

At the time when the Council of the Y. R. A. were considering their report on the rating rule, the New York Yacht Club conference was engaged in considering the desirability of continuing the Seawanhaka rule. No decision has yet been arrived at by the conference, but we understand that it will present a report to the different clubs represented at the conference early in January. The general view taken of the rule is pretty much the same as that held here, that it must inevitably tend to produce a boat of small displacement compared with the circumscripting parallelipipedon, but that hitherto no harm has been done. On the whole, we think it is a matter for congratulation that the Council saved us from the awkward consequences of adopting a rule which in all probability will be abandoned in America before the end of the next season.

In 1881 the Y. R. A. adopted the 1730 rule in place of the old 94 rule, because the former was "easier on beam;" that is to say, when the beam was equal to about one-fifth the length, both rules operated alike; but if a yacht were narrower than one-fifth, less beam could be taken for any given rating than the old 94 rule allowed; on the other hand, when the beam exceeded one-fifth the length, the 1730 rule allowed greater beam. The following table gives the relative proportions for a 40-tonner:

No. of beams to length.	$\frac{B}{(L-B) \times B \times 2}$		$\frac{(L+B)^2 \times B}{1730}$	
	L	B	L	B
3	46.70	15.55	48.80	16.30
4	54.40	13.60	50.10	14.00
5	61.95	12.33	62.10	12.44
6	68.40	11.40	67.40	11.25
7	75.60	10.80	72.00	10.80

It was supposed, for instance, that under this revised tonnage rule a yacht four beams to length would have a chance of winning, and that the slight extra penalty put on beam after passing the five-beam stage would put a check on the building of very narrow yachts. But, as a matter of fact, the new rule forced the building of narrower yachts. Length was necessary at any price, and no matter how beam had to be sacrificed, increased length was absolutely essential to arrive at the top of the class. The only practical effect of adopting the 1730 rule was, therefore, to hasten the development of the very narrow yachts.

At the present time we have a similar feature in the Y. R. A. rating rule and the Seawanhaka "corrected length" rule. These two rules operate exactly the same when the square root of the sail area and the length of l.w.l. are equal; but when the square root of the sail area is less than the length, the Seawanhaka rule allows less sail than the Y. R. A. rule, and more when the square root of the sail area exceeds the length. In consequence of this peculiarity we are asked to believe that the Seawanhaka rule will check the increase of length at the expense of sail; but we may rest assured, as in the case of the 1730 rule, that the length will be had at any cost; and as sail is cut down as length is increased, so will the displacement be cut down to suit it.

Under the present rule the 5-rater Dacia has 880sq. ft. of canvas for a load waterline length of 33.83ft.; under the Seawanhaka rule she could only have 801sq. ft. of sail; or, if she stuck to the 880sq. ft. of sail, nearly 18in. (1.4ft.) would have to be sacrificed. We have not the smallest doubt that it would be better to sacrifice the sail than the length. The differences, however, under the two rules are so slight that practically they may be regarded as identical, and what is urged against one rule can with equal force be urged against the other, as a study of the following table will show:

Length on L.W.L.	Sail allowed by Y.R.A. rule.	Sail allowed by Seawanhaka rule.
	Sq. ft.	Sq. ft.
5-rater.....	31.1	967
	34.0	983
	36.0	1000
40-rater.....	62.1	3892
	65.0	3992

We do not for a moment suppose that the Seawanhaka rule would prevent the 25ft. 5-rater, or 65ft. 40-rater being built. We have proof positive that a 34ft. 5-rater, with less than 1000sq. ft. sail area, is superior as an average performer to one of 28ft., with 1700sq. ft. sail area, and it is as clear as daylight that changing to the Seawanhaka rule would not give the 28ft. boat an all round chance, unless very light weather could be insured; but then, under such conditions, it would equally pay to have a 28ft. 5-rater under the Y. R. A. rule. The only real influence of the Seawanhaka rule would be to hasten somewhat the depreciation in displacement instead of checking it, unless the rule were provided with limitations of length, breadth and depth, such as we have always contended would have to be the case. But then it comes back to this again, what would be the object in preferring the rule to the existing rule? Certainly the plus (+) sign in the rule instead of the multiplying (x) sign is not a sufficient reason, even if it should be proposed to import another term into the formula.

It is as certain as fact that such things can be certain that, so long as races are sailed in average summer weather of good breezes, to obtain an increase of speed under the existing rating rule, it will pay to cut down sail, because an increase of length can be obtained, and any given displacement we know becomes easier to drive the greater the length of the figure which bounds it; and if, while the length is increased, displacement is decreased, a still greater sacrifice can be made in sail area. Thus it follows that boats must be continually out-built until the limit to which sail area and displacement can be cut down is arrived at. When the limit is reached, we shall probably have something which no more resembles the yacht of the period than an ice yacht does a Brixham trawler. The proper thing to do is to search for a rule which will render such a development impossible. One of the suggested ways of doing it is to introduce registered tonnage or displacement into the formula as a divisor. We showed last week that registered tonnage probably would not insure more under-water body than is at present given; in fact, that its tendency would be to reduce displacement and add to the size of the above water proportion of the hull. If, however, displacement (in cubic feet) is introduced into the formula, the tendency would be to increase the under-water bulk, and take just as much above water body as may be necessary for seaworthiness or accommodation. Such a rule could be formulated as follows:

$$L \times \sqrt[3]{\frac{S}{30,000}} \times \left(\frac{L \times \sqrt[3]{S}}{30,000} \right)$$

The formula looks more complicated than it really is; but, as a matter of fact, it only involves two multiplication and two division sums, as a table of roots will afford the other square and cube roots of the quantities. The table which here follows will show how the formula would operate:

Length L.W.L.	Sail area in sq. ft.	Displacement in tons	Displacement in cubic feet	Y. R. A. Rating	Proposed Rating
25	520	5.0	175	2.5	2.5
28	529	5.0	170	2.5	2.7
30	1000	6.8	238	5.0	5.0
35	855	10.0	350	5.0	5.0
36	2600	14.0	490	10.0	7.6
38	1000	10.0	350	10.0	9.0
40	1200	17.0	505	10.0	10.0
46	1260	28.0	980	20.0	19.0
50	2400	31.0	1085	20.0	20.0
60	4000	60.0	2100	40.0	38.0
65	3700	63.0	2200	40.0	40.0
66	3282	75.0	2625	58.0	56.0
85	10025	150.0	3250	128.0	125.0

The examples given are not very numerous, but they are sufficient to explain the working of such a rule. It will be seen that in the 5-rating class to increase the length (to 35ft., and retain the sail area allowed by the present Y. R. A. rule the displacement would have to be increased by three tons. This feature is shown in other ratings given in the table. The 30ft. 5-rater represents the old 30ft. 5-rater, and she would probably be beaten by the 30ft. 5-rater in whole sail breezes. The quantity of displacement set down for a 5 or 10-rater, &c., may not be actually that in vogue, but the effect of the rule is all the same shown. Of course, the objection to a rule like this is the trouble and expense of obtaining the displacement. The simplest plan would be to take off three sections by aid of a jointed link chain, which could be set to take any form of section. This could be done before the yacht was launched, and a scale made from which the displacement for any draught could be read off. If a displacement rule is ever adopted it must be in some such formula as we have shown, and if it is felt that a rule which includes displacement is necessary to achieve certain objects, we presume that the trouble and expense of working it would not be a ground for objection.

The following letter is from an English yachtsman who has taken a prominent part in all recent discussions abroad:

SOUTHAMPTON, Dec. 18.—*Editor Forest and Stream:* I see by the Field of yesterday that Mr. Herreshoff has been designing a formula

for corrected length in which V tonnage is used as a divisor. I therefore ask for your order to bring before your readers a modification of the Seawanhaka rule which would, I think have the same effects, and be far more easily worked in practice. I propose that corrected length should be found thus:

$$L \div \sqrt[3]{S + \frac{1}{2}B + D + F - H}$$

where L is the taxable length, S is the taxable sail area, B is the extreme beam, D is the extreme draught, F is the freeboard amidships, H is the depth of hull amidships (measured from top of floors to top of upper deck beam).

By this rule, a boat with an extravagant B would pay for it, and a boat with an extravagant H would pay for it, and a boat with a moderate B and moderate H would pay for it. The rule encourages a boat of moderate B, and moderate keel below hull. It also encourages a deep body, or more strictly it discourages a shallow body, and consequently on account of the buttock lines, it indirectly discourages long overhangs. The rule encourages a keel bottom parallel to the waterline, like Wasp's, and consequently discourages the triangular cut-away fin keels which cause boats to stall.

If you examine the rule, you will see that draft and freeboard are not really taxed, freeboard being included in depth of hull, and that portion of draft only is taxed which projects below top of floor at midship section. The "house boat" nightmare conjured up by Mr. Herreshoff's rule is outmaneuvered, and the only way to "cheat" my rule would be to build deck like the roof of a house. This can of

course be legislated against; by ruling that the curvature of deck shall not exceed one inch for every foot of extreme beam. THALASSA.

P. S.—Example:

V.....	39.60
L.....	38.05
$\frac{1}{2}B$	5.00
D.....	8.50
F.....	2.50
	64.25
H.....	7.50
	2+86.75
	11+49.37
	39.43 corrected length.

Yacht Building.

Such activity as is apparent at present in yacht building is confined to the expansion of the two large Herreshoff cutters, to steam yachts and the smaller classes. The rumors of syndicates and Cup defenders have thus far brought out nothing, it seems certain that Boston will not be represented this year in the trial races, and equally certain that unless another keel is laid very soon New York will have but one yacht in.

The City Island Piegras has completed the alterations to the hull of the old Diana, and when she is launched again as the Dagmar she will show a stem not unlike Wasp's above water, running down to a distinct jog where the new line of stem joins the old keel. The new foremast is 4ft. deck to hounds, and both masts are handsome sticks, finished with very light and neat ironwork aloft, the hounds and cheek pieces being of steel plates and angles. The crossrees are of oak, each in two halves, placed abreast, the center of the mast and an inch or two from the hounds, and the hounds are of steel, with the inner ends jogged in about an inch to steady them. Underneath each arm is an iron bracket carried by the hound band, which supports the spreader. The iron work of the hull matches the excellent plating put in when Mr. Piegras built the yacht in 1887. On the spot where Lasca, Constellation and Katrina were launched, there is now going up a building shed 48ft. wide and nearly 200ft. long, a necessary adjunct to the otherwise complete plant.

At Wood & Son's yard the old building shed has been completely rebuilt, making a commodious shop 100ft. long and 48ft. wide. It is heated by steam, the pipes serving to dry lumber, while the second story will make a large model loft. In this shop the new Gardner-Mosher steamer, 85ft. long, is now in frame and partly planked, a similar craft to the one built, but not launched, last year, which is now lying under canvas on the beach. The sides of the new yacht are vertical and nearly straight for a long distance, the midship section being nearly rectangular. The stern is of the double cone variety. The hull has steamed oak frames and double skin, the inner of yellow pine and the outer of mahogany. Owing to her shape the yacht will have a large amount of available space below, giving a good saloon aft with a ladies cabin.

In the old shop the pilot-house and joiner work of the steamer are partly complete, while down stairs is a large lifeboat for the U. S. Government, one of three to be built by the firm for exhibition at Chicago. This one is the largest yet built, about 38ft. over all and 8ft. beam, self-righting, self-bailing, and fitted with gummatel shoe and centerboard. She is diagonal built, of mahogany, with a few floors, but no complete frames. Wood & Sons have built a number of similar boats in the past, being one of the two firms in the country which do such work.

On the beach are three curious craft, Nameless, Pryxie and Nemadji, the Gardner 25-footers, the former a miniature cutter, the second a fin-keel with solid lead fin of the Solent type of three years since, and the last a more advanced fin-keel with plate fin and lead bulb, similar to Dilemma and El Comte. Taken together the trio form an instructive commentary on rapid changes of modern designing.

At Hawkins' yard the three cutters, Melusa, Huron and Wenonah, are hauled up and struck over, side by side. The former is receiving a new stem and apron, and Wenonah is also undergoing some repairs and alterations. The wrecked schooner Una is also on the beach, while the little cutter Rajah has been hauled up and housed over to receive a new deck and some changes below. When purchased last winter by Mr. H. W. Eaton she was converted into a yawl, but late last season she was sold back to Mr. W. C. Hubbard, Mr. Eaton retaining the yawl rig. The original cutter sail plan will be replaced by her present owner, while Mr. Eaton will build a new hull for the yawl rig.

At Bath, Me., the steam yacht designed by Henry J. Glow for Harry C. Baxter is now under way at B. Harrington's yard. She will be 77ft. 8in. over all, 10ft. l.w.l., 10ft. 3in. beam, and 4ft. 4in. draft, with a plumb stem. The frame is of oak, the timbers steamed, the clamps and planking will be of yellow pine, and the three bulkheads, as well as the bunkers, of steel. The engines will be triple compound, by the Portland Iron Works.

Nearly a year since Mr. Glow completed a design for H. A. Laughlin, of the firm of Jones & Laughlin, the iron founders of Pittsburgh, but the yacht was not built. The contract has just been awarded to Witherington, the yacht to be of wood, 98ft. over all, 89ft. 4in. l.w.l., 15ft. 9in. beam, and 4ft. 6in. draft.

Carmita, the Foster fin-keel 40-footer, is now under way at Lawley's. She will be 70ft. over all, 40ft. l.w.l., 12ft. beam and nearly 12ft. draft, with 6ft. 4in. headrooms in cabin and 5ft. 8in. forward and aft. Mr. George Lawley will design a 100ft. steam yacht to be built for the firm for a New York owner, and also a 25ft. steam launch for Mr. Gerrish, of Howard College. At the yard the lead keel of the cutter Lapwing has been removed for recasting.

Jacob E. Buckhout.

It would be impossible to chronicle the development of ice yachting, the most exciting of winter pastimes, apart from the history of the man who took it from its former low plane of boy's play and placed it in the first position.

Mr. Buckhout was born in the village of Lloyd, Ulster county, N. Y., in the year 1829. From his youth he was a lover of the water, and proving too confining for his vigorous nature he followed the river as boatman and master of sailing craft plying the noble Hudson. This in turn proving too restricted a horizon he in 1850 sailed from New Bedford on a four years' whaling voyage to the South Pacific in the capacity of ship's cooper. Here began an apprenticeship which in after life guided him to his choice of a vocation. The ship's carpenter proved to be no unimportant and Buckhout soon found himself engaged in rebuilding and repairing boats as well as casks, and to the end of the voyage he filled both positions.

Returning from this cruise he opened a shop in his native village, building boats of various kinds; and at length grasping the possibilities of ice-boating from the primitive craft of the neighborhood, he designed and built the Zouave, which was a great improvement on all her predecessors.

Soon orders came pouring into the little shop and enlargement and removal to the city of Poughkeepsie became necessary. Here were built nearly all the "lightning" craft that have made his name so famous in the sporting world.

His ice yachts were not merely structures, they were artistic creations, each with a character of its own. Their strength defied the winter's gale; they fairly outstripped the wind and set it naught. Fifty or sixty splendid cup winners owe their existence to this father of ice yachting. Indeed, with the exception of a single season, his yachts have always carried the pennant of the world's championship.

In his life Mr. Buckhout was a grand Christian man. In his instincts he was an ardent sportsman. In his work he was an artist—a very Benvenuto Cellini of artisans.

May.

ALTHOUGH on his recent return from Europe Vice-Com. Morgan is reported as denying that he had purchased a steam yacht abroad, it is quite probable that the commodore's pennant of the New York Y. C. will fly from the truck of the big Scotch steam yacht May next season. This yacht is the latest and finest of a large fleet of pleasure craft built for and owned by the Scotch yachtsman Mr. Ninian B. Stewart of Wemyss Bay, Scotland, and Torquay, England. It was for him that the 40-tonner May, one of the cracks of the old 40-ton class, was designed by Mr. Watson in 1881, while a year before was built the iron steam yacht Amy, of 639 tons, from the designs of Mr. St. Clare J. Byrne. In 1884 Mr. Stewart sold the latter yacht to Mr. Morgan, who made a cruise to the East Indies in her, bringing her to America in 1885. Mr. Stewart replaced her in the same year by a second Amy, a steel vessel designed by Watson, of 812 tons and 221ft. length. This yacht was sold in 1891 to a Russian prince, being renamed Roxana, giving place to the second May, also designed by Mr. Watson, built by the Alisa Shipbuilding Co., and launched on March 28, 1891. She is a steel vessel with two masts, schooner rigged, and is 224ft. over all, 21ft. tonnage length, 203ft. 10in. l.w.l., 27ft. 10in. beam, and 17ft. 8in. hold. Her engines, by Rowan & Son, of Glasgow, are triple compound, 10in., 31in. and 51in. x 33in. She is fitted throughout with electric lights. Her photo shows a very handsome vessel. She is now under charter for three months by Mr. Colet for a Mediterranean cruise, at the expiration of which she will be taken over by her new owner.

Ice-Bound.

A WINTER REFLECTION.

If you have ever read "Yolande" you will recall that meditative Scotch student who, when asked how he could be satisfied with reaching the North Pole in his life, answered, "I have made answer that he could sit on his porch on any pleasant evening and travel at the rate of sixty-eight thousand miles an hour. Not all the fun of yachting lies in the flash and delight of the race or the seductive pleasures of longshore cruising.

Suppose we have just cleared harbor some misty morning in July; we have dropped down and put out early enough to stow our duflie before the morning breeze comes fanning in out of the south-west; softly and with many a coquettish waver, the cooling zephyr is wafted toward us, dispelling the mist of the morning and kissing into smiles the surface of the awakening lake. But its very hesitancy is a promise we know, for will it not blow the longer and steadier? And what matters it that it will be dead ahead all the day long? There is more satisfaction in wrestling a few short miles from a stubborn head wind than one can ever know who lingers in port until the weather suits his indolence and then sides with the lifted sheets.

The first elements of enjoyment in yachting, its uncertainty and the feeling that "We can wrest the power from the wind," are the predominant factors in windward work. And so voyages may lengthen out until the wages swallow up the freights, and our friends in the coasting trade are greatly displeased, yet there is no grumbling aboard our tight little ship. We'll confess, that she does waltz some on the port tack when she meets the wind, but this is the best leg, and when we have stayed and stand up to the shore she races along in a merry style.

Single-hand cruising is all very well, but there's none of the Diogenes in his tub (no offense intended; we're guilty ourselves) for us this voyage. We more resemble an emigrant vessel in miniature. There's skylarking under the mainsail's lee; boisterous laughter is heard through the companion, while in to windward is the coterie of inveterates, recounting old adventures and vying with one another in flights of imagination. The larboard and starboard watches muster four each, and the "Doctor" is driven to his wit's end to provide for so generous a ship's company.

As the breeze freshens toward mid-day every trick that we know is impressed in the service of urging our craft up to windward. Every inch of sail is once and for all put to the test. And how nobly does she respond to the summons of the helmsman! No longer with nervous haste, only to deaden her way with her own eagerness, but ever bowing and sweeping on with becoming grace and stateliness. And see! she has really done better than she promised; we weathered the clump of birches yonder on the shelving hillside, and it is ready about for another reach into the offing.

And so through the first part of the afternoon watch the wind holds steady, and the sun, who in to windward is the coterie of inveterates, that sparkling appearance that owes naught to any tint for its radiance, but only to the sun that tempers the wind from a cloudless sky. There are just enough of snowy crests to indicate the strength of the breeze. But later it becomes apparent that the wind will fade as the sun gets lower. Little progress is made now, and when the waves have subsided and the breeze quite disappeared we drop anchor a cable's length from the white beach, the coming of darkness. And when the long solemn twilight merges into night we feel the first impulse of the warm land breeze, that seems never to venture out on the broad lake except under cover of darkness. The anchor raised and sails peaked up, one watch disappears below deck, leaving us at the helm while the lookout steals a nap under the lee of the cabin trunk.

With the wind fair abeam, we leave the shore in the darkness and head for the distant point in the southwest, whither we have laid our course through the whole long sunny day, and where now gleams brighter than any star of the sky, one of the "street lamps of the ocean."

The water seems strangely smooth; the pleasant land breeze fills our upper cloths and sends her swiftly on her course, but is scarcely felt near the surface. The sails are indistinguishable in the gloom, save that the white back of the western sky is visible, and the gurgles around the bends forward and naught indicates how swiftly we are approaching the light that had seemed so distant when the wind was foul, except only the fact that she has listed one stroke under to leeward and we hear aft the low, weird hissing of the bubbles in the wake.

Then at last the light is doubled and for a moment we are slipping in spectral silence through the darkened labyrinth of the pines, rays of the lonely light. The sleepy watch blinks, rubs his eyes and then discovers that daylight is still far away. The wind is again foul on this side of the point and seems to blow only in a narrow streak along the shore. So we are at it again hammer and tongs, everything jammed close and 'boutship every five minutes. When the tall shaft of the lighthouse has faded astern we sight another light up the coast, and the wind is again foul. It swings and sometimes disappears for a brief space, so we recognize it as the lantern carried by the lonely coast patrol. Next course in we are heading directly for him. The only way to make to windward when the breeze is confined to so narrow a space is to keep on into shoal water with a hand at the board. So we hold on, waiting to hear the centerboard grate on the sandy bottom, when the lapping of the ripples on our weather bilge is heard by the cabin. As we wait we see him darkening his lantern that he may make us out. Then he lights his signal, carried for the purpose, and in a moment we see the shore and the water stand out as distinct as at noonday, but flooded in a glow of fire-red light. It is a tableau and we are the audience.

Or perhaps we are wing and wing and the wind blowing from the north. It may be so if you wish it. Some of the big fellows hold to their gaffsails, but we prize our sticks too lightly to risk them from mere bravado. The heavy craft heave to on the sea, but when we slide down an incline with our rudder half out and meet the next wave as it were going through it and the solid water curls and froths as high as the hawseholes, she brings up with deadened way, and it is then one looks to his preventer stays. So it is just all the fun we wish to show whole lower sails, and at times it seems almost too much. This is schooner weather, but look sharp for a gear, the mainboom is shorter than a cutter's, and the mast is just so much quicker if she gets the better of her helm while she surges forward after a mad reel through the foam and brings up all standing.

How clear is the atmosphere on the surface when the north wind blows! Off the starboard beam we look out through the furrows of the open lake where the dark blue of the racing billows mingles with the green of the grassy shore. The wind is again foul, but not further on is clearly outlined the naked spars of a steamer that lies more than hull down in the west. The shore on our larboard bow and even into the furthest bight of the bay shows its sandy stretches of beach and wooded ravines with a distinctness that shortens the distance by half and almost persuades us that we hear the hollow roar of the surf that fringes the reef. That smoke that hangs so nearly in our eyes, the rainbow is shorter than a cutter's, and the mast is just so much quicker if she gets the better of her helm while she surges forward after a mad reel through the foam and brings up all standing.

The north wind is the wind for climbing aweather. Blow high or blow low I hold the filler with a quiet reliance in the perfect steadiness of my breeze. Squalls and flukes come as scarce as rain from a clear sky. The sea, even seem longer and more regular, and this is all important when racing to windward. Many a time you have reluctantly put in a single reef with a southerly breeze, that would never have been put in if that stiff and unyielding wind had blown, and the confidence that is felt when the cold north wind blows, and then too its very steadiness will add many a mile to the day's run. It does not seem to feel the influence of the sun as does the south wind; it blows earlier in the morning and is later to die out at night. But with all of its good qualities, its influence on me has always been of a serious turn, half allied with sadness; it sends into my dreams the memory of the old lines that end:

"Though the harbor bar be moaning,"

Don't you like to roam over the high seas in a dense fog? Of course you don't if you do your roaming in a long, swift "smokeboat" that will be out of water every time she strikes a wave. But I refer now to our little cruiser. The room for skill in dead-reckoning, cooled with the unreasoning expectancy of seeing a great shadowy hull loom up dead ahead, give this sort of sailing a dash of adventure that enlivens a cruise and is really met with too seldom. To lay a course by compass, make allowance for set of current and leeway, and then take a race into the wind, and finally bring up about twenty miles from the point intended, as usually happens with me, is altogether too enticing to be resisted. Or perhaps we can creep up under a schooner's lee bow and scare her into going about with our horn. Then when she gathers sternway and the whole crew is manipulating the jibtopsheet, we glide into the opaque distance, followed by some choice comments from the quarter deck.

Of course, there isn't much wind as a usual thing in a fog. But I remember yet with a little thrill of interest my first experience "way back in my freshman days, when we essayed navigation in the mist. It was what we call a fog squall, driving down from northwest on a sultry day in June. At that time our allegiance was pledged to a little pocket compass that would have made a good watch charm. I mean it would make a good watch charm if it was useful for any purpose at all. The wind was fresh and with the sea that had rapidly arisen, it was impossible to get good results by holding our toy to the rail, while my first lieutenant's hand shook so as to fairly make the needle spin. But we did finally discover the narrow harbor entrance and then all hands and the cook vowed that it was awful jolly, but couldn't afford the time that day, etc.

Can anything more rejoice the cruiser's heart than when with

lightened sheets and half-laced board, the cooling breeze strikes his bonny craft fair abeam and sends her romping through the seas with a loud, tremulous, silver-laced wake! With what nicely does she pick her way among the threatening waves, seeming ever just to escape a complete submersion! I love to lie near the lee quarter, where the water boils up in foaming white and shoots out astern in line with the main boom. The sails stands rounded out in graceful curves, the weather after leach reflecting the sheen of the afternoon sun, while at the foot, where the blast hums merrily under the boom, the canvas tautens its lacing to the tension of a bow string. It is then one loves to muse on the yarns that gratified our ancestors' love of adventure. Many a tale of roving privateersman and mysterious smuggler flits across the stage, a panorama of fiction. One is almost persuaded that in the good old days their taut brigs and imposing seventy-fours did really acquire the amazing speed that appears to have been so common then, but which we moderns can equal only with the aid of coal and steam. But even these potent factors cannot put us on the same footing with the sailor of the past, for he had no cousins of the rod and reel, as have we, to overshadow all his vagaries of memory and flights of fancy with mightier works and stranger tales. And yet we do make some pretty good puns even now: not always must we yield to our first cousins of the fly-bok and snell, or, on the other hand, to our more distant and more rampant relatives who squat at the binocular through many a sandy. And he he he! we are not so bad as we finally weathered the last headland and point fair for the cove in the bight of the coast.

Coming in to the moorings after the glow in the west has disappeared may be slow and tedious, or perhaps, borne on the wings of a gale, we sweep proudly round the base of the lighthouse and lash into foam the quiet waters of our haven. Then, when her way is deadened and the water smooth, we hear the splash of the splashing water and the racing of the chain through the pipe. It's quick work with the canvas now; all down on the run, and knot the gaskets well. Seize the riding light to the forestay and we dive into the cuddy. And now while I cross the borderland of sleep to the music of the muttering storm there floats back from the dreamy past those suggestive verses:

"Hark! how the breezes that wander
Mutter their plots to the deep;
Good night till the lances of morning
Glance from the shield of the sea;
Rest till the surf shouts its warning,
And tings its gray gauntlet at thee."

MANISTER, Mich.

HERBERT L. HARLEY.

New Watson Yachts.

The Prince of Wales is to have his new first class cutter built by the Messrs. Henderson, of the Anchor Line, in their Meadowside yard, Glasgow. The cutter is to be composite and will be designed by Mr. G. L. Watson up to the latest requirements for speed and accommodations. Alongside this cutter the same firm is to build the 85ft. first class racer for Lord Dunraven, from Mr. Watson's design. She is to be composite. Both yachts are to be gone on with at once. Mr. Watson is designing a cruiser for Mr. Schuit, she is to be 55ft. on the L. V. The same designer has also commissions for a 19-rater cutter for Mr. H. E. Anderson, of Plymouth; a Windermere yacht for Mr. Sladen, and another of 20ft. for Mr. William Hunt; a 23ft. centerboard for Mr. J. B. K. Macbeth, and a 20ft. length class cutter for Mr. Hensee; Mr. J. Coats, owner of Marjorie, has commissioned Mr. Watson to design two 23ft. boats for racing, to be built by Mr. Adams, of Gourock. These boats are intended for friendly matches, but may be sailed at regular intervals. Mr. George Coats has commissioned the same designer to design another 23ft. racing boat, which will be built by Mr. Robertson, Sandbank, who will also build the centerboard of the same dimensions. Mr. Watson has also in hand a lifeboat of 43ft. for the Royal National Lifeboat Institution, and a beach boat for the Old Company of Beachman of Lowestoft. Mr. Watson has several steam vessels in hand, including a steam yacht of 60 tons, building by Messrs. Ramage and Ferguson, of Leith, for Mr. Lysaght, of Bristol; a steamer for the Irish Lights, to be built by Messrs. Workman & Clark, of Belfast; a fishery steamer for the Foyle and Bann Commissioners; and another fishery steamer for the Lancashire Sea Fisheries Board.—Field.

YACHT NEWS NOTES.

Messrs. A. B. Sands & Son, the yacht plumbers, of New York, advise us that they have a limited number of Capt. Howard Patterson's "Canal Guide" to the Hudson River and Erie Canal, which they will send to yachtmen upon application.

The new twin screw Somd steamer for the Norwich Line will be designed by Mr. A. Cary Smith.

A patent has just been issued to G. F. Asken, London, for an arrangement of air passages through the outer section of a propeller shaft, and along the flanges of the wheel itself, by which it is proposed to distribute a thin film of air over the entire surface of the blade. The air is taken from a windsail on deck, and led by a vertical pipe to a closed chamber surrounding the shaft coupling.

An important decision in the Alva suit was made on Jan 4 by the U. S. Supreme Court, all the points claimed by Capt. Morrison being denied. Capt. Morrison asked for a writ of prohibition on the Massachusetts court to restrain it from further proceedings in the libel filed by the Dimock, and a writ of mandamus on the New York Court to compel it to try the suit. Judge Blatchford denied both motions.

Iola, sloop, has been sold by F. H. Weeks to J. T. Ackerman through Manning's agency.

Sagamore, steam yacht, has been sold by W. F. Slater to Edgar Shepley, of Philadelphia, on the expiration of her charter to E. M. Fulton, Jr., who is now in the West Indies. The price is given as \$125,000. The yacht was built at Bath, Me., in 1888.

Capt. Harry Randall, of Southampton, England, who came to America some ten years since to command the cutter Maggie for Geo. H. Warren, and who was later in Stranger for the same owner, died of pneumonia in Boston last week at the age of 38 years, leaving a widow and three children.

Reverie, steam yacht, has been sold by S. Wilcox to Frederick G. Bourne, president of the Singer Sewing Machine Co.

Trophy, steam yacht, has been sold by Thos. H. Pratt to E. H. Bennett, of the Singer Sewing Machine Co., owner of the steam yacht Countess.

Wild Duck, steam yacht, Col. John M. Forbes, sailed from New York for Nassau last week.

Oriole, ketch, lately purchased by Com. Colt from T. B. Asten, sailed from New York on Jan. 4 for Biscayne Bay, Fla., where her new owner will join her.

The Lynn Y. C. officers, 1893: Com., H. L. Parker; Vice-Com., S. L. Sanders; Clerk, F. E. Newhall; Meas., Louis Cole; Treas., W. A. Estes.

A very good race was sailed by the Shrewsbury ice yachts on Jan. 5, but on other days there has been no racing owing to calms, snow and rain. Newark yachtmen have been enjoying a little sailing on the Passaic River.

Chelsea (Mass.) Y. C. officers, 1893: Com., Fred T. Clayton; Vice-Com., C. H. Hyde; Recording Sec., Frank L. Dow; Financial Sec., L. B. Butler; Treas., S. C. Gleason.

A very sad accident occurred on the night of Jan. 3 at Telo's Pier; by which Capt. William Dand, brother of Capt. Nick Dand, of the steam yacht Stranger, lost his life. Capt. Dand, who was watchman on the Stranger, returned to the yacht after midnight with two companions. In crossing the gangplank he slipped and fell into the water, and was only rescued after a delay of half an hour. He was alive when taken from the water, but died a short time later from exposure. In his 35 years of life he had seen some exciting experiences, having been in the Confederate Navy and later in George Lordard's schooner Meteor when she was lost in the Mediterranean.

The Volunteer Sailing Club, of New Haven, Conn., held its annual meeting on Jan. 4, at its rooms, 185 Orange street. The following officers for 1893 were elected: Commodore, William A. Piburger; Vice-Commodore, J. W. E. Johnson; Secretary, Webster H. Mathis, 10 Olive street; Fleet Captain, J. H. Jooss; Measurer, Frank F. Upton. The club has had a very prosperous season during 1892. Its membership has increased and arrangements are being made to secure permanent headquarters and an anchorage for the fleet, which number twelve boats. The regatta was well held during the coming season as follows: May 30, July 4 and Labor Day.

The Volunter Y. C., of Lynn, has elected the following officers for 1893: Com., M. H. Dennis; Vice-Com., Charles H. Chapman; Captain of Fleet, F. W. Martin; Treas., W. B. Newhall; Treas., S. T. Davidson; Trustees, C. E. Breed, J. R. Newhall, O. S. Robbins, Regatta Committee, Joseph Bedell, S. F. Woodard, L. G. Austin, S. T. Downs, H. G. Hobbs. The club has 50 members.

Mr. Manning writes us that the reported sale of Smuggler is not correct. Manning's Yacht Agency is now preparing charts and part of a list of routes to Chicago, which will, when ready, be distributed free to yacht owners on request.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1893-94.
COMMODORE: LIEUT.-COL. W. H. COTTON, Kingston, Ontario, Canada.
SECRETARY-TREASURER: R. EASTON BURNS, Kingston, Ontario, Canada.

ATLANTIC DIVISION.

Officers:
VICE-COM.: J. R. Lake.
REAR-COM.: H. L. Quick.
PURSER: F. L. Dummell, B'klyn, N. Y.
EX. COM.: M. V. Brokaw, W. E. Lawrence, W. E. Dodge.

CENTRAL DIVISION.

Officers:
VICE-COM.: T. H. Stryker.
REAR-COM.: W. C. Witherbee.
PURSER: Chas. Stryker.
EX. COM.: C. V. Winne, W. R. Hunt-ington.

EASTERN DIVISION.

Officers:
VICE-COM.: Geo. L. Parmele.
REAR-COM.: F. A. Sears.
PURSER: F. B. Lewis, Box 89, Hartfd.
EX. COM.: Paul Butler, W. U. Law-son, R. Apollonio.

NORTHERN DIVISION.

Officers:
VICE-COM.: J. N. MacKendrick.
REAR-COM.: F. Minns.
PURSER: W. G. MacKendrick, Tor.
EX. COM.: C. E. Archbald, J. H. Car-negie.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expense. Applicants sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by address ing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—G. M. Munger, Eureka, Kan.
Vice-Commodore—F. W. Dickens, Milwaukee, Wis.
Rear-Commodore—F. H. Gary, Oshkosh, Wis.
Secretary-Treasurer—F. B. Huntington, Milwaukee, Wis.
Executive Committee—G. H. Gardner, W. H. Crawford, S. N. Maxwell, Regatta Committee—G. P. Mathes, J. H. Ware, G. C. Case, M. D. Smith. Applications for membership should be made to the Sec. Treas., on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

JUNE.

17. New York, Ann., Bensonhurst.

JULY.

1-5. Ar. Div. Meet, Captain's Island. 15-20. W. C. A. Meet, Ballast Island.

AUGUST.

11-26. A. C. A. Meet, St. Lawrence River.

The Royal Canoe Club, of London, has long enjoyed a most prominent and honorable position as not merely the parent club, but as the recognized leader in the art, science and sport of canoe cruising and canoe racing. Naturally this position has carried with it many responsibilities: the reputation of the club has made it incumbent that it should keep not only abreast but ahead of the times. So far from this being the case, however, it has been long apparent that whatever the local standing and influence of the club might be, such standing and influence was purely local, and that the club has ceased to be the factor which it once was in canoeing the world over.

Up to 1880 this country was under obligations to the Royal C. C. for all that it knew about the formation of clubs and the designing and use of the decked canoe; but from that period the influence of British canoeing has steadily and rapidly declined. The great advance made in America was clearly shown in the signal defeat of the two crack canoes brought out and well sailed by Messrs. Baden-Powell and Stewart in 1886; the superiority of the light displacement model with the crew on deck over the heavily ballasted canoes with crew below being freely conceded by the visitors.

Two years later the superiority of the American craft was made still plainer by the defeat of Mr. Stewart, a very skillful sailor, in a new canoe of the general type of the American craft, but with a purely British sail plan and outfit. The increase in speed of American canoes since 1888 has been most remarkable, the boats being improved in every way from a racing standpoint; but from what we know of the latest of the Thames models and sail plans, the best of the R. C. C. canoes to-day would be no nearer to Wasp or Glenwood than Charn was to Notus, P-cowic or Eclipse.

It is true that the development of speed in America has been at the expense of other most valuable all-round qualities, and that canoeing at large has suffered as racing has been perfected; but even from this extreme point of view there has been no relative gain by the conservative policy of the R. C. C., as general canoe sailing and cruising is and long has been at a very low ebb in England. The position of the Royal C. C. is a peculiar one; so far as racing is concerned the British Canoe Association, the national body, has no influence at all, while the Royal C. C. has much the same position as the American Canoe Association has here, the greatest and most important part of the racing being under its rules. When these rules were last revised, in 1888, for a term of three years, the relations of the Butler seat to canoe sailing were vastly different from what they are to-day, and the use of this important appliance was prohibited—perhaps wisely under the circumstances. Since then, however, the great value of the sliding seat in contributing to the speed, safety and comfort of canoe sailing, whether racing or cruising, have been recognized by individual canoeists in all countries, notably in England. On the expiration of the rules last year, 1891, some minor changes were made, but the proposal to recognize the sliding seat was voted down. So much has been seen since of its advantages on English canoes that it was confidently expected that all opposition would disappear before the meeting last month, and that the members of the Royal C. C. would be placed once more in a position where international racing might be possible to them. So far from this being the case, however, the club as represented at the meeting has voted again to continue the prohibitory rules.

With the unlimited racing class which is now a necessary feature of modern canoeing there should go naturally a limited class, such as has been generally defined by the words cruising or general purpose canoe. Recognizing this fact, some of the progressive members of the R. C. C. have sought to secure the passage of a rule of this kind, but again without result.

There may have been at one time long ago a reason for the distinction which has always existed in the R. C. C. rules between first and second class, the latter being "clinch-built, with lands," or what is called lap-stroke in this country. With improved methods of building the lap-stroke has disappeared, so far as any canoes which come under racing rules are concerned, and for some years there has been an outcry against the retention of this absurd restriction which has benefited no one and manifestly injured the second class. After the action of the club over the other two amendments it follows naturally that the conservative members were sufficiently numerous to secure the retention of this historic relic in the dim hope that some day the class might be built to.

ONE of two results must follow this retrogressive action of the R. C. C.: if the club is able to retain any of its former influence over British canoeing, which is very doubtful; then that influence must act to retard the improvement of racing canoes and the development of the speed necessary to successful competition with America. If on the other hand the other British clubs permit the use of the sliding seat and refuse to follow the lead of the R. C. C., all interclub racing between them and the latter club must cease, to the injury of both parties, but especially to the R. C. C. Canoeing is not in a prosperous state in England, and it requires for its existence the stimulus derived from active racing and the intelligent co-operation of all the British clubs: failing this, the modern descendants of the Rob Roy and Nautilus are likely to have a hard strife for existence against the canoe yawl on the one hand and the open Canadian canoe on the other.

While restricting the development of the 16'30" canoe, the R. C. C. has adopted a new and better rule for the canoe yawl, the most formidable rival of the racing canoe. The result likely to follow from this very strange action on the part of a canoe club is that men will give up the canoe and take to the canoe yawl.

Royal C. C.

The annual meeting of the Royal C. C. for 1892 assumed a special importance from the facts that for the first time since its organization in 1861 the club has been called upon to elect a captain; and further, it has had to consider the question of modernizing and amending its measurement and sailing rules.

The office of commodore has always been a purely nominal and honorary one, held by the Prince of Wales since the early days of the club. The executive head of the club has been the captain, the late John MacGregor, the founder of the club and almost the originator of modern canoeing. Captain MacGregor's interest in the club and canoeing, which was always that of the cruiser and non-racer, has naturally decreased with age, and in fact for four years or more prior to his death his physical disabilities have been such as to separate him entirely from the club, the business being carried on by the subordinate officers.

The death of Captain MacGregor made it necessary to elect a new captain, and at the meeting on Nov. 21 two candidates were nominated, Mr. George Herbert, the oldest member of the club, and Mr. W. Baden Powell, also an old member and one of the most active of the racing men. A proposal was made to discuss the qualifications of the candidates, but as it was objected to, Mr. Baden Powell withdrew his name, and Mr. Herbert was declared elected. The other officers elected were: Mate, Percy Nisbet and George Webster; Purser, C. T. Wright, re-elected; Cook, F. Tuckett, re-elected; Secretary, T. G. F. Winsor, re-elected; Auditor, B. deQ. Quincy, re-elected; Committee, W. Baden Powell, A. B. Ingram, E. A. Leach, F. T. Miles, A. H. Nichol, R. deQ. Quincy, Col. Howland Roberts, E. B. Tredwell, Paul Waterlow. Honorary Committee, Dixon Kemp, Lord Kinnaird, W. J. Clayton.

After the election the following proposals for changing the rules were introduced. By Walter Stewart: "That in future in sailing races of the R. C. C. there be no restriction placed upon the use of appliances by means of which the weight of the canoeist's body may be most advantageously used to add to the sail carrying power of any canoe competing in such races."

Mr. Baden Powell introduced the following three proposals:

First—That the rule relating to canoe yawls be amended so as to embody the following clause: "For racing purposes a canoe yawl shall not exceed the present Y. R. A. rating of 0.5, found by

in accordance with Y. R. A. rules. The certificate of such rating granted by the Y. R. A. or the Thames Boat Sailing Association (same rule) shall be deemed the yawl's rating, subject to verification by the R. C. C. committee if necessary."

The waterline length shall be marked at each end, and such marks shall be above water when the yawl is lying in smooth water in complete and usual racing trim.

Second—(New class) General purpose canoe. That the following dimensions shall constitute the class, with such additional wording as may be necessary: Not over 16ft. long; not over 20in. depth, deck to bottom of keel; not over 36in. beam; not less than 27in. beam; not less than 15in. in depth, taken anywhere in middle third of length; no ballast outside except center plates; shall be fitted with two bulkheads not less than 4ft. apart, well hatchway not less than 20in. long by 15in. wide, and 2ft. 6in. of well floor in length shall be clear of centerboard case; center plates shall be housable within the canoe, and all spars shall be stowable within the canoe; no other restrictions.

Third—In the event of No. II. being withdrawn or not passed: That Rule 22, second class, be altered by striking out the words "and to be clinch-built (plank edges overlapping and forming lands)".

Mr. Stewart's proposal, which was practically to admit the Butler sliding seat in the club races, was seconded by Mr. Baden Powell and supported by some of the sailing men, including the winner of the 1892 challenge cup, but it failed to secure the necessary two-thirds majority and thus did not pass. The rule for canoe-yawls was carried with but one contrary vote, but a question arose over the next proposal as to whether a bare majority or a majority of two-thirds was necessary, the result being that Nos. II. and III. were postponed to a future meeting.

This took place on Dec. 9, both proposals being defeated, leaving the rules as they have been for some years.

Aluminum and Aluminum Boats.

DANIEL J. GALANAUGH, the Philadelphia boat builder, is constructing the first eight-oared racing shell ever built from aluminum metal. It is intended for the use of the Cornell College crew and will be finished the latter part of March. Galanaugh is the first boat builder to experiment with aluminum in the construction of racing shells. His first effort was on a single-screw shell for the use of George W. Statzell, commodore of the Schuylkill Navy and ex-champion single sculler of the Schuylkill River. It is proved to be a very strong boat and some 40lbs. lighter than those constructed from any other material hitherto used. The shell was loaned to an oarsman who was entered at the Newark (N. J.) regatta, and there Charles B. Courtenay, the oarsman, saw it. He was much taken with the new style of shell and urged its adoption so strongly and so persistently that the Cornell boating authorities finally appointed a committee to go to Philadelphia and interview the maker. Galanaugh felt so positive that he could build a shell at least ten seconds faster than one constructed of either paper or cedar that he agreed to take the risk of building an eight at his own expense, and if it does not do ten seconds faster than any other shell the crew can get their money back.

The keel and gunwale are now laid in his shop on the banks of the Schuylkill. The boat will be 62ft. in length over all, 23in. beam amidships, 83in. deep amidships, 61in. deep forward, and 51in. deep aft. The shell will be composed entirely of aluminum with the exception of the washbox, which will be of wood, and the outriggers, which are to be of steel tubing, cold drawn. The shell will weigh 175lbs. all told. Ordinary paper and cedar shells weigh about 225lbs. and Waters, the famous shell builder of Troy, N. Y., claims that a 200lb. eight-oared shell is an exceedingly light one. The aluminum shell will be built in two pieces, being divided fore and aft and then joined together amidships. It is designed to carry an average weight of 175lbs. per man.

The aluminum from which the shell is being made is one-twentieth of an inch thick and weighs about seven ounces to the square foot. Galanaugh's contract calls for completion of the boat by the latter part of March, when the Cornell crew will come to Philadelphia to try the shell on the Schuylkill. If it is satisfactory Galanaugh will receive \$500.

The fact of Cornell's ordering this shell has caused considerable comment in college boating circles, and Harvard's having one as soon as possible, of iron, lead, copper, zinc, nickel, gold, and silver combined. Besides being abundant, aluminum possesses in itself qualities peculiar to no other individual metal. It is stronger than iron, while it is malleable as copper; it is as hard as silver, while it is only one-fourth the weight of that metal; it is white as polished steel, while, unlike that metal, it is unaffected by the atmosphere—that is, it does not corrode or rust. It may, well be asked, if aluminum is so plentiful, and if it possesses so many excellent qualities, why is it not more extensively used? The answer is, it is too dear. Its high price has arisen from the difficulty, which hitherto has existed, in separat-

ing the metal from its combinations as formed in nature. The ore of iron has only to be thrown into a blast furnace, along with a flux, and the metal flows; but it is otherwise with the ore of aluminum; it has hitherto declined to be treated so expeditiously. A cheap method of attaining the end in view has been the quest of chemists and metallurgists for years. This long-sought-after process has been at last discovered by a Dr. Meyer, of Berlin, by which the metal can be produced at about twopence per pound (in 1888 the price was \$1,000 per pound); the price to-day is about 4s. per pound.

The time, therefore, seems not to be far distant when aluminum will take the place of iron, copper, and brass in the construction of everything where strength, lightness and durability are essentials, and it would be hard to mention any engineering construction intended for use on land or water, and it might be added in air, where these three qualities are not a necessity.

SEBROF.
—Engineering.

The W. C. A. Winter Banquet.

CHICAGO, Ill., Jan. 8.—It is usually supposed that a welkin is something that lives out of doors, but this is not the case. There was a fine, large welkin at the Wellington Hotel here last night, and it was made to ring, whether it wanted to or not—you know a welkin has to be made to ring, it never does it willingly—not only once, but several times. No canoe banquet is all right without a welkin, and this one was all right, because it was given by the Chicago Canoe Club to the members of the W. C. A., on the occasion of the winter meeting of the executive committee and the presence of a number of visiting canoeists.

The description of a canoe banquet is much like the description of a battle—it can be done best by a man who wasn't there. At this writing

of the proper conduct of a canoeist. A Voice: "You were away off there."

Mr. Munger called for Mr. Spencer of Bloomington. Mr. Spencer spoke briefly. Two years ago he had had to shoulder the responsibility of making a speech in place of the FOREST AND STREAM man, who was absent. Would the latter now make the speech he had had up his sleeve for two years? The chairman promised "apple opportunity" for this as soon as the back numbers of FOREST AND STREAM could be obtained. His pronunciation was corrected, but he said he couldn't say apple opportunity any better than that, and he didn't believe anybody else could. If so they should have apple opportunity, all of them.

Billy Friese, aus Milwaukee, told a touching story of the love affair of a certain Corinthian sailor, and then there was a song to the effect that "There is a Tavern in Our Town," at the first burst of which the entire Dago orchestra on hand rose and fled in a body, deserting their instruments, which became spoils of war.

Mr. H. C. Crane expressed regrets for the Cincinnati brethren who could not be present at the banquet or at the summer meet, but promised to have them all there at Ballast next July.

MORE MUSIC.

Mr. A. W. Kitchin was now called on to sing about the man with the hat which had a woollen string for binding. Mr. Kitchin informed the audience that—

"There was a little man and he wasn't very rich.
And when he died he didn't leave much;
But he had a little hat with a great big brim,
All bound round with a woollen string."

The fact that the deceased gentleman had a penchant for wool in

time is brief, and any description must be curtailed. It was a plenty good banquet, and a regular canoeing time, and that covers the case perfectly.

The banquet was in the ladies' ordinary of the Wellington, and the committee of the Chicago club had done their work admirably, as well as the management of the hotel. Mr. Lee and Mr. Ware are at home in ceremonies, from a hanging bee to an installation, and Chicago had nothing to regret. The menu was good, the tables tastefully decorated, and P. F. Munger was at the front end of the assembly.

There were present as hosts the following members of the Chicago C. C.: Messrs. P. F. Munger, Dr. C. F. Matteson, J. H. Ware, C. W. Lee, L. J. Marks, D. H. Crane, A. W. Kitchin, R. P. Marks, A. J. White, H. B. Cook, J. Turrell, H. C. Waters, D. M. Lord. The guests were: Messrs. E. H. Holmes, F. B. Huntington, F. W. Dickens, Emil Hansen, Hugo Hansen, A. W. Friese, Chas. Thompson, Geo. Nash, G. B. Gage, and A. P. Chapman, Jr., all of Milwaukee; Judge Maxwell, of Cincinnati; Mr. T. J. Kirkpatrick, of Springfield, O.; Mr. H. D. Spencer, of Bloomington, Ill.; Mr. H. C. Crane, of Cincinnati; Messrs. W. H. Crawford, O. A. Woodruff and N. H. Cook, all of Dayton, O.; Messrs. B. M. Gardner and Chas. Rogers, both now of Chicago. There were also present at different times several representatives of the daily press, all of whom Mr. C. W. Lee dutifully assisted in their labors.

"Do you see that gentleman over there at the head of the table?" Mr. Lee would say to the press men, pointing to the dignified figure of Mr. L. J. Marks. "I mean the man with the long auburn whiskers. Well, that is L. J. Marks, a member of the life saving service. He saved five lives at one trip out on Lake Michigan last summer—brought 'em all in, five of 'em, off from a capsized yacht, all in his canoe. Yes, a canoe is much safer than a yacht. Yes, it is too bad about Mr. Marks (with regret in his voice) we have to bar him in all the paddling races at the summer meets. He will insist on wearing whiskers, and you know we don't allow any sails or any undue advantage, you can readily see what the result would be if we allowed him to go into a race. The wind would follow him all over. You may tell the public that stern justice is the watchword of the W. C. A. We play no favorites. Now, what are you going to have?" The results of Mr. Lee's coaching are not yet apparent in the morning papers, but the likeliest guess is that they won't have anything at all, if the press boys could use all the hospitality that was offered them.

After the hour was duly advanced Toast Master P. F. Munger made a few solemn remarks and asked Mr. R. P. Marks to continue the exercises by a brief talk on canoes. Mr. Marks said he didn't know a canoe from a summer girl. "Once he was out in a canoe over at Ballast with a girl, A Voice: 'Yes, and it was my girl, too!'" and they really knew so little about canoeing that they hugged the shore. (Cries and loud exclamations of surprise and disgust at his ignorance

decoration seemed to interest those present very much, for there was a stamping of feet in chorus, and a general exclamation in unison about the character of said string. The orchestra came back when Mr. Kitchin got to the twelfth verse. I couldn't see any difference in any of the verses.

Mr. O. A. Woodruff ("The Sliver") was called up, but said he had no ideas, except that he thought Mr. White's camera ought to be barred about this. He would call on his friend Mr. Rogers, the man with the wooden leg.

Mr. Rogers said that he found a wooden leg very useful in winter, as it never got cold, and also useful in summer canoeing, as it couldn't sink. Also, it could not be pulled. He had heard the whole crowd was pulled at Oshkosh. They couldn't have pulled him if he had been there, not on his wooden leg.

The orchestra now ventured into the door, and with some trepidation assisted in the rendition of the African aria known as "Hear Dem Bells." Mr. Harry Cook, who has only been married two weeks, was called on to tell what he knew about married life. He earnestly endeavored to elucidate some few truths as to domestic bliss, but was not equal to it, and finally burst into tears and sat down. Mr. A. J. White, a bachelor, failed also when asked to tell what he didn't know about married life. Mr. D. M. Lord, who lives in the same neighborhood as "Feather" Ware, wished to enter an indignant denial of the fact that Mr. Ware had only gained 1lb. in weight in ten years. He was satisfied Mr. Ware was picking up right along.

CANOEING A PURE SPORT.

Mr. T. J. Kirkpatrick, of Ohio, spoke clearly and handsomely for canoeing as a sport. It was the only pure sport of general practice, was strictly and unquestionably amateur and above reproach. He was interested in a bicycle manufactory, but he was sorry to say that bicycling was no longer a clean amateur sport. He loved the canoe-man, to whom a bit of hunting was of more value for a prize than any gold or silver or any convertible prize.

Mr. D. H. Crane now told a story about Charlie Lee. He said he once saw Mr. Lee measure off a place on a board, which he was making into a sliding seat, and then go to work and saw along the mark. He heard a large, round, sinful swear word fall from Mr. Lee's lips as he stood there unobserved. In short, Mr. Lee had left the rule lying on the board and had saved both the rule and board in two. He was satisfied that Mr. Lee was the boss absent-minded man.

Judge Maxwell, of Cincinnati, made a scholarly and able speech on Association matters. He was fond of Ballast Island. He was satisfied that when the angel Gabriel was skating around over Lake Erie in the early days, with his hands full of jewels, he stubbed his toe and spil-

LONDON, Dec. 6, 1892.—Editor Engineering: The following facts and figures will doubtless be interesting to many of your readers. The metal aluminum, of which the general public sees so little, is nevertheless the most abundant of all metals. Not a hill nor valley exists in the universe which does not contain it.

Those who have not made minerals and metals a special study, will be startled when told that there is ten times more of this metal in the world than there is of iron, lead, copper, zinc, nickel, gold, and silver combined. Besides being abundant, aluminum possesses in itself qualities peculiar to no other individual metal. It is stronger than iron, while it is malleable as copper; it is as hard as silver, while it is only one-fourth the weight of that metal; it is white as polished steel, while, unlike that metal, it is unaffected by the atmosphere—that is, it does not corrode or rust. It may, well be asked, if aluminum is so plentiful, and if it possesses so many excellent qualities, why is it not more extensively used? The answer is, it is too dear. Its high price has arisen from the difficulty, which hitherto has existed, in separat-

shoot at 10 live birds, one trap. Old Long Island rules, 21yds. rise, a purse of \$50, divided \$30 and \$20, took place at Martin's & Gottmartin. 1111001117—8 J Rogers. 11101010010—4

The following letter received from A. Smyth, secretary-treasurer of the Hamilton (Ont.) Gun Club, will enlighten American shooters as to the methods to be employed to get their guns and ammunition across the border. "We have arranged with the Customs, authorities as to the entrance of guns of American shooters attending our tournament on Jan. 17 to 19. The way you should do, is to ship your gun from your home or the point you leave U. S. in bond, to Hart & Lyne, Custom house brokers, 22 John street, Hamilton, Ont. When you reach here, you go to them, and make a deposit of the amount of the duty, on your valuation, which should be about right; and when you are through, you return the gun to them, and they refund you the amount you left as a deposit. They then ship your gun to the point at which you entered Canada, or such other place on the border as you desire. This you will find a simple mode of handling this business, and in our shoot last January, had not the least trouble. We will be pleased to see you here, and will endeavor to make your visit pleasant."

Thus far the following clubs have entered for the Kings county (Championship) tournament of the Coney Island Athletic Club: Atlantic Rod and Gun Club, Coney Island Rod and Gun Club, Parkway Rod and Gun Club, Crescent Gun Club, New Utrecht Rod and Gun Club, Vernon Gun Club, and Unknown Gun Club. The Glenmore and Erie Gun Clubs are also expected to enter. The first shoot will take place on Jan. 24, at West End, Coney Island. The shoots will take place on the fourth Tuesday of each month thereafter.

The Nickel and Mechanicsville Gun Clubs shot a match at Perth Amboy, N. J., on Jan. 2. Each team was comprised of ten men and five men shot each. The scores were: Nickel—O'Hara 2, J. Rea 5, C. Rea 7, Kenahan 7, Bloodgood 7, Walters 5, Applegate 5, Ardes 4, Langon 4, Wallace 5, total 47. Mechanicsville—Workley 4, Spaford 2, Roberts 4, Selver 6, Frazee 0, Flanagan 6, Hauser 1, Roberts 3, Bourland 5, Dill 4; total, 35.

Ed. Throckmorton and Ed. Cooper shot a match at 100 targets at Red Bank, N. J., on Jan. 2. Throckmorton scoring 76 to Cooper's 71. Then they shot a match at 25 live birds each, this resulting in a tie on clean scores.

Arthur W. Du Bray is in the Blue Grass State creating a boom for Parker guns.

The Brunswick Gun Club of New Brunswick, N. J., held its monthly shoot on Jan. 2, each member shooting at 20 targets for the club badge. V. S. Voorhees scored 16, J. H. H. getting 16, V. E. Rea 5, C. Rea 7, Kenahan 7, Bloodgood 7, Walters 5, Applegate 5, Ardes 4, Langon 4, Wallace 5, total 47. Mechanicsville—Workley 4, Spaford 2, Roberts 4, Selver 6, Frazee 0, Flanagan 6, Hauser 1, Roberts 3, Bourland 5, Dill 4; total, 35.

Ed. Throckmorton and Ed. Cooper shot a match at 100 targets at Red Bank, N. J., on Jan. 2. Throckmorton scoring 76 to Cooper's 71. Then they shot a match at 25 live birds each, this resulting in a tie on clean scores.

Arthur W. Du Bray is in the Blue Grass State creating a boom for Parker guns.

remaining members who were eligible to the honor seemed disinclined to serve.

At this juncture quick-witted Mr. Belden stepped into the breach and asked to be allowed to occupy the chair. Mr. Quimby had unsuccessfully attempted for some time to make him do this thing and so fell into the trap. Whereupon Mr. Belden, in his capacity of chairman, appointed Mr. Quimby to the vacant position on the committee, with the added honor of being its mouthpiece.

Secretary Squires read letters from Chas. Tatham, of Tatham & Bros.; E. R. Gilman, of the Greensboro Sportsmen's Association, and Jas. M. Green, of the Capital City Gun Club of Washington. Mr. Tatham regretted his inability to join the American Manufacturers' Association, and advocated the merging of the rival organizations. The letters from Messrs. Gilman and Green were in regard to the methods and schedules of the new association, and later other letters bearing on this subject and asking for dates were read.

The question of programme and handicap next came up for consideration, and T. H. Keller made a motion, which was carried, that a cash prize of \$50 be offered through the press for the best system of handicapping submitted, said prize to be awarded by a committee consisting of the Board of Directors. Mr. Parker made some remarks on what he considered an attractive and varied programme that should give all shooters a fair show, and later proposed some improvements in sheet iron blinds to take the place of wooden ones now in use; and also recommended a small screen inclosure about the feet of the shooter to prevent their edging away for better shots, which, in the case of quartering birds, often gave them an unfair advantage. Mr. Parker's remarks were received with favor, and the Board of Directors was instructed to vote to secure such appliances.

Messrs. Belden and Dimick now returned from a short conference with one of the heads of the Interstate Manufacturers' and Dealers' Association, and reported that some definite action would be taken in the matter of consolidation before 3 o'clock, Jan. 11, for which day and hour a meeting of the American Manufacturers' Association was called.

The meeting then adjourned.

Anent Shooters and Shooting.

Editor Forest and Stream:
It is a great satisfaction to see the many articles in the FOREST AND STREAM touching upon the trap-shooting, and I expect much good may come out of a free expression of opinion by those interested in the "smashing of targets" through your widely circulated paper. It is time that those deeply interested in the future of the sport should make a break from the fetters cast around the amateurs, if the sport is to remain an open sport for all. And unless some equitable rules be made, ere long the interest will be centered only in an occasional shoot among the experts, mostly all of which will be "trade representatives," or those who shoot as a business. And when this does come, where will be the field for recruits? Certainly not among the present amateurs.

But it need not be reduced to an extreme. There are equitable grounds, such as will admit all to shoot, and will surely recruit the ranks; but to attain such results it becomes necessary to go over the records as published in the FOREST AND STREAM, note the scores of the many events, see the list of contestants and note the names; and to those familiar with certain names which appear in most of the great events, see the amounts which have been paid to them from the purses of the contestants, and then see the amounts which have been divided among the remainder, and say if 50 per cent, or even 40 per cent, is not an unfair proportion to go to first prize at the expense of the rank and file of each event, and act accordingly.

You may say that the expert will always get the most, so say I, and I know of no reason why they are not entitled to it, but I do see a good reason why they should not. The expert is a professional shooter, and his money is taken out as now divided. There are many ways which can be devised where every shooter can get the benefit of all the birds he breaks and still leave the greatest amount in the purse to the best shot. Suppose a club or other manager gives a shoot, he or they charging the usual two cents a bird to each contestant, and a dollar each to be charged for entrance, and every bird broken is credited to each shooter, and the amount of each shot is added up; then there will be missed enough to amount to thirty per cent in the hands of the manager (as shown by the record); then let the three or four best scores of the event divide that amount equally, as may be agreed upon; it will pay all according to their score, and the manager has the benefit of all that can be gathered from the misses. In this way more shooting will certainly follow, and the complaint of the expert that he is not getting his money will be settled, and if the experts who are in it for money only want to gamble beyond this, let expert wagers with expert to his heart's content among themselves.

Such an arrangement will satisfy the amateurs and the field for the expert seems broad enough to satisfy a modest ambition. Next, "set the traps right," according to some rule as to elevation and distance to be thrown, and remove all obstacles between the shooter and the target, except the target itself, and set the trap on the level with the shooter. Initiate the worthy examples of the live bird shooters—in fact have fair play all around, and as an improvement at the score, change the line of march from trap 5 to trap 1, but shoot as now from trap 1 to trap 5, for obvious reasons—most important of which is that of safety, and to avoid interference with the shooter. The shooting will be kept as now, but the man who is in the habit of loading his gun on the march, won't come poking his gun into your presence in the act of loading while you are shooting. This will be the order:

No. 1, shoot and go to rear of trap No. 5, there to stay while the others shoot.
No. 2, shoot and go to trap No. 1.
No. 3, shoot and go to trap No. 2.
No. 4, shoot and go to trap No. 3.
No. 5, shoot and go to trap No. 4.
No. 1, who was behind No. 5, goes to trap 5, etc., etc. In this way there will be more comfort at the score, for the nervous man, as every man after shooting turns his back to the next shooter, instead of rushing into his presence at a moment when the shooter is best left alone. Mr. Editor, I have not asked for any special space, but if it is of interest to merit it, shall be pleased to see this matter set before your readers, and hear the opinion of all. I do not claim full originality as to all I have set forth, but hope to aid in the agitation until much good is accomplished.
SIO BROMLEY.

Here is a Challenge.

EASTPORT, L. I., Jan. 9.—*Editor Forest and Stream:* Believing that the marked advantages of wood or more properly, nitro powder, are the property of the writer desires to publish the following challenge: He will shoot a match with anybody at 20 live birds, Hurlingham rules to govern, using black powder in both barrels—his opponent to use any brand of wood or nitro powder. As the match is essentially to determine the relative advantages of the two powders, the writer requires that, his average at live birds being only 75 per cent., he be allowed equal birds scored to place him on a footing of equality with his opponent. The above match to be on grounds mutually agreed upon, and for not less than \$100 a side.

A contributor to the New York Herald writes: "Not one grain of black powder is ever used now at any shooting contest at live birds at any shooting club where the use of the second barrel is of any use." The issuer of the above challenge will wage any sum from \$50 to \$500 on the following terms: He will shoot at 20 live birds, Hurlingham rules to govern, using black powder in both barrels—his opponent to use any brand of wood or nitro powder. As the match is essentially to determine the relative advantages of the two powders, the writer requires that, his average at live birds being only 75 per cent., he be allowed equal birds scored to place him on a footing of equality with his opponent. The above match to be on grounds mutually agreed upon, and for not less than \$100 a side.

Individual Matches of 1892.

Below will be found a list of the individual matches at live birds (25 or more per man), reported by FOREST AND STREAM during 1892, and we feel confident in asserting that no other paper can show so complete a list:

Date.	Place.	Winner's Score.	Loser's Score.	Birds shot.
1. Harrisburg, Pa.	Ed D Fulford.	96	J L Brewer.	94
6. Burnside, Ill.	J W Dukes.	41	W P Mussey.	37
9. Newark, N. J.	G L Freche.	27	C Reinhardt.	24
13. Burnside, Ill.	L M Hamline.	19	F A Place.	18
15. Larchmont, N. Y.	E G Murphy.	71	Wm Brown.	52
20. Dexter Park, L. I.	M Fay.	23	J Pilkington.	23
21. Marion, N. J.	H E Smith.	34	C Reinhardt.	31
23. Burnside, Ill.	B Rock.	45	G Burns.	41
27. Dexter Park, L. I.	R Wood.	23	J Bennett.	21
28. Macon, N. J.	F P Class.	94	F Lumbreyer.	89

FEBRUARY.

2. Burnside, Ill.	J W Dukes.	47	C B Dicks.	37
4. Harrisburg, Pa.	J S Dustin.	24	H A Bach.	21
4. Burnside, Ill.	D C Gammon.	24	H A Bach.	19
1. Milwaukee, Wis.	Dr Carmichael.	37	C B Dicks.	32
1. Milwaukee, Wis.	Shepard.	21	Frieze.	16
16. Burnside, Ill.	F A Place.	42	Geo Burns.	35
18. Dexter Park, L. I.	F P Class.	94	F Lumbreyer.	80
20. Albany, N. Y.	W T Lord.	91	W G Parr.	74
22. Burnside, Ill.	E M Deming.	37	Jm Neff.	29

MARCH.

1. Burnside, Ill.	C W Budd.	93	E D Fulford.	81
2. Burnside, Ill.	W P Mussey.	86	T A Marshall.	83
3. Burnside, Ill.	C W Budd.	49	E D Fulford.	38
8. Paterson, N. J.	F P Class.	23	J Vermaer.	23
9. Essington, Pa.	R Sheet.	44	W Greenwood.	43
9. Essington, Pa.	P Minch.	42	J Rothaker.	35
11. Yardsville, N. J.	J E Hill.	63	M H Ruppell.	44

NEW YORK, JANUARY 19, 1893.

VOL. XL.—No. 3.
No. 318 BROADWAY, NEW YORK.

SNAP SHOTS.

SENATOR JOHN SHERMAN, chairman of the Senate Committee on Foreign Relations, introduced a bill on Dec. 20, 1892, to extend to the North Pacific Ocean the provisions of the statutes for the protection of fur seals and other fur-bearing animals. The bill was referred to his committee, and was by him reported back to the Senate on Jan. 12, and was passed without debate after a brief explanation. "Mr. Sherman said that in view of any judgment which may be made by the tribunal of arbitration next summer in respect to the fur seal fisheries it would be necessary to authorize the President of the United States to extend the present law (which applied only to Bering Sea) to the North Pacific Ocean. That was the judgment of all who knew anything about the subject matter. The real trouble, he said, about the seal fisheries was in the North Pacific. The bill had been recommended very clearly and forcibly in the message from the President. It had been prepared by the Secretary of State, had met the approval of every member of the Committee on Foreign Relations, and the necessity of its passage was obvious to everybody."

Pelagic sealing has caused greater destruction of fur seals than all other modes of capture combined, and it will soon settle the entire controversy over Bering Sea by exterminating the subject of contention. We have frequently called attention to the accepted fact that 50,000 females with their unborn young are thus secured during a season of average prosperity, and there is no room for doubt that twice as many more are killed and afterward lost. The Government cannot act too promptly for the protection of these valuable animals whose very existence is seriously threatened.

The night was atrociously cold. The elevated railroad car was as frigid as a Washington Market cold storage game vault, the passengers rapidly verging toward the condition of refrigerated game. The train had consumed an hour and seventeen minutes in going a mile and a half. Most of the unfortunate Harlem bound passengers had made their escape at the way stations and taken to the horse cars; others had climbed down the posts to the street. Only three desperate men remained. One of them broke out into swearing loud and vigorously, and then he delivered an oration to the two other captives and the train guard. "We've got a Legislature this year that won't stand this kind of business," he shouted. "It's an outrage on the public, that's what it is; hanging a man up here in the air to freeze to death. We'll pass a law to stop it; that's what we'll do. We've got a Legislature this year that'll fix things."

"What's the cause of the delay?" asked the second man, for the four hundredth time.

"Engineer let his train slide back on the down grade; it crashed into the train behind and blockaded the whole road," explained the guard.

"Humph!" said the third man, "it is not a new law we need; it's a new superintendent and an engineer with brains in his noddle." And there came a jerk and a bump and then a stand-still, to give force to his remarks.

Which little incident of railroad travel in New York in a cold snap is commended to the attention, consideration, reflection, instruction and moralizing of those good people who think that if the deer, and the quail, and the grouse, and the trout, and the bass are not protected, the panacea is to be found in a simple change of law.

The winter convention of the New York Association in Syracuse last Thursday brought together a body of earnest and enthusiastic men who constituted an assemblage admirably typical of the sportsmen of the State. The subject of most import coming before the convention was that of game law amendments. In view of the fact that the present code has been in force for so brief a period, that on the whole its working is proving satisfactory, and that the statute will be attacked by a multitude of proposed changes, coming from friends and enemies of protection, it was determined by the convention to pursue for the present the policy of hands off. A resolution was adopted urging the Legislature to forego changing the law, and to refer proposed amendments to a committee for report in 1894. This action will appeal to sober reason as the wisest that could have been taken. After long consideration by a special codification commission the Gould bill was submitted and adopted. It has imperfections, but the practical working of the law. Chief Protector Pond and the live protective societies declare, is efficient.

It will protect the game and the fish if only the Legislature will let it stand as it is. The Association may with reason ask the sportsmen of the State, whether affiliated with it or not, to indorse and support by every available influence and expedient the policy of "hands off."

We print to-day the portrait of Mr. Alex. Starbuck, whose relations of angling experiences on the North Shore of Lake Superior have constituted so pleasant a feature of our angling columns. When not off fishing, he is a resident of Cincinnati. He is a trustee of the famous Cuvier Club of that city—an institution which was established originally by a few enthusiasts as a fish and game protective association, and now owns property valued at more than \$82,000. Mr. Starbuck is an accomplished fly-fisherman and a collector of works on angling. He is possessed in generous measure of that sound and practical philosophy that accepts the good things of an angler's life as they come, and endures the ills with fortitude. He delights in mild adventure, and no less in the telling of it; he has an iridescent and scintillating aurora borealis vocabulary, and of all men, who are fishing and writing at the close of the nineteenth century, is the one who can write the most about a trout without ever once alluding to it as a trout. Mr. Starbuck enjoys a wide acquaintance and warm friendships among anglers. The companion of his North Shore excursions, known to our readers as Ned, is Mr. P. E. Roach, of Cincinnati, Third Vice-President of the Cuvier Club.

It will be remembered by those who were most interested in the writings and life of "Nessmuk" that shortly after his death a hint was given in these columns that some of his friends might be invited to contribute toward a fund to provide a stone for his grave. In his lifetime "Nessmuk" had designated a certain loved spot "under the hemlocks" as the site where he desired that his grave might be. When the proposition respecting the monument fund was broached there existed some doubt whether this selected piece of ground where the grave then was could be retained permanently for cemetery purposes, and pending the decision of that question the fund contribution was postponed. A removal has been made to the village cemetery of Wellsboro (Pa.), and there is no longer any reason why the monument may not be provided and put in place, where it will be cared for permanently. With this preliminary announcement we shall next week state definitely just what is proposed, and we trust that the undertaking will have the generous support of those who through his writings in FOREST AND STREAM learned to admire "Nessmuk" and to respect and love him.

The death of Senator John E. Kenna, of West Virginia, has removed from public life a character of many admirable qualities. A man of recognized ability and many varied accomplishments, Mr. Kenna was to be counted among a score of Senators and Congressmen who have found in the woods and on the trout streams physical up-building, re-creation and clarifying of the intellect for taking up anew the labor of their lives. Mr. Kenna was an accomplished all-round sportsman. He loved to follow the hounds, to pursue the deer, to lure the trout, in the wild surroundings of his own West Virginia. We reproduce to-day a charming amateur photograph made by him, not long ago, of a group, including two companions and himself, while on a fishing trip on Howard's Creek, in Greenbrier county, West Virginia. And we reprint from an earlier number of FOREST AND STREAM an admirable bit of verse, which he once sent us, in praise of a favorite dog.

It has generally been understood that something was "going to be done" in Pennsylvania by the State Sportsmen's Association, but the report sent us by President Brelsford comes as a genuine surprise. The sportsmen of the State have gathered in convention, stated their views, adopted their findings, put their conclusions in the form of a bill, radical, comprehensive and bold in its character, gained the attention of the Legislature, secured the appointment of a special Legislative committee, and have done all this so expeditiously and with such spirit that the attainment of their wishes appears to be a foregone conclusion. The sportsmen of Pennsylvania may well be congratulated that their interests are in such efficient hands.

Commissioner E. M. Stilwell, for many years at the head of the Maine Commissioners of Fisheries and Game, died at Bangor, last Sunday night, Jan. 15, aged 83 years. He was born in Massachusetts, but early went to Maine. Mr. Stilwell was a great lover of animal life, and of the woods and waters; he was the controlling spirit in building up Maine's fish and game protective system. Assuming the responsibilities of that work when it was of necessity in large measure tentative, he was beset with untold difficulties, and subjected to many perplexities. A man of strong convictions, and exceedingly frank in giving them expression, he won for himself and his measures bitter opposition among some classes, and among others the most cordial approbation, with heartiest confidence and support. With the people of Maine, and with the people of this country and of Canada, wherever indeed an intelligent interest in the subject has been aroused, Mr. Stilwell's name was synonymous with fish and game protection.

The findings of the committee in the FOREST AND STREAM's Amateur Photography Competition will shortly be announced. The committee consists of the following gentlemen: Mr. Edward Bierstadt, Hon. Theodore Roosevelt and Mr. Wilmot Townsend. Mr. Bierstadt is widely known in photography circles. Mr. Roosevelt's name is familiar as that of a public man who is also an accomplished sportsman, and Mr. Townsend has won well-deserved praise for his wild fowl drawings, which have been printed in this journal. It is an occasion of honest pride that these gentlemen have kindly consented to serve the FOREST AND STREAM and its friends by assuming this delicate task of rendering a decision where the average quality of work is so high.

"Buffalo" Jones, of Kansas, has just delivered to the Corbin game preserve in New Hampshire ten more buffalo, which, with the original stock and its increase, now make thirty-three head on Mr. Corbin's tract. Mr. Jones reports that the buffalo appear to be thriving, and if the stock shall not be affected by the moist climate he anticipates for the undertaking a most complete success. Because of their being so much in the timber and sheltered from the sun the Corbin buffalo have taken on a coat distinctively darker than that of the plains buffalo, and assimilating the hue of the woods buffalo.

The average man will be inclined to sympathize in the view expressed by a Pennsylvania correspondent last week that the proposition to give game wardens authority to search the person of suspected poachers would be going a step too far in violation of personal rights. On the other hand, the average man who reads Mr. Hague's note of a specific instance where such a search proved rich in results will probably assent to the plea that in aggravated cases personal rights may be violated without arousing a very violent storm of public indignation.

The Supervisors of counties in this State are authorized under the new game code to enact local game and fish ordinances extending protection, but none of the county laws can take effect until the first day of May next succeeding their adoption. The State code approved May 5, 1892, repealed all existing county laws. It follows that no local laws can be in effect prior to next May. As there is no State law on rabbits (hares), the January shooter may this year scour the covers, pot his birds, and innocently aver that he is rabbit hunting.

That report of the Massachusetts Association Committee on Acclimatization is a record in which every citizen of the Bay State should take pride. It deserves, too, the widest proclamation as an instance of generous, public-spirited and far seeing enterprise. Whatever shall be the ultimate success or want of success attending this enterprise, those who have suggested, supported and achieved so much already have manifested a spirit worthy the emulation of kindred societies everywhere.

Dr. James A. Henshall has resigned his position of Special Agent, in charge of the Angling Exhibit in the Government Building, at the World's Fair, in order to devote his entire time to the Angling department of the Fisheries Building for the Columbian Exposition Company.

PERHAPS those who believe that wolves are always lean and hungry never saw the wolf of the plains in buffalo days. In its winter coat, too, a lean wolf could not be readily distinguished from a fat one.

The Sportsman Tourist.

ON THE NORTH SHORE.—II.

The Trip Up.—II.

(Continued from page 32.)

THE dawn disclosed the pink of the coming sun, swiftly growing in glory among the snowy clouds in the east, and a favorable breeze that would race us along with delightful speed to Gros Cap. An early breakfast was soon partaken of, and then all hands busied themselves in breaking camp. Everything was quickly put aboard, and that tattered old rag of a sail was again exhibited to the beauties of nature, as if it, too, was spread for especial admiration. Ned, who is generally a paragon of patience, again stormed at the boatmen for not having repaired it. A promise that the next camp would see it in good condition satisfied us, and then the subject was dropped. As we sailed out of the bay into the river, we saw the craft of the Kentucky gentleman far in advance, with the "Soo" party, and the students a close second. We were laggards, and it looked as if we would remain so, as the distance between us increased instead of diminished. We had, however, despite the slowness of our craft, a most delightful sail and under the bluest and most transparent of skies. Here—

"Nature had known no change, felt no decay,
For untold ages in this ancient land
Her dark woods wave, her rivers hold their way.
Majestic as when first from nature's hand:
Down the dread depths, as in the dawn of Time
The raging cataracts their waters urge."

Here is a region that will ever tempt the ardent angler, for it is a place to meditate over life's fitful change, as well as enjoy the pursuit of the ever beautiful trout.

It was evident, as we progressed, that the wind was on the wane, but as we only contemplated making Gros Cap, it mattered not. Arriving there, by 9 o'clock, we were quite surprised to see the three boats that were ahead of us ashore at the small island, with the entire party dotted here and there around it. This determined us to make for Maple Bay, as eight anglers at one place was entirely too many to afford good sport. We wanted more solitude, and so sailed away. As we passed the rear of the little island, we noticed the Kentucky angler poised on the apex of a high rock playing a good-sized trout: but, alas! it escaped. He cried out to us, by way of explanation over his unfortunate loss, which seemed to fret him, that it had got away with his fly. I thought when I saw him handling the struggling trout, that it must be well hooked indeed if it did not escape, for it struck me from my point of observation that he gave him little or no play. Ned said he would wager largely that his leader became untied, for the knots that he saw in one of them were decidedly unreliable and likely to fail when the angler is striving to save an impaled fish of undue proportions.

About the time we reached Goulais Bay Point the wind had entirely died out, and the bay presented an un-rinkled surface. It was 9 miles across, and with a burning sun overhead it was no child's play to cross over with the oars. The boatmen, however, cheerfully stripped to the buff and took the blades in hand with a willing heart. They perspired freely as they swung the heavy oars, and but once or twice on the way over did they stop for a rest. Emery, as usual, kept his weather eye open and scanned the blue dome for signs of an approaching storm. He was disappointed in his observations, for the azure sky contained nothing but a few pin-feathery clouds that were without apparent motion, while the lake was as smooth as if oil had been poured over it. No indication of storm or even of a gentle breeze, and so intensely hot you'd imagine you were in the tropics. We all sighed for the shore and shade, but it was a long pull over the quiet bay and would be hours before they could be realized. As an expedient to while away the time, as well as endeavor to catch a fin or two, Ned suggested a troll, and so overboard went the glittering spoon. It, however, received but one strike after a long wait, and then as it was quite a drag on the boat, I pulled it in as a relief to the sturdy oarsmen, who were already overtasked. Time and again I told the men to rest, but Emery, casting his eyes above, was confident a storm was quietly brewing, and after a few rapid words in Chippewa to Peter, they bent to their oars with increased vigor. Finally, when within about a mile of shore they took a good rest, satisfied they were then out of all danger. A slight ripple now ran o'er the unruffled surface, and soon another and another followed, until in a short time we had a refreshing breeze, and then the little waves, bearing silvery and pearly streakings of sunshine began to form, and the old rag was once more hoisted and spread to the favoring wind. It was now about three miles to our destination, Maple Bay—and that we expected to make in an hour if the wind held. Our course was along a shore where the whole landscape was aglow with splendor; every tint and hue imaginable seemed to intermingle in that sea of color, and every jutting crag and dome and pinnacle of sullen rock flamed as though a thousand rainbows had fallen out of the sky and hung themselves there like glorious banners. We stand enthralled at the scene before us; no sound is heard, no note of bird breaks the awful stillness. We are in the region of eternal silence and solitude. Spruce and birch and balsam generously lined the wave-washed and iron-bound coast, while the lichens, mosses and ferns, which were here, there and everywhere, united in forming a picture which is like Keats's description of beauty.

"A joy forever,
For whoso'er I looked, the while,
Was nature's everlasting smile."

We noticed as we sailed along that the lake was about eighteen inches lower than last year, for over the old familiar ground there was quite a change, and when we rounded into Maple Bay we found it impossible to land the boat, owing to the shallowness along the coast. The boatmen advised carrying us ashore on their backs and then take out the cargo of provisions. This they were confident would lighten the boat sufficiently to admit of dragging it to a safe harbor. We accepted the proposition, and so Peter, who was the athlete, carried us both ashore, and then the provisions were landed, a channel dug out and the boat pulled to the beach. Ned prognosticated all manner of disaster to us in case we desired to leave or return to our haven during an ordinary or extra-

ordinary blow. As coming events cast their shadows before I advised him to wait till it was favorable to fore-shadow the calamity. There being three of us for him to subside and his ill-boded prophecy shelved.

The boatmen having rowed us about fourteen miles that day we concluded to pitch our tents and remain for a few days and try our luck with the *S. fontinalis*, and also old Boreas should he think proper to ride down on us on one of his tempestuous gales. It requiring some time for "the boys" to get everything in good order about the camp, we concluded to defer the attempt at luring the scarlet-hued beauties till the following morning.

Ned, who had a penchant for overhauling tackle, took an affectionate look at his impedimenta, and on coming

MR. ALEX. STARBUCK.
Cuvier Club, Cincinnati.

to his book of flies eagerly opened it and proudly laid before me for admiration, as I thought, a few flies of his own creation, which were in his favorite color—red. It was the hue which so enthused him last season and it was to be the same this, unless he was cured of the infatuation by the preference the trout might manifest for mine. I had a very nice selection that were tied per order, and they were dandies I assure you, evidently the work of an accomplished artist. Among these were the Henshall, silver-doctor, Montreal, cow-dung, raven, spider, royal-coachman, Seth-Green, Oquossoc, white-miller, red-ibis, hackles gray, black and brown, and a few others unnecessary to mention. I had another lot tied by an Eastern house, but they were not satisfactory and, consequently, of little use.

During the trip the most taking fly I had was the Hen-

MR. P. E. ROACH ("NED").
Cuvier Club, Cincinnati.

shall, next came the silver-doctor, then the hackles. There was one, however, the name of which I am unable to give, that had two white feathers, the same in gray and a dun body, which proved a very attractive lure. Indeed, I used it frequently for my dropper. Ned highly praised my selection and, when he compared the work with his, admitted the superiority of mine, but doubted if they would prove more attractive than his own. They did, nevertheless, and he made due acknowledgment of the same before we had been a week in camp. After he had toyed sufficiently with his tackle to satisfy his desire he laid it tenderly aside and then challenged me to a rubber of cribbage, in which he came out second best.

As evening came on a faint crescent moon looked down upon us, a gentle breeze cooled our brows, the odor of the balsam diffused itself on all sides and then the vesperian hymn of the little insects warned us to hasten for the repellent they so dreaded. Being somewhat weary with the long confinement in the boat during the day, under a burning sun, we early sought our blankets and soon fell into the arms of Morpheus.

On stepping from our tent at early dawn we were at once made aware of a slight sprinkle of rain, an east wind and a lowering sky that presaged anything but clearing weather. Concluding to try for the trout, rain or shine, we got ready for the advance, but just before starting for the fishing grounds the boat containing the Ann Arbor students sailed into the bay and anchored opposite our camp. The party did not make use of the boatmen as pack horses, but plunging in waded ashore like genuine sportsmen. They could well afford to do so as they all had top boots, which insured them a dry pas-

sage. They had no sooner landed than one of the party took his rod, and wading out to a favorite rock, where we had always caught trout, commenced casting. He, however, whipped the waters in vain, for no trout rose to his fluttering fly. Some one had evidently given him a pointer on that particular rock, but he realized nothing from it, leaving, doubtless, with a sad remembrance of "what might have been."

It having ceased raining, we now took the boat and started for our old grounds where we had such unexampled sport last season. We first tried the rock where the student attempted to steal a march upon us, but our efforts were in vain. I had a Henshall for my dropper and a silver-doctor for my stretcher, but neither seemed to attract, no matter how deftly thrown and skilfully floated. Tiring of this futile attempt, we went for the reef in our immediate front, and on reaching some magnificent cover I sent my flies over a deep and darkened crevice that I would have wagered a kingdom contained one or more of the freckled beauties, but they met with no response. Lifting the lures from the waters I once more sent them circling in the air, and then dropping them with the lightness of a snow flake or feather, just as you like, over the same spot, and still the surface remained unbroken. A third and a fourth cast were as fruitless as were many more. Ned was casting in equally as promising waters and he also failed to attract. It certainly looked ominous, but we were not discouraged over the results, as the trout is of varying moods, sometimes fierce for the fly, and again lying dormant behind some convenient boulder or in crevice deep. After a full hour's steady casting over the reef we tried the shore around Maple Bay, then Maple Island, but not a rise did we receive. We were somewhat disappointed to think that our favorite grounds did not show a sign of the coveted trout. Two things we were satisfied of, viz., either the trout were not here or were not rising to the fly. We returned to camp with anything but an air of triumph, concluding, however, to remain here a day or two longer if for nothing more than to solve the problem of the whereabouts of Mr. *S. fontinalis* and the condition of his appetite.

There was a slight sprinkle of rain in the afternoon, and with promise of a stormy night it was a cheerless evening when we sat down to supper. The sky was overcast with dark ink clouds that whirled like chaff, the wind moaned sad and cold, the waves broke spitefully against the ragged rocks, and all nature seemed preparing for an insurrection. It was really a dismal outlook, and it was manifest our plans would have to be held in abeyance. You can never depend on the old icy lake or tell from which source to expect the wind, or what the coming morn will bring forth. It may be zephyr breezes or tempestuous gales, bright sunshine or chilly shade. With all this adverse prospect we kept up a brave heart and sat around the camp-fire and made merry with cheery song and animated story. Emery told a marvelous tale of an isolated lake located in the dense forest of Canada, where you could catch myriads of trout about an hour before sunset and at no other time. He was taken to it by an old Indian hunter, but didn't think he could find it again. I agreed with him as to the closing part of the recital.

After retiring there was a rumble or two of thunder, then a few flashes of lightning, and in a short time a subsidence of the elements, and then we went into the land of Nod, where

"The unchecked thought
Wanders at will upon uncharted ground,
Making no sound
In all the corridors."

The morning opened with a heavy northwest wind, a leaden sky and a very boisterous sea, which sent the towering waves o'er the shallows in our immediate front with such terrific violence as to make it impossible to leave the shore with the boat, and therefore the fishing was deferred.

The students paid us a visit during the morning, and arranged for a rubber of whist to take place as soon as they had returned from an overland trip to the mission at Goulais Bay. It was more of an undertaking than they had bargained for, as they did not return till after dinner. On the way over they shot a few seasonable birds, which on being shown to Ned, so excited his epicurean palate that he at once started Peter on the hunt for some of the same toothsome birds, while he took from his satchel a copy of "Ben Hur" and was soon lost in the absorbing pages. Having got through with "Lucy's Mistake," which she corrected at an opportune time, I waded into one of Ballantine's works, entitled "The Sandal Wood Trader," the scene of which is laid among the islands of the Pacific Ocean. We had indulged in but a page or two of our books, when the two students put in an appearance to engage in the game we had arranged for. We ascertained on the very first hand that they were exceedingly skillful players, and when the rubber was completed they had the odd game. Ned being a little chagrined over the defeat, said by way of apology for the loss of the rubber, that they outlived us, but I said in response if he had observed my signal of having four trumps when he led them, we would have been the victors. He led trumps once too often, and that completed our overthrow.

The northwester continued the entire day, though in the afternoon the large murky banks of clouds disappeared, and the witchery of a soft blue sky greeted us; but a few paces away the lake was sending forth its deep roar, as its foaming crests broke on the beach and subsided in snowy curvatures. It was really a grand and lovely sight, this angry sea in a bright sunlight, and it made the heart and senses thrill with emotional pleasure. Lord Byron rightly says that the beauties of art and nature are not to be placed on the same level, for he

"Who lives to nature, rarely can be poor;
Who lives to fancy, never can be rich."

And again to poetically embellish:

"Long indeed the mimic works of art,
But nature's works far lovelier."

The next morning opened bright and breezy with the northwester still prevailing and a sea sufficiently turbulent to prevent an indulgence in angling. As our hunters had returned the day before without a feather, they again took the gun and went in search of some seasonable game. I told them in substance, as did the Athenian mother when she sent her son to the wars, to come back with some trophies or not at all. Ned, who had abandoned the idea of casting a fly during the day, took his camp-stool

and "Ben Hur" and sought a spot in the hazy warmth of the sun, and where a sylvan songster was warbling the tuneful bars of an aria, and lost himself in the fascinating pages of the work.

About 10 o'clock that morning one of the boatmen of the college boys came over to our camp and with an exceedingly serious aspect, as if mourning the loss of some departed friend or an absence of tobacco, handed me a scroll of birch bark. I at first thought it contained a challenge for another tilt at whist, but on unrolling was agreeably surprised, as its contents were as follows:

Windy Camp requests the pleasure of your company at dinner to-day, July 19, at half after 1 o'clock.
P. S.—Bring your chairs.
R. S. V. P.

Ned received a similar invitation, which after reading we replied instanter, dispatching the tawny messenger with the following acceptance:

Maple Camp accept with pleasure your kind invitation and will be delighted to place their knees under your mahogany. Yours, &c.,
JULY 19, 1891. S. & R.
P. S.—We'll not only bring our chairs, but that which every entertainer desires, a superior appetite. S. & R.

We at once commenced preparing an elaborate toilet for the occasion, and when ready to present ourselves to the hosts of Windy Camp were as neat and trimly dressed as a bridegroom, that is, as a bridegroom would be with the wardrobe then at our command. True, we had no swallow tails, white vests, satin ties, silk stockings, or patent leathers; but we had clean flannel shirts, corduroy short coats, vests and pants, cork-soled boots, red bandannas and soft felt hats. But the chef-d'œuvre was the hair dressing. Ned chose to appear in ambrosial curls, which fell in graceful folds over his lofty forehead and adown the flannel collar of his laced shirt, while I selected the pompadour style, which Ned said gave me the appearance of a statesman from Bitter Creek. Thus toiletted we presented ourselves to the Windy Camp entertainers with a chair on our right arm and a vacancy under our vest.

Our arrival was treated with the most pleasant consideration, more like Bohemian open-heartedness than the cold formal manner which so often sits enthroned upon the brow of aspiring genius. While the menu was in preparation we had a jolly time in swapping side-splitting stories. In this Ned was champion, for his *repertoire* of amusing and droll narratives was without end. Many of his funny fancies were touched with a delicacy of dialect and phonetic shading that were decidedly provocative of hearty laughter. He was

"For ever foremost in the ranks of fun,
The laughing herald of the harmless pun."

Dinner was at last announced, to which we sat down with an appetite that would have done honor to an alderman. The banquet was elegantly prepared, as will be seen by the bill of particulars which was inscribed upon the native birch bark, and placed at each plate:

MENU.
POTAGE.
Julienne. Poullet.
POISSON.
Sardines à la huile.
ENTRÉE.
Haricots à la Boston.
GAME.
Rara Avis.
DESSERT.
Pâtés de Gingre Fromage Americain. Biscuits au Sel.
Cigars. Café noir.

Entertaining is really an art, and we must here state, all pleasantries aside, that these young students acquitted themselves in a highly creditable manner, and when we parted from them it was with the hope that they meet us soon at our social board, but a departure from Maple Bay the next day prevented its materialization. This festive incident was the most pleasant of the trip, and will long be remembered by us.

The next morning was introduced to us in a light fog, which fortunately was soon followed by a clear sky and glittering sunshine, which painted the woods and waters in a golden glow, while the sweet song of the lake rose with a jubilant spirit, as if dreamland was floating by.

The University boys broke camp early that day and sailed at once for Bachevanaug Bay. We prepared for an angle at Grindstone Point, and while on the way stopped at the large reef, which was located about the middle of the bay and in front of our camp. We had caught many a freckled monster here on a previous occasion, and hoped we might now be rewarded with the same good luck. We kept a sharp lookout for a sight of the rocky bottom, and as soon as it showed up away went our flies in search of some red-coated knight of the reef. It was not long before Ned rose one of the patriarchs, and unfortunately being a little unduly excited, missed him.

"What a dandy!" he exclaimed.

"What a lamentable miss!" I replied.

Ned tried once more to lure the spotted veteran, and after a cast or two was greeted with a response that came with a tigerlike ferocity, and this time the skillful angler sent the cold steel into its quivering jaws. The melody of the reel rang sweetly out while the infuriated trout was speeding like a silvery arrow. The overjoyed angler was cool, patient and watchful, and as the velocity of the stricken fish faltered, the rodster slightly checked the unwinding thread, and then the bewildered beauty leaped up into the golden sunshine, scattering the pearly drops on all sides. Again he sails away in frantic circles, with a hasty trip or two to the chasms below, as if seeking some sharp-edged rock with a view of parting the line. Disappointed in this, he again dashes upward through the silver surface with a vaulting that makes as clean a somersault as an acrobat. His vigorous efforts to escape are telling on him, and his strength begins to wane. The happy angler now feels satisfied that the battle is more than half won, and thinks it high time to make the impaled fight for every inch of line he seeks to gain. The reel is slowly returning the cord, and inch by inch sulkily comes the painted reveller of the reef, determined to make an effort or two before he is ready to chant his death song. The angler knows full well the trick, and is on the *qui vive* for its introduction. Here he comes, still struggling, with a wicked gleam in his eye, and though he may reach the net within a foot or two, will assuredly play his last card. Ah! he is off with a vigorous plunge, but it is his last, for his strength is gone, his heart is broken. He is this time led to his inevitable death, and now the meshes of the net close around him, and he is tenderly lifted to the boat. What a beauty, truly a poem in crimson, purple and gold,

the loveliest fish that seeks the crystalline pool or lies poised in rocky crevice. Ned was delighted with his spangled prize, and gloated over it as if it were a pearl beyond price.

"How much did it weigh?" Full 4lbs., and that was as large a trout as we caught during the season.

I strove hard to emulate Ned, and kept my flies dropping and fluttering in the water in the most attractive places. No response came, and after having covered the entire reef, which we did in about an hour, we pulled over to the point and fished along the coast for about two miles. It was just the place for a trout to sport or feed in. The bottom was one entire series of deep crevices, shelving rocks, huge boulders and the like, and over these we whipped the waters with industrious perseverance.

Occasionally we made a change in our flies until we had offered them the choicest of our assortment, but no jeweled darling sprang from his retreat. After a while I grew tired and lolled in idleness, watching the golden, glimmering surface sparkling and flashing in sunlight, the crimsoned wood as it bowed to the gentle breeze, the yellow-winged butterflies as they sailed along the shore, the tiny dragon fly, the little blue-bodied sunbeam in its rainbow wings, and the inevitable gull as it flashed its white wings against the weather-stained rocks that shone with metallic lustre in the bright rays that beat upon them from above.

Ned finally wearied of his work and proposed lunch ashore, to which I gladly assented, as we were all tired and exceedingly hungry. The boys made us a pot of tea, which we found more exhilarating than any rank compound which comes under the head of "golden grain," or any other fancy name, which is simply imprinted as a delusion.

While we were lunching a northwest wind began to freshen, and then our astronomical Emery was all in a

SNOWY OWLS.

From a photograph by Hoff & Lasey, Fremont, Ind.

flutter, declaring it would soon blow great guns. The breeze being favorable for us we hurried not, for we felt as if we would like to see that old rotten sail torn to tatters in a gale of some kind, as the boys were so remiss in repairing it. We at last took to the boat, and then commenced the return, whipping the waters as we slowly moved along the shore. I finally had a rise from a petite trout and was glad I missed it, for to have laid it alongside of Ned's peerless beauty would have made the comparison unduly reflective. Well, to omit detail, we reached the reef, and here Ned had another rise of a large crimson and pearly spotted dandy that made his heart beat a tattoo upon his ribs. He missed, I sighed, the boatmen groaned and the wind caressed his whiskers. Alas! poor Ned, he was a perfect picture of despair, for his first rise was his last, and no matter how tempting a fly, how lightly delivered, or how skillfully fluttered, the old Roman in his robes of crimson could not again be coaxed to the surface. He was doubtless laughing in his lair as he saw the feathery deities fall and flutter above.

"Ah!" said Ned, "the conflict is o'er, the struggle is past. I have whipped and I have fluttered, and I have cast my last fly, and now I am ready for the camp," and then he slowly and sadly reeled up, content to await my verdict in regard to a retreat homeward. I was in the affirmative, and so the prow of the boat was turned to the white tents on the shore, ever in plain view. With a declining sun, which was glinting the tinkling waters and painting the fleecy clouds in royal red and fiery gold, we reached camp quite weary, though not disheartened in the pursuit of that priceless beauty of spotted carmine which the true angler travels so far and toils so hard to capture with a bit of tinsel and feather.

After we had partaken of supper Ned, who had sat in a deep brown study for a few minutes, impatiently arose and said: "I'll try how the trout rise at twilight," and so at once ordered the boat and asked me to accompany him, but being weary I declined. Off he went to the big reef where he had missed his last rise and where he doubtless expected to capture the magnificent fish which had so lamentably disappointed him. I sat on the bank in my camp chair and watched the inveterate angler as he was rowed to the reef. He was evidently bent on securing the quarry and would have parted with many a ducat if he could only return with that particular trout which had so impudently flaunted his broad tail in his face. He was, however, sadly discouraged, for after a full hour's hard and skillful work he returned, like the Knight of the Rueful Countenance, without a trophy. He was simply disgusted with the way trouting opens this season. "Me too."

Ned's trout that he had caught early in the morning disclosed, when cleaned, a full stomach of undigested minnows, one reason evidently why the trout were not eager for the fly.

ALEX. STARBUCK.

[TO BE CONTINUED.]

Natural History.

SNOWY OWLS.

ON Sunday, Dec. 14, 1890, while walking in the country just outside the city limits, I saw a snowy owl (*Nyctea nyctea*) sitting in the top of a dead tree about forty rods from the road. As this was the first live specimen of this species I had seen in twelve years' collecting I thought I would see how near I could get to it. Bringing a large tree between me and the one the owl was in, I walked up within 36 paces (as measured the next day), where I stood and viewed him through a field glass for at least ten minutes, and then turned away and left him undisturbed.

As I had never secured a snowy owl, and as this was a pure white specimen, I wanted it for my collection. Therefore, on Monday morning I started out before daylight, and tramped about that farm until half-past eight o'clock, and again in the afternoon from 3:30 until dark, but without seeing his owliship.

On Wednesday afternoon at 3:30 I was there again, and to my great surprise saw a snowy owl sitting in the top of a small tree in the field. I followed it from tree to tree until dark, but was unable to get near enough for a shot. On Saturday afternoon I started immediately after dinner and had not got to the city limits when I found my owl in the top of a small tree within twenty rods of the avenue, and for three hours crossed and recrossed three farms three times. The old saying is "Three times and out," and I began to think it would prove true in my case, and had turned my face toward home, as I had lost sight of my traveling companion. I turned through the little piece of wood where we had seen the owl on Sunday, and had passed nearly through it, when I chanced to look in the top of the tree where I had seen the first one, and in the very same place sat *Nyctea nyctea*. I got behind the same large tree and advanced to the foot of it without disturbing the owl, but as I stepped out in sight, with gun in position for use, away he went, but my BB shot overtook him when about 20ft. from the top of the tree, and down he came with a broken wing. As I came up to him he faced about but showed no fight.

I laid the gun across his body and took him by both feet, and got him home without any trouble, and then killed him with chloroform. Before I shot him I saw it was not the white specimen I saw on Sunday before.

On the following Monday a party told me there had been two owls seen at one time on the farm where I had secured my specimen, and at 3:30 P. M. I was there again, and had not been in the field five minutes when I saw a white object on a fence stake, and on looking at it through my glass saw it was another owl. I walked beside the fence and got within a long shot range before he flew. I sent one charge of BB shot after him, and not stopping him sent another, but he kept going for 40 or 50 rods when I saw him drop down, and as I came up to him he was dead. On my return I paced off the distance I had shot and found it was 42yds. from the stake to where I stood. This was not the pure white bird that I had seen at first.

On Jan. 1 I was out again, and after tramping all the forenoon without seeing anything, I turned toward home, when I saw on a fence stake another *Nyctea*, and with the glass saw that it was the white specimen. But after a three hour chase I lost him, and at no time did I get within 20 rods of it, although it was on the same farm where I got the others. This one kept entirely to the fences, while the first one kept to the few isolated trees, not once alighting on the fence.

In ending this long screed I will say that within a week I secured a red-tailed hawk and the two snowy owls.

LOCKPORT, N. Y.

J. L. DAVIDSON.

ABNORMAL DEER ANTLERS.

Editor Forest and Stream:

I notice in the issue of FOREST AND STREAM dated Jan. 5 a note by "N. A. T." from Eddy, N. M., in which he describes the antlers of what is called by an old hunter a cactus deer. These antlers, instead of being of the ordinary form of the mule deer's, appear in clusters of growths in place of the antlers, and he inquires if there be such a distinct variety or species.

There is no probability that the deer he saw is a distinct variety, but is the ordinary mule deer which I understand is the prevailing deer in the Pecos Valley, with an abnormal growth of the antlers. Probably if he had examined carefully he would have found that the deer had been castrated, which is sometimes found to be the case among wild deer from some unexplained cause.

In my own grounds I have known castration of the Virginia deer to produce an effect upon the growth of the antlers somewhat similar to that described in this case, where they grew in clusters. An example of this kind of growth is described on page 187 of the "Antelope and Deer of America," which grew on the head of a deer which I sent to the Central Park in New York in 1865, but the extraordinary growth described by your correspondent may have been owing to other causes.

What we call abnormal growths of the antlers of deer are not very uncommon. I have many specimens of these in my collection which grew on the heads of wild deer. Many specimens of female deer have been taken with antlers on them, one of which I have in my collection. These are abnormal growths which may not be ascribed to injury or any other assignable cause. The suspicion of "N. A. T." that they might have grown on a black-tail deer, as the mule deer is there called, is probably correct. If it was a full grown buck, upon examination he would have found on the outside of the hindleg below the hock the metatarsal gland four to five inches long, while on no other deer does this gland grow to more than half that length. Nor need the dark color of the specimen cast any doubt upon the subject, for there is none of our American deer more variant in color than the mule deer, ranging from white to almost black, though the latter is much rarer than the former. Indeed, ordinarily when the new coat on the mule deer first appears in the early fall it is nearly of a black color and is short, fine and soft, though usually as it grows longer it rapidly changes to a lighter color.

If there be a distinct variety of this cactus deer numerous specimens must have existed and been met with by other hunters and have been mentioned by them and talked about and heard of. A single specimen or several specimens cannot constitute a variety.

CHICAGO, JAN. 10.

JOHN DEAN CATON.

WOLVES AND THEIR WAYS.

SHANLEY, N. Y.—*Editor Forest and Stream:* Apropos of the query in *FOREST AND STREAM*, of 5th inst., as to whether or not our big gray wolf is a coward in the presence of man. I wish to say that I have found him so on the many occasions that I have met him on his native heath, singly or in the company of his kind. Whether or not any one of us would care to crawl into a cleft in the rock where a wolf had its den, as Gen. Putnam is said to have done, is another matter. I guess "Old Put." had the right stuff in him.

While following the life of the gentle shepherd, on the plains of Montana, a couple of years ago, I used to watch the wolves a great deal while tending the sheep, and though I usually had my good rifle in my hand, I once had the opportunity of facing a wolf empty-handed, and I don't know which was the worse scared. It happened thus. The sheep had "bunched" during the heat of the day upon one slope of a little valley, and I occupied the opposite slope, the better to see that they came to no harm, and since I knew that they would not move for hours, I was taking a bit of a doze, now and then opening my eyes wide enough to see my sheep, and then dropping off again with my face on my arms, stretched out on the hot rock. Suddenly, when I looked up, in a somewhat dazed condition, I became aware that a very large wolf was coming right at me, not 60 yards away, his red tongue lolling out, and his yellow summer coat reminding me of a hyena at first sight, coming as I did, so abruptly from the land of Nod. I actually thought it was his intention to try me a few rounds, as he did not notice the sheep, but was coming straight in my direction with murder in his eye, I thought. Being without arms, as it happened, my first impulse was to snatch up a stone and let him have it, and it was when I jumped up that he seemed to see me for the first time, and turned tail for all the world like a huge cur dog, and loped off with many a fearsome glance over his shoulder. The stone did not quite reach him, but when he saw it coming he put his tail between his legs, exactly as a dog would have done under similar circumstances, and if I could have hit him I am satisfied he would have ki-yied. I had to laugh at his comical aspect and at myself for being so rattled, but I did not leave my rifle in camp very often after that, not because I had any idea the wolves would tackle me, but because it "broke me all up" to miss so good a shot.

The probability is that this wolf had no evil design in his head, either toward the sheep or the shepherd, but happened to be headed my way, while traveling across the country on business of his own. Probably he was more startled by my sudden appearance in the way than by my projectile, or my ferocious aspect.

We often used to chase these big fellows horseback, and almost any horse will run up on to them, they are no such runners as the coyotes.

IPSARRAKA.

CHICAGO, Jan. 5.—*Editor Forest and Stream:* I have read with interest Mr. Dodge's narrative of his encounter with a grizzly, which was published in your issue of Dec. 29. The only comment I have to make is the one that will perhaps occur to the casual reader, viz., that he showed unnecessary solicitude for the third bear. However, a man that has made the extraordinary record that Mr. Dodge gives would come to regard bears with as much indifference as he would a band of black-tailed deer in the cedar. I confess to a fellow feeling in the gun episode, and remember a half minute on one occasion that seemed to have covered a year of my life, in connection with a "stuck" shell that refused to meet the frantic advances of the ejector. I think it is rather too risky to go after grizzlies.

The adventure I have to relate is of quite another character, was harmless enough, but will interest your readers.

Late in the fall of 1875 I received an invitation to join three adventurous hunters who designed passing the winter in the Judith Basin, Montana, with occasional incursions into the Sioux country beyond the Musselshell. Our pastime was to poison wolves. Wolf skins brought then at the trade store at Carroll, our starting point, on the upper Missouri River, \$4 and \$5 each in cash. I cannot say what they sold for in Chicago and New York.

One day we packed our wagon with provisions, ammunition, traps, etc., and started for the Lone Butte Pass, south of Judith Basin proper.

I may remark that the Judith Basin of that day was one of the loveliest regions of the West for game and Indians. From the ridges above our camp in the Lone Butte Pass I have seen at one time elk, deer, bighorn, antelope and buffalo, and there never was better ground for approaching the several kinds of game.

One item in our bill for groceries was \$50 for crystallized strychnia, but that amount of medicine did not cut much of a figure in our load, and could have been carried in a hand bag.

The wolves in this country were of the largest size; some were of a very dark gray color, a few pure white, a number almost white or a sort of creamy white.

A year or two before the hunters had poisoned more than a thousand north of the Missouri River, but the incidents of warfare barely enabled them to visit the baits once during the winter, and pile up the frozen carcasses of the wolves. In the spring they skinned about a third of the catch; the Indians, ravens and eagles did the rest.

Arrived at the Lone Butte Pass—the season being too early to string out buffalo baits for wolves—we built a stout cabin of green logs, cached our provisions and ammunition in a hollow of the rocks and gathered in a supply of fat venison for winter use.

The mountain and river Crow Indians claimed and held the Judith Basin, but the Sioux south and north of the Yellowstone disputed their title, and large war parties from time to time served a temporary injunction on the Crows, driving them out, and making life there precarious and uncomfortable. While camped at the pass we had a notable interview with some of the leading Crow warriors who paid us a visit.

In this debatable territory we passed the winter. When freezing weather came we packed our ponies and started down the cedar ridges in the direction of the Musselshell. In such a country we did not lack for good camping grounds, for the numerous war parties had filled the country with stout pole lodges, built in the form of a "teepee," in which a fire could be built that would not attract attention 100 yds. away.

Near the mouth of Flat Willow creek we separated one day for the purpose of putting out some buffalo baits for

wolves, a process I will now describe: Crossing some narrow breaks in the rolling hills I saw a buffalo cow standing on a little flat near a prairie dog village. The point was a little difficult to approach, and I consumed some time in crawling along low ground to a point when I could get a good shot. While doing this I saw two large wolves approach the cow in feint of attack and the cow lower her head and lunge at them; I saw then that she was a little lame in one leg. The utter unconcern and contempt with which the wolves treated this movement was amusing to see. I understood their actions better a little later on. Meanwhile I had gotten a little closer. After a while the wolves left the cow and trotted around to where I was, surveyed me from a distance of about 15 or 20 yds. and returned to the cow. Crawling a little closer, and the cow standing about right, I placed a bullet from my .44 Winchester where I thought it would do the quickest execution, and the cow dropped a short distance from where she had been standing. Approaching, I discovered about 100 yds. away, all in one row, some standing, some sitting, about twenty or more large wolves.

Paying no further attention to them I proceeded quietly to dispose of the buffalo carcass in such a way as to make it most conveniently available to the use of my now attentive audience. Skinning one side of the cow, I split the carcass lengthwise and spread it out to receive the slashes of meat I cut from the back and quarters. My strychnia was in 4-oz. vials. Emptying one bottle into the hollow of the ribs, I scattered the other two over the carcass and rubbed it in by taking a chunk of meat in my hand and swabbing warm blood over the whole.

Washing the blood and poison carefully from my hands in the snow, I picked up my rifle and started for camp, leaving the wolves in about the position first described.

The next morning there was not much of the cow left, but we skinned 22 fine wolves.

L. S. KELLY.

SNAKES.

JUST previous to the shedding of the skin—and I do not dare say how long before—the snake is blind, or nearly so; the eye is covered by a whitish opaque shell, which is the old and normal covering and protection for the eye, a part of the skin, which in process of separation previous to exfoliation, gradually becomes loosened from the eye and assumes a bluish-white appearance. This at least partially obstructs the vision and I doubt not frequently makes them entirely blind. It is said that the massasauga is totally blind at this season, and people supposed to be versed in common snake lore will say that "pizen snakes air more sartain deadly when blind, particaly saugers." This popular belief may be true, for the massasauga or other venomous species is decidedly lethargic for a period before its liberation from its old husk, and during its enforced idleness it has no desire to use its poison fangs, as it does not seem to care for food. I have never met with either noxious or innocuous individuals which gave evidence of a recent meal when nearing exfoliation. Naturally the increased supply or hoarded secretion of venom would be more dangerous.

We now come to the supposed "spitting" of snakes, a subject of special interest, because it has been the subject of some discussion in the columns of *FOREST AND STREAM*.

I have had a half dozen diamond rattlers shaking their caudal adornments at me at one time, and all were quite irritable, yet they never opened their jaws, and they very rarely showed the inside of their mouths unless when striking, in which act they move so quickly that the mouth is not seen to open. That the jaws do open is evident, as the fangs cannot be thrown into the erect position unless the mouth is expanded. In nearly all rattlers that I have seen confined, the only covering at the top of the cage or box was a pane of glass, and this of poor quality, making it dangerous from a possible escape. In many cases wire netting was an additional precaution, but it was outside of the glass. Many snakes when irritated will strike out savagely, but I could not learn that the glass was ever broken or an escape effected; still their noses (I judged) would go against the glass front or top with a bang that made the glass rattle. After these blows there could be seen occasionally a little moisture which did not have the tenacity of saliva, but trickled down the pane readily. Some rattlers are very irritable and do not ever seem to become accustomed to confinement and irritation, but will sound their alarm at once on any one's appearance. Others, again, remain quiet and will scarcely move for days together. Then, again, there is a marked difference in the positions occupied by the different species. The big ones of the South lie in a coil, with the head nearly in the center, and in a very lazy-appearing attitude. The members of the genus *Crotalus*, both our massasauga and the ground rattlesnake (a little rattler of the South rarely reaching twenty inches in length), seem to sprawl about in any shape. It is the Northern or banded rattler (*Crotalus durissus*) which assumes an attitude of real dignity, if not absolute beauty; and he could readily be admired did we not bear constantly in mind his dreadful power. A common position is one in which the neck and upper part of the body are projected up from the coil and a half, at an angle of 50°, with the head poised in attitude of attention, from fifteen to twenty inches in the air. One will remain, if undisturbed, in this position hours together, and often when slightly aroused the tail will vibrate while the strained rigidity continues, and the steely eye glitters in unswerving watchfulness.

When the poisonous snake strikes, as I have endeavored to show, it throws its head forward with great rapidity and, I have no doubt, with its full strength, and should it not reach the object for which it aims the force of the blow is just as great as if it were reached. Frequently a series of misses demoralizes an irritated snake to such an extent that it will utterly refuse to strike for some time. It may be that the pestered creature loses its pugnacity, knowing that its efforts are unavailing, or it may feel, and this is much more likely, in cases where it has struck the object without effect, that its supply of venom is exhausted and it is useless to continue the attack. As the head moves forward like a catapult, the jaws open and, as the object is reached, the teeth, or more properly fangs, are presented forward and downward. Now, suppose the snake strikes with its opened upper jaw at an angle of 45° and its fangs are about at right angles with the jaw, then the fangs as presented, or on entering the object, are at about 45° angle, or sinking down into the flesh at that degree. With rattlers it is all alike, so far as I can learn in regard to striking, whether a small

massasauga or large diamond, the act is the same and the wound the same, only differing in depth, varying with difference of length of fang and in height from ground, the difference resulting from reach. If this reasoning is correct, then a 4ft. rattler striking at an object a foot and a half from the ground would, if it had the power of ejecting the contents of its poison sack at will, throw the venom forward and downward at an angle of 45°, and on to the base of triangle one foot and a half in advance of a perpendicular dropped from the point where the fluid was ejected. These figures may be altered variously, and the proposition may be demonstrated by any one having enough interest in the matter to get a rattler and try the experiment.

A sauger (*C. tergenina*) that we had in confinement, upon irritation would strike at the end of a stick or any other object held in front of it; as it was caged in with a wire netting, of course its head came with force against the screen and often the poison (at least so I judged it to be) was thrown six or eight inches, and once somewhat over a foot. It was observed that after remaining undisturbed for several days or weeks, this escaping venom was in greater quantity than if the creature was pestered often, sometimes showing to the extent of several drops, whereas only the faintest evidence of moisture would be seen, or even none at all, if the snake was made to strike repeatedly. That the snake's mouth opened and fangs erected was often made evident, for, although the act was performed very quickly, it not infrequently occurred that the fangs were momentarily caught in the mesh and it took a second or two for it to recover itself, showing conclusively that the mouth had been opened widely. It also proved what I am endeavoring to demonstrate, that the fangs at time of striking present forward and downward. This massasauga was slightly over 20 in. in length and could strike as high as 5 in. from the floor on the wire netting, and it is said with all confidence that the poison was undoubtedly thrown several inches further than it would have been had the snake thus struck while resting, and possessed (suppositional) of the voluntary power to squirt, eject or spit its poison without first striking an object. In other words, the momentum acquired from the forward movement gave an additional impetus to any object leaving the mouth through any cause whatever. Many times when we hauled this snake on to the bare floor in the room and irritated it, it did strike fruitlessly, failing to reach the object aimed at; but these failures were not accompanied by an emission of venom, and therefore it seems reasonable to conclude that the ejection only occurs when the jaws come in contact with an object.

If we plagued the sauger too severely, as we often did, stirring him around on the floor with an iron poker, he would, after many fruitless darts, in which he not rarely bit himself, though without result, spread himself out quite flat, and assuming a sigmoid flexure on the floor, flop about at each poke and never attempt to bite or to escape.

It is difficult to understand what reason could be advanced for the act of spitting. The venom of snakes was supplied to them for purposes of offense and defense, and as we know that it is harmless when applied to unabraded surfaces, it is difficult to understand why these creatures should waste their stock of ammunition. The venom has even been applied to medicinal use and has been at times given in an attenuated state by the homoeopathic profession, as per their principle *similia similibus curantur*, but, although at one period advocated, I have yet to hear that a case of rattlesnake bite was ever benefitted by the treatment.

I conclude that (1) snakes cannot strike from a coil, and (2) they cannot spit if they would, for their anatomy does not admit of it, and they would not if they could, as there would be no object in wasting their ammunition.

KALANAZOO, Mich.

MORRIS GIBBS.

The Crank and the Plume Hunter.

INDIAN RIVER, Fla., Jan. 11.—*Editor Forest and Stream:* Many thanks for your editorial of Jan. 5 on the crank in Florida who shoots at everything he sees and calls it sport. Happily the greater number of these gentry shoot at but fail to hit what they think they are aiming at. Still their whole course is one of wanton cruelty and not of sport in any legitimate sense of the term. The way to stop it is for the great majority of right thinkers to so impress the public mind that a force of public opinion shall be established which will force these people to a proper behavior. Meantime we are all the while urging the amendment of the Florida laws, and another year will, I think, see a great change in them for the better.

Still, after all, the "cranks" who are most responsible for the destruction of birds of plumage are the ladies, who at the North, as members of the societies for the prevention of cruelty to animals, are mighty careful (and very properly too) that horses and dogs shall be kindly treated, and yet by the wearing of plumes offer a premium to the ragamuffins employed by the dealers for the wholesale destruction and rapid extinction of every beautiful bird in Florida.

This is done by the invasion of the rookeries in the swamps where large colonies have their nests and rear their young, and where, in consequence, the destruction is much greater and is irreparable. Hundreds of these rookeries where thousands of birds congregated every year are already broken up and destroyed, and to-day you may sail a hundred miles along the Indian River without seeing that most picturesque of all birds, the great blue heron.

Let us have a new crusade for the protection of the birds of plumage and of song.

W.

Blue Goose in Rhode Island.

PROVIDENCE, R. I., Jan. 16.—I have in my collection a goose killed at Charlestown Beach, R. I., Oct. 16, 1892, which has been examined by Mr. Newton Dexter and pronounced by him as, probably, a young blue goose. Plumage dull bluish on the head and upper parts of the body, feet lead-colored, laminae very prominent. Length 27 in., wing 15 in., bill 2 in., tarsus 2 1/2 in. This bird was alone when shot and was in very poor condition.

THE BOONE AND CROCKETT CLUB.

THE annual meeting and first dinner of the Boone and Crockett Club were held Wednesday, Jan. 11, at the Metropolitan Club, in Washington. The occasion was one of unusual interest from the fact that the club is to have an exhibit of a hunter's camp at the World's Columbian Exposition in Chicago next summer. Among the members present were Hon. Theodore Roosevelt, Prof. Arnold Hague, Mr. W. Hallett Phillips, Mr. Royal Car-

game. Its members have not spared time nor trouble in advocating beneficial legislation, and opposing injurious measures, in Congress, and there is little doubt that the better feeling which now exists among big-game hunters in this country is largely due to the good influences exerted by the Boone and Crockett Club.

SOME WOODS PRANKS.

KANKAKEE, ILL.—*Editor Forest and Stream:* Business prevented me from taking my annual hunt with my companions last fall.

To-day one of those companions, K., an old hunter called on me to report the result of the hunt. The party killed nineteen deer, about two to the hunter. He related to me many amusing incidents of the hunt. Rarely an expedition of that kind, an expedition for amusement purely, a camp

HUNTER'S CABIN OF THE BOONE AND CROCKETT CLUB AT THE WORLD'S FAIR.
From the "Illustrated World's Fair."

roll, Mr. Winthrop Chandler, Mr. Owen Wister, Hon. H. Cabot Lodge, Mr. W. Austin Wadsworth, Capt. Frank Edwards, of the First Cavalry, Gen. A. W. Greeley, Dr. J. West Roosevelt, Mr. Gordon-Cumming, Mr. J. Chandler, Mr. L. Nicholls, of Boston, and Mr. Geo. Bird Grinnell. Among the invited guests were the Honorable Secretary of the Interior, Hon. Thos. B. Reed and Hon. B. Storer and Mr. Caspar W. Whitney.

The business meeting was called to order at 6:45 in the Metropolitan Club, the president, Mr. Roosevelt, occupying the chair. In the absence of the secretary, Mr. Archibald Rogers, a temporary secretary was appointed. The first business in order was the election of officers for the ensuing year. On motion of Mr. Austin Wadsworth, seconded by Mr. Nicholls, it was voted that the temporary secretary be authorized to cast a single ballot for the club for president and for secretary. The old officers were renominated and so elected, Hon. Theo. Roosevelt, President, Mr. Archibald Rogers, Secretary.

The President outlined the work which he had done in preparing the grounds of the exhibit at Chicago, and causing to be erected a log cabin of the ordinary type. His action so far as he had gone was approved by the club. On motion it was voted that the chair appoint a committee of five to have direct charge of the exhibit, and Messrs. Austin Wadsworth, Winthrop Chandler, Wister, Deering and Grinnell were named to form this committee with full power to take such action as they may deem best. The question of a publication to be issued by the club was discussed at some length, and this matter was handed over to the committee with power to act. The meeting then adjourned.

The dinner was served at 7:30 o'clock, and was greatly enjoyed by all, the party not leaving the dining room until after 1 o'clock. The *pièce de résistance* of the meal was a saddle of elk, killed some time ago in Montana, and sent on by Mr. Elwood Hofer, who accompanied it by a saddle of mountain sheep. The dinner was quite informal, there being no set speeches. Only one health was drunk, that of the Hon. John W. Noble, whose great interest in our public preserves, whether national parks, forest reservations or marine reservations, was referred to in a few earnest remarks by Mr. Roosevelt. The Hon. Thomas B. Reed responded briefly but feelingly for Mr. Noble.

Much interest is felt by members of the Boone and Crockett Club and will be shared by other big-game hunters in the exhibit to be held at Chicago next summer. The grounds assigned to the club consist of a small island adjacent to a larger island near the grounds occupied by the Agricultural building at the fair. On these grounds, as has been said, a commodious log cabin, with a mud and stick chimney, has been erected. Camps of various types will be placed near this, with perhaps, examples of ordinary canvas tents and of Indian tipis. The cabin will be furnished in the style of an ordinary hunter's or ranchman's cabin in the West. A prairie schooner will stand not far off, riding saddles and pack saddles will be lying about, hunting implements will hang upon the walls, hides, skins and horns will be thrown upon the roof or tacked against the sides of the building. In short, an effort will be made to reproduce as nearly as possible the ordinary cabin of the western country with which all big-game hunters are so familiar. Among the arms which it is hoped to secure for exhibition are the rifles of Davy Crockett, Daniel Boone and Kit Carson. It is possible that there may be some mounted heads of large game exhibited within the building, but this is not certain. It is thought that the committee will be glad to receive for exhibition here a few articles, if they have a real historical value, but no attempt will be made to prepare anything like a complete exhibit of arms or even of historic weapons.

The history of the Boone and Crockett Club is not a long one, but during its existence of four years it has accomplished some very good work and has done much to impress upon many classes in the community the importance of preserving our National Parks, our forests and our

of four weeks, passes without many amusing, ludicrous incidents.

Joe, one of the party, was a "fresh hunter," not accustomed to timber, and fearing that he might become lost, not able to find the way back to camp, took Luke with him as a guide, the understanding being, Joe was to do the shooting and Luke the guiding. However, Luke had his gun with him.

While they were stealthily proceeding through the timber, a large buck sprang from his bed, looked at Joe and Luke, stretched out one hind leg, raised its flag and leisurely jumped into the brush, Joe not raising his gun. Shortly a doe sprang up and Luke dropped it, and Joe ran rapidly to it, and said: "Hello, Luke, I got my deer. Did you get yours?"

The guide part of the story recalls to my mind an anecdote, that transpired when K. was not in the hunt. We had a gentleman with us not accustomed to hunting, nor to timber. He would not venture far from camp alone, but employed a guide, a "native," to go with him. The

BOONE AND CROCKETT CLUB ISLAND.
Site of the Boone and Crockett Cabin.

gentleman carried on his watch chain a very small compass, as a charm I believe.

When returning towards camp the gentleman took the charm in his hand, looked at it wisely, intending to convey the idea that he "knew some things as well as others," saying to the guide, "camp is yonder," pointing.

The native dryly replied, "I reckon that trick is kerect, case I see the tops of the tents over thar." When we were seated for dinner, the native with an expressionless countenance, said, "Gentle-men, what mought that trick be Mr. C. has hitched to his watch guard? It pints out camp kerect every time."

K. says, "L., do you remember the trick the boys played on Doc many years ago when he first commenced hunting deer?"

Doc was with others hunting deer where open glades and marshes were interspersed throughout the timber, the marshes being grown up with tall grass. Those places, especially the marshes, were a great resort for old bucks in the day time as hiding places. The boys killed a large buck in one of the marshes, and to have some fun with Doc at his own expense, he not being present, cut off the head of the buck and placed it on an ant-hill so as to appear as natural as possible of a buck resting in its bed, then they took the carcass into the timber. The stems of the grass around about the head were large but not enough of them to hide the buck's head. The wind was blowing gently, waving the grass, so that to the anxious inexperienced hunter, the head of the buck with a little imagination would appear to be steadily turning in different directions.

After dinner the boys started out with Doc. The duty of beating the different glades and marshes was duly as-

signed to the members of the party, the marsh containing the head falling to the lot of Doc. His attention was casually called to the old sign of the buck leading into the marsh, with the remark that it was possible that the buck had stopped in the marsh. Doc proceeded to beat the marsh while the boys took a good position in the timber where they could take in the whole scene. He went cautiously as he had been advised, step by step. Soon he was seen to stop, crouch, get upon his hands and knees, crawl along, then rise on one knee, take the military position, fire kneeling, and fire, look, then drop on his side, reload (we had muzzleloaders in those days), assume the same position and again fire, look at the buck which appeared undisturbed, then lie down, examine the sights of his gun to see if they had been moved (for he was a good shot). He repeated these movements until his bullets were expended, fifteen I believe, then arose to his feet, went to the buck and found that he was sold. Ah! the pranks the old hunters will frequently play off on the young hunter, yes, and on occasion on an old one.

A number of years ago one of my old companions, I will call him Bill, would occasionally hunt in the night with a head light, having one route he travelled. The boys procured for the occasion an old nail keg, bored a couple of holes in it for eyes, put a lighted candle in it, covering the top of the keg so as to hide all the light, except the eyes; and placed it in a suitable place on the route a short distance from the camp.

Such a dummy will deceive an unsuspecting old hunter, when it is set up in a suitable place. In hunting on such occasions Bill used a No. 9-gauge shotgun heavily charged. After dark he started out on his beat. The night was dark and still, air heavy, timber dense.

Soon the boom of his gun was heard, quickly followed by another shot, the shots sounding under these conditions like the firing of artillery. Bill returned with a broad grin on his face, saying, "Boys, you got me this time."

I will close by saying, gentlemen it is your turn next—
H. L.

BLACK DUCK SHOOTING.

NEW HAVEN, Conn.—One day on returning from woodcock shooting just west of Allingtown, which is about two miles west of New Haven, I stopped at the foot of the hill on the Derby road near West river. Looking down the long, nearly straight stretch of the river where it flows close to the high steep bank on the west side of the meadow, I saw in the "bend" of the river, about sixty rods below, a flock of the black or dusky ducks—*Anas obscura*—apparently feeding on the wild oats that grew luxuriantly along its banks. The wild oats grew so tall all the way to the bend as to conceal the shooter by his stooping a little. When I got within about twenty rods of the bend I tied my dog to a tree, then went carefully down to the bend, and crept slowly through the wild oats, inch by inch, poking them aside with my gun, till I got near enough to rather dimly see the ducks through the oats. I waited till I got two or three of them in range, and then pulled. As they always do when startled, they seemed to spring straight up about fifteen or twenty feet and then fly straight away. I let go the other barrel and brought down two.

Without waiting to see the effect of my first shot barrel, I ran for "old Gyp," my dog. The race to the bend was made in good time. I stripped as quick as they skin an eel, and plunged into the river, where I saw but two ducks. I took them by the tips of the wings between my teeth, and swam back and threw them on the bank. I then swam back to the other side of the river, and secured one more among the oats, badly wounded. I then hunted the dog back and forth along the fringe of wild oats, clad as I

was in nature's airy bathing suit, but found none. I noticed that when Gyp came to a certain spot he was inclined to work into the meadow where the grass and bushes might hide one, but thought it best to first beat the belt of oats to the river, but could find no more. When the dog came to that particular spot, he again began to work inland. "Aha," said I, "good dog, you understand your part of the sport better than I," and let him follow his own nose. Within a few rods he found the duck concealed in a clump of low bushes, which we secured.

I carressed old Gyp in the most endearing manner, which he fully appreciated by affectionately smiling with a most approving look. He seemed to think that we were two of the best fellows in the world, and we were just then, or at any rate the happiest. I took the tips of the duck's wings, as I did before, and swam back to the other side of the river. It took much longer to put on my clothes than it did to take them off, as might be expected. By the time I got back to the wagon I should have thought that my load was heavy if it had been anything else, but it being black ducks it seemed light enough. The unexpected termination of my day's sport was very satisfactory indeed, as I always took some pride in shooting the wary black duck. These little side incidents tend to spice up a day's shooting, and are always pleasant to recall.

B. F. ARLINGTON.

A Thought Ahead for Posterity.

THE FOREST AND STREAM is as sick as a new pin in its new dress, and of a sweet smelling savor unto its readers. I sometimes wonder what this earth will do without the FOREST AND STREAM, for you people can't live forever, don't you know.
O. O. S.

PENNSYLVANIA IS AWAKE.

HARRISBURG, Pa., Jan. 14.—*Editor Forest and Stream:* At the meeting of the Legislative Committee of the State Sportsmen's Association, called to consider the best means to protect the game of the State, more genuine interest and enthusiasm was manifested than was anticipated. The committee expected that half a dozen enthusiasts who had the game interests at heart would get together and bewail the destruction of fur and feather that was soon to terminate their favorite sport. Instead, there was a full attendance of the committee proper, gathered from the extreme ends of the State and fairly representing each section, together with a score or more of the members of the Legislature now in session and a couple of dozen sportsmen from near-by points.

Such a gathering without any previous advertising, except the notice published in *FOREST AND STREAM* and a couple of other sportsmen's papers, was not only highly gratifying to the committee, but showed the keen interest taken in the subject up for consideration; and also that game protection is going to have plenty of advocates and friends in our State.

A brief statement by the chairman, setting forth the objects and reasons for the calling together of the committee, brought on a general discussion which led to the adoption of a resolution requesting the Legislature to pass an act creating a State Game Commission, whose duty it shall be to foster and protect our game birds and animals, to introduce new varieties and renew exhausted coverts, and to have similar rights, privileges and assistance as are now extended to the State Fish Commission.

Judging from the remarks and pledges given by members of the Legislature who were in attendance, this act will be passed.

It was acceded to by all present that there must be some directing head to which sportsmen can look for assistance in punishing violators of the game laws, and for intelligently carrying out the best methods of increasing the game supply. All changes and amendments to the game laws have, when brought before the Legislature heretofore, been referred to the Committee on Agriculture, a very important committee, having some very important matters referred to it. It is now proposed to appoint in the House of Representatives a committee on fish and game.

This is a step in the right direction, as it is presumed the Speaker will appoint members interested in the subject and capable of understanding what is needed to preserve the game. To this committee will be referred the proposed changes in the game laws, and Speaker Thompson kindly sent a communication to our meeting asking if our Association's objects would be advanced by the appointment of this committee. We unanimously agreed that they would, and passed a resolution thanking him for his suggestion and praying that the committee be appointed. So it looks as if the proper legislative machinery was well oiled and set in motion to give us anything in reason.

The next important matter taken up was the revision of the game laws. This naturally provoked a great deal of discussion. Numerous letters were read from all sections of the State, showing the great interest taken, some of them recommending radical changes and others none at all, but all breathing the one sentiment, "protection." The causes leading to the diminution of the game were carefully discussed. Bad weather, hawks, owls, foxes and other vermin received their share of attention, but the final conclusion was reached that of all these elements there was one above all others to be feared, and that was the breechloading gun. Bad breeding weather and hard winters were beyond the committee's control. Destructive animals and birds might be reduced in number by proper bounties being offered for their scalps or hides, but the breechloader was what the committee had started out to protect the game from and their action was rather radical. It being conceded that the hunter was the one to be watched it was thought he could be watched closer if he had fewer days to pursue game. The first recommendation made was to repeal all the existing game laws (not including fish) and to substitute new clauses entirely. To make a uniform day for opening and closing the season on all except a few migratory birds.

A committee of three, Representative Tabot, Caspar Dull, Esq., and the chairman, were empowered to draft these new clauses as directed by the meeting, and frame a bill to be presented at once to the Legislature.

The committee then took up each head of game separately, and after a careful consideration recommended as follows:

Deer, wild turkey, ruffed grouse, prairie chickens, woodcock and squirrels should be killed only from the 15th day of October to the 15th day of December, included; quail from Nov. 1 to Dec. 15; grass plover, Aug. 1 to Sept. 15; rail and reed birds, ducks and geese, the law to remain as it is. No hounding of deer or keeping dogs that run deer, to be allowed; snaring or trapping to be prohibited; insectivorous birds to be protected; no game of any kind allowed to be sold in the State after Jan. 1, whether killed in this or any other State, and prohibiting the shipping of game out of the State; the farmers to be protected against damage and insult by trespassers.

The committee looks for a great deal of unfavorable criticism, especially from the summer woodcock and squirrel shooters, who have their season so sharply curtailed. But they appeal to all the sportsmen in the State to stand by these dates for what is considered the best of reasons. If we are to have the bulk of our game preserved some sacrifices must be made.

It is well known that woodcock and squirrel shooters, in September especially, are strongly tempted to kill the young ruffed grouse and turkeys, and unprincipled hunters do kill them by the scores. So we ask the true sportsman to sacrifice his summer shooting for the greater good of the fall season, and we can't help but think that all the fair-minded sportsmen will uphold us in these choice of dates. If it is unlawful for a hunter to be seen in the covert or mountain before Oct. 15 it will be easier to detect and punish those killing game illegally.

The closing of the season on Dec. 15 we considered a wise move, as we rarely have any deep snows before that time, which removes the temptation for the pot-hunter to get in his work. It is a notorious fact that more quail are brought to market after heavy falls of snow than any other time in the open season.

Regarding the clause prohibiting the sale of game no matter in what State it has been killed after Jan. 1, it will

bring the game dealers down on us. We expect this, and are prepared to fight this clause through. It has been a concession to them that has been shamefully abused, and has always been a weak point in the game laws, and only by the enactment of this clause can game be properly protected from slaughter in close time.

The committee has finished the work for which they were appointed as soon as their bills are framed and properly presented to the Legislature, and we ask the different game associations and gun clubs to complete the work by urging their representatives to vote for our measures.

Start the ball at once and quit only after our bills have become law, and then see that the law is lived up to.

C. E. H. BRELSFORD, Chairman.

SOME TEXAS SHOOTING.

VELASCO, Texas, Jan. 5.—Since my last communication we have had several notable hunts. A few days ago a party composed of J. M. Moore, Dr. J. G. Boyd, Mr. J. F. Perry, and your correspondent gave the deer a round up. We stopped during the night preceding the hunt with Mr. Perry, at his beautiful home on the old Perry plantation near the banks of the Brazos River. The place is replete with historical interest, as it was the favorite rendezvous of Stephen F. Austin, one of the noted Texas pioneers, and his remains rest here beneath the shades of the live oaks in the family cemetery.

We made a fair start in the morning, Mr. Perry did the driving, while the rest of us took stands along the old road which leads through the forest. Moore rode a spirited mustang, and everybody knows that the average Texas mustang is an uncertain quantity when badly wanted, and in this case the mustang was rather above the average, as he could run faster, kick higher, buck stiffer, and look uglier than anything in the shape of horseflesh within ten counties.

When the music of the hounds commenced there was a dispute between Jack and his rider. Moore wanted to canter down the road and head off the deer, Jack suddenly remembered that he had not finished his breakfast and decided to canter back home. A dispute arose in which various threatening parrotutes was followed by Moore suddenly dismounting after the latest fashion not yet taught in the riding schools.

It did not take much time to jump a deer. Boyd stood in a narrow ravine running into the river; it was his first deer hunt although he had often studied the animal through the bars of the Central Park in New York. Presently he saw three brownish looking animals hopping along through the undergrowth toward him. He concluded they were dogs from a neighboring plantation, and not wishing to have them frighten the game away from him, he gathered up a club, and with a vigorous "Git there, you curs," let drive at them as they came within a few steps.

They got, so did the Doctor; he got up on a stump and orated, for instead of three cur dogs they were three big bucks that straightened up and did some of the tallest running you ever saw when the Doctor hurled his club. They passed close to Mr. Perry, who tumbled one of the biggest with a right and left, the dogs passed out of hearing and finally dropped the trail, which ended the hunt.

We are getting up a party to go for the wildcats along the east bank of the river a few miles north of town; they are numerous, and of late have been pretty bold in visiting the chicken roosts of the Perry plantation. They make a splendid run, almost as strong as a fox, and there is some little excitement at the capture.

Dr. Boyd is perhaps the best posted man on the ways of the feathered tribe in this section of the country, but he reports something which passed before his observation a few days ago while hunting ducks north of town. He says he was attracted toward a collection of sandhill cranes at some little distance, and after some caution succeeded in getting within easy shooting range. They were having a regular old-fashioned corn dance.

While the flock stood gravely looking on, two of the cranes would step out, and facing each other dance in the most serious and ludicrous manner imaginable. They would cut all kind of capers with their long ungainly legs, as the Doctor put it, just like the human dudes who display their agility in the ball room. When one couple became exhausted, another stepped forward to take their place, and the dance continued for hours at a time, until the Doctor was forced by the approach of night to return home; the Doctor says some of the steps practiced were original and extremely funny; he is trying to introduce them to the local dancing master.

Mr. B. W. Merrill, a noted disciple of Izaak Walton, has been here the past week. The black bass, trout and redfish are at their prime, and the weather is just cool enough to make fishing pleasant. The bass take the fly almost as daintily as the mountain trout of loving memory.

Dr. J. C. Mayfield, Rev. W. H. Browne, Mr. Will Hamilton, of Houston, Texas, and your correspondent made a trip to the Cedar Lakes, about eighteen miles south, a couple of weeks ago. The country in the vicinity of the lakes is little hunted, and I am ashamed to tell the story of our luck, as it would look like pot-hunting; but there was not a pot-hunter in the party, only we could not resist the temptation to shoot when the geese and ducks persisted in flying around us.

Boyd, Gueringer, More and Morrissey tried their luck at the ducks yesterday morning. They are pretty plenty, but we have had little cold weather here yet, and they are not as thick as I have seen them.

You can realize something of our climate when I tell you that there has not been a day this year when you could not find the farmers near town selling all kind of green vegetables on the streets.

If you want to have fun just ask Gueringer how shooting over decoys is in this country. My flesh proud friend bought a dozen handsome mallards from an Eastern dealer and a few mornings ago concluded to try them. He had first-rate sport at first, killing twenty-seven mallards in less than an hour; but not content with that he left his decoys and sought for the frisky quail in the neighboring fields. Returning, he forgot all about the decoys, and after crawling 100 yds. through the weeds, covered himself with glory by slaughtering nine of the innocent canvas sides.

Next letter I will tell you about a bear hunt on the Bernard, in which various of our deep-water port nimmers participated with various degrees of glory.

O'BRIAN.

STYLES OF CHOKES.

BERGERVILLE, Can.—*Editor Forest and Stream:* I have for several years been trying to get some satisfactory information as to the relative merits of the various systems of chokeboring employed by the manufacturers of the best guns. There seems to be such a slight difference in the performance of some of these high grade guns, yet the systems of boring are entirely different. For example, take a Greener and a Lefever of about the same cost and finish. They will (supposing both guns are fully choked) put about an equal number of shot in a 30in. circle at equal distances, other things being equal, viz., powder, charge, shell used, etc.

Now, one of these two guns, the Greener, is choked in the manner adopted by many other makers, viz., by gradually reducing the size of the bore from about 4in. from the muzzle to the muzzle. The Lefever choke is a gradual taper from breech to muzzle. One must have an advantage over the other, and yet it is scarcely apparent.

I have used many guns choked on both these systems, and my experience has been that in most cases the gradual taper is better for an all-round gun, as large shot do not scatter so much as in the other system. I have an Ithaca which makes very close and pretty patterns (and it is muzzle-choked) with all sizes of shot. The closest shooting gun I ever used was a Needham gun with Greener barrels. It would scatter buckshot, however, very badly.

I once shot a broad-wing hawk at eighty-five paces with a taper-choked gun made by Forehand & Wadsworth. I may be wrong, and if so will be glad of correction, but it seems to me that a gun that is muzzle-choked throws large shot across one another, more than if choked on the taper principle.

I am certain that the recoil is less in taper-bored guns than in muzzle-choked ones. It seems to me that a charge of shot which is brought together slowly and gradually will scatter less than when suddenly bunched together at the end of the barrel; and yet as I said before it is only apparent when using coarse shot.

I hope some one who knows more than I do will take up this subject, as I am interested in it in more ways than one (no bet), but chiefly from a scientific point of view.

L. D. VON IFFLAND.

ANOTHER PANTHER INCIDENT.

PLATTEVILLE, Wis., Jan. 9.—*Editor Forest and Stream:* I have read with amusement and interest the several communications in your paper upon the panther's scream, and have wished it was in my power to contribute a mite toward settling the much vexed question. But as I never saw but one uncaged panther, and that one did not scream in my hearing, I was unable to add any testimony as of my own knowledge to either side of the discussion. Though, if one may believe what his neighbors say respecting what they heard, my impression, based upon such evidence given at the time, would be that the particular panther in question had a good healthy voice and knew how to use it.

Your correspondent, John R. Spears, in his very amusing paper in your issue of Jan. 5, enters upon the discussion of a new type of asserted pantherian peculiarity respecting which I can testify something from my own observation.

More than forty years ago, when I was in my seventeenth year, and a new-comer in southwestern Wisconsin, I saw the panther above referred to. The same animal, or one supposed to be the same, was believed to have remained in the locality for several years, and was many times seen—and heard so it was said—and left traces of his visits to farm yards in dead animals killed and not carried off, as it was asserted, besides leaving his footprints in the snow. And although many hunting parties were organized to kill or capture him, in some of which I took part, he was never killed or captured that I heard of.

When I saw him it was under these circumstances: My father and I were hauling stone from a quarry which we had opened in a piece of prairie on our own farm, to a place about a quarter of a mile distant, where, in dense underbrush by the side of a fine spring, we were building a house. Going with the team and unloaded wagon from the house to the quarry, and just as we emerged from the underbrush upon the prairie, we caught a glimpse of the back of some animal which showed above the tops of the tall prairie grass and weeds. Curious to see what sort of an animal it was, we turned the team in the direction which he had taken and trotted off in the hope to overtake him. It was only about one-sixteenth of a mile or less from the place where we first saw him to the edge of our farm, which was then unfenced. Adjoining our land lay a piece of new "breaking," which had been broken the summer previous and left uncropped, and only as the breaking plow left it. On our side of the line there was a narrow fringe of low hazel and chokecherry bushes through which our visitor passed without stopping, and when we drove through it and reached the edge of the "breaking" there stood the pursued, some six, or perhaps, eight rods distant out upon the "breaking." Evidently, however, his curiosity as well as ours was stirred, and looking back at the occurrence now it seems to me that probably he was thinking, as he looked back at us, "Well, what are you going to do about it?" for there he stood, facing toward us, head and tail erect.

We did not go any further in that direction after we saw him standing there for three reasons, as I remember it. First, the new breaking was too rough to drive over with comfort; second, the pursued did not seem to be particularly anxious to go any further, just then, in the direction which he had been pursuing, and third, as we had no weapons it did not seem to be advisable to endeavor to compel him to do so. Besides, we had already gratified our curiosity; we had seen him. But neither of us had still the slightest idea what animal it really was, and it was two or three years later when I discovered that our visitor actually was a full-grown panther.

As I said, there he stood looking at us, and we sat on the wagon and looked at him. Neither party appeared to be frightened. The panther showed no signs of fear at any rate, and my father and I really did not know enough to be frightened. He showed no signs that we detected of any purpose to attack us, and we had no purpose to attempt to molest him. After surveying us for some seconds, probably not minutes, he began to "wave" his tail. He would swing it around with the most stately dignity, until its tip would be thrown with what seemed almost like a blow against one side, then the operation

would be repeated with similar dignity on the other side, and so on. Presently, after how long an interval I cannot say, but while we still sat there looking at him, he slowly turned away, and with stately tread pursued his original course across the "breaking," and we returned to our stone hauling.

Therefore, as I know I was not frightened, and am as certain that I saw what I have detailed as I am certain of my name, I may be counted among those who know from observation that a panther does "wave" his tail, or at least that one panther did. W. E. CARTER.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]
All About Skins.

CHICAGO, Ill., Jan. 14.—Mr. J. A. Price, of Riverside, a Chicago suburb, has a magnificent buffalo robe of the old sort, which has been in his family unused for years. His father bought it in the late '60's. He has also a rare and unique thing in the skin of an albino buffalo, a genuine white buffalo, of the fabled sort. This is evidently the robe of a yearling. The color is grayish white. Mr. Price's father got it in 1871. Its history is unknown. Still, it has been in Chicago for 22 years, a singularly interesting and valuable bit of news as it is. I have been waiting for 22 years to see whether or not a valued albino contemporary published in this city was going to say anything about this skin, but have about concluded that it won't. May be it will next week now.

The finest bear skin I ever saw is the property of Mr. R. F. Bullen, of 186 Clark street, this city. It is a "silver tip" skin, though Mr. Bullen and the taxidermist thought it a grizzly. While not so large as many grizzly skins, it is the finest, in point of coat and general perfection, I ever met. Not that it is small, for indeed it is very large. We measured it 8½ feet from hind foot to nose, 7ft. 10in. from tail to nose, 6ft. 11in. from front foot to front foot across its outstretched fore legs. The head is 19 inches long, the actual skull being 15 inches as measured over the naked bones. This bear was killed late in last September, near Hahn's Peak, Colorado, and Mr. Bullen had a near call with him. He and his guide saw the bear standing up on his hind feet in a quaking asp thicket. The guide got his cartridges mixed, and his rifle was worthless. Mr. Bullen shot the bear though, with a .47-70 government cartridge. His heavy 500 grain bullet did not stop the bear, and it came on. Mr. Bullen fired three more balls at it which struck it in the body, and all but one seemed to pass through its body. This one was found, battered and flattened in the most singular way, lodged against the skin on the opposite side of the body. None of these stopped the big fellow, and he came smashing out through the thicket, walking on his hind feet till he got near the edge, where he dropped to all fours. He was then only a few yards distant, and came on, with his head low down and rolling, as if to protect his head. Mr. Cullen fired several rapid shots at his head and missed him, the bear snarling and roaring each time as if he knew what the zip of the bullet meant. His last shot fired struck the bear in the corner of the eye, and it turned him, though it was never found in the direction and probably did not do the mortal work. At this shot, however, the old fellow swerved and went back into the thicket, where he was found a few moments later quite dead, with his head stretched out on a log. Mr. Cullen says he was not scared at the time. He knew he had to shoot and couldn't get away. After it was over, he got plenty scared, as well he might. This will show that two men are better than one to kill bear. Of these two guns, one was out of order just at the time when it should have been working. The guide got a cartridge jammed, one of different caliber from the one his gun required. At any rate, after so narrow a squeak and so exciting an experience, Mr. Bullen deserves hearty congratulations. His trophy is valuable in every sense of the word.

At Periotot & Wolff's fur store I spoke of the Bullen bear skin, and ventured the remark that there were only two kinds of bears in the Rockies, the grizzly and the black. One of the firm laughed at me, and showed me, as something which he evidently considered conclusive proof, the skins of black, brown, cinnamon and silver tip bears. "These may cross," said he, "but they are distinct species." I should not wonder if he called the Bullen skin a grizzly skin.

The "Golden Beaver."

Once upon a time I wrote some articles about furs, and had occasion to interview Mr. J. F. Periotot, of this same firm. He showed me some specimens of golden beaver furs, a fur which I have always thought the most beautiful on earth. "This is the golden beaver," said he, "which we usually call the Siberian beaver, but to be frank with you, it doesn't come from Siberia at all, but is only found on a few streams of the Indian Territory. This private snap in news I duly published. Now it happened that to-day, while talking with the member of the firm who didn't believe in restricting the bear family, that this question of the golden beaver came up. "There is no such thing as a golden beaver," said this candid gentleman. "That color is all the result of bleaching." We can bleach a beaver skin to any shade of 'golden,' as I will show you. We used to call this Siberian beaver, but now everybody is on to this, and the trade secret is too common for concealment." Thus vanished alike my belief in the secret streams of the Indian nations and in the honesty of a fur man. My admiration for the wonderful honey-colored fur remains unshaken.

A Sensation in Buffalo.

But this was not all that I discovered in my wild and woolly day of prowling after skins and furs. I ran across a sensation which may cause many a man to start in his chair, in New York or Colorado. I ran across one of the slaughtered herd of the Lost Park buffalo, of Colorado, something which has torn up the press, both lay and sporting, for some time. I found the skin of one of these buffalo, found where it came from, and—more's the pity!—came within an inch of finding out the name of the man who did the killing! At least, I believe these to be facts, and will state the case just as it lay before me with the guard that obviously the words of the fur men need careful weighing.

It was at this same store of the Wolf & Periotot Fur Co., and just after the golden beaver man had explained the Siberian bleach to us, that he called our attention to

the mounted figure of a magnificent buffalo bull, in full robe, and fairly well set up.

Where does that come from?" I asked, "and how long have you had it?"

"We've had it about 6 months. It came from the north, from Montana," was the reply.

"Then it must be from Manitoba, not Montana," said I. "Did it come from the Warden Bedson herd, of Stony Mountain, or did Buffalo Jones get all of that herd?"

"Yes, that's where it came from," said the fur man. (He was very polite and this may have been the wolf, though I do not know his name).

We turned to go, when I met Mr. Periotot, whom I had met often before. I spoke to him of the big bull at the stock yards, remarking that it weighed over a ton. "Oh, that's nothing," said he, "we've got one in here that weighed 2,700 pounds."

"Where did you get him?" I asked, "as we walked back to the bull."

"He came from Colorado," said Mr. Periotot, "or rather it was smuggled into Cheyenne from Colorado. It was killed in Brown Co., Col., but you know there's a \$1000 fine for killing a buffalo in Colorado. We got this skin packed down close and tight in a store box. It was killed by a man who hunts and traps for us all the time out there, and shipped by our Cheyenne firm."

"Why, this must be one of the Lost Park herd," said I, unwisely; "you know there aren't very many buffalo left out there." Then I caught myself, and grew more careful. "Do you know who killed the big bull?" I asked, "he was in big luck to get a shot at a buffalo these days."

"I can't just think of his name," said Mr. Periotot, "but I've got it on my books. Come on back, and I'll look it up."

We had gone half way to the desk before he tumbled. "No, I guess I won't give you the name, said he, "It might get the fellow into trouble out there."

This is how I ran against one of the Lost Park herd. I

give the story for what it is worth. The conflict in the reports of the two members of the firm will be noted. Does any one, Mr. Jones or any one else, know the real story of the big full blood bull now to be seen mounted in this store? If not, did it really come from Colorado, is not this a clue better than nothing, and better than any yet held by the Colorado men who are after the brute who did the illegal and abominable act of killing one of the Lost Park herd? E. HOUGH.

175 MONROE STREET, Chicago.

GAME NOTES FROM THE PECOS VALLEY.

EDDY, New Mexico.—A party of Eddy sportsmen made a round-up on rabbits yesterday afternoon and in two hours shooting killed 138, 96 of which were killed with Winchester rifles of .22 and .32cal., and the others with shotguns. The score was as follows: J. E. Gluck 17, F. G. Hodsell 17, G. D. Huestis 17, W. A. Morrison 8, Ed Piontowsky 17, August Gagg 17, W. A. Whittlesey 5, A. Luckey 20, W. P. Simonds 1 and C. C. Blodgett 17. You will notice that six men tied on 17. The tie is to be shot off within a few days. Four of these shooters went out a few days ago and brought in 51 rabbits, the result of three hours' work. The reason we kill so many rabbits here is, first because there are so many, second because we can, and third because they are a pest to the fruit growers and ought to be killed. We estimate, however, that it will take about ten years to exterminate them, at this rate.

Jack rabbits do some queer things. A local sportsman was lately shooting some cottontails in a large bunch of mesquite and, after killing several, saw a jack sitting in the further edge of it, not more than 10ft. from him. He preferred to shoot the jack on the run and walked toward him to start him up. Jack simply moved around to the other side of the bunch of brush. The shooter followed him up several times and he kept walking from one place to another, at no time getting more than 6 or 8ft. away. Finally the hunter picked up a small pebble and, holding his gun in his right hand, threw it with his left. It hit Jack on the side of the nose with such force as to make a sharp report and to stagger him. He winked his left eye, clawed the injured member with his left foot, bucked, jumped and performed various gymnastic feats, for a minute or so, when he lit out across the country and a rifle ball turned him over.

A fish hawk offered an interesting bit of entertainment to the same man a few days later. The bird hovered over a shallow place in the river, for a moment, and then, dropping into the water, fastened to a catfish that was more than he could lift. He struggled with it for some minutes, the cat towing him about the river, and sometimes taking him entirely under the water. The hawk hung on until he seemed to get the best of the fight, when he struck out for the shore, using his wings as paddles, and was making fair progress. He would undoubtedly have landed his catch in a few minutes more, but a small rifle bullet also ended this struggle.

Mr. M. Gilbert, who lives thirty miles above Eddy, on the Pecos, states that some time ago he went away from home, taking his family with him. He left a couple of seines, each about 100ft. long, hanging on a fence to dry. Some prospectors came along, camped near his ranch, and seeing the seines stretched them up in the mesquite, in the shape of a V with a pocket at the angle. They then made a drive through the brush, for a distance of half a mile back and drove in several coveys of quail, capturing in all 180 birds.

Dick Rule, a local newspaper man, says he doesn't care to take a gun with him when he goes after quail in this country. That he can kill all he wants with a club. An incredulous smile on the faces of some of his auditors called out an emphatic reassertion. Dick insists that he can go to Rattlesnake Springs, twenty miles west of Eddy, and when the quail come in to water, in the morning, he can kill a basketful in half an hour. Still telling this story he is often introduced to strangers as the only club hunter in the Pecos Valley.

A local newspaper reporter recently stated that a man had brought in from the Guadalupe Mountains a carload of deer. The only error in the statement occurred by the dropping out of the word "carload." A little incident sometimes makes a big difference in the result of a hunting trip.

A big mule deer, brought in a few days ago and sold to a butcher, weighed, when dressed, 183lbs. He was killed in the Guadalupe some distance west.

Bob Welch, who lives on the Penasco, fifty miles west, brought in a wagon load of good, fat deer the day before Christmas and sold them at \$2 a carcass.

C. R. Sims and J. L. Bock, from the same neighborhood, brought in fifteen deer a day or two later, which they killed in eight days, and sold at six to eight cents a pound. G. O. SHIELDS.

SOME NEW BRUNSWICK TRAPS.—III.

Fisher Trap (Fig. 3), Tobique River, N. B.

As is well known, the fisher is often very destructive to sable and mink traps. These animals either spring the trap and eat the bait, or else devour sable that are captured. In a region where the black-cats are plentiful, it will be observed, when following a "line" of traps, that every other trap, or several consecutive traps, are built somewhat larger than the others, yet not too big to capture sable also. But it sometimes happens that the black-cat refuses

FIG. 3.—FISHER TRAP.

to enter the larger trap built for him, so whenever a suitable chance is afforded, an ingenious contrivance is built for the cunning animal, like the following, which was used on the headwaters of the Tobique River:

A spruce stump, higher than one's head, had been left standing after some gale had broken the top off. A few blows with an axe completed the work which the storm began, and the stump was split down nearly its whole length. Two spruce poles, five inches thick and fifteen feet long, had been cut, and the butts of each hewed somewhat flat. One of them was forced down into the split stump to within four feet of the ground, the small end resting upon the ground. The other pole was laid up on top of the first one. Then at a point about three feet distant from the stump, the ordinary "standard" and "bait-stick" were set up between the two poles, the "bait-stick" pointing out at right angles. Over the triggers a handful of flat fir boughs had been placed, balanced upon the upper pole, and to keep it in place a short pole was laid up on top of it, as shown in the illustration. The bait cannot be reached from the ground, and the roof of boughs prevents its being taken from overhead; so in order to get at the bait at all, it is necessary for the animal to crawl down upon the under pole. He is thus between the two poles, and when he seizes the end of the "bait-stick," the upper pole (which should be weighted) falls upon him. This is by no means a common trap. TAPPAN ADNEY.

COLORADO GAME INTERESTS.

DENVER, Col., Jan. 13.—In his annual message to the Legislature Governor Routt made the following suggestions in regard to the game laws:

It is evident from the report of the fish commissioner that an error was committed in adding the duties of game warden to his department. The protection of our fish and game from cruel and wanton destruction should be made a subject of your active interest, and legislation which will be effective in securing this result, together with a sufficient appropriation to enable those charged with the duty of enforcing the same to properly perform their duties, will earn the gratitude of our future as well as our present citizens.

In the propagation of fish our present commissioner has been rendering the State a good service, as shown by his report, and suitable provision should be made to accommodate the growing needs in this direction.

The many waters of our State seem to be well adapted to this purpose, and the immense number of fish deposited therein by the commissioner insures a bountiful supply for our sportsmen and for food purposes, if proper safeguards are provided.

In the matter of the destruction of game more stringent legislation is absolutely necessary if we would prevent its total extinction.

I would recommend that no appropriations be made for bounties upon bears or mountain lions, and that all laws upon this subject be repealed. Our present condition does not justify any expenditure of money in this direction, as no injury to our stock interests of any consequence can result from this source.

There appears to be a growing interest in game and fish protection among the most influential of our citizens, and it looks now as if something worth while in the way of a game law would be enacted by the present Assembly and that a fund will be created to properly enforce it. TESEBY.

A New-Subscriber Offer.

A *bona fide* new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a *bona fide* new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$8).

MASSACHUSETTS ASSOCIATION.

BOSTON, Mass., Jan. 16.—The annual meeting of the Massachusetts Fish and Game Protective Association was held at the American House, Boston, Wednesday evening, Jan. 11, President George W. Wiggin in the chair, 110 members being present. Mr. Henry J. Thayer, secretary of the Committee on Acclimatization, made the following report:

"During the year 1892 the committee has loosed alive in Massachusetts 94 prairie chickens, 146 sharp-tail grouse, 382 Rocky Mountain quail—total, 572.

"Reports concerning birds loosed in previous years have been received, and are very encouraging, being far more favorable than had been anticipated. Pinnated grouse are known to have bred in six localities, sharp-tail grouse in two places, and Rocky Mountain quail are often reported, some near the places where released, and others many miles away from where loosed, and they are thought to have materially increased. The first lot of these birds was put out in March, 1890, and they are known to have survived to the present time and to have increased in numbers.

Twelve prairie chickens have been reported as having been shot in Massachusetts the present season, also two sharp-tail grouse and five Rocky Mountain quail.

"Your committee, since its organization, Jan. 17, 1890, has brought to Massachusetts and liberated in the State alive 349 pinnated grouse, 146 sharp-tail grouse, 1,020 Bob White quail, 26 Oregon Mountain quail, 601 Rocky Mountain quail, 87 northern hares; total, 2,229 head of game.

"These have been distributed in 134 different lots and liberated in 62 different localities in such places as seemed most favorable to their preservation and increase.

"Birds contracted for, to be delivered before the coming spring, are: 500 pinnated grouse, 500 sharp-tail grouse, 120 Rocky Mountain quail.

"Telegraphic advice of the first shipment of pinnated grouse was received yesterday, Jan. 10, and other shipments will follow soon."

Officers for 1893 were elected as follows:

President—Hon. Geo. W. Wiggin.

Vice Presidents—Ivers W. Adams, Edward A. Samuels, Augustus Hemenway, Hon. James F. Dwinell, C. J. H. Woodbury, John T. Stetson, Horace T. Rockwell.

Treasurer—Andrew J. Lloyd.

Secretary—Richard O. Harding.

Librarian—John Fottler, Jr.

Executive Committee—Heber Bishop, Chas. G. Gibson, John N. Roberts, M. A. Morris, W. G. Kendall, Wm. B. Smart, Frederick R. Shattuck, Wm. F. Keith, Wm. C. Tharilwall, Rollin Jones, Henry H. Kimball, Chas. F. Chamberlayne.

Membership Committee—Edward T. Barker, Arthur W. Robinson, Walter C. Prescott.

Fund Committee—Benj. C. Clark, Edward Brooks, Walter A. Power.

Miscellaneous—Chas. H. Peckham, David M. Little, Chas. E. Howe and Henry P. Plimpton were elected members of the association.

RICHARD O. HARDING, Secretary.

MASSACHUSETTS GAME INTERESTS.

In their annual report for 1892, the Massachusetts Commissioners of Inland Fisheries and Game say:

"The laws for the protection of game are more generally observed than heretofore, and are regarded with yearly increasing favor by the people.

"The disease of last year continues among the grouse, causing a decrease in numbers. It is not to be expected to prevail another year, judging by the past history of like occurrences.

"We renew the suggestions of last year, concerning the desirability of a law providing for a bounty for the destruction of predatory vermin. The increase of these animals is large, and is not appreciated by people not given to knowledge and observation of this matter. The preserved value of farm products resulting from the destruction of such animals would, in our opinion, be many times the amount paid out in bounties.

"The desirability of the maintenance of game wardens, with sufficient funds and authority therefor, becomes more and more apparent as the years go by. Intelligent continued action for the preservation of the game is justified by each year's added experience.

Deputy Commissioner Delano reports: "All complaints of the bird laws have been promptly investigated; but, from the fact of there being one month's difference between the open season on partridge and quail, it is impossible to convict unless the parties are caught in the act. With a uniform season, the hunter would have no excuse to be in the woods with his gun and dog out of season; and, for the protection of the birds and the enforcement of the laws, better results could be attained than at present."

District Police Officer Proctor reports that owing to a defect in the law as it now stands, "the possession of a game bird is not an offence at any season of the year. I would recommend that the law be amended so as to make possession of game birds an offence during the time within which the taking or killing of the birds aforesaid is prohibited, and also a uniform season for taking or killing said birds."

Deputy Commissioner Chadwick reports: "There has been a decided improvement in the observance of the laws in relation to game. Very few complaints have been sent me, as compared with previous seasons; only two arrests have been made and those were for offering game for sale in the close season. The parties were convicted and paid their fines. With the exception of quail and woodcock, the markets have shown a decrease. Partridges have been scarce, and prices higher than in former seasons. This, in some measure, is due to the law in New Hampshire, prohibiting the transportation of partridges out of the State. The open season for shooting in New Hampshire is Sept. 1, while in Massachusetts it is the 15th. The result of this difference is two weeks' shooting in Massachusetts by parties from New Hampshire, all along the State line. Complaints of this nature have been sent me. A distance of seventy miles is quite a space for one person to properly guard, and it is extremely difficult for an officer to locate the State line when he attempts to prosecute an offender. The open season for the shooting of game birds in Massachusetts and New Hampshire should be on the same date. Early in September, half-grown gray squirrels

and rabbits were offered for sale by hunters at the low price of five cents each. September 1 is too early to shoot such game; and, with an open season of six months, it is useless to expect much increase. To be allowed to kill gray squirrels and rabbits in January and February is certainly not in the interest of those who hunt them. Three months of good shooting is better for the hunter than six months of poor shooting."

The Commissioners recommend a new law making the close season for pinnated grouse, woodcock and ruffed grouse (partridge), Jan. 1-Sept. 15; quail, Jan. 1-Oct. 15; wood or summer duck, black duck, teal, or any duck, April 15-Sept. 1; with sale and possession forbidden in close season.

SEARCHING POACHERS' POCKETS.

PITTSBURGH, Pa., Jan. 14.—*Editor Forest and Stream:* Your assistance in getting our sportsmen interested in new laws to protect our game is proving invaluable. I am in receipt of many letters from those who want some perfect protection not only for the game but the fish as well. Also from many visitors who are eager to see success crown the labors of those who have the matter in hand. We are all likewise interested in this subject.

It was suggested by me to increase the powers of the present Fish Commission and increase it by adding to it the State Ornithologist, whose knowledge would be most valuable in more ways than one. By doing so, no objection could be urged upon the matter of costs and expenses, while it could be if an entirely new board was organized to propagate and protect the game.

My experience has proven to me that there are short periods of the year when not a single infraction of the law is made, and then when they do begin, they are all against the fish laws; and then they stop, and the violations of the game laws begin. It seems to me to go in streaks, first one, then the other.

I have no personal interest in the matter, except that I desire to see the fish and game protected, so that others who follow us in after years may enjoy the sport. I get but little shooting myself, but when I can get away I want to get some game as my reward.

Let me tell you of an instance of a man who boasted of being a sportsman and how I "called him down." One day in August several years ago two ladies came to my office and asked if I were the fish warden and said they wanted to tell me something, provided I would not mix them up in it. I gave my pledge of secrecy and they informed me that a man came on the Castle Shannon Railroad every week and brought his dog and gun along and was shooting all around the village, and they were positive he was killing quail. I had this road watched for weeks; had men stationed in the fields and woods to be able to swear that he killed quail, but not one of them could be sure it was so. I grew desperate and the killing went on. But one day a man came into my office with a rush and said the scoundrel was out again and they saw him shoot into a flock of birds, and they thought they were quail, but would not like to swear that they were. I was wild and made up my mind that I would haul that fellow in if it cost a law suit at my expense. I found the time table of the road, went to the station an hour ahead of time and waited. The longer I waited the madder I got, and when the train did come my man, his dog and gun got off and I marched up to him, called him by name, asked what luck he had that day, and he said: "I did not kill any game; I was only giving my dog practice." I knew he lied. I saw the bulging pockets of his hunting coat and as quick as a flash my hand went down in one and out I drew a half-grown quail wrapped in paper, and holding it up before his astonished eyes asked him what he called that. My search brought four half-grown and one mother quail and one half-grown rabbit. I took man, gun, dog and game before one of our magistrates, who promptly fined him \$75 and costs.

If I had not searched this fellow what further destruction would he have committed? I do not think any sportsman would hesitate to show an officer his game at any time, but a poacher or violator will. How is a warden to catch men with ferrets in bags hung inside their coats unless they can search them?

I hope that our friends will have framed a suitable bill making all game come in and go out together.

How can we stop the shipment of game from one State to another? When our close season comes our hucksters send to Chicago, to St. Louis and other points and get game, so they say, and prove by express bills, when some of the places they get game from have the same close season that we do, and then they claim they are not violating the law! I would like to furnish to the wardens of other States the names of the persons who ship game to Pittsburgh out of season, and if any of them will write to me I will gladly aid them. I hope the FOREST AND STREAM can open up a field in this direction and lend us its assistance. I will give my aid in any way I can to further the interests of our hunters and fishermen.

J. W. HAGUE, Fish Warden.

No. 96 DIAMOND STREET.

Barnegat Ducks Rest on Sunday.

EAST ORANGE, N. J., Jan. 16.—*Editor Forest and Stream:* A short time since I wrote Capt. Joe Ridgeway, of Barnegat, asking what arrangements I could make for ducking trips of two or three days' duration. I inclose his reply, which may be of interest to your readers, and at the same time would draw your attention to the second paragraph of his letter, which I think worthy of commendation.

C. C. H.

BARNEGAT, N. J., Jan. 10.—It is useless for you to come to Barnegat for duck shooting just at present, as the bay is closed with ice.

It is of no use to come for Sunday only, as no guide will go out with you on that day, for it is an unwritten law among us to give the birds one day in the week; and we think this is one reason that keeps the wild fowl with us more than in some other places where they are shot at every day.

Terms are \$2.50 per day and board and ammunition for each guide, he to furnish boats and decoys. Some very good bags of game have been made in the past two weeks by men gunning in air holes in the ice. Fifty head of geese and ducks to a man for a two days' shoot has been done by several of our local gunners, but each man in that kind of shooting has all he wants to do to look out for himself, and will not take a sportsman with him, two boats being more than he can handle in or on ice.

JOS. K. RIDGEWAY.

THAT MAINE TAX PROPOSITION.

AMONG Boston sportsmen the interest in what the Maine Legislature may do concerning fish and game is very great. The lawmakers of that State convene only once in two years, and it is felt that whatever measures may be adopted have got to be endured for a long time. The interest in Maine fish and game has been steadily growing for many years with sportsmen outside of that State as well as in it, and it is perfectly natural that Boston, the largest city in New England, as well as east of New York, should be the centre of this interest. While Boston sportsmen have no desire to dictate matters legislative, in Maine, they do feel that they have paid out a great deal of money in that State, and that legislative action there should not be made hostile to them, unless it be absolutely necessary for the better protection and preservation of the fish and game there. The most absorbing question at this time is as to whether September will be opened in Maine, for the hunting of deer. Hundreds of Boston hunters, who annually visit that State, are interested. I have met a great many of them within a couple of weeks, and all are ready to discuss the possibilities or the impossibilities of such action. Generally these sportsmen are desirous of combining both the pleasures of the gun and rod on their annual trips to Maine, but under existing laws there it cannot be done. It is believed that September might be added to the open season, without danger to the deer supply, and Boston sportsmen are generally aware that they have both the worthy game commissioners of Maine on their side in that matter. Reports from Maine suggest that the measure will again be opposed by the lumber interest, and the chances are not very favorable for its success.

Capt. Fred C. Barker, well known to many readers of FOREST AND STREAM, was in Boston last week. He is very much interested in having September added to the open season for big game. In his part of the State, the Rangeley region, he finds the opinion almost universally in favor of the opening of September. He has also obtained opinions from a large number of prominent men in Oxford and Androscoggin counties, and the verdict is almost universally favorable. Failing in carrying the measure in the whole State, the three western counties of the State will ask that September be opened in these counties alone. Capt. Fred says that, notwithstanding the unusually large number of deer killed the past season, the breeding supply has not been harmed in the least. He and his men have been in the woods considerably since the open season closed, and he finds that the number of deer left is remarkably large.

Concerning the proposition of several Maine gentlemen to impose a license tax on non-residents of the State for the privilege of hunting or fishing there, considerable disgust is expressed. I have questioned a large number of gentlemen in Boston, who annually hunt or fish there, and the universal opinion is one of surprise that members of the Maine Legislature should propose such a measure, and generally it is not believed that a measure so foolish can possibly pass. Gentlemen say that it is not the amount that would probably be required, but it is the idea of such a thing! Boston sportsmen have visited Maine for years. They have paid out large sums of money on these trips, and they are willing to continue to do so. They own camps and boats there, and they are willing to meet every legal requirement to sustain these. But when it comes to a license fee, be it never so small, they are roundly opposed to it. It is not congenial to the New England idea. Indeed there is a question concerning the constitutionality of such a measure. "Impose a license tax, and we shall withdraw our interests, and go to Canada." Such is the verdict of more than one Boston hunter and fisherman who is interested in camps and cottages in Maine.

A Gentle Moose.

Boston hunters and would-be hunters have been a good deal interested of late in a live cow moose that has been on exhibition at 102 Friend street. Mr. Peter LeRoyer has at last reached Boston with his celebrated cow moose. He has exhibited it at the Maine State Fair and other fairs. At the Maine State Fair he drove his moose in harness, and "made excellent time." The animal weighs about 700 lbs. is five years old, and thoroughly tame and affectionate. It will follow its master like a dog, and is very fond of being petted by even strangers. It is anything but a beautiful animal, with its long muzzle, coarse hair, forming almost a hump at the shoulders. The nose must be seen to be appreciated. Mr. LeRoyer has taught his moose to eat hay, and to see it gather up the straws with its almost prehensile muzzle gives one a better idea of what the snout of a moose is made for than any mounted moose head—even by the most skillful taxidermist—can ever do. Its owner claims that his animal is the only living adult cow moose in captivity. It shows signs of a desire to breed every fall, and its master has tethered it several times in the woods in the vicinity of where bull moose were known to be. It has called, and several times a mate has responded and come down till it could scent the signs of domestication—Mr. LeRoyer's idea—when it has turned and fled. Mr. LeRoyer is of the opinion that there is a scarcity of bull moose in Maine and Canada. His idea is that if moose are to be sustained in Maine, the few bulls there are left must be left alone in October, the height of the breeding season. From Boston this moose is likely to go to Mr. Austin Corbin's preserve.

There will be Plenty of Ice.

Mr. Rollin Jones, of Boston, has just invited his friends to his annual pickering and cusk fishing excursion at his camp, Camp Millstone, Tuftonborough Neck, near Wolfboro, N. H. Mentioned as to be in the party are Messrs. Rollin and Westley Jones, Adrain T. Nourse, Benjamin F. Nichols, John R. Stuart, Joseph T. Meader of Boston; Orlando Brown, George V. Ladd and Sidney A. Carpenter of Haverhill, George W. Gardner of Manchester, Lester C. Shepard of Brushton, N. Y., Joseph T. Hathaway of Plymouth, Mass., Jacob Cohn of New York, Horatio L. Cate of Rochester, N. H., and Harry Jones, Samuel W. Fay, and Charles H. Gage of Wolfboro.

The weather has continued remarkably cold, as it was at time of the departure of the party on Saturday. But they go prepared for cold weather. They were to proceed in sleighs from Wolfboro to the camps. The lake is frozen solid, and even if the party do only a little fishing, the sleighing will be excellent.

SPECIAL.

The Charleston, S. C., markets are overstocked with woodcock, which have been killed in great numbers by hunters this season, and sell at a very low price.—*Evening Post.*

NEW YORK STATE ASSOCIATION.

In spite of the adverse weather conditions which prevailed last week, a goodly number of delegates gathered in Syracuse Thursday morning for the winter convention of the New York State Association for the Protection of Fish and Game. It was the first meeting of the Association since the re-organization, and in the number present, the substantial character of the assemblage and the spirit which pervaded it, the convention was all that could have been anticipated. The proceedings were marked by earnestness, enthusiasm, harmony, intelligence and good sense. They demonstrated anew, what was so abundantly made manifest at the November committee meeting, that the Association has the cordial support of those people of the State, who are sincerely interested in preserving the game and fish supply. The organization is already firmly established, and the lines of practical activity laid out for it are such as to afford ample promise that the Association will in the future merit and receive a constantly growing public support.

The convention met in the ample assembly room of the new and handsome Yates, whose proprietors, Messrs. Averill and Gregory, did much to add to the convenience and comfort of those in attendance.

The following clubs were represented by delegates:

AUBURN GUN CLUB.—Chas. A. Bannister, Geo. Peck, Geo. W. Nellis.
CENTRAL NEW YORK FISH AND GAME ASSOCIATION.—W. S. Gavitt, Henry C. Carr, Dr. Seaman, Fred Davis, W. H. Wilson.
CLARK HAVEN GUN CLUB.—Fish Protective Association.—E. D. Crosby, John D. Babcock, Geo. R. Collins.
LYONS FISH AND GAME PROTECTIVE ASSOCIATION.—Burton Hammond, Peter Knobloch, Dr. J. W. Putnam, W. S. Gavitt, H. G. Hotchkiss, Jr.
SYRACUSE INDOOR SHOOTING CLUB.—C. H. Mowry, W. A. Koehler, G. Wells Neating, W. E. Blumer, Dan. A. Pierce.
SYRACUSE RIFLE CLUB.—J. N. Knapp, C. H. Lewis, H. S. Seely, R. Robotham, C. J. Schmitt.
TROUT BROOK FISH AND GAME CLUB (McGraville).—Dr. M. R. Smith, Frank G. Seaman.
BLACK RIVER FISH AND GAME PROTECTIVE ASSOCIATION.—W. E. Wolcott, Dr. J. V. Haberer, S. R. Fuller, G. G. Chassell, Bion H. Kent.
ONONDAGA COUNTY SPORTSMEN'S CLUB.—H. E. Robbins, M. Weidman, D. Walters, N. Ayres, Geo. Holloway.
NIAGARA COUNTY ANGLERS' CLUB (Lockport).—W. W. Treavan, F. K. Sweet.
FOREST LAKE CLUB (Hudson).—Granville Hills.
ROCHESTER ROD AND GUN CLUB.—H. D. McVean.
ANGLERS' ASSOCIATION OF ONONDAGA.—Amos Padgam, D. H. Bruce, Wm. Etverson, M. J. French, Geo. B. Wood, Walter S. MacGregor.
ONONDAGA GUN CLUB.—Augustus Martin, Paptis Thomas, John Soft, Isaac Waterman, C. J. Schmitt.
ANGLERS' ASSOCIATION OF THE ST. LAWRENCE RIVER.—Geo. H. Strough.
CHESAPEE FOOD FISH ASSOCIATION OF NEW YORK.—Frank J. Ainsden (Rochester).
HONEYCREE FALLS ANGLERS' ASSOCIATION.—Aaron Mather.
JEFFERSON COUNTY FISHING ASSOCIATION.—Tyler.
SUN DOWN FISHING CLUB.—J. S. Van Cleef (Poughkeepsie).
SYRACUSE GUN CLUB.—W. A. Hoken, W. E. Hookway, H. M. Chase, Geo. H. Mann, C. E. Becker.
ASSOCIATE MEMBERS.—Gen. D. H. Bruce.

Among others present were Chief Game and Fish Protector Pond, and Protectors Hawn and Cotton, and Special Protector Jackson.

President Charles B. Reynolds, of New York, was in the chair; Secretary, John B. Sage, of Buffalo.

The delegates had been asked to bring reports of the work of their own clubs, and the morning and afternoon sessions were largely taken up with relations of protective effort and accomplishment in the several localities represented. Our full report of this feature of the convention, however, must be deferred until next week. By far the most important subject to which attention was given was the action of the Association respecting the present law. At the committee meeting in November a Committee on Legislation had been provided to take into consideration proposed amendments of the fish and game law, and to report on them to the convention.

Game Law Amendments.

Numerous amendments of the game and fish laws had been submitted to the Committee on Legislation. Pending the report of the committee, a discussion was had as to whether the Association should recommend any changes whatever to the Legislature, or should urge for the present the retention of the law as it is.

CHIEF PROTECTOR POND said: There are a few minor changes in particular localities that would help very much. I would not favor any radical changes. The law has only been in force since the 5th of May last, and we have hardly got to understanding its workings. While you are anxious for a few changes in different localities, make as few as possible, because you will find an element at the Capitol which will fight against it. The thing to do is to head them off. I am aware from what I have heard that there will be quite an effort to have several changes that this organization would not favor. If you go there with many amendments you are going to get considerable trouble from the opposition element.

MR. HILLS.—Wouldn't it be proper for us to prepare ourselves to meet this movement? What will we do to fight this?

MR. AMSDEN.—My thoughts have been on this for a long time before coming down here. There will be considerable effort made by interested parties for selfish purposes to get this law amended. We have made a good many amendments which we would like to have made this winter, but would not it be better to waive them rather than take the chances? Mr. Hills asks how we are going to meet this movement. The law has only had a short life and has not had time enough to demonstrate what it is. This organization should recommend to the Legislature that no changes be made at all this winter. Let it rest just as it is. It is a good law in its general provisions. Ask the Legislature to appoint a committee to sit during this and the next session together with a commission and a committee from this body and consider what amendments and changes are beneficial. I think if we take such action as that, it will put us in a very good light with the Legislature. We have no selfish purposes. We want to do what is right. This is a most important matter, and what action we take will have a far-reaching effect. While the law is defective in a great many respects, there is a way for us to cover up those defects in a measure, as has been done in Wayne county, by getting the supervisors to take action.

W. E. HOOKWAY.—It has been intimated to me by people who have shot for the market and dealers in game that this winter they will try to have the shipping of game allowed. The working of the non-export law has been of the greatest benefit to the State of New York.

W. S. GAVITT.—We have met with very serious obstacles at Sodus Bay, and in trying to find some means to protect ourselves we have taken advantage of the provision that allows supervisors to make provision granting fuller protection in localities. In Cayuga county we were defeated, but the Seneca county board looked more favorably on our resolution and passed a resolution prohibiting spring shooting. In Wayne county we introduced several resolutions, one in regard to partridge shooting, which was granted. In Wayne county we introduced a resolution protecting woodcock until Sept. 1, which prevailed. We have no spring duck shooting in Wayne county. Thus far we have been instrumental in getting some of the provisions we asked for. All things considered, I agree with Mr. Amsden to leave the State law as it is. In securing local legislation it must be borne in mind by local clubs that eternal vigilance must be their motto always.

MR. SCHEMERHORN.—I have had a little experience with supervisors. I think my county was the first in the State to stop the selling of birds. Five or six years ago I got up a law stopping the selling of birds in Cortland county. As I understand it they are obliged to file their law with the county clerk in so many days afterward. They neglected to do it. I went before them the next year. This time they filed it all right, but I found that they had amended the State laws. Nine times out of ten the laws supervisors pass are worthless. I then went to Albany with Mr. Kellogg of our town, and got a law there prohibiting the sale of game.

GEN. D. H. BRUCE.—In view of what has already been said on this question this inference may be drawn: the Legislature of this State can hardly be made to infuse life into clubs organized for the protection of fish and game that have no life to begin with. That which is done in the county can only be done by live organizations. I apprehend that most of the live organizations of the State are represented here to-day. Now if any effort were to be made in the way of procuring amendments to the State game law, they must be of general application throughout the State. As has been already observed, the law in its main particulars is fairly satisfactory, although not all we can desire. There are amendments which we could suggest many of us, but which it must be most difficult to obtain.

Generally speaking the boards of supervisors of different counties have the power to pass ordinances to accomplish that which should be desired. Is it not a fact that it would be better to depend temporarily at least on the boards of supervisors to do that which we might ask the Legislature to do? If it should be said that the boards of supervisors are reluctant to comply with requests that a legal organization makes, it seems to me that that local organization lacks life enough to make its power felt in the board.

It was not many years ago, here in the county of Onondaga, where we have many public waters well filled with fish and not a little game, that the matter of protection was somewhat unpopular, but resolute men and resolute clubs determined that there should be protection. Resolute men, fearing not the pirates who would rob us of our rights, have worked together and brought about a condition here that is a reform, at the same time putting their work before the public until the people of this section have become well educated to the necessity which exists for the protection of fish and game. As illustrative of this Mr. Mowry has told you of the action of the board of supervisors. The Anglers' Club asked for an appropriation of \$500 to be placed under the discretionary charge of the District Attorney. The board has unanimously passed that resolution. It shows the effect of earnest work. It shows the effect of educating the people.

This matter of taking care of the public waters is a public question. The fish in the public waters and the game belong to the people. They don't belong to the few. It is as much the business of the boards of supervisors, of the District Attorney, of officers of the law generally, to protect the fish and game of their locality as it is to enforce any other law. You have only to bring this to the attention of the supervisors.

Properly organize in every county at least one live club to bring about the result so much desired throughout the State. It is not all in the passage of laws by the Legislature. It is in creating a public sentiment which shall not only demand those laws, but support them after they have been passed. If we build ourselves up properly the time will soon come when our committee can go to Albany and there demand of the Legislature that which is of benefit to the people and the whole people and we shall be heard. We need thorough organization throughout the State. We need men in every county of the class and character of the men who are here to-day. And when our organization shall have been carried into every county then will our association become strong, and then will the protective laws of this State be ample and sufficient.

We need, at the same time, to create public sentiment in the direction of the support of the fish and game protectors. It may be said that a better corps of protectors could not be selected. We all have faith in them, from the chief down (making one, and only one, exception). I speak unqualifiedly of the ability of the game protectors. They have to take care of sixty or more counties, and it is too much of a tax on each protector. We need more of them. We need to broaden our power, we need to broaden our protective force, as well as to broaden protective legislation. Our protectors have not the support that in right and justice they ought to have. They are doing all it is possible for them to do, but it is utterly impossible for twenty men to enforce the law throughout this State as it should be enforced. It is only a surprise to me that they accomplish as much as they do.

On this question of going to the Legislature and asking amendment I, for my part, am decidedly in favor of keeping the law as it now stands, demanding that there be no amendment that shall reduce its efficiency. It is a doubtful expediency, in my mind, to go to the Legislature asking any important changes in that act. Those changes which to many of us seem necessary, most of them the boards of supervisors have the power to make as temporary laws. It should be left to the boards to take care of them. In fact, I would propose no radical amendment until the present law has been tried to see what are the faults as well as its good points. (Applause.)

HENRY C. CARR suggested that the matter of amendments be left to the executive committee. Things might take a different turn. He himself did not think it was going to be a difficult thing to get legislation.

MR. CROSBY believed in keeping what they had. In Cortland county they were going to ask for some legislation, and he believed they were going to get it.

MR. PECK.—Mr. Carr handed me a bill for our supervisors a short time ago, curtailing spring duck shooting. Although the supervisors are good in every other respect, still, in this one respect, the matter of game protection, they don't seem to be as thoroughly educated as they might be. They rejected the bill three to one on the mistaken ground that it was properly a State measure.

MR. MOWRY.—We have an idea that our game laws are all right as they stand to-day for the protectors of the State to work under. I think there is a general feeling that the game laws had better be left practically as they are, so far as the protective interests are concerned. Our protectors are at work under them and secure convictions readily. There are some minor changes in which we are interested that will probably be brought before the meeting through the chairman of the amendment committee.

Report of the Committee on Legislation.

There was developed a well defined feeling that the wiser course for the Association to pursue this year would be to refrain from recommending any amendments whatever, but on the contrary to defend the statute so far as might prove practicable against the assaults sure to be made upon it in Albany. When the committee reported, through Mr. Van Cleef, recommending that all amendments be held over for another year, their report was adopted without further debate, as follows:

To the Association:

Your committee on legislation having carefully considered the situation and having listened to the expressions of opinion here to-day report as follows:

We would recommend that no amendments of the fish and game laws be submitted at Albany this year from this Association.

We would recommend the adoption of these resolutions as expressive of the sentiment of this convention:

"Whereas, The present fish and game laws, enacted after two years of careful deliberation, has met with general approval; and

"Whereas, The period of one year is too short a time within which to test its merits fully, although we appreciate the fact that it is defective in some particulars;

"Resolved, That it is the sense of this organization that all changes in the present law should be deferred until another year.

"Resolved, That the Legislature be and hereby is requested to appoint from its own members a commission to revise the present law, with direction to report at the next session of the Legislature; that such commission be authorized to sit at any time during the present year; and that it be requested to confer with the Commissioners of Fisheries for their advice in preparing such revision.

"Resolved, That the Legislature be and hereby is requested to refer to such commission all amendments proposed at the present session."

Respectfully submitted,

WALTER S. MACGREGOR, Syracuse, Chairman,
J. S. VAN CLEEF, Poughkeepsie,
W. S. GAVITT, Lyons,
G. M. SKINNER, Clayton (not present).

Finances.

Secretary-Treasurer Sage reported \$144 on hand. Of this amount \$60 had been contributed in response to the appeal of the Ways and Means Committee, by Mr. F. J. Amsden (\$25), Mr. W. S. Kimball (\$25) and Mr. W. C. Browning (\$10). The purpose of these contributions had been to establish a fund for use in securing promotion of the game protective purposes of the Association. On motion of Mr. Van Cleef, it was determined to invite the clubs of the State to contribute to the fund:

Resolved, That the secretary of the Association request from the several clubs to reply to the voluntary contributions to be used as a special fund for the purpose of meeting such necessary expenses as may be incurred in securing that legislation which may in the judgment of the Executive Committee be necessary for the protection of fish and game.

Annual Dues.

The amendment reported from the executive committee, respecting annual dues, was adopted, and a further provision, suggested by Mr. Van Cleef, was added, empowering the executive committee to remit dues in special cases. The article now reads:

ARTICLE VIII.—DUES.

Sec. 1. Clubs.—(a) The annual dues to the Association from each club to entitle it to representation in the annual winter and quarterly meetings shall be five dollars, payable on or before the second Thursday in January, which shall be the beginning of the fiscal year. (b) The dues from each club to entitle it to participation in the summer meeting shall be one dollar, payable on or before the date of the first day of such meeting. (c) The executive committee shall have the power to remit in its discretion the said dues in whole or in part for any year.

The Committee on Forestry presented a very comprehensive and intelligently prepared report on the subject of forestry. It was submitted by Gen. Bruce, who explained that it had been prepared chiefly by Mr. Wolcott. The full text follows.

On motion of D. J. V. Haberer, of Utica, it was voted to invite forestry organizations to ally themselves with this State Association:

Resolved, That the Association extends an invitation to all scientific organizations in the State interested in forest protection to join this body.

Reimbursement of Game Protectors.

Gen. Bruce called attention to the fact that certain of the game protectors had in the past expended their personal funds and incurred personal liabilities in the discharge of their duty beyond the provision made for such expenditures, and as the men could not bear these losses without hardship, he suggested that the State should repay to them the funds thus spent in its service. Chief Pond estimated that the total amount was under \$2,000. On motion of Gen. Bruce it was declared to be the sense of the Association that the Legislature should be requested to ascertain the amounts that may be due the game protectors beyond the provision for such expenditures, and that a bill should be passed reimbursing them for the money which shall be found equitably and justly to be due.

Other Business.

The secretary read a communication respecting a projected national sportsmen's convention in Chicago. This was referred to the executive committee, where it was laid on the table.

On motion of Mr. Hookway the secretary was instructed to keep the members of the Association advised regarding the introduction of bills into the Legislature.

A committee on nominations, consisting of Messrs. Mowry, Gavitt and Van Cleef, submitted the names of Mr. Charles B. Reynolds, of New York, for President, and Gen. D. H. Bruce, of Syracuse, for Vice-President, and they were elected. Mr. John B. Sage, of Buffalo, was elected by the Executive Committee Secretary-Treasurer.

Syracuse was chosen as the place for the next annual convention, Jan. 11, 1894.

Following the convention a meeting of the Executive Committee was held, in which a plan for presenting to the Legislature the views of the Association was discussed,

and the special committees on legislation and on finances were continued.

The Committee on Legislation consists of Messrs. Walter S. MacGregor (chairman), Syracuse; W. S. Gavitt, Lyons; J. S. Van Cleef, Poughkeepsie; G. M. Skinner, Clayton.

The Ways and Means Committee, whose special purpose is to secure funds for the actual protective work of the Association, consists of Messrs. Frank J. Amsden (chairman), Rochester; D. H. Bruce, Syracuse, and W. H. Thompson, Alexandria Bay.

The reports presented by the delegates of their club work will be given in our next issue.

At the November committee meeting, Mr. W. E. Wolcott, secretary of the Black River Fish and Game Protective Association, had made a report on Adirondack deer; and on request of the president had prepared for the convention a fuller statement, which was listened to with close attention:

Report on Adirondack Deer.

[Presented by W. E. Wolcott, of Utica.]

A great deal of interest is taken by Adirondack deer hunters, guides and hotel men, as well as by sportsmen generally, in the operations of the existing game laws and their effect in protecting the cervine animals in our great Northern wilderness. It is generally admitted that deer have been increasing in numbers in the Adirondack region ever since the unsportsmanlike and highly-destructive mode of hunting known as "crusting" was abolished several years ago. Formerly men would go into the wilderness, when the snow was deep and there was a heavy crust, and with revolvers or clubs slaughter deer by the score while they were helpless in their yards. One old woodsman boasts of having killed 87 deer in one winter in this way. Of course, where so many were killed much of the venison was allowed to go to waste and only the hides were taken. This slaughter was permitted to continue until it became evident that the ultimate extinction of the deer must result unless it was stopped, and then it was that a law was enacted imposing a severe penalty for crusting, and this statute has since been in force. The wisdom of this law has been plainly demonstrated, as has also that of the act prohibiting killing deer at salt licks. Now the question arises as to whether or not, with the increasing tide of travel in the Adirondacks and the rapidly multiplying number of hunters, it will not be wise to enact further laws for the protection of deer.

Many sportsmen in central New York favor doing away entirely with the style of deer hunting known as floating or jacking, for the reason that when this method is most successfully carried on, which is in hot weather, the deer are not in their prime, many more does than bucks are killed, and the percentage of deer that are wounded and escape the hunter only to die of their wounds is very great. There is also quite a sentiment among our sportsmen in favor of doing away with hounding, but it is by no means as strong as that against floating. All believe the season should be shortened. Most sportsmen would be glad to see a law enacted making it illegal to kill does, providing such a law could be enforced.

It has been argued by men who have had years of experience in hunting deer, and therefore know what they are talking about, that the season for shooting should not open until Sept. 10 or later. Many would like to have the season extended so as to include fifteen days of November, for the deer are not in prime condition until late in the fall, but such persons are also in favor of abbreviating the season by opening it later.

In order to obtain definite information as to whether or not deer are increasing in numbers and with a view of obtaining other information concerning them I sent out letters of inquiry addressed to Adirondack guides and hotel men in all parts of the woods. The responses were prompt and to the point.

Of the replies received 30 favored doing away with floating or jacking for deer entirely, 5 favored floating, and 1 correspondent wrote that some guides were in favor of and others opposed to it. Thus it will be seen that the weight of the sentiment among the guides and hotel men is strongly against floating, and quite in accord with that of sportsmen who frequent that region, as far as this method of hunting is concerned.

As to the practice of running deer with dogs, more than three times as many guides and hotel men favored this style of hunting as were opposed to it. The general feeling, however, was found to be quite in favor of a short season for hounding. There seemed to be quite a diversity of opinion as to the dates when the season for deer hunting should open and close, but the majority appeared to be satisfied with the present dates. Quite a number, however, declared in favor of opening the season Sept. 1 or 15, and a dozen or more desired the season extended into or through November. The St. Lawrence county guides say they would like to be permitted to hunt deer with dogs there, if it is allowed in other counties.

The following reported deer increasing in their localities: In Herkimer county, A. D. Barber, Honnedaga Lake; J. E. S. Wilkinson, Wilmut; Charles H. Smith, Stillwater; Henry Studor, Bisby Lakes; Robert Perry, Christopher Goodsell, Eugene L. Scrafford, John L. Scrafford, Sam Dunakin, C. V. Wells, Old Forge. In St. Lawrence county, Chauncey Westcott, Donald Stewart, Cranberry Lake. In Hamilton county, C. H. Bennett, Raquette Lake; G. W. Tunnichiff, Blue Mountain Lake; David Helma, Long Lake; O. L. Howland, Rudeston; Tyler M. Merwin, Blue Mountain Lake; Theodore C. Remonda, Morehouseville. In Warren county, W. H. Roblee, North River; Henry S. Downs, Chestertown. In Lewis county, Warren Humes and Fred. Phelps, Harrisville. In Saratoga county, Thomas Salmon, of Sacandaga Valley. In Essex county, the Leland House, Schroom Lake, and Orrin Harris, of the Pyramid Lake House. In Oneida county, Byron E. Cool, Forestport, referring to the Black River county.

Deer are reported decreasing in their respective localities by Charles Fenton, of Number Four, Fulton Chain, Herkimer county, and G. W. Griffith of Prospect, the latter speaking for North and South lakes. Willard Howlin of South Russell, St. Lawrence county, reports deer not increasing there, and Jack Thomas of Cranberry Lake in the same county, thinks they are about holding their own. Charles Wagner of Morehouseville writes that deer are not increasing there.

The guides say there are a few wolves and now and then a panther in the Moos River region, and also in the Spruce Lake region, near Cranberry Lake and about the

headwaters of the Oswegatchie. Two panthers are reported between the Grass and Raquette rivers, one in Essex county and occasionally one near Blue Mountain Lake, Hamilton county, and now and then one near Chestertown, Warren county, but these animals are getting very scarce and, of course, kill comparatively few deer.

Estimates as to the number of persons who now visit the different localities in the Adirondacks where there was one ten years ago, were made as follows: Old Forge, Herkimer county, 100; Cranberry Lake, St. Lawrence county, 25; Long Lake, Hamilton county, 10; Rudeston, Hamilton county, 3; Wilmut, Herkimer county, 10; Sacandaga Valley, Saratoga county, 50; Bisby Lakes, Herkimer county, 10; North River, Warren county, 10; Chestertown, Warren county, 10; Blue Mountain Lake, Hamilton county, 100; Essex county, 16; Harrisville, Lewis county, 50; North and South Lakes, Herkimer county, 50; Raquette Lake, Hamilton county, 10; Number Four, Fulton Chain, 12; South Russell, St. Lawrence county 10; Honnedaga Lake, Herkimer county, 10; Morehouseville, Hamilton county, 10; Stillwater, Herkimer county, an increase of 25 per cent.; Schroom Lake, Essex county, not as many.

Estimates as to the number of deer killed in various localities last season by the various methods of hunting were given as follows:

	Floating.	Hounding.	Still-hunting
Fulton Chain.....	100	125	30
Cranberry Lake.....	75 to 100	25 to 30
Long Lake.....	10 to 15	25 to 30
Rudeston.....	30 to 40	125 to 150	10 to 15
Morehouseville.....	25	40	12
Wilmut.....	6	40	10
Sacandaga Valley.....	25	30
Bisby Lakes.....	2	8	3
North River.....	30	10
Chestertown.....	25	75	5
Blue Mountain Lake.....	25	50
Pyramid Lake.....	6
Hornsville.....	10 to 12	75 to 80	20 to 25
North and South Lakes.....	14	27
Raquette Lake.....	100	10
Little Woodhull Lake.....	42
Schroom Lake.....	30
South Russell.....	100 to 150	15 to 25
Stillwater.....	8	100	20
Honnedaga Lake.....	90

From the above figures it will be seen that in the localities named from 475 to 567 deer were killed by floating, from 998 to 1,028 by hounding and from 170 to 245 by still-hunting. The totals thus show that from 1,643 to 1,840 deer were killed, and the number not reported would certainly make the aggregate over 2,000.

There are comparatively few Adirondacks hotels where venison is not included in the bill of fare before the hunting season opens, provided the proprietor has confidence that his guests will not enter complaint against him. Many persons living in the woods or on the borders believe they should be allowed to kill a deer at any time when they are out of meat and do not hesitate to do so. There has, however, been a great change for the better during the past few years in the attitude of the residents of the Adirondacks toward the game laws and I think most of them would be glad to see wise protective measures lived up to. It goes without saying, however, that no game protector who is not an experienced woodsman can do effective work in the Adirondacks.

Report on Forestry.

Your committee on forestry beg leave to report as follows:

Under the new constitution of the New York State Association for the Protection of Fish and Game, adopted last June, the preservation of the forests is designated as one of the objects for which this organization exists and to which its members are pledged. The subject is one of vital moment to every citizen of the Empire State, and to those interested in the aims and purposes of this association it has a double significance.

The most important forest in the State, and one of the most important in this country, is the great Adirondack wilderness, and as this is seriously threatened on all sides at present it would seem to be proper and advisable for this association to first consider what can be done toward its preservation.

The gross area of the Adirondack wilderness region proper is approximately 5,600 square miles, or 3,588,803 acres. These lands are classified, as to character, as follows: Improved, 104,123 acres; wild meadow, 855 acres; water, 67,686; waste, 31,121; burned, 27,274; denuded, 77,027; lumbered, 1,348,587; forest, 1,932,130 acres. Most of the land is unsuitable for agricultural purposes and much of it, when deprived of its timber, is worthless.

It is an established and well-known fact that forests protect and preserve the springs and streams which they overshadow, and are, therefore, a prime factor in regulating and equalizing the water supply. Denude the rocky slopes of the Adirondacks of the timber and the scanty soil of leaf mould will speedily be washed away by the rains, leaving only the granite foundation, upon which vegetation can scarcely find a foothold. These hills and mountains once denuded cannot regain their primitive condition in centuries. The experience of older nations has demonstrated the fact that disastrous floods and freshets follow in the wake of forest destruction. The bitter lesson learned by the people of France, Italy and Asiatic countries should serve as a warning to us. In this region are the reservoirs which are the feeders and the life of our canals. Under the constitution of this State the canals are given special safeguards, Article VII., Section 6 of the constitution says: "They shall remain the property of the State and under its management forever." The proper management of the canals entails the procurement of a sufficient water supply which can only be had from Adirondack streams and lakes. The public interests in this line, therefore, require their protection. But they are not receiving it, for even now lumbering is in progress on the water sheds of the reservoirs, and hundreds of men are at work, as they have been for two years, felling timber on the headwaters of Black River. It is said that within memory the outflow of the Adirondack streams has decreased in summer from 30 to 50 per cent.

The great Adirondack wilderness is not only essential to the water supply, but it has a powerful influence upon the general climatology of the State, equalizing the amount of moisture in the atmosphere and the rainfall, modifying the severity of the winds and storms and making the temperature more uniform. Science has shown that forests are beneficial to public health, aside from climatic influences, for the air that passes through the trees is divested of poisonous gases and rendered pure and whole-

some. Thousands of devotees of rod and gun have favorite haunts in this region which they love next to their homes. As a resort for the overworked people of the cities who need rest and recreation it is deservedly popular and has no superior. As a sanitarium for consumptives our leading physicians commend it.

The dangers that threaten the magnificent forest are many and great. Years ago most of the grand old hemlocks were prostrated, deprived of their bark to supply the tanneries and left to decay on the ground. Most of the gigantic pines have long since lowered their heads and floated down stream to the sawmills. Countless thousands of spruce trees have followed the same course. Annually, in flood of springtime, every stream in the Adirondack region of sufficient volume to float a log bears downward its flotillas of soft wood logs destined to be sawed into lumber. Annually in the heat of summer forest fires rage in the partially lumbered districts, obtaining their first start in the scattered tree tops or brush heaps that follow in the wake of the wood-chopper's axe, or receiving irrepressible impetus therefrom. Annually in the snows of winter processions of teams drawing long timbers for spars and piles may be seen coming marketward over every wilderness highway. And all the year round the woodman's axe rings the death knell of the forest trees; all through the year their bodies are deposited in the mills, where their funeral music is played by the buzz and the gang saws, and in others cremated for wood acid or reduced to wood pulp. Thousands of sturdy axmen, hundreds of sawmills and scores of other mills are ravaging our beautiful forests. The soft wood has already been removed from 1,350,000 acres and the hardwood will soon follow suit if no one cries "halt."

Railroads have been laid around the wilderness, branches thrust into it from every quarter and the year just past saw the completion of a great line running through its very heart. The shriek of the modern locomotive and the rumble of Wagner car wheels are now daily heard where a short time ago the wild deer roamed in undisturbed seclusion and the cry of the great northern diver was the loudest sound that greeted the ear. The new Adirondack & St. Lawrence railroad traverses the wilderness from Remsen to Malone, a distance of 145 miles and opens this great section to markets in which all kinds of timber will find a ready sale. That a great and constantly increasing traffic in timber will result is certain and that frequent, almost daily forest fires in the dry season will occur along the line of this road seems inevitable.

The lumbering, as carried on at present, is as far removed from the teachings of scientific forestry as black from white. The evergreen trees are the first to suffer, and those 10in. through, and even down to 8, 6 and 4in., fall with the others. Land cut over in this way cannot regain its growth of soft timber in half a century. But this is not all. The thick treetops are left on the ground where they fell, and after lying one season they form food of the most inflammable nature for forest fires. Forest land which has been burned over is practically ruined, for most of the virtue of the soil itself, which is composed of leaf mould and other decaying vegetation, goes up in flame and smoke. Where the hardwood timber, the beech, birch, maple and cherry are also cut off, fire is almost certain to follow to complete the work of destruction and render the land worthless for generations. It is calculated that there are now about 1,900,000 acres of primitive wilderness, and at the present rate of cutting there are people living who will see the timber supply exhausted.

For a century or more thoughtful men have raised their voices against the wholesale and wasteful cutting of timber in this State. Perhaps the earliest recorded action by an organization along this line, was that taken by the New York Society for the Promotion of Agriculture, Arts and Manufactures, in 1719, when it appointed a committee to consider the best modes of preserving and increasing the growth of wood and valuable timber "which committee recommended that the State should devote those lands not adapted to agricultural purposes to the cultivation of trees." This very wise recommendation produced no visible results, however, and nothing definite was done by the State until 1872, when a commission of State parks was appointed to inquire into the expediency of the State acquiring title to the timbered lands in the Adirondack region. This commission subsequently reported that in its opinion the protection of a great portion of that forest from wanton destruction was absolutely and immediately required. The preservation of the timber was recommended as a measure of political economy. The Legislature took no further steps in the matter, however, until 1883, when an act was passed stopping the sale of State lands in the Adirondack counties. The year following \$5,000 was appropriated to compensate experts for reporting on a system of forest preservation. In 1885 the present Forest Commission was established, as was also the State Forest Preserve, consisting of lands in the Adirondack region belonging to the State. The commission was empowered to sue for trespass, collect penalties for timber illegally cut, and guard against forest fires. This action was in the right direction, and the Commission did much good work, but something more was needed to meet the public demands. The intelligent people of the State soon came to understand that the comparatively small proportion of the Adirondack lands owned by the commonwealth was not at all sufficient to meet the public requirements, and that however willing the Commission might be its power was limited. Then came the plea for the purchase of additional lands in the Adirondacks and the establishment of a permanent State Park, which plea has since echoed and re-echoed from the North River to the St. Lawrence, from Saratoga to Niagara and Chautauqua, growing in intensity and gaining in volume year by year until it has at last attained the form of a demand that cannot be disregarded. Gov. Hill realized the import of this plea three years ago, and in a special message to the Legislature of 1890 recommended the appointment of a commission to report a plan for the creation of an Adirondack State Park. Gov. Flower appreciates the import of the demand, and in his annual message to the present Legislature recommends prompt and liberal action along this line.

The recommendation of Governor Hill was, by the Legislature, referred to the Forest Commission, which body presented an extended report favoring the establishment of an Adirondack park containing 2,307,760 acres. Then the Legislature passed an act authorizing the commission to purchase lands in the counties of the Forest

Preserve at a price not to exceed \$1.50 an acre and appropriated \$25,000 for the purchase. Last year an appropriation of \$15,714 was made for the same purpose. Of course this amount was very meagre but it was utilized in the purchase of lands in townships 14, 26 and 27 Essex county. Last winter a law was passed ostensibly establishing a State park, but the appropriation was so small that comparatively little could be accomplished. Of the 2,307,760 acres which it is proposed to include in the State park, the State owns about 512,229 acres. There are also included in the park boundaries 336,207 acres of private reserves. To purchase the land desired outright would cost \$4,000,000, but it is argued by many that the investment would be an extremely profitable one for the State.

It is claimed, and very truthfully, that with a proper system of forestry, providing for the judicious cutting and marketing of ripe timber under the direction of State officials, the expense of maintaining and protecting the Adirondack Park could be met. And more than that, a revenue sufficient to pay the annual interest of several million dollars in bonds insured. Prof. B. E. Fernow, of Washington, one of the very highest authorities on forestry matters, calculates that from 2,000,000 acres of Adirondack lands 100,000,000 cubic feet of timber could be cut annually, which, on a conservative estimate, would yield a revenue of from \$150,000 to \$750,000 a year, and even more than that, for a time. The action of the State in purchasing 115 acres land at Niagara Falls, at an expense of \$1,433,429, and establishing a State park there was heartily approved by the public, and it is believed that if equally energetic steps were taken to secure the land desired for an Adirondack park people would rejoice. Of course, the purchase cannot be made at once, as the Legislature cannot authorize the issue of more than \$1,000,000 in bonds for any one object without the sanction of a popular vote, but the Forest Commission will ask the present Legislature for an appropriation of \$750,000 to buy land within the proposed park boundaries.

It would seem to your committee, in view of all the information that can be obtained on the subject, that the most profitable plan for the State to adopt would be to issue \$1,000,000 in bonds each year for four years, if necessary, and acquire title to the land desired at the earliest date possible. Adirondack timber land has an upward tendency in value that cannot be gainsaid. Land that could have been bought ten years ago for \$1 an acre is now worth \$4 and \$5, and ten years later it will be worth twice or three times as much as it can be bought for now. The longer the purchase is delayed the greater will be the expense.

There is talk of asking the present Legislature to amend the law regarding land acquired by the State through tax sales, so as to prevent, as far as possible, the practice of sharp work in its redemption by individuals. This is a matter that certainly requires attention. It is suggested that it would be wise to authorize the president of this association to appoint a committee from each county in the State, as far as the same are represented in the organization, to urge the senators and members of the Assembly in their respective districts to use all honorable means in their power to advance measures tending to secure to the State the desired Adirondack park.

As to the matter of forests in general throughout the State there is no room to doubt that the constant drains made upon them have been such as to warrant the belief that a timber famine must necessarily follow, unless something is done to check the cutting and to replant denuded districts. The subject is one to which all good citizens should give attention and consideration. All of which is respectfully submitted.

D. H. BRUCE, { Committee.
W. E. WOLCOTT, }

Southwestern Texas.

VICTORIA, Texas, Jan. 11.—This country ought not to be forgotten by lovers of sport, especially now when the weather in the Northern States is almost too severe for out of door work. Our weather is all that can be desired for the sportsman. Clear and cool with white frosts, and sunny days, it is enough to make one glad to be alive to get out. We have a good many quail this year, and a larger supply of prairie chickens than we had last year, and on all of our swamp land snipe are abundant. I bagged twenty-one snipe in a two hours and a half hunt yesterday evening, and claim to be no fine shot either. Three young men went out last week, reached the hunting ground about 10 o'clock, and left about 4, and rested about an hour for dinner and bagged seventy-eight. We also have a fine winter for ducks and geese, but the latter are very wild and hard to kill. I have heard of no place where all sorts of shooting are secured with less travel than here.

A. B. P.

A Cold Weather Query.

HARTFORD, Conn., Jan. 16.—I have read with much interest, in your issue of Jan. 12, an article signed by "Tamarack." I wish he would explain a little more clearly how he managed to have so much fun with his canoe and with deer in the water, and why the swamps were so soft, all at a time when the pocket thermometer was spending the night at 10° below zero. Yours in perplexity,

E. D. N.

That Michigan Venison Case.

GAME AND FISH WARDEN'S OFFICE, Charles S. Hampton, Warden, Petoskey, Mich., Jan. 10.—*Editor Forest and Stream:* In February of last year I learned that Dettenthaler, of Grand Rapids, was selling venison. I succeeded in getting positive evidence of the fact and brought suit. Finding that the evidence of the sale was conclusive, Dettenthaler made no defense upon this point, but took the ground that, following the decision of our Supreme Court in the O'Neil case, he was not violating the law in selling venison which he had legally bought during the open season. It was conceded that the venison was bought in accordance with the law, and the police judge convicted Dettenthaler and fined him \$50. The case was appealed to the Circuit Court and the Circuit judge took the case from the jury and acquitted the defendant. I have requested the prosecuting attorney to take the matter to the Supreme Court.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

DEATH OF THE KENTUCKY FISH BILL.

Editor Forest and Stream:

I regret very much that, at last, so old a State as Kentucky, and so clever a people as occupy and possess its territory, have found it necessary to cling to the old tradition—somewhat frontier, but leaning to established Southern ideas—of the right of every man "to do as he pleases," in the capture and destruction of fish.

After months of fight in the Legislature—a body "wonderfully and fearfully flung together"—a body that holds its existence and \$5 a day with a tenacity that commands universal disgust—a body that has been the common object of assault of every newspaper of Kentucky and the common victim of a notoriety as broad as it is undesirable—a body that is at once a mutual admiration society, and an odorous remembrance that will never fade away while the new constitution continues to revolutionize things—after, I say, months of struggle to secure some sort of protection for the last fish in the State, this remarkable Legislature has decided substantially, that fish are public enemies, to be captured, maltreated, mutilated and destroyed whenever and wherever found. It has no pity for a condition that denotes fish disappearance; it has no desire for fish propagation; it believes in a free and open field for the poacher, the seiner, the poisoner and the dynamiter.

There is no exaggeration in this statement. Having taken a personal interest in the attempt to secure a fair and just law in Kentucky for fish protection and propagation from the present Legislature, and with others of the Frankfort Fish and Game Club almost daily, while action was pending, visited the Legislature, conversed with its members, explained the reasons and necessity of the proposed legislation, and finally, after changes and concessions whittled down to the last point, realized the fact that the "most notorious" Legislature of Kentucky don't propose to pass any law on the subject—the result creates a sense of disgust beyond expression.

The first attempt to secure a just law resulted fairly enough. The Spalding Fish Bill, providing for fishways, punishing seiners, netters, poisoners, dynamiters and those who shoot fish on their spawning beds, passed the House by a decided majority. When it reached the Senate came the Lindsay episode, the hostility of that eminent jurist, because, in his opinion, to protect fish and to propagate fish produced idlers and drunkards. The bill went down under his opposition, and a modified bill was introduced by Senator George. After a struggle this bill passed the Senate.

Reaching the House, those who believed that fish had no rights that Kentuckians were bound to respect, had gathered force, consolidated efforts, and what, with lack of attendance, adroit manipulation and the indifference of some of the professed friends of fish legislation, the bill went over till after the summer recess.

The eternal Legislature, as it is called, on reassembling found little of interest in fish matters. The old fogey got in his work. The doom of the fish bill was sealed. There was a little skirmish, some desultory firing, a call of the roll, and the measure, trimmed down to the ultimate of penalties against seining and dynamiting, was laid away in its little bed six by two.

Kentucky is not ready to protect or propagate its fish industries, nor any other industry, for that matter. Its Geological Survey Department has been throttled, "cobwebs are festooning the ores and metals that denote its native wealth. The iron hand is laid hard on projected railways. Corporate co-operation in building factories and workshops is discouraged. Double taxation on the same subject matter is approved as the highest element of public economy.

In fact the only idols that endear themselves to the Kentucky heart of to-day are the "hoss," the "tobacco," the "whisky trade," the "plunder of politics" and the memory of the "good old times that are gone." The "Days of Auld Lang Syne" can be sung in Kentucky from year in and year out and reflect vividly the public life. It has little opportunity or time to study or solve the problems that interest the age that is marching on. So little does it wreck of the wheels of progress that it will probably stand the isolated, unenviable, non-represented State of the Republic at the World's Fair at Chicago.

What chance has a fish bill in such a state of affairs as this?

S.

THE reports of the Fish Commissioners of Ontario, Nevada and Pennsylvania have reached us too late for extended notice this week. They will be reviewed in a later issue. The reports from Ontario and Pennsylvania form large illustrated volumes of especial interest, the former including an account of the fishes by Prof. Wright, and the latter a report upon the same class of animals by Dr. Bean. The Pennsylvania volume contains 15 colored and 60 black plates of the fishes.

IN GREENBRIER COUNTY, WEST VIRGINIA.

MR. A. N. CHENEY. SENATOR J. E. KENNA. MR. WM. D. CLEVELAND.
From a photograph by the late Senator Kenna.

Labrador, Greenland and neighboring regions. The opportunities for getting Arctic game, i. e., bear, walrus, seal, etc., and fowl, as well as salmon and trout, are seldom presented. The expedition will leave Boston about July 10 and will en route be prepared to stop at rivers, where full time for sport will be given. Capt. Farquhar is well known to all sportsmen who have tried the coast and rivers of Newfoundland and the Labrador. I will be pleased to answer all inquiries of any who have a mind to avail themselves of Capt. Farquhar's offer.

ROWDY ROD.

Albany Game and Fish Bills.

[Special Correspondence of Forest and Stream.]

ALBANY, Jan. 17.—*Editor Forest and Stream:* The bills amending the fish and game law (Chap. 488, Laws 1892) introduced into Assembly and Senate are as follows:

ASSEMBLY.

No. 37. By Mr. Guenther.—To forbid the taking of deer by jacking.
No. 38. By Mr. Guenther.—To amend Sec. 210 by inserting the words "posted" and "private territory" so as to show more clearly what lands cannot be trespassed upon.

No. 39. By Mr. Guenther.—To amend Sec. 217 to make limit of exemplary damages for trespass \$50, instead of \$25 as now.

No. 42. By Mr. Griffin.—Applies only to Delaware county: allows catching of suckers by jerk-hook or spear through the ice; and also the spearing of eels, suckers and pickerel in the Delaware River at any time.

No. 104. By Mr. Thornton.—To amend Sec. 141 so that bull-heads, catfish, etc., can be caught in Sullivan and Orange counties.

By Mr. Parkhurst.—To amend Sec. 149 so as to include Honeoye Lake among the lakes in which bull-heads, suckers, etc., may be caught through the ice.

IN THE SENATE.

No. 47. By Mr. Saxton.—To amend Sec. 104 of the game code, so that fishing for trout, salmon, etc., shall not be done through the ice in Great Sodus Bay, in Wayne county. Sections 133 and 141 are amended to correspond. The Senate Committee has reported this bill favorably. Mr. Saxton tried to have the bill advanced. Then Senator Erwin made an eloquent plea for the game code, and advised everybody to go slow in amending it.

BOSTON AND MAINE.

Tonging Tomcods.

A FRIEND asked me the other day if I ever went "tonging tomcod?" Here was a puzzler to me, and perhaps it will be to some of the readers of the FOREST AND STREAM. At first I thought that he must be guying me. But he is a great lover of hunting and fishing, and I was bound to find out his meaning. His name is Claude Tarbox, of Byfield, and he is in the grain trade at the Boston Chamber of Commerce, with A. P. Aldrich & Sons. He explains: "I went Christmas morning with my brother-in-law, J. Oren Bailey, and we tonged a bushel basketful, as cold as it was."

"But how in the world is it done?" I asked. "Why, it is simple enough," he explains, "though I never heard of its being done anywhere but down our way. About this time of the year the tomcod come up to the fresh water falls, where the streams empty into the salt water. At low tide we go after them. We have wooden tongs with crossed arms, about four feet long. Between the jaws, where the tongs come together, we have sharp brads to hold the fish. These jaws are a good deal like the jaws of a big fish; the brads taking the place of the teeth of the fish. Well, you are ready for tonging. With the tongs in hand—one hand hold of each arm—you get on to the rocks at the falls and peer down into the water. There are the tomcod. The tongs go down cautiously. One is between the jaws. Click go the wooden arms together, with a quick motion of the hands above water. The fish is caught and the brads hold him. With a swing he is deposited on the shore, and you are after another. No matter if only his tail sticks out from among the rocks, the brads will hold the fish. It is great fun. You should see my brother-in-law. He is an expert, though he has only one leg, as I have told you before. Tongs in hand, he jumps from rock to rock on one foot. His crutch is usually somewhere up on the shore then. Of all the men I have ever been hunting or fishing with he loves it the best, and not one man in a dozen, with both legs, can get around as fast as he can. He is a born sportsman. He never backs out. 'He can go where you can, or anybody else. His gun and his crutch are all he requires for a glorious day in the woods. Come down, and go tonging tomcod with us.'"

The pickerel fishermen are at it again, or will be as soon as the extremely cold weather lets up. The bait is generally ready. Mr. A. W. Tompkins, of Foster, Weeks & Co., tells of a good haul of pickerel bait from the Charles river the other day. It seems that the fishermen watch the holes where the ebb tide leaves the small tomcod confined, till the next tide. Here they dip them out with nets, and put them into proper receptacles—generally some part of a running stream, set off with wire netting—till they are wanted for bait. This time Mr. Tompkins with his friend, found a very deep hole, and they dipped and dipped till they had many thousands of little tomcod, just right for pickerel bait. The pickerel fishermen speak highly of the little tomcod. They will stand more hard usage, both in transporting and as bait, and come out alive, than almost any other form of minnow. The catch, mentioned above, will be used later, probably at the Sudbury river, where Mr. Tompkins and his friends own a hunting and fishing camp.

ANGLING NOTES.

Pike Work Down Stream.

It was not until my note making reference to the movements of pike in a stream was in type that it occurred to me that I could get some evidence on the subject right here at home. Pike were transplanted from Lake Champlain—and I mean the so-called pickerel, *Esox lucius*, not the pike-perch, which is locally known as Champlain pike—to Schroon Lake about 1845. This date may be a year or two out of the way, but an uncle of the writer was visiting Schroon Lake the year after the pike were introduced and learned of the plant from the men who made it, and he thinks it was about 1846 when he was there. Within four years from the time of planting the pike in Schroon Lake the uncle referred to was fishing in the Hudson River above Glens Falls for trout and caught 36lbs. of pike, very much to his astonishment. He told me to-day that he thinks that it was really within three years from the time the pike were planted, but to be on the safe side he finally said four years. There were no pike in the upper Hudson until they worked down from Schroon Lake, and to get to the place where the 36lbs. were caught the fish had to leave the lake, follow down Schroon River into the Hudson, a distance as the streams flow of from forty-five to fifty miles. It is not at all likely that a large number of pike were brought from Lake Champlain for the purpose of stocking Schroon Lake, and that they should not only stock the lake, but spread down stream for a distance of fifty miles in such numbers that 36lbs. were caught in one day by one man, all within four years, is rather startling evidence of the rapidity with which they breed and spread, and is the best evidence that the pike requires no close season, and spearing if shooting and netting is prohibited by law.

Pike in Glen Lake.

There are pike in Glen Lake, the home of the giant black bass of the small-mouth species, and as the lake was formerly the home of the brook trout, before the pike, and then the black bass, were introduced, I have been curious to know how the pike got into the water, but only learned the facts regarding their introduction very recently. When the pike from Schroon Lake had worked down the Schroon River to the vicinity of Warrensburgh, one Joseph Bentley, in 1851, took some of the fish and put them in an artificial pond on his farm, the outlet of which flowed into Glen Lake, and the pike soon found their way down into Long Pond, as Glen Lake was then called. If the fish did not know it, they have only to go down the outlet of Glen Lake to find themselves back in their original home, Lake Champlain.

Pickerel.

Of pickerel proper, *Esox reticulatus*, there are very few in the waters of northern New York, although the pike is universally called the pickerel. Moreau Pond, in Saratoga county, contained the true pickerel, and until a few years ago it was the only water anywhere near my home that did contain this fish. Within the past half dozen years Judge Orange Ferris showed me some pickerel that he caught in the Hudson while fishing for pike at a

place very near the pond, where my uncle first caught the pike while fishing for brook trout. That was the first information that any one had that pickerel were in the Hudson. I mean any one that could tell the difference between pike and pickerel. How the pickerel came in the river I do not know to this present day, but it is quite evident that some one brought them from Moreau Pond and put them in the stream. At first, out of five fish four would be pike, and one a pickerel; now four out of five and very often five out of five are pickerel, and the pike appears to have almost disappeared.

How Fish Spread.

Having told something of how the pike worked down the Hudson, it may be of interest to relate briefly how the black bass got up the Hudson. The building of the Erie Canal brought the black bass into the lower Hudson. From there they were taken to Saratoga Lake (Saratoga Lake furnished the bass which stocked a great part of New England), and then to Effron Lake in Saratoga county. From Effron Lake the bass got into the Sacandaga River, and so into the Hudson from Luzerne south. From Effron Lake the bass were carried to Schroon Lake, and thus stocked the Hudson and Schroon River, south to Luzerne Falls. This spread of pike, pickerel and black bass has destroyed a lot of good trout fishing water, and the introduced fish have not taken the place of the trout. The last trout that I caught in the Hudson below Luzerne weighed over 2lbs., and I caught it just 20 years ago. Long before that, and before the advent of the pike, my uncle, already mentioned, and Judge Ferris caught trout just above Glens Falls that weighed from 4lbs. to over 5lbs. each. A few big trout are yet to be caught in the upper Hudson about North Creek and North River P. O., but they are very few indeed. A. N. C.

WESTERN PENNSYLVANIA TROUT.

THE headwaters of the Alleghany River in McKean county, Pa., have furnished good brook trout fishing in the past and continue to furnish moderate sport at present. Last spring some fairly good catches were made. Owing to the use of dynamite as a fish destroyer, the native trout supply was about exhausted, and this necessitated the formation of an anglers' fish protective association. "It's an ill wind that blows nobody good," so the bad state of affairs resulted in the birth of the Port Alleghany Fishing Club, the members of which set to work to replenish and protect the streams of their vicinity.

One of their first steps was to prevent the use of dynamite in fishing. The anglers supposed they were helpless under the fish laws of the State. If they had consulted the *Book of the Game Laws* they would have found that, according to Sec. 26 of the Statutes, the use of any explosive for killing fish in the waters of the State is punishable by a fine of \$50.

To accomplish their immediate purpose, trout were secured from the State hatchery at Erie and planted in the waters in question. These are rainbow trout and seem to be doing well.

One of the best points for speckled beauties is at the foot of the Rowley Mill Dam, about two miles above Alleghany Port. The river here is about 100ft. wide, and immediately below the dam as much as 18ft. deep. Trout of a pound weight, occasionally several ounces better, are often taken. Several have been seen that are regular old fashioned "speckles." Last spring E. H. Brown, of Alleghany Port, drew in out of the wet a beauty of 1lb. 9oz.

Other members of the club are: Messrs. S. L. Young, Buckingham, Flannan and John Brown. MCKEAN.

Spring Fishing for Ouananiche.

Editor Forest and Stream:

Mr. M. C. Luckenbach, in your issue of Jan. 12, seeks information as to spring fishing for ouananiche in the rivers running into Lake St. John, rightly presuming, I suppose, that there is no early spring fishing in the Grande Discharge. In your note at the end of Mr. L.'s letter, you speak of Mr. George H. Dana's fishing at the foot of Alma Island, in the latter part of June. That is usually ten or fifteen days after the fishing commenced there, but I do not think it is wise to expect good fishing there in the spring. I should recommend Mr. Luckenbach to try either the Ouiahouan or the Metabetchouan for early ouananiche fishing, say from about May 20 to June 10 or 15. Last year I had splendid fishing in the pretty Ouiahouan Pool, immediately above the railway bridge, on May 25 and 26. So had R. M. Stocking, of this city, Mr. Chase, banker of Waterbury, and president of the Waterbury Watch Co., and Mr. J. Wallace, of Ansonia, Conn. I briefly described this fishing in the FOREST AND STREAM of June 9 last. There is always good fishing about the same period in the mouth of the Metabetchouan, and also along the Roberval shore of Lake St. John, in front of the hotel. E. T. D. CHAMBERS.

Fishculture.

MAINE FISHERIES.

THE Commissioners of Fisheries and Game have presented their report for 1891 and 1892. "The success of their work is best recorded by the journals of the day, the railroad superintendents, the hotel keepers and the pretty little village reports of summer visitors." Newport, Sebago, Green Lake, Belgrade and Sebec are illustrations of the combined attractions of pure air and good fishing.

Black bass have been introduced at trifling cost and have multiplied so rapidly that they no longer need protective legislation. The Kennebec has been despoiled of its salmon by the dam nuisance at Augusta, and the destructive instincts of the natives at Waterville Falls, combined with the pollution of the stream by factory and mill refuse.

"The salmon fishery of the Penobscot has been preserved the last few years almost entirely by the joint efforts of the United States and Maine Commissioners of Fish and Fisheries. The United States Commission purchases the fish at the weirs on the river where taken and conveys them to waters set apart for that purpose, where they are carefully protected until ready for spawning, when their eggs are taken and distributed to such of the States as have subscribed to the expenses of the work for home planting. We as representatives of the State's interest subscribe to the full extent of the resources that the State Legislature places in our hands. We have established small hatcheries of our own at such points as are most central and convenient for distribution. The United States Commission has lately adopted a system of feeding the young fry for a length of time, that

will prepare the young fish to protect and feed themselves. We deem this a great advance, as it increases the chances of life to the newly-born fish. One of the young fish that is fed for six or eight months before being turned into a pond or river is deemed equal to ten times the number of the newly born fish when planted and liable to be eaten by even the most worthless vermin that swims.

"The United States Commission has been very liberal to our State in gifts of salmon eggs and fry. We intend to adopt the system of feeding all our young fishes for some six or eight months in our State hatcheries before planting them just as soon as our means will admit of it. We have already introduced it in a small way at Auburn with our landlocked salmon, having fed and distributed successfully some 50,000 six months old fish."

In 1891 the Commissioners planted in the Penobscot 80,000 young salmon that had been fed at Orland for eight months. These fish when planted were from 2 to 3 in. long. They were transported about twenty miles and liberated in Grant and Burr's brooks, tributaries of the Penobscot. Some of these fish, captured three months later, had reached a length of from 4 to 6 in.

Landlocked salmon have thrived in all suitable ponds and lakes. They require wide range of water, which must be quick running and with gravelly bottom, in which to spawn. The lakes must be deep enough to afford cold retreats from summer heat, and they must be plentifully stocked with smelts, to serve as food for the salmon. The Commissioners recommend the passage of a law forbidding the capture of these salmon in stocked waters until six years after planting.

In Sebago Lake the spawning landlocked salmon are obtained, and since artificial stocking has been carried on the fish have greatly increased; many are caught by trolling in May and June along the shores.

Last spring the Commissioners commenced feeding a portion of their young salmon at East Auburn. About 50,000 were kept until six months old when they were 3 in. long. They consider one hundred of these fish of more value to stock a lake than one thousand of the young fry just beginning to feed, and propose to continue this method hereafter as far as their means will allow.

Some peculiarities of the landlocked salmon not generally understood by the angling fraternity are mentioned in the report. They resemble the sea salmon in many if not all their habits, but their home and feeding grounds are in fresh waters instead of the ocean.

"Coming into the streams to spawn at the same season of the year, and on the same grounds. Hatching at the same time, the young remaining in the streams one or two years before going back to the lake. They are identical in looks and habits and cannot be identified from each other. They are not a fish that take the fly or bait readily, even in the feeding season, often being days that not a fish can be taken, at other times taking the hook or bait greedily. There are only about two months in the year (May and June) in which they can be angled for successfully, though a fish may be taken in now and then during the summer season, but rather as an exception than a rule. They grow very rapidly during their feeding season, often attaining a growth of two pounds in one year. We have authentic information of fish being caught in ponds, stocked by us only six years that had attained a growth of eight pounds and over. In one instance (Peabody Pond) of twelve pounds. There appears to be some lakes that grow large fish, while in others with apparent the same advantages, no fish will be found of over four or five pounds. There are now quite a large number of lakes and ponds in Maine that have been stocked by us with these fish. In many of these they are quite plenty, while in others hardly a fish has been taken, but as a rule, where the waters have the requisites mentioned in the preceding page, they have been a success."

"The painstaking and careful experiments of Hon. Chas. G. Atkins, Superintendent of the United States works at Orland, has made the discovery that the sea salmon only return to the rivers to spawn once in two years. The same law applies to the landlocked salmon, and perhaps with the brook trout likewise."

STOCKING WATERS WITH SALMONIDÆ.

THE very successful establishment of Sir James Maitland is well known wherever fishculture is practiced, and its influence has been widely felt for good. Perhaps nowhere else in the world have scientific principles been more judiciously and advantageously applied to the difficult and varied problems of fish breeding, and the public has not been slow to profit by the experience of the author of the "History of Howietoun."

"The first edition" of the pamphlet on stocking "had to beg the whole question of modern fishculture; the fourth edition finds artificial stocking very generally adopted and trout farms established in many places in England and Scotland as purely commercial ventures, thriving both fish-culturally and financially."

A similar, but more extensive, growth of public sentiment in favor of artificial hatching has developed in the United States under the stimulus of vigorous Natural and State fishculture operations.

Sir James Maitland's pamphlet will be read with interest because of the many practical subjects treated, as, for example, the preferred age of spawning fish, the separation of the sexes and of sizes, the management of eggs during incubation, the cost of eggs, fry, yearlings and older fish, the care and breeding of trout in the hatchery and ponds, the transportation of eggs and fish.

The cost of eyed eggs is stated to be \$1.62 per thousand; fry at three months cost from \$3.50 to \$4.00 per thousand; yearlings from \$30 to \$45 per thousand; two-year-olds are sold at \$125 thousand.

The pamphlet contains much practical information about the construction of ponds, the water supply, the use of water plants and of natural food. Sir James finds the water-flea (*Gammarus*) the most valuable flesh colorer, since it gives a deep pink hue to the flesh of trout. Snail (*Limnaea*) are also useful. Swan mussels, in our country known as freshwater mussels or unios, are found to increase the number of water-fleas. Watercress beds at the inlet of ponds have given excellent results.

On Stocking Rivers, Streams, Lakes, Ponds and Reservoirs with Salmonidæ. By Sir James Maitland, Bart, etc. Fourth Edition. Published by J. R. Guy, Secretary, Howietoun Fishery, Stirling, N. B., 1862.

A Pennsylvania Railroad Tour to Florida.

SPACE on the first personally conducted Pennsylvania Railroad tour to Florida is being eagerly sought for. The severe old-fashioned winter and the continuous snow storm which has prevailed for the past week has been the means of forcing the chilled inhabitants of the North to seek lovers, which time will give the tourist ample opportunity to profit in health and pleasure, and admit of a thorough tour of all the interesting places in the Peninsula. Later tours to Florida will leave during the months of February and March, dates for which have been fixed for Feb. 14, 28, March 14 and 28. A neatly prepared book on Florida and its surroundings is at the disposal of all applicants by addressing the tourist agent of the Pennsylvania Railroad Company, 340 Broadway, New York, or 233 South Fourth street, Philadelphia.—Adv.

THOSE RUSSIAN HOUNDS.

[From "Hunter's Calendar and Reference Book for 1892," by L. P. Sabaneyef, Moscow.]

Borzoys.

The borzoys can be divided into four groups. First, Russian or Psosoy borzoys, with more or less long hair. Second, Asiatic, with pendant ears. Third, Hortoy, with smooth hair of even length, and fourth, the Brudastoy, with stiff tufted hair. Of the better known breeds there are nineteen, but there are many more in northern Africa and southwest Asia of widely varying characteristics, but little known and so far not fully described.

RUSSIAN BORZOYS.

1. Old psosoy or Gustopsosoy borzoy.
2. Courland borzoy.
3. Modern psosoy borzoy.
4. Chistopsosoy borzoy.

ASIATIC BORZOYS.

5. Caucasian or mountain borzoy.
6. Tazyor Turkomenian borzoy.
7. Crimean borzoy.
8. Persian borzoy.
9. Khiva borzoy.
10. Khirghiz borzoy.
11. Moldavian borzoy.
12. Arabian borzoy.
13. Soudan borzoy.

HORTOY BORZOYS.

14. English borzoy.
15. Polish borzoy.

BRUDASTOY BORZOYS (TUFTED).

16. Courland tufted borzoy.
17. Russian brudastoy borzoy.
18. Scotch deerhounds.
19. Irish wolfhounds.

RUSSIAN BORZOYS.

Old Russian psosoy, or gustopsosoy borzoy, had many varieties, but they all conformed to the following general characteristics:

Ears short and pointed; when quiet lying back on the neck and touching or crossing each other by the tips.

Ribs come down below the elbows.

Back of the males rising in a hump from the shoulders and falling again to the hips; the bitches had a straight back, though sometimes they also showed a slight hump.

Feet long, never round like the English hound.

Hair dense, soft and silky, longer than with any other breed. On the neck the hair longer and heavier, sometimes forming a muff.

Color of the type was gray and yellow, also these mixed. But the color must not be too deep, nor the same all over the dog. For instance, a yellow dog (of which the straw or maize color were preferred) must have the muzzle, throat, chest, hip edges and lower side of tail considerably lighter in color, even passing into white on the tips; the same of the gray dog. Neither must the color be too dark or deep, and it must pass into the lighter one gradually, not in sharp spots. An even dark red or ash gray color, even with lighter shadings on the edges is objected to. But the same dog can have yellow and gray mixed in its coat. In respect to special features of all the different varieties of the Russian psosoy borzoy the authorities do not differ very much, and if occasionally some one defends some particular deviation, it is mainly owing to private reasons, and though his dogs may be of pure blood and breeds, still their deviation from the established type cannot be approved. For instance, the ribs of the Russian psosoy borzoy are not barrel-shaped, as of the Caucasian and Crimean dogs, but they are longer and reach down lower; the hips are never so large as of the Caucasian and English dogs.

It seems sure that all breeds of Russian borzoys came from one common root, namely, from the crossing of the Asiatic or eastern borzoy, which penetrated into Russia some hundreds of years ago, with the northern wolflike dogs, or even perhaps with the wolf itself. This is proved by the ears and by the long hair on the neck or muff. But the Courland borzoy seems also to have added its blood to the breed and given to it the long, curly hair.

Owing to many different conditions of place, food, method of hunting, adding of new blood, etc., the breeds of the Russian borzoys are very numerous and varied, though their characteristics never pass beyond the limits of those of the parent types. That means that when the influence of the Asiatic dog is greater the Russian borzoy of the particular breed would show rounder ribs, prominent forehead, large hips, tail slightly shorter, and possessing great power. When the blood of the northern wolflike dogs predominates, the borzoy is usually gray; coat long and thick, especially so around the neck, and the temper and manners approach those of the wolf. For instance, the dog, sometimes lying down, waits for the game to approach and tries to catch it with one short, tremendous effort. This last quality has been especially developed in breeds for many generations into astounding leaps, as if they were fired from a gun. But owing to the usual tendency to excess in man, some breeds have been refined into nothing; too great a leanness and sharp back, lack of power and morbidity.

MODERN PSOVOY BORZOY.

The ancient breeds of Russian borzoys have been obliged to change and lose some of their former characteristics, owing to changes taking place in the country; as, for instance, decrease in size of woods. The short dog, unable to run long

distances, is gradually losing importance, and signs of greater endurance are being cultivated, like the barrel-shaped ribs and strong muscles. But some signs and qualities of the ancient type are still being carefully preserved. The well-known breeders, P. M. Matchevanauoff and N. P. Yermolof have crossed their dogs with the Caucasian race and have obtained dogs of rounded ribs and strong muscles, at the same time retaining the length of the ribs below the elbows, the touching of the ears behind, and possessing high speed in general with the ability to increase this to a last lightning-like effort or spurt; powers and qualities that had been considered incompatible. Of course, many foreign breeds of windhounds have been crossed with the Russian borzoys in the course of time, but of all these the Crimean and Caucasians have had the most influence and left their imprint on the race either casually or by design.

In the breeds of the modern psosoy borzoys the influence of these crossings is strong enough a variety distinct from the old borzoys, but still the general psosoy borzoy characteristics must not be lost.

Head lean and narrow, with a long and narrow forehead, feet slightly broadening to the top, a sharp ridge on top, profile nearly straight, a little raised at the brows and broken at the eyes. *A prominent forehead is a defect.* Muzzle thin and long, but kept in proportion to the skull, *i. e.*, tapering down evenly, not in broken lines. *A hooked nose, or turned up, or sunk in at the bridge are defects, as is a short or broad muzzle.* The cheek muscles are noticeable, but must not be prominent enough to prevent the head being lean. The lower jaw must not be much shorter than the upper one.

Eyes somewhat prominent, large, dark, hazel in color or black, set in a black ring. *Hanging lower lids and a huge dentate fierceness are undesirable.*

Ears thin, larger than those of the Gustopsosoy borzoy, set up high on the skull, not lying on the back of the neck, but pressed tightly to the sides or at least lying close together. A pendant ear proves the predominance of Eastern (Asiatic) blood. Very desirable is it that the ears should be mobile and partly erective, the tips hanging down to the fore.

Neck is longer and flatter sideways with the bitch, the male having a shorter and broader one. But borzoys with a markedly short and broad neck are usually not good catchers.

Chest broad (broader than any of the Gustopsosoy, but narrower than the English), but not arched so that the crest of the breastbone barely passes the line of the shoulders. Shoulders muscular and freely moving about the elbows, *i. e.* the elbows are slightly turned out. Shoulder a little slanting, so that the legs do not look stumpy.

The forelegs are quite straight, large boned, but lean, so that the tendons can be seen through the skin.

The feet are lean, and toes well compressed and narrow, and the dog must stand well on its claws, the heel barely touching the ground.

Back broad, raised to a hump in the male, more level in the female. The croup long and broad and furrowed so that a hand can go between the hip bones; level in the bitch and curved down in the male, but so as not to form a break in the line of the back, but an even curve. The backbone ought to be slightly sunken in, like a furrow. *A sharp backbone with the vertebrae standing out is defective.*

Ribs not as flat as a fish, nor too much bent, but somewhat bent in and reaching to the elbows or below; and not shortening sharply toward the belly. Barrel ribs are a sign of too much English or Courland hound blood in the breed.

Hindlegs not too straight nor too much bent, hocks well defined, but not sharp; both hindlegs standing parallel to each other, but wider apart than the forelegs. Hip bones nearing each other are objectionable. Quarters not too large, but strong and sinewy, and not at all flat. Tendons thick and elastic. Feet long and toes well gathered.

Tail lean, a little thicker than a finger, tapering to the tip, and with long, pendant hair, which sometimes reaches 7 in. in length and is straight and silky, shortening toward the tip. In repose the tail must be somewhat bent into the shape of a sickle, without any tendency sideways, and come a little below the knees. The length of tail is measured by pulling it forward and between the hindlegs of the dog and touching the back with it; the last vertebra of the tail must come on the spine of the dog.

Size, normal, for the bitch is about 26 in., and 30 in. for the male. Less than 24 and 30 in. respectively are a defect, and over 32 in. is no advantage.

Coat soft, silky and glossy; wavy in places or in large curls all over. The decorative hair, *i. e.*, on the neck, hips and tail, is considerably longer than on the back and ribs; on the head, from the ears forward, and on the fore edges of the legs, the hair must be very short, like to a mouse, smooth and glossy.

The color of the coat at present varies widely, but the best established type has a gray or yellow color, with lighter shadings. Pure gray or yellow are scarce—scarce yet is pure white—the most prized.

Admissible also are a dark muzzle and fawn back, gradually shading to the under side of the body to white or light gray. Other colors, especially black, or black spots, are not allowable, as they surely and unmistakably show English or Asiatic blood. But in general the color of psosoy borzoys must be even, not too strong.

General shape of the modern borzoy is the same nearly as of the old one. Both are about as well-coated, with a kind of muff around neck; profile and outlines of both are the same, except for the head and ears. In the old borzoy the ears are set higher on the skull and lying back on the neck made the profile of the head appear longer and more graceful; while in the modern one, though the head is as long, it is broader and the ears are not outlined; but even in this case the dog has a grace of its own by showing a proportional relation to its greater strength. This same quality is indicated by the greater width of chest, when seen from before, and thus the dog gains by a combination of breadth and strength.

NEW ENGLAND BREEDING RIGHT.

Editor Forest and Stream:

I have secured from Dr. Jas. E. Hair the English setter dog Albert's Roderigo, by Roderigo out of Bonny Gladstone's Girl, and shall soon send him South to be prepared for the New England Field Trial Club All-Aged Stake, and if breeding and natural qualification go toward making a winner, he will be in the first flight sure. He is one of the best of Roderigo's get I have seen and I have seen most of those shown North, and for field work he has that dashing merry way of going that makes it a pleasure for one to see him afield. I expect soon to have him serve my dashing little bitch Nellie Hunter, which will give this get the same blood lines as the get of Antonio and the peerless Daisy Hunter, so much talked of last winter when Daisy was bred to Antonio, with the addition of the Druid-Ruby cross through Ben Hill. I will then have some Derbys to be proud of. I shall also breed him to Rose Gladstone, and by that means get a combination of Roderigo and Gladstone-Sue, which ought to prove as good now as it has in the past. I wish to say a word before closing, of the work of J. M. Taylor, of which I have just secured a copy. For the benefit of the amateur breeder of English setters it is of incalculable value, as it shows plainly what breeding has secured the best results in the past, and if one will study it carefully cannot go wrong in breeding now; and I think that the breeders of setters and pointers owe Mr. Taylor a debt. With best wishes for the continued prosperity of FOREST AND STREAM.

NEW CANAAN, Conn.

THE LORA-HEINEKEN HEAT.

Editor Forest and Stream:

I desire to call your attention to your report of Lora-Heineken heat in Philadelphia trials in the FOREST AND STREAM of Dec. 8, which gives the setter Lora the credit of finding and pointing both coveys in that heat. The heat as run was this: The bird Mr. Tucker flushed just before the dogs were cast off took a direction obliquely to that given by the judges for the handlers to hunt the brace. Lora followed the direction this bird had flown, which led her to a covey. Heineken hunted out in his proper course until signalled back over the hill to back Lora's point; she had dropped and he either pointed or backed without a word; both were steady to wing and shot. Lora followed rapidly the direction the covey took in flight. It had settled in good cover about 75 yds. from woods; the birds were seen to fly from this cover and Lora remained. There was no reason for these birds to have flushed wild; they had taken a long flight and found excellent cover before reaching the woods. The judge (Mr. Coster) ordered Heineken to remain until Lora was brought back, after which we went back and were directed to hunt out the original course. Lora cast in the direction of wagons. Heineken skirted the pines and sage and found no scent of birds at the edge of billrushes, and he followed this a few feet. Lora was whistled back and passed within a few feet of Heineken, who whirled to the right and rear and pointed, and the point was called. Lora came back to the left and was working on the footscents of the birds in bushes in front of Heineken, who was then signalled to go on and locate. He passed to the right of Lora and made a good and firm point. Lora was still moving in the bushes unseen by him. When the birds were flushed the greater number raised just in front of the dog; one flew to the rear, which Heineken's handler killed. He would not have shot had it been Lora's find or her point. It was the dog's find and his point.

Ordered on Heineken, when following swiftly the direction of the flushed bird, wheeled to a first-class point. The judge ordered the bird flushed. Heineken was steady and the judge said "All right." Now when you make such an important mistake against the dog as not to give him credit for making ends to a staunch and positive point when running fast following the direction all of the flying birds went (except the one I killed), were you not most likely to make one when there was a possibility of doubt?

I feel that Heineken should have his due, especially when he ran a good race industriously working with fair range and improved pace to the last, obediently and intelligently, without an error. While I make no objection to the decision of the judges, because they were acting under a system without rules which I agreed to, I do object to reports which argue most favorably to his opponent when her position indicated that she had flushed the cover from good cover where it had settled and stopped to wing. You failed altogether to report the fact, positive that she went in and rooted up two scattered birds in the narrow strip or turning row with wheat field on either side. Mr. Tucker saw the birds fly and I saw the bitch go in and flush them, so that whatever position she may have then occupied, she had flushed the birds.

I do not desire to detract from Lora but I think I am entitled to a fair report for my dogs, and I think you will cheerfully accord it now that your attention has been called to what I hope and believe was an inadvertency.

J. R. PURCELL.

GUN-SHY DOGS.

Editor Forest and Stream:

In your issue of Dec. 29 Mr. Elting has an article on treating gunshyness in a dog. His article is all right, except in the first act, and that is wrong. Never tie a dog, for the moment you put a cord on him and confine him he thinks there is something wrong and you at once abuse any confidence the dog has in you. Gunshyness is merely this one thing and nothing else—fear—and whenever you convince your dog that the report of a gun will not hurt him he is cured of gunshyness. I have broken several that were so bad that at first report of gun they would run home. I then pay no more attention to them that day, don't try to get them out from under the house nor pet them, but feed at night as usual, and if they don't come out for it just leave it there. Then the next day take your gun and dog, go hunting, and the first cover you get into don't shoot. Keep an eye on your dog and see what he is doing. If he shows no disposition to get away from you go to where the birds flew from and sit down. Don't say a word to your dog, he will soon commence pottering round; let him nose round all he wants to. Go to your singles and do the same way. Try this and keep at it till your dog gets interested in the birds. Keep at it if it takes a week; let him chase all the birds and hares he wants to. Now, when your dog gets interested in the birds then you can shoot some; but don't fire your gun close to the dog. Let him be off one, two or three hundred yards, and a good time is when he is chasing. Then if you kill a bird, take it, sit down and play with bird, puppy or dog a half hour, get him to think your bird is a wonderful thing, and then your dog is all O. K. Old dogs that have been badly spoiled would probably require different treatment; but my article is for puppies and young dogs, on probably their first time in the field. If your puppy should not run home at first report, but comes in to you and stays at heel, act as if you were out with him the second day.

CHARLOTTE, N. C., Jan. 6.

HORNET.

DIVISION IN WEIGHT OF POINTERS.

Editor Forest and Stream:

In your issue of Jan. 12, in "Points and Flushes," your eminent staff correspondent of Chicago champions the abolishment of weight classes in pointers. The new club at Chicago, which has proposed such innovation, has certainly no pointer man among the framers of the law and it seems to me, is only trying to have something new, at all hazards. While certainly not averse to any progress possible, I will rest content to await the opinion of pointer breeders and exhibitors in this matter, even though it has the weighty indorsement of Mr. Waters, and it will be plainly no!

TUCKAHOE, N. Y., Jan. 13.

G. MUSS-ARNOLD.

NEWPORT, R. I., Jan. 5.—Did you ever see anything like this? On Sept. 22 my English setter bitch Lillian Russell whelped nine pups. I was away from home at the time, and when I arrived home Nov. 1, I found Kittie G., a maiden bitch, suckling six pups; and now she plays and thinks more of the pups than the mother does. When I feed her she will take the food to the pups first and then eat what is left.

Talks business seven days in the week—a "Forest and Stream" Kennel Special advertisement.

DOG CHAT.

Sale of Base.

The beagle men who were present at the late trials will remember the good work done by Mr. Ashburner's Base, when it was a toss up between Lee II. and the former who should win in the 15in. class. Base goes West and is practically lost to Eastern breeders, though he is a gain for the West. His late owner writes: Mr. E. H. Rummele, Jr., of Sheboygan, Wis., is the purchaser at a large figure. There were several men after this dog; the price was large, but the terms are private. Mr. Ashburner bespeaks the good will of the beagle men for the dog, which will be put at stud at once.

National Beagle Club Meeting.

The quarterly meeting of the N. B. C. was held at the Astor House, New York, Jan. 16, at 4:45 P. M. The old officers present were: Pres. Chapman, Vice-Pres. H. L. Kreuder and Sec'y H. V. Jamieson. The minutes of the last meeting were read and approved and communications by letter accepted as received. After letters from the Keystone K. C. and New England K. C. asking for specials had been read, it was voted that their requests be referred to the new officers for action. Messrs. W. A. Power and N. L. Rutter, Jr., having resigned from the club, Mr. H. L. Kreuder was appointed to communicate with these gentlemen requesting them to state their reasons for resigning. It was then voted that a committee, consisting of Messrs. J. W. Appleton and George W. Rogers, be appointed to draw up a set of resolutions acknowledging the good work of the retiring officers. On retiring from the chair Mr. F. W. Chapman made a few remarks on the welfare of the club, and then introduced the new president, Mr. H. L. Kreuder. This gentleman then took the chair, and in a few well chosen words outlined the policy of the club and its intentions. The roll call of new officers was then called, and the members present were Messrs. H. L. Kreuder, H. F. Schellhas, F. W. Chapman, A. C. Knoblauch, H. V. Jamieson, Geo. W. Rogers, G. W. Laick, J. W. Appleton, H. E. Twyford and H. W. Lacy. Discussion ensued as to the special for the Keystone show, and it was decided to give one for the best beagle in open classes. After several suggestions it was finally decided that the special at the N. E. K. C. show should be for the best pack of four. Voted that committee on incorporation be discharged, as the club having removed its headquarters to New York, it was no longer necessary to incorporate in Massachusetts. Messrs. Norman S. Pease and W. Tallman were accepted as members. It was then voted that the N. B. C. hold field trials in 1893. After some discussion Mr. Chapman moved that at the next field trials classes should be as follows: 13 in. for dogs and bitches; 13 in. and under for dogs and bitches; a Derby for beagles whelped on or after Jan. 1, 1892, also champion class for first prize winners at previous trials only. This motion was lost, but the field trial committee will consider it in due course. Messrs. Kreuder, Appleton, Laick and Schellhas were nominated for delegates to the A. K. C., and Mr. H. F. Schellhas was chosen. A committee on pedigrees, consisting of Messrs. H. L. Kreuder, J. W. Appleton and H. F. Schellhas was then appointed by the chair. The meeting adjourned at 6:45 P. M. and the executive committee went into session. The members of this committee were Messrs. Kreuder, Appleton, Laick, Rogers and Lacy. The question as to what the proposed specials should consist of for the Keystone Kennel Club and N. E. K. C. shows was first taken up. Instead of cups it was decided that a piece of plate should be given not to cost more than \$25, at the Philadelphia show. The committee feeling that the N. E. K. C. show being in the center of beagledom, as it were, should have a little extra attention, so it was decided to offer a piece of plate not exceeding \$50 in value. Messrs. Kreuder and Appleton were appointed a committee to choose any suitable articles in silver as the specials for the above shows. The secretary was instructed to notify the secretaries of those clubs of the intentions of the N. B. C. Meeting adjourned about 7:30 P. M.

The World's Fair Show.

It has long been a much discussed question as to who would be chosen for the responsible position of superintendent of the greatest dog show this country will probably see for some time to come. Mr. Mortimer has been the general choice, and exhibitors should feel relieved when they find their wish come true. In Mr. John Read he will have an able assistant, for these two men stand *facile principes* as managers of shows in this country, and can probably teach the "promoters" on the other side a thing or two in this line. Now that this point is satisfactorily settled we trust that Mr. Buchanan will so arrange matters that the "red tape," so plentiful a source of annoyance in these expositions, will not interfere to frustrate the efforts of these men to give us a great show.

W. K. C. Premium List.

The years seem to come upon us with alarming frequency, and the receipt of a W. K. C. premium list marks another milestone, the twelfth in our experience of American shows. The Westminster Kennel Club is progressive, and while it does not go in for a protechnical premium list to startle the world and then subside into darkness, the steady growth in the value of prizes shows that this, our parent club, fully appreciates the advances that has been achieved in kennel affairs in America by continually increasing the value of its prizes, until with their seventeenth issue even the most greedy exhibitor should feel contented. A glance through the premium list of the show, that will take place Feb. 21 to 24, is almost bewildering in the array of regular prizes and specials, and at no other show can one judge of the interest taken by the different specialty clubs in the breeds they foster than at New York, for nearly every club has done its "proudest" this year.

For the important breeds, such as mastiffs, St. Bernards, both types, greyhounds, great Danes, pointers, all setters, collies and smooth fox-terriers, the divided challenge classes have the same as last year: \$20 and \$10. In open classes, however, \$5 has been added to the first prize; making the prizes \$20, \$15, \$10 and \$5. Puppy classes in these breeds have \$15, \$10 and \$5; and in this is the only fault which we can find with the list. These prizes alone are equal to those given in late shows to the grown dogs, and in view of the

restricted area of the Madison Square Garden one can hardly consider it a wise or beneficial provision, especially when the novice classes, which effect almost the same purpose as puppy classes without so much danger, give the same amount of money. In bloodhounds, deerhounds, field spaniels, cocker spaniels, bulldogs, bull-terriers, dachshunds, beagles, Irish setters, black and tans, and pugs, we find \$15 and \$10 given for divided challenge classes; while Russian wolfhounds, poodles, wire-haired fox-terriers, Bedlington, Scotch, Skye and Yorkshire terriers, King Charles, Blenheim, and Japanese spaniels and Italian greyhounds have the same money, but the sexes compete together. In open classes all the breeds, with the exception of spaniels, which have \$5 more for first, get \$15, \$10 and \$5, and the more important have in addition puppy and novice classes with \$10 and \$5 prizes. Newfoundland, foxhounds and terriers, Dandies and Prince Charles spaniels have no challenge classes, but the open money, \$15, \$10 and \$5 in divided classes, is liberal enough for the support given. Those breeds where sexes compete together are English retrievers, Chesapeake Bays, Irish water spaniels, Clumbers, mouth

hope now that good weather will serve and the best dogs we have be put down in proper shape.

The New Beagle Field Trials Club.

According to Mr. F. W. Chapman, who was in New York last Monday to attend the Beagle Club meeting, the prospects for the proposed New England Beagle Trials Club are quite rosy. Several other breeders of beagles have signified their intention of lending support to the movement. A meeting will be held at Young's Hotel, Boston, Jan. 26, at 8 P. M., to take definite action in the matter and organize the club. The idea at present is to have the trials about a fortnight before the regular trials of the N. B. C. next fall, which plan is a better one than the one first proposed, as time and expense will be saved the owners in conditioning their dogs when the trials are held about the same time.

A Field Trial Club for Chicago.

It is reported in Chicago that a new field trial club will be formed in Chicago. Indications are that even the wonderful boom in field trials in 1892 will receive added strength during 1893. Field trial interest is fast becoming not merely an adjunct to the kennel world in general, but a little world of its own, affording employment for many as trainers and kennel keepers. It is very evident that several trainers now handle too many dogs to do justice to all, and new men are bound to take up what will prove a lucrative means of earning a living. Every field trial club increases the list of pointer and setter owners and the consequent demand for stock. Prospects are very rosy for kennelism in the year of 1893.

American Spaniel Club Meeting.

A very pleasant little dinner of which spaniel men and a visitor partook, was held at the Bartholdi Hotel, New York, on Friday evening last. Spaniel matters were discussed *ad infinitum*, and with the advent of coffee and cigars the affair resolved itself into an executive committee meeting of the club, in which Messrs. A. C. Wilmerding, R. P. Keasby, E. M. Oldham, Jas. Watson and C. H. Mason took part. After reading the minutes and the treasurer had announced the finances of the club to be in a healthy condition, the "annual dinner" committee announced that they had received favorable terms from the Bartholdi Hotel, which they had under consideration. The committee on diplomas, which the club intends to distribute at principal shows, reported progress, showing several samples which, combined and aided by the artistic taste of the committee—the president—is sure to result in a diploma well worth winning. The question of specials for the N. E. K. C. show was referred to the secretary for further action. Mr. Wilmerding reported an offer of \$10 cash from Mr. Wm. West, to be allotted by the club, and a vote of thanks to Mr. West was passed. The most important business of the meeting, the question of life membership, was then taken up and the committee appointed, Messrs. Oldham and Keasby, gave an idea of what they thought would be right. After discussion it was adopted with few alterations and voted upon as follows: That any charter member of the American Spaniel Club may become a life member provided he is in good standing, on payment of \$10. That any member may become a life member, providing he is in good standing, on payment of \$50. That those charter members who are at present in arrears for dues may, on payment of the dues to date, become life members on payment of \$10 additional, provided such payment is made on or before May 1, 1893. The meeting then adjourned.

Death of Suffolk Riot.

Mr. A. D. Stewart, good fancier and true that he is, seems to be having most unmerited luck just now. His fox-terrier bitch Suffolk Riot, that he bought from Mr. Mortimer, had to be killed a few days ago by her owner, owing to the injuries she received in an encounter with Hillside Baroness. The latter bitch Mr. Stewart has sold to a New York gentleman.

Mr. James Watson is hustling in his usual way for the Keystone Kennel Club show next month, and intends that it should be in every way superior to the first held last year. The Pointer Club has promised \$10 for best heavy-weight dog and bitch and the same for light-weights. The Collie Club gives the stud dog plate and two silver and bronze medals for specials.

The late Alton's get evidently partake of the excellent qualities of their sire, for Mr. Patterson writes us, "How does this compare with the record for litters? By Alton, Jr., ex Lady Lomond, 11, 7 dogs; by Alto-neer ex Clara Barton, 10, 7 dogs, all born Jan. 14; nicely marked and doing finely."

It's pretty cold in this country just now but a warm wave is predicted for February, starting from Canada. This is how we know: "Keep your eye on a fox-terrier pup that will be at New York. He is by Star-den's King ex Incognita (lately owned by Mr. Mortimer). A good many of the best judges here including Bell, of Toronto, think he has a 'cinch' on Mr. Thayer's \$100 'wad.' His bone is simply wonderful, not a bit timid and a good shower."

Russian Wolfhounds.

An interesting contribution to the existing literature on this much discussed breed as given in the "Hunter's Calendar and Reference Book for 1892," by L. P. Sabanayef, Moscow, will be found in another column. The standard he gives will explain and fit some of the types of the dogs that are owned at present in this country. Anything that may shed light on the proper formation of these dogs should be welcomed as a guide to the men who have to judge these dogs at our shows. The question simply resolves itself into this: Are the dogs now owned here to be classified as Psoroy Borzoy, that is, the dogs known as strictly Russian Borzoy? Color seems to have an influence in determining the purity of the breeds, and while no one wishes in any way to detract from Argoss's merits, and his general formation (we name this dog because he is the only black and tan dog in the country), we think that every evidence should be produced to show whether his type or dogs that hail from Messrs. Hanks & Hacke's kennels are the correct thing. Another show season is coming on and in all fairness and justice some understanding should be come to as to what type we are going to stand by. Is Argoss's type to lead or is Leekhoi's? There is much money invested already in these

THE GLENMORE KENNELS.

Finglas, Beau Brummell, Winnie II. and Coleraine.

and old English sheepdogs, Bassets, white English terriers, Clydesdales, Welsh and toy terriers, schipperkes and the miscellaneous, and they all get \$15, \$10 and \$5, a considerable advance on last year.

This about summarizes the whole, which compares more than favorably with the best show in England. Then the cash kennel prizes given by the W. K. C. amount to a very considerable sum in the aggregate, when mastiffs, St. Bernards (both types), great Danes, wolfhounds, pointers and all setters, collies and bulldogs have a prize of \$25; spaniels for sport, toy spaniels and pugs \$20, and bloodhounds, foxhounds, poodles, bull-terriers, dachshunds, beagles, wire-haired fox-terriers, Irish and Yorkshire terriers \$15, and Newfoundlands, black and tans, white English, Dandie, Bedlington, Scotch, Skye, Clydesdale and Welsh terriers and Italian greyhounds

sure to result in a diploma well worth winning. The question of specials for the N. E. K. C. show was referred to the secretary for further action. Mr. Wilmerding reported an offer of \$10 cash from Mr. Wm. West, to be allotted by the club, and a vote of thanks to Mr. West was passed. The most important business of the meeting, the question of life membership, was then taken up and the committee appointed, Messrs. Oldham and Keasby, gave an idea of what they thought would be right. After discussion it was adopted with few alterations and voted upon as follows: That any charter member of the American Spaniel Club may become a life member provided he is in good standing, on payment of \$10. That any member may become a life member, providing he is in good standing, on payment of \$50. That those charter members who are at present in arrears for dues may, on payment of the dues to date, become life members on payment of \$10 additional, provided such payment is made on or before May 1, 1893. The meeting then adjourned.

JUDGES AT CENTRAL FIELD TRIALS, 1892.

W. S. Bell, J. M. Tracy, N. Wallace.

get \$10. It would be impossible, as well as unnecessary, to enumerate the great number of specials given by the specialty clubs, but we may note the liberality of the Mastiff, St. Bernard, Great Dane, Collie and Bulldog clubs in this respect, whose prizes in cash and cups range all the way from \$10 to \$500. The New York Herald again shows its interest in kennel affairs by donating medals for the best in most of the breeds.

The judges we have already announced, and the FOREST AND STREAM's list last week was the only correct one published before the premium list was issued.

The railroads which will carry dogs free when accompanied by owners are Grand Trunk Railway, N. Y. C. & H. R., West Shore, N. Y. C. & W., N. Y., L. E. & W., D. L. & W., Lehigh Valley, Central R. R. of N. J., Philadelphia & Reading, Pennsylvania, Baltimore & Ohio, Ches. & Ohio, Michigan Central, N. Y., N. H. & H. (Erie charges one-half cent per mile between local stations); Providence and Stonington Steamship Co.

All the express companies take the dogs on the usual rates. Spratts Co. will bench and feed, as usual, and the Walker Co. will disinfect, their sawdust being used. Entries close Feb. 6 and the fee for each dog is \$5, and we must impress upon intending exhibitors the fact that they must enter early or stand a chance of being thrown out when the space is taken up. All entries must be sent to Mr. James Mortimer, the superintendent, 44 Broadway, New York. Dr. H. Clay Glover is the veterinarian, so we may be sure all sick dogs will get the go-by. In conclusion, we can only

dogs, and with the exception of Mr. Hacke's kennel, we believe that both Mr. Huntington and Mr. Hanks's kennels contain specimens of both types, Mr. Hanks having secured a couple of what he terms "cast offs" to compete with Argoss on his own form. Still Mr. Hanks, from information gained personally from Prince Galitzin and other breeders, vows strenuously that Leekhol's type is correct and will so endeavor to breed his dogs. This all leads to confusion and the sooner it is settled one way or the other the better. Why cannot the National Greyhound Club secure all the evidence possible, compare standards, and let the majority of opinion on certain points rule and arrange a standard that our judges shall follow. We know that Mr. H. W. Smith, who has had the unpleasant task of deciding, in the dark as regards correct type, between two good animals, is anxious that some steps in this direction should be taken at once, and we think that other greyhound judges are of the same mind.

Mainspring Dead.
We regret to learn that the noted field trial performer Mainspring is dead. This well known pointer died at the Charlottesville F. T. Kennels Jan. 11. He was owned by Mr. J. T. Perkins, Brooklyn, N. Y. Mainspring was bred by D. J. H. Salter, of England, and was by Mike out of Romp, by Chang out of Brackenbury's Romp; Mike by Price's Bang out of Sella. His litter sister, Hops, the dam of so many good ones when bred to King of Kent, died a few weeks ago. Mainspring won second in the All-Age Pointer Stake at Eastern Field Trials, 1884, and the next year won first, thus showing himself a consistent performer in the field. We believe his bench showing was confined to one or two appearances. He, however, sired such good field performers as R. M. Hutchings's Spring, F. R. Hitchcock's Springbok, Dr. J. G. F. Holston's Count Fauster, Mrs. G. N. Castleman's Rex and Charlottesville's Kennels' Mainstay, all of whom have records in the annals of field trials.

Conrad II. Missing.
The Hempstead Farm Kennels' sable and white collie Conrad II. strayed away or was stolen during Mr. Mortimer's absence on Thursday last, and no trace of him can be found. He is a large sized dog weighing about 50 lbs., has white forelegs, white breast and white collar, also a few white hairs on tip of tail. Any information that will lead to his recovery will be heartily appreciated by the owners.

His Chicago appointment must bring pleasure to Mr. Mortimer, but it is qualified by several untoward experiences he is having at present. His eldest son was taken suddenly and seriously ill in Hempstead village and immediately removed to the hotel, where Mr. Mortimer has had to remain with him ever since. Then Conrad II., their crack sheepdog, is missing. His many friends will join with us in our hope that the clouds will soon roll by, for this is a busy season of the year for him.

After the Beagle Club meeting, President Kreuder invited those present to partake of an informal dinner with him, and a pleasant hour was spent in discussing the viands and the merits of beagles in general.

Another good old sportsman and fancier has passed away. Mr. P. H. Jones of the *Stock-Keeper*, England, died Dec. 29, 1892. He was a most popular and well known fancier in England, for besides being a poultry and pigeon judge and breeder, he was also interested in bull dogs and pugs.

Mr. Cruft, of Cruft's Show renown, has severed his connection with Spratt's company, with whom he has been since the company bought the patent.

Mr. Everett Millais has resigned from the English Kennel Club, as he is not pleased with the way the club is conducted, averring that it is not representative of the dogmen, they having no voice in the election of officers.

Mr. Ed Booth has purchased the good young St. Bernard Wyoington Hesper from Mr. E. B. Sears. He was shown at Lewiston, Me., and created a very good impression, being especially good in head.

We are pleased to say that the youngster Carlisle Glory is not dead, but it was another of Mr. Bellin's pups by Blenton Rasper that succumbed from inflammation of the bowels.

There will be a bench show at Rockville, Ind., Jan. 25 to 30. Mr. W. P. Overman is the secretary.

Mr. Stewart's ill luck still pursues him for the other day his bitch Blenton Venom was found dead in her kennel. He has now only the good young dog My Fellow, who, true to his name, sticks to him.

We have had an opportunity to see the copy of charges brought by Mr. E. B. Elliott against Mr. H. E. Tywford, and for fear that the remarks we made recently in regard to this case may have been misconstrued, we would say that Mr. Elliott strenuously denies ever having received any communication from Mr. Tywford demanding or asking for a settlement of the account that was owing between them, before hearing of the sale of his dog.

There was a small dog show held at Des Moines, Ia., last week in connection with the Des Moines Poultry and Pet Stock Association. The show was held in the new Pitt carriage building. Mr. F. H. Perry, of Irish setter fame, is one of the executive committee of the club and also acted as judge at the show. The bench show committee was Messrs. F. O. Green, C. N. Page, Elwood Alexander, J. C. Ford and K. R. Guthrie. No cash prizes were given, but glory bedecked with ribbons was sufficient to draw a number of dogs. Our report of the show has not yet arrived. St. Bernards, Great Danes, setters, pointers, mastiffs, pugs and Yorkshires were the breeds represented. A dog called Garza was the attraction in St. Bernards. Reports of the Indianapolis and Detroit shows arrived too late for press this week.

Among the new kennel advertisements this week we find that Maine State Kennels offer foxhounds for sale; James McAlcer, pointer pups; Dr. J. A. Hartman, broken pointers and setters; J. Feulner, well bred English setters; A. B. Suit, the celebrated Wild Goose pack of foxhounds; Frank Watson, pointers; Thasmo Kennels, Irish setters; W. H. Pierce, choice pointer pups. Exchange, F. Watson, pointers for breechloaders.

The Collie Club sweepstakes this year has 17 entries, making the stake worth \$85 in all.

In the Netherlands dogs used to be trained by smugglers to cross the frontier, laden with parcels of lace, at night. A quick-scented dog was always dispatched ahead of them, who, when he snelled Custom House officers about, turned back and warned the others, who lay concealed behind bushes or in ditches till all was safe. At the end of the journey the leading dog showed himself alone, nor did the others come up till a whistle was given by the consignee to show all was safe.

The St. Bernard has been playing a new role, though all in way of saving life. Two professional men of Milan, Italy, who had repaired to a frontier village to fight a duel, were prevented from doing so by an enormous St. Bernard dog which appeared on the scene just as the would-be duelists

were taking their places. Several attempts to begin operations were made, but the dog interfered each time. Finally the ridiculousness of the situation dawned upon the principals, and they shook hands and returned to Milan together. A dog of this sort should prove eminently useful to French duellists in affording them an excellent excuse to suspend hostilities.

POINTS AND FLUSHES.

The Manitoba Field Trials.

CHICAGO, Jan. 14.—A meeting of the Manitoba Field Trials Club was held recently in the Clarendon Hotel, Winnipeg, Manitoba. There was a large attendance of members. The meeting was for the purpose of making arrangements for the club's field trials of the present year. There will be two stakes, a Derby and an All-Age. In respect to prizes, the club decided to offer a guaranteed purse of \$800, to be divided as follows: Derby, first prize, \$160; second prize, \$115; third prize, \$75. All-Age, first prize, \$225; second prize, \$125; third prize, \$100. Mr. William Tallman, who so ably acted as judge last year, has accepted the club's invitation to judge again at their next trials. Securing Mr. Tallman will unquestionably prove most satisfactory to competitors. His awards and management of the running last year won the confidence of all by the impartiality and skill displayed.

A more central point was selected for running the trials. Morris, being near Winnipeg, was a convenient place to hold the trials and for Winnipeg members to attend, but it was not at all convenient for members who reside in the western part of the Province and the Territories. The town of Souris has been selected at which to hold the next trials. It is more centrally located for the club's members, and is said to be easily reached from the United States and Canadian Provinces. The farmers in the vicinity of Souris have generously offered their lands for the club's trials. The lands are preserved, which will be a guarantee of an abundance of birds. The trials will be run under the spotting system. Dogs which have won first prizes in any field trial All-Age stake will be barred. Derby entries close June 1. All-Age entries close Aug. 21. The trials will commence on Tuesday, Sept. 12.

The Chicago Dog Show.

The Chicago Kennel Club is conducting the preliminary arrangements for its forthcoming show with a vigor and expedition which denote that everything will be ready on time. In the short time since the club was organized—Jan. 2, the premium list has been prepared and published, orders have been placed with Spratts Patent for the necessary outfitting and biscuits, Battery D has been secured, and the details are all in running order. Entries already are coming in, and the signs indicate a good show. The club has applied for membership in the A. K. C. The entry fee for mastiffs, Great Danes and St. Bernards is \$4; for all others, \$3. Club members will not enter dogs for competition. Dogs on which one full rate has been paid to the show will be returned free, if ownership is the same.

Mastiffs, Great Danes and St. Bernards (smooth and rough coated respectively), have in challenge classes, \$25 to first, \$15 to second. In open classes, \$50 and \$25, first and second respectively. Puppy classes, \$10 and \$5. Pointers, collies, English setters and Irish setters have \$25 in challenge classes, \$35 and \$20 in open classes, and \$10 and \$5 in puppy classes. Gordon setters have, in open class for dogs, \$35 and \$15; bitches, \$25 and \$15; puppy classes, \$10 and \$5. Other prizes for other breeds vary from \$25 to \$10 to first, and from \$10 to \$5 to second prize winners. Entries close Jan. 27. Mr. R. J. Sawyer judges St. Bernards; Mr. Harry L. Goodman judges mastiffs, Great Danes, bulldogs, bull-terriers, dachshunds, Yorkshire terriers, toys, pugs and Italian greyhounds. Mr. Roger D. Williams judges Russian wolfhounds, deerhounds and greyhounds. Mr. John A. Long judges collies, and Mr. John Davidson judges English setters, Irish setters, Gordon setters, pointers, cockers, Irish water spaniels, field spaniels, beagles, black and tan terriers, Irish terriers, fox-terriers and miscellaneous. Dr. R. J. Withers is veterinarian.

Self-Hunting Dogs.

A correspondent writes me for information in respect to what will restrain dogs from self-hunting. He says: "I have never had any trouble in keeping a single dog from straying off. When there are several dogs they can be prevented from self-hunting by letting only one loose at a time. He then is not apt to go far. But where there are a number of dogs, each, when at liberty one by one, gets but a small part of the time."

I regret to say that there is no remedy for the fault. It is impossible to keep a dog from self-hunting if he is at liberty. If there are two or more dogs the fault is greatly exaggerated. One will lead the other off, and they enjoy hunting together immensely. They will sneak off even if their master is present. They will display great cunning to accomplish their purpose. They will not display the slightest inclination to go hunting while their master is watching them. When his eye is off them for a moment they sneak behind a fence or a cover, and run swiftly to the fields or woods. Some dogs will return in two or three hours, some stay away two or three days. Dogs have a limited sign language which they readily understand so far as it applies to common acts of hunting.

I remember two setter dogs which were most enthusiastic self-hunters when they could escape together. When the opportunity was favorable and the desire to go hunting was felt, one would prick up his ears, give a few bounds, look knowingly at his companion and away they then would go to the woods. No commands would stop them after they once got started, although in every other respect they were well broken and perfectly obedient. Once away, they remained in the woods and fields from two days to a week. They would be heard of miles away, they being seen while hunting the fields. No more wretched looking dogs than these could be imagined after such a trip. Tired out, skin torn, worn down to skin and bones, it required days of rest and good feeding to restore strength and flesh. Of course, after it was plain that they were on the alert constantly for a chance to go self-hunting when together, they were never given their freedom thereafter both at the same time.

There is absolutely no practicable remedy for the fault, if the dog has his liberty. It is a fault which becomes more confirmed by opportunity and indulgence. Aside from the annoyance it occasions, it is really serious in that the self-hunter in his rambles will meet some vagrant self-hunting curs with which he will join interests. If there are any sheep in the neighborhood, the vagrant dog may lead his companion into doing dark and bloody deeds, and death to him from the shotgun, or a big bill of damages to his master may be the result. If a dog will self-hunt, it is better to restrain his liberty.

I recently had the pleasure of a visit to the charming home of Mr. L. A. Rice, owner of the Scotts Wood Kennels, at Riverside, Ill. There I saw a kennel building most expensively fitted and arranged. In it Mr. Rice had a fine lot of setters. While there I heard of a Great Dane which was purchased recently by a young gentleman who resides at Riverside, a most delightful suburban town. No royal dog like that, in whose veins flows the blood of his fathers, should be treated like an ordinary dog, therefore his tail is to be done up in chamois skin. The ordinary go-as-you-please dogman may ask what for. The tail of a Great Dane is a large vital organ. It needs protection in cold weather. Wrapping it keeps it warm and therefore there can be no cold blood in that dog, as indicated by the tail, which is said by those who are wise in such matters to be the first part

which shows variation from pure blood. The second purpose was to keep people from injury when the dog wagged his tail, and also incidentally to keep the tail from injury. These refinements show progress in the doggy world and a warm place in life for man's best friend.

Mr. Rice contemplates a trip South about the 14th inst. He will stop at Trenton, Tenn., and shoot there till the trials begin, if it is not too cold. Advices from the South tell of zero weather everywhere thereabouts. B. WATERS.
175 MONROE STREET, CHICAGO.

A TRIBUTE TO PUP.

BY THE LATE SENATOR JOHN E. KENNA.

(From *Forest and Stream* of June 17, 1880.)

HOUSE OF REPRESENTATIVES, WASHINGTON, D. C.—*Editor Forest and Stream:* The following tribute to a faithful hound may not be deemed unworthy of a place in your columns. The sobriquet, "Pup" began with him, and ended with him. I never knew a better dog. His achievements were among the hills and in the woodland range along the valley of the beautiful Kanawha. Many were the foxes that surrendered to the fleetness of his foot and the unerring certainty of his nose. We have some good dogs—he was the greatest Roman of them all. A pair of his youngsters promises the early adornment of my small pack, and a strain of his blood is prized above anything our section can boast:

Hear! all ye lovers of the chase,

Who follow black, tan, pied, or red,

The best and noblest of his race.

The Prince of dogs, old "Pup" is dead!

No more will Joppling's echoes ring

His accents clear at early morn;

No more his eyes will brightness bring.

Responsive to Lan Oakes' horn;

Van Buren's voice on the hill top high.

May greet the Nimrod in the chase.

Delaney's yell from mountain high,

Give cheer and relish to the race;

From Mathew's Branch to old Stittfield,

Red fox or gray may frequent go,

With foot or ken that ne'er did yield

To man or dog, nor fast nor slow.

The old peach orchard on the hill,

May, listening, hear the opening pack;

The Laurel Hollow o'er the rill,

Resounding, give the echoes back;

Jeff, Plunder, Chowder, and the rest,

With Steptoes' shout, may mingle sounds.

While Fleet and Watkins, with a zest,

Make rapid pace with fox and hounds.

Like hurricane or cyclone driven,

By measureless, eternal wrath,

With lightning's flash, in bounty given.

To illuminate the reckless path,

The eager pack may sweep the plains.

As swift as fawns of love or light,

The fearless horseman loose the reins,

And lash his charger on to "sight."

But never over log or rail,

Will fox evade, or dog pursue,

A quicker or a colder trail,

Than, wind or storm, old "Pup" would do.

No pointer he, nor setter sly,

To steal on unsuspecting prey

But loud he raised his battle cry.

A warning, as he sought the fray,

Descended from an ancient brood.

Unflinching, bold, he stood the test;

He vindicated royal blood,

Nor found his peer among the best.

His voice was music on the air.

As he through mazes fast did wind;

His nose wrought out the hidden lair.

His feet left hills and rocks behind;

His "bottom" never knew a flag,

In mountain, thicket, heath or vale,

By deepening gorge or lofty crag.

He followed, fate-like, on the trail.

Now, all ye hunters, mark the spot.

Where lies the friend who served you well.

In chase, or out, forget him not!

He stood by you until he fell.

His life was long, his labors hard,

Mong men he never owned a foe;

He leaves a fame no blench may mar.

He's gone where all the good dogs go.

J. E. K.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Alice Leslie. By E. M. Beale, Lewisburg, Pa., for pointer bitch, whelped June 24, 1892, by champion King of Kent out of champion Belle Randolph.

Belle F. By Oak Grove Kennels, Moodus, Conn., for English setter bitch, by Dan Gladstone out of Belle of Piedmont.

Nellie F. By Oak Grove Kennels, Moodus, Conn., for English setter bitch, by Gath's Mark out of Mollie Belton.

Blue Bell and Piedmont. By Oak Grove Kennels, Moodus, Conn., for English setter bitches, by Antonio out of Belle of Piedmont, Jr.

Count Antonio and Huntress. By Oak Grove Kennels, Moodus, Conn., for English setter dog and bitch, by Antonio out of Miss Nellie Y.

King Antonio and Dixie F. By Oak Grove Kennels, Moodus, Conn., for English setter dog and bitch, by Antonio out of Princess Joy.

Fowler's Mark II. By Oak Grove Kennels, Moodus, Conn., for English setter dog, by Gath's Mark out of Ollie J.

Hinder Mark II. and Ouida F. By Oak Grove Kennels, Moodus, Conn., for English setter dog and bitch, by Gath's Mark out of Ruby's Girl.

Gypsy Mark. By Oak Grove Kennels, Moodus, Conn., for English setter bitch, by Gath's Mark out of Ollie J.

Daisy Furness and Beulah. By Oak Grove Kennels, Moodus, Conn., for English setter bitches, by Monk of Furness out of Suspense.

Monk's Nick and Furness Maid. By Oak Grove Kennels, Moodus, Conn., for English setter bitches, by Monk of Furness out of Bloom Mar.

Kennebec Valley Kennels. By R. W. Pope, Gardiner, Me.

Conat Roderic. By C. H. Mills, Baltimore, Md., for black, white and tan English setter dog, whelped July 8, 1892, by Toledo Blade out of Grace M.

Clay Stockton. By E. W. Travis, Peekskill, N. Y., for black and tan Gordon setter dog, whelped July 12, 1892, by Remont (Heather Harold—champion Belmont) out of imported Judy.

Hamilton Aber, Hamilton Foresee, Hamilton Rescue, Hamilton Resolute, Hamilton Mischief and Hamilton Exempt. By F. R. Close, Hamilton, Ont., for fox-terriers, two dogs and four bitches, whelped Oct. 17, 1892, by Suffolk Coronet (champion Result—champion Diadem) out of Bonally Belle (champion Blenton Trump—Hillside Baroness).

BRED.

Prepared Blanks sent free on application.

Lady Fidget—Black Duke. John Allan's (Mount Forest, Ont.) cocker spaniel bitch Lady Fidget (champion Black Dufferin—Myth) to Luckwell & Douglas's Black Duke (champion Obo II.—Woodland Queen), Oct. 29.

Maggie R.—Black Duke. Wm. Rice's (Woodstock, Ont.) cocker spaniel bitch Maggie R. (champion Bob, Jr.—Jealously) to Luckwell & Douglas's Black Duke (champion Obo II.—Woodland Queen), Oct. 13.

Leady Stanley—Black Duke. H. H. Webb's (San Francisco, Cal.) cocker spaniel bitch Lady Stanley (Robbin—Fretley) to Luckwell & Douglas's Black Duke (champion Obo II.—Woodland Queen), Oct. 9.

Jude—Black Duke. Luckwell & Douglas's (Woodstock, Ont.) cocker spaniel bitch Jude (champion Doc—Smutter) to their Black Duke (champion Obo II.—Woodland Queen), Oct. 6.

Flossie P.—Black Dufferin. J. Pascoe's (Woodstock, Ont.) cocker spaniel bitch Flossie P. (Master Shina—Dido) to Luckwell & Douglas's Black Dufferin (champion Brant—Bonita), Sept. 30.

Woodland Sallie—Black Duke. Jas. Campbell's (Miles City, Mont.) cocker spaniel bitch Woodland Sallie (Black Pete II.—Queen) to Luckwell & Douglas's Black Duke (champion Obo II.—Woodland Queen), Nov. 24.

Victoria Nounn—Glendon. A. O. Hooley's English setter bitch Victoria Nounn (Buckeliew—Mimmetonka) to Roseroff Kennels' Glendon (Rockingham—Donna), Jan. 1.

Glady's—Eberhart's Cashier. Eberhart & Mack's (Cincinnati, O.) pug bitch Glady's (Sir Loris—Phyllis II.) to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora), Jan. 5.

Daisy Gladstone II.—Toledo Bee. Chas. Davis's (Glencoe, Can.) English setter bitch Daisy Gladstone II. (Ned Gladstone—Miss Rhoebe) to F. W. Eddy's Toledo Bee (Toledo Blade—Maggie Bee), Dec. 20.

Ruth—Kildare. J. B. McKay's (Detroit, Mich.) Irish setter bitch Ruth to champion Kildare, Dec. 29.

Alice Kent—Kildare. Oak Grove Kennels' (Moodus, Conn.) Irish setter bitch Alice Kent to their champion Kildare, Dec. 16.

Rose Boronine—Kildare. Oak Grove Kennels' (Moodus, Conn.) Irish setter bitch Rose Boronine to their champion Kildare, Jan. 1.

May F.—Kildare. Oak Grove Kennels' (Moodus, Conn.) Irish setter bitch May F. to their champion Kildare, Jan. 5.

Rosalind—Dicie Tartar. C. J. Mischler's (New Orleans, La.) fox-terrier bitch Rosalind (Lythau Crack—Lythau Belle) to Leinster Kennels' Dicie Tartar, Dec. 17.

Shamrock—Shelby New Forest. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Shamrock (Beverwyck Trap—Julip) to their Shelby New Forest, Dec. 22.

Leinster Babu—Shelby New Forest. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Leinster Babu (Baby Jim—Hillside Rue) to their Shelby New Forest, Dec. 27.

Gipse—Dicie Tartar. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Gipse to their Dicie Tartar (champion Baby Mixer—Hillside Rue), Oct. 17.

Wilton Leah—Dicie Tartar. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Wilton Leah (Regent Vox—Royal Dart) to their Dicie Tartar (Baby Mixer—Hillside Rue), Oct. 17.

Gipse—Dicie Tartar. W. W. Garig's fox-terrier bitch Gipse (Sport—Gipse) to Leinster Kennels' Dicie Tartar, Dec. 2.

Hillside Rue—Shelby New Forest. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Hillside Rue (Reckoner—Lady Mixture) to their Shelby New Forest (New Forest—Holecomb's Jill), Dec. 18.

Danson—Warren Dagsman. C. S. Hank's (West Manchester, Mass.) fox-terrier bitch Danson (Domine—Daphnia) to W. L. Rutherford's Warren Dagsman (Raffle—Warren Dags), Nov. 23.

Agatha—Bourbon. C. S. Hank's (West Manchester, Mass.) fox-terrier bitch Agatha (D'Orsey—Danson) to his Bourbon, Nov. 17.

Grouse II.—Bourbon. C. S. Hank's (West Manchester, Mass.) fox-terrier bitch Grouse II. (Rational—Oliver II.) to A. Belmont's Blanton Rasper (Venio—champion Rachel), Nov. 24.

WHELPS.

Prepared Blanks sent free on application.

Gipse. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Gipse, Dec. 12, five (three dogs), by their Dicie Tartar (champion Baby Mixer—Hillside Rue).

Wilton Leah. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Wilton Leah (Regent Vox—Royal Dart), Dec. 23, five (four dogs), by their Dicie Tartar.

Lady Kent. H. K. Devereux's (Cleveland, O.) pointer bitch Lady Kent (King of Kent—Fleet), Jan. 14, eleven (seven dogs), by his Tamarack (Tam O'Shanter—Croxeth's Royal Queen).

Nan. W. H. Worth's (Chicago, Ill.) Gordon setter bitch Nan (champion Argus—Laura), Dec. 22, five (five dogs), by his Legnald H. (Leinsterstocking—Smith's Rhoda).

Kent's Flirt. H. K. Devereux's (Cleveland, O.) pointer bitch Kent's Flirt (King of Kent—Flirt), Jan. 1, seven (four dogs), by his Tamarack (Tam O'Shanter—Croxeth's Royal Queen).

Kinzal. C. S. Hank's (West Manchester, Mass.) Russian wolfhound bitch Kinzal, Dec. 31, ten (four dogs), by his Leechhol (Beezvee—Lobiedka).

Obruka. C. S. Hank's (West Manchester, Mass.) Russian wolfhound bitch Obruka (Khoat—Harpadka), Dec. 30, ten (eight dogs), by his Leechhol (Beezvee—Lobiedka).

SALES.

Prepared Blanks sent free on application.

Ben W. Liver and white pointer dog, whelped April 25, 1899, by champion Pommerly Sec out of champion Fan M., by W. H. Hyland, North Tarrytown, N. Y., to F. A. Wagner, Sea Cliff, L. I.

Peggie. Liver and white pointer bitch, whelped May 1, 1888, by Go Bang out of Meteor's Madge, by W. H. Hyland, North Tarrytown, N. Y., to A. A. Savage, Newtonville, Mass.

Gibbia. Liver and white pointer dog, whelped Feb. 12, 1892, by Birt out of Juno, of H. Hyland, North Tarrytown, N. Y., to L. H. Cummings, Norwich, N. Y.

Clara. Liver and white pointer dog, whelped June 9, 1892, by champion Pommerly Sec out of Louisa H., by W. H. Hyland, North Tarrytown, N. Y., to F. Bollett, Brooklyn, N. Y.

Sajer. Black, white and tan beagle dog, whelped June 10, 1891, by W. H. Hyland, North Tarrytown, N. Y., to J. A. Scollay, Brooklyn, N. Y.

Clara. White and tan beagle bitch, by W. H. Hyland, North Tarrytown, N. Y., to J. A. Scollay, Brooklyn, N. Y.

King Robin. Black and tan Gordon setter dog, whelped Feb. 22, 1890, by Stubble out of Floss II., by W. H. Hyland, North Tarrytown, N. Y., to A. V. Woodward, Winona, Minn.

Pilot. Black and tan Gordon setter dog, whelped Aug. 25, 1892, by Gordon Grouse out of Little L., by C. T. Brownell, New Bedford, Mass., to G. D. Bonbright, Wymewood, Pa.

Fennie. Fawn pug bitch, whelped Feb. 17, 1892, by champion Penrice out of Mint, by Eberhart Pug Kennels, Cincinnati, O., to Lew M. May, Tecumseh, Neb.

Monarch. Orange and white rough St. Bernard dog, by Sultan out of Beulah, by Eberhart Pug Kennels, Cincinnati, O., to Rev. William Schmitt, Muncie, Ind.

Royal Hunter—Lady Flute whelp. Beagles, whelped Aug. 18, 1892, by W. W. Pope, Gardiner, Me., a white and tan dog to H. A. Gray, same place; a black, white and tan dog to C. E. Taylor, Bath, Me., and a black, white and tan bitch to F. L. Cheney, Pittsfield, Mass.

Pommerly Sec—Louisa H. whelps. Lemon and white pointer dogs, whelped June 9, 1892, by W. H. Hyland, North Tarrytown, N. Y., to each of Abram Atchinson, Sing Sing, N. Y., and Drew Mullen, North Tarrytown, N. Y.

Pommerly Sec—Fan N. whelps. Pointer bitches, whelped April 25, 1892, by W. H. Hyland, North Tarrytown, N. Y., a black and white to Andrew Rohr, Sing Sing, N. Y., and a liver and white to T. J. Jewell, Montgomery, Ala.

Hamilton Forceps. White, with black and tan head, fox-terrier dog, whelped Oct. 17, 1892, by Suffolk Cornet out of Bonally Belle, by F. R. Close, Hamilton, Can., to Dr. N. B. McNulty, Duluth, Minn.

Hamilton Alba. White fox-terrier dog, whelped Oct. 17, 1892, by Suffolk Cornet out of Bonally Belle, by F. R. Close, Hamilton, Can., to Geo. Reid, same place.

Toledo Blade—Grace M. whelp. Black, white and tan English setter dog, whelped July 8, 1892, by Henry Matern, Jr., Sandusky, O., to C. H. Miller, Baltimore, Md.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

C. H. M., Palestine, O.—Grace M. was whelped May 1, 1887, by Startle B., by Guy H., out of Josie B.; Carp, by Sportsman out of Jessie Turner.

C. F. M., Lansingburg, N. Y.—Sarsfield, the Irish setter, is by Ch. Garrison out of Currer Bell II., by Sportsman out of Currer Bell; by Palmerston out of Rose; Snake, by Party out of Kate; Garryowen, by Palmerston out of Belle, by York out of Bellar; Palmerston by Old Shot out of Kate.

E. W. T., New York City.—(1) Write to secretary A. K. C., 44 Broadway, New York City, for registration blanks, which give full information. (2) You can fill out one of our blanks and claim the name for your dog. (3) You cannot show puppies at any show held under the A. K. C. rules, under six months old, or over twelve months. Knowledge of field work is not a requisite in bench shows. Dogs that never saw a quail may win the highest honors at bench shows.

G. H. P. S., Neoga, Fla.—Please answer following questions as to measuring mastiffs: (1) How is girth of loin taken? (2) How do you

place the tape for measuring girth of head? (3) Is girth of arm taken one inch above or below elbow? (4) Is "occupit" extreme back of skull? (5) Is girth of muzzle taken midway between eyes and tip of ears. (1) The part between the last short ribs and hip bones. (2) Round the head in front of the ears; half way between eyes and ears. (3) Below. (4) Yes, the occiput is that slight protuberance at the base of the skull, seen more distinctly in setters, bloodhounds and pointers than mastiffs. (5) Yes.

Yachting.

DEFINITE and reliable news about the new American and British yachts is almost as scarce and precious as anthracite coal in these days, but the following yachts may be considered as certainties. On this side the Carroll boat, the Rogers syndicate boat and a third for a second syndicate headed by Vice-Com. Morgan, and including Messrs. Oliver Iselin, A. Perry Belmont, August Belmont, J. M. Waterbury and others. All three of these will be built by Herreshoff, of about 85ft. l.w.l. The Carroll boat will have a centerboard, but it is not yet known whether the other two will be keel boats. The Carroll and Rogers boats will be of steel throughout, the Morgan boat probably the same.

Three boats will be built on the Clyde, one for Lord Dunraven, to race for the America Cup; one for the Prince of Wales, and one for a Scotch syndicate, headed by Mr. John Clark. The first two will be of composite construction, designed by Mr. Watson and built by Henderson & Co. The third, designed and built by Fife, will probably be of composite build. Another yacht will be built in the south, designed by Mr. Soper and built by Fay & Co., of Southampton, for Mr. A. D. Clarke. She will be of composite build. The Dunraven boat and probably the other Watson boat will be centerboard craft, like Queen Mab, but the other two are likely to be of the usual keel type. All four will be about 85ft. l.w.l., the Prince of Wales's boat possibly being longer.

Two other of the same class are talked of, one for the Emperor of Germany and another for an Austrian syndicate, to race for the Meteor Shield. The sale of Queen Mab is reported, leaving Mr. West in the field for a new boat. Mr. Payne is now at work on a new 40-rater for Admiral Montague, and Mr. Fife is turning out a boat for the same class for Mr. John Gretton, so this class will keep up its vitality next year.

Now that international racing is again to the fore, one looks for the customary rehash of old fables in country papers; the threadbare story of "Your Majesty, there is no second," is once more on its weary way from Maine to Montana, and the equally veracious story of how the old Dauntless sailed about the British Channel for weeks with a big sign board in her rigging challenging all British schooners to race, is likely soon to start out for a new land cruise. These things are the usual accompaniments of every international race, and yachtsmen pay no attention to them, but it is a matter of surprise that the great newspapers which pretend to pay serious attention to yachting should publish as true the most absurd and impossible stories. One was launched last week to the effect that the new Fife cutter would sail in trial races against the Dunraven yacht, the winner being sent to sail for the America Cup. The New York Y. C. has accepted a specific challenge from the Royal Yacht Squadron on behalf of Lord Dunraven's yacht Valkyrie, and the challengers have no power whatever to substitute another vessel.

Seaboard Yachts and the Chicago Exposition.

Editor Forest and Stream:

Replying to your correspondent asking for information regarding the route and difficulties to be met with in taking a yacht from New York to Chicago, I can perhaps give some hints and information upon the subject which may be of service to yachtsmen contemplating such a trip, from practical experience over the route to be taken from New York.

Of the two possible routes, i. e., by way of the St. Lawrence River, and via the Erie Canal to Oswego or Buffalo, the St. Lawrence route of course will only be taken by the larger yachts—over 100ft.—the canal limit of length—unless it be for the sake of a very much longer voyage, regardless of time. This article, therefore, is mainly intended for those who desire to go in the able and comfortable craft of 100ft. or under by the easiest and shortest route, and not for the larger cruisers, who can only go by the St. Lawrence.

A very comfortable and delightful trip it is, too, if one has favorable weather, but it should not be attempted with any but able, seaworthy craft, and with competent hands aboard, as the voyage from Oswego or Buffalo to Chicago is quite a long one, and the weather on the western Lakes is often liable to become very nasty on exceedingly short notice. The good harbors are not as numerous as on Long Island Sound, nor as easy of entrance; and though a salt water yachtsman myself, I have been through one or two blows on the Lakes with yachts that would "knock the socks"—so to speak—off of anything I have ever chanced to see from Cape Cod to Cape Sable. Indeed, I should not now be here if I had not been aboard a craft that were to be depended on for weather foul or fair.

For course the captain must know the way to Albany, or if they do not their sailing masters or pilots do. You may enter the canal at either Albany or Troy. On arrival at either place the yacht must be stripped of all standing rigging, length not to exceed 100ft. over all, draft 7ft. and height from waterline to top of deck house must not exceed 11ft. 3in. to go under the bridges. (I am not now positive that this is exact, though only last summer I have found it so.) The draft of steam yacht. Exact height, but I have found it so, though with a 95ft. steam yacht.

Have plenty of good wooden fenders all round, to hang vertically along the sides and long enough to reach from deck to just clear of the water. Fill coal bunkers, swing inboard small boats, and rig awnings to proper height; as you will need them in the canal if weather is hot.

While these preparations are being made on board, you must call on the canal superintendent and get a permit to enter the canal. This is merely a formality, no cost being attached. The lockstander at the river lock will ask to see this on entrance, and pass you to the weigh lock, where you must stop and get your permit or clearance to point of destination.

The clearance papers will not need to be shown after leaving the weigh lock until you reach the last lock at your destination, where they must be given up. The lock-tenders and others are not allowed to show any partiality or accept fees for courtesies shown, but I have found two or three cigars to the canal employees have an excellent effect on their amiability for which trait they are not very remarkable usually. In fact both the lockmen and the boatmen have no special love for these "gifted estate steamers" as they call yachts, but most of the canal men I have found, though rough and tough, are a pretty decent set, if you treat them right and do not assume to be too far above them. Wee bodie you though, if you try to rush into a lock past the old battered hulk of a canal boat, whose captain thinks he has the first right.

I have never taken a sailing yacht through the canal. Of course a sailing craft would have to be towed, and a single steam tug—there are many that would do at all the larger towns on the canal—would be the means. Steam is the only thing to handle a yacht with in the canal, as there are times when there is considerable backing and filling to be done, waiting at the locks, or avoiding a jam of boats.

I have, however, made ten or twelve trips through the canal with steam yachts, and it is a novel and interesting trip, but slow of course. The rate of speed is only about seven miles per hour on the average, as the suction is so great that a higher speed it throws the water over the banks, the stern drags down and steering becomes a matter of much difficulty.

In my experience with yachts through the canal I have never had an accident, and I would offer these hints if you expect to get through without damage.

Run at a speed, according to beam and draft, that you can steer easily; slow down when meeting or overtaking canal boats, especially if loaded, as a yacht of 90 or 100ft. and drawing 6ft., running at seven miles in the canal, will lower the "level" for 500ft. ahead, enough to make a loaded canal boat "yaw" and steer wildly, so that when you get ready to pass the chances are you get a thump from the canal boat that will play hob with your varnish, while her captain will astonish you with the extent and variety of his vocabulary. Keep a little nearer you the tow path than the "level" path, and in wide water the same, for though the water may in places be 200yds. wide, the channel or the dug canal is of one width.

When about to pass loaded boats, especially "double-headers"—two boats lashed together stern and bow on—slow down when within 200ft., and stop your wheel entirely when you are bow on, and don't start again until you are abreast the stern boat's waist. Keep a sharp look-out ahead for boats, and when you see one taking up the whole canal, give him a whistle for room to pass, indicating of course the side opposite his tow line, and do not run up on him until he gives way; they can stand the thumping, the yacht cannot.

Always steer between piers under bridges; some are low and have ugly bolts projecting that will play havoc with your roof. All bridges are supposed to be high enough to clear allowed height, but they are not. There is one, the railroad bridge in Schenectady, which is the lowest on the whole canal. Approach it very slowly till you are sure you will clear. Twice I have been compelled to pump forward compartment full of water to get under, after trimming at start to the regulation height.

Don't try to run after dark in the canal, unless your yacht is a small one. Better lay up at some good dock about sundown, selecting a place where passing boats—which run all night—will clear you well. See that your fenders are in good shape, having a light on the rail forward and aft on canal side, turn in early and start again at daylight.

Before you have had much experience in navigation on the Erie Canal with a yacht, you will make up your mind that neither latitude, longitude nor compass variation count for much, but that you must depend upon observation alone and have the daylight to do it.

The Erie Canal is 352 miles long from Albany to Buffalo, with 83 locks. Nineteen of the locks are in sight from Troy. At Utica, 110 miles west, you reach the 60-mile level, all clear of locks, which takes you to Syracuse, 108 miles. If you prefer to go via Oswego and Lake Ontario, you turn off at the main canal at the weigh lock in Syracuse and take the Oswego Canal, 38 miles to Oswego, when, with the exception of the Welland Ship Canal, you have open water all the way to Chicago.

If you continue in the Erie canal you have 16 more locks to Rochester, about 90 miles. At the latter place you again reach a 60 mile level from Rochester to Lockport, where are 5 locks, all close together. From Lockport to Buffalo is 31 miles and no locks after passing the 5 at Lockport.

From Buffalo you will find plenty of sea room and perhaps some of it pretty rough at that. The Government charts will give any good yachtsman all the information he needs about courses, dangers and lights; but once in the open water keep a sharp eye on the weather, watch your barometer closely and make a harbor if changes look threatening. For with my old water-thermometer for yachts at Chicago you may run into on the lakes will sometimes prove very trying to your seamanship and the stability of your craft.

At Chicago there is as yet no good anchorage except behind the Government breakwater, 6 or 7 miles from the Fair grounds. If a harbor is to be made at the Exposition I do not see how it is possible to construct one large enough to accommodate many yachts in time for the coming season. I hope they may, as I expect to go there in a 100ft. steam yacht via the Erie canal and Lakes if I have good luck, and I hope to see a large number of our Eastern yachts on hand. With a good yacht and a snug anchorage, safe from old Michigan nor-easters, a party of visitors to the Fair could stay with old Ben Bolstay, "Pity all those poor folks, Bill, 'That have to be on shore."

In my communication regarding seaboard yachts and the Chicago Exposition I mentioned the fact that there was as yet no safe harbor at the Exposition grounds and expressed doubts as to any being provided in time for the coming season. Apropos of this subject a Chicago friend sends me the Chicago Tribune of Jan. 8, in which I find an article on the harbor facilities as they are at present and as proposed. Entering Chicago from the lake there is no harbor for yachts at Chicago except behind the breakwater, at say, about foot of Vanuren street, and there is not room there for a large number even if the necessary alterations proposed are made.

Besides, this is five or six miles from the Exposition, and in such nor-easters as Lake Michigan is quite capable of, the whole lake front is a lee shore in gales from the N. to E., no yacht could lie at anchor in the open water, and the position of the breakwater and of the shoals she be quite weatherly enough to run down from the breakwater in a gale.

I have seen some of the largest vessels on the Lakes go ashore there more than once, despite all the mud hooks they could hang out, and I hope something may be done for a harbor, or there is little use of many yachts taking their chances there. I am sure one would think of entering Chicago from the lake with a yacht, and the only other place I could be would be the Calumet River, at South Chicago, where some might be taken care of.

The nearest harbor deserving the name is Kenosha, fifty-five miles north of Chicago, and it looks as if the Eastern yachtsmen will have to sail there in a Pullman car, leaving their yachts at home, so far as I see.

DORSAL FINN.

Notes from Our Readers.

Editor Forest and Stream:

The glorious days of autumn are past. No more will the crimson and gold, the scarlet and yellow leaves of last year rustle in all their variegated magnificence to the morning breeze. The same trees will be there, perchance, this year, covered as of yore with leaves of glistening hues; but the old leaves, the leaves whose tinted loveliness have been the cause of our revelation each time we have climbed the hills, have gone forever.

And so it is with us, the FOREST AND STREAM is our tree. Its branches—grown larger now by the way—are kept well covered, but still we miss the "old leaves." "Nessmuk," "Wells," Mr. Kunhardt, and many others who have crossed the Great Divide can never be replaced. The cruise of the Sable Gump, the story of the spear dog, Pete, the record of "Pete" at Michigan, and the whipping out of the "agur" by the Indians, are tales which can never be forgotten. And the quail hunts described by "Wells!" His account of "Mud's" gun trade!

The determined championship by Mr. Kunhardt of cutter principles, the "Cruise of the Coot," the taunts flung at the beamy, shallow, cut-off sloops as to their performance, the story of the "spear dog" Pete, the "Coot" and his revisits this inaudible sphere and gaze on Gloriana Wasp and the abnormal fin-keels, what, I wonder, would be his emotions?

But although many are gone, many are left who have charmed us by their writings time and again, and for whose contributions we eagerly scan the pages of each issue, seldom now, alas, with success.

Waders, "Buck," "Piscis," "Orin Belknap," "Backwoods," "Bengal Sepoy," "Shikaree" and "Pious Jeems," and "Mississippi Lowlands" of the long ago?

Where are the yacht cruisers? Did Orinda swing idly at her moorings all season? The interesting log of the Elsa, so admirably recounted, should act as a stimulant. May it act as such, until in fancy we can sniff the salt sea air and hear the growling of the halard blocks, the whistle of the wind through the shrouds; hear the "whet" as she plunges into it, throwing the spray high as the bounds until involuntarily we duck our heads to avoid the shower.

Have the canoes, too, remained on their shelves? Well! well! Let us hope that some of our old friends will again take up their pens for the common cause.

ALERT.

Editor Forest and Stream:

The yachting editor's design is unquestionably "the idea" for a head for the old reliable, to which we all refer when in any kind of doubt about official plans, center of effort, racing rules, etc. We of Lake Pontchartrain cannot understand either why the said design was not adopted, unless it was because of a kick from the gun man. (They are entitled to just a little kick on account of the style of the gun.) Would like to know why the dog man should not be boiled down about two columns and the trap man about a page for the benefit of the "luggerman," whose space could more than compensate for the loss of the others, especially with the "Argonauts," if not with the dog and gun cranks.

Yes, by all means publish one of Clapham's Bouncers and the details of the Scarecrow. Think there are about five Scarecrows on the stocks now by pupils of "Canoe and Boat Building" and the FOREST AND STREAM.

"Shake" with us on the FOREST AND STREAM's new dress; it is immense.

NEW ORLEANS, La., Jan. 9.

Editor Forest and Stream:

The yachting editor's notion of a head for the outside cover is very good, and ought to stand over the yachting and canoeing departments at least, if it is in the outside; it represents so many good things. But my main ask, does Mr. Stephens bring again into prominence the picture of Eddie Bingham's gun, which Mr. Hough illustrates on page 571 of your issue of Dec. 29? Can this be the "coming gun"? ROE.

LANCASTER, N. H., Jan. 7.

Editor Forest and Stream:

The yachting editor's design for a head is easily ahead. Oh, give me the FOREST AND STREAM. No matter how small the forest, but give me plenty of stream.

WORCESTER, Mass.

The Dutch Boeier, Elizabeth.

Our German contemporary, *Wassersport*, in its issue of Dec. 15, reproduces the lines of the Dutch Boeier, Elizabeth, originally published in the *Forest and Stream* of March 31, 1892, giving also the sail plan, which did not appear with the lines. The drawing is to a scale of very nearly $\frac{1}{2}$ in. to the foot, for the true size of the boat; the boom

being 26ft. 3in., the gaff 12ft. 2in., and the boomkin 5ft. 5in. outboard, the mast is 39ft. 4in., deck to hounds. The jackstaff over the stern is 10ft. 6in. long, looking much like a solitary davit. The sail plan is well adapted for its special purpose, being composed of the foot, with little overhang beyond the extreme points of the hull, as the boat must work close up to the bank in the narrow canals; while its hoist is very effective when sailing between high banks. The area of the mainsail is 665sq. ft., and of the jib, 300sq. ft., the total being 965sq. ft. The mainsail has a loose foot, while the gaff is curved in a very peculiar manner.

Comments on the Challenge.

Now that we have the complete record of the negotiations between Lord Dunraven and the New York Yacht Club, we can see plainly how the land lies, and we regret to say that the prospect is altogether unsatisfactory. The negotiations between Mr. Ashbury of the Cambria and Sir Richard Sutton of the Genesee, were irritatingly tedious and confused; but they were plain sailing compared with this last attempt to challenge for the America Cup. As we said some time ago, Lord Dunraven was occupied in endeavoring to get a challenge accepted without, at the same time, covenanting that the onerous terms of the new deed of gift should be imposed on future challengers; and the New York Yacht Club was endeavoring to accept the challenge, so as to bring off a race, without tearing up this new deed. The practical result, so far, is the New York Yacht Club has won all along the line, and only accepted the challenge under the new deed. This places the Royal Yacht Squadron in a very unenviable position, and we much regret that it has got into such an entanglement. It is true that Lord Dunraven telegraphed on Dec. 12 to the New York Yacht Club that he had no "authority from the Royal Yacht Squadron" in answer to a telegram apparently requiring him to state that the terms contained in his challenge were not exceptions or additions to the new deed of gift, and also to state that the Royal Yacht Squadron would covenant to "faithfully and fully see that the conditions are fully observed by any contestant for the cup during the holding thereof."

Lord Dunraven, so far as we can see, has declined to commit the Royal Yacht Squadron to this; in fact, he could not; but it is evident that the following clause from Lord Dunraven's letter of Sept. 16 last forms the basis of the whole negotiation: "I will sail a series of matches under the rules of the new deed of gift, with the following exceptions and additions." The New York Yacht Club declined the "exceptions and additions," but they are practically repeated in the challenge of Nov. 25, although not referred to as "exceptions or additions." A reference to the telegrams will show that the New York Yacht Club wished to know if the terms of the challenge of Nov. 25 were still to be regarded as "exceptions and additions" to the new deed. We cannot see that this matter has been cleared up. We feel certain that the Royal Yacht Squadron intended that clause 3 of the challenge should be incorporated with the new deed if that deed is to be accepted by a British Yacht Club. Clause 3 of the challenge is the same as the exceptions and additions of Sept. 16, and is as follows:

"3. It is understood and agreed that, should the challenging club obtain the custody of the cup, it holds it open to a challenge under precisely similar conditions to those under which it challenged, but is not at liberty to refuse a challenge according to the terms of the deed of 1857."

Although the New York Yacht Club still declines to accept this clause as an "exception or addition" to the new deed, it is quite plain that the club, according to the manner it interprets the deed, considers that the challenger and challenged can make any terms they like; that the Royal Yacht Squadron could accept a challenge on the basis of the clause just quoted, but it must at the same time covenant to see that the onerous terms of the new deed are in the future, while holding the cup fully carried out. How the two undertakings are to be reconciled we do not know; but if clause 3 of the challenge is added to the new deed as permanent conditions, the matter is simple enough. The New York Yacht Club, however, so far as we can understand the telegrams, has not agreed to accept a challenge on the basis of an addition to the new deed but in effect says to the Royal Yacht Squadron, "Should you win the cup, you must covenant that the new deed is fully observed; but you can come to any terms you like with a challenger outside the new deed." In fact, the new deed must be accepted unconditionally, but its terms may be violated. So here we are back to where we started from; and the R. Y. S., after saying it would not accept the new deed, has been made to appear to have done so bodily. It is true that the New York Yacht Club has set the precedent of accepting a challenge on terms much less onerous than those set forth in the deed; and if this precedent remains undisputed, the terms objected to in the new deed will become a dead letter. This precedent is a wholesale admission by the New York Yacht Club that the terms were unfair, and it is to be hoped that the admission of unfairness will also become a precedent for all time.—*Field* Dec. 31.

Though Lord Dunraven's challenge has not been formally accepted by the New York Yacht Club, a large amount of dissatisfaction remains among both English and American yachtsmen, which will materially diminish the interest that would otherwise be felt in the encounter. The owner of Valkyrie has merely evaded the obnoxious "Should you win the cup, you must covenant that the new deed is fully observed" but has nowhere repudiated it, as other English yachtsmen had declared to be essential. So, too, there are dissenting members of the N. Y. Y. C. who hold that the acceptance of the challenge is *ultra vires*, and have announced their intention of submitting the matter to a legal tribunal if defeated on the water. The result of so unportsmanlike a proceeding would, at all events, be a final decision as to the legality of the "New Deed."—*Vanity Fair*.

According to telegrams received in London on Wednesday, the New York Yacht Club has resolved to accept the Valkyrie's challenge for the America Cup; but a very strong opinion prevails among English yachtsmen that Lord Dunraven, in his anxiety to challenge for the America Cup, has very much given us away; but the most surprising thing is that the premier club of England—the Royal Yacht Squadron—should have backed this challenge. It is pretty clear that the New York Yacht Club intends that the "new deed of gift" shall be accepted in its integrity, and it is well that we should rightly understand what this means.

Here follows a summary of the history of the previous deeds, continuing:

In the new deed there is, however, a "mutual agreement clause," which enables the parties concerned to arrange to cancel the cup in any way they please, and also the conditions laid down for the challenge may be altered so far as waiving the ten months' notice. The New York Club has now gone farther than this and consented to accept a challenge if the name, rig, length, and Custom House measurement of the yacht are given as enjoined in the original (1857) deed of gift, provided the club which backs the challenge agrees to take

over the new deed. The latter stipulation has since 1887 been the stumbling block in the way of a match; but Lord Dunraven thinks he has got round this stipulation by asking that the following conditions be attached to the deed:

"It is understood and agreed that, should the challenging club obtain the custody of the cup it holds it open to a challenge under precisely similar conditions to those under which it challenged, but is not at liberty to refuse a challenge according to the terms of the deed of 1857."

If this has any meaning at all it means that if the Royal Yacht Squadron obtains possession of the cup it will be bound to accept a challenge, accompanied by the name, rig, length, and Custom House measurement of the challenging yacht. How can the club import this alteration into the deed now that the vacillating "surviving donor" is dead? In the message telegraphed to Lord Dunraven not a word is said as to whether the club accepts his stipulation, and, indeed, the club must have felt that to do so would be to practically abrogate the new deed, which they contend they have no power to do now Mr. Schuyler is dead.

All yachtsmen will wish Lord Dunraven success, but at the same time they must feel that if he had kept a firmer upper lip the New York Y. C. would have been compelled to destroy the obnoxious "new deed" and revert to that of 1857, as the club is bound at any cost to bring off a match for the Cup during the run of the Chicago Exhibition.—*London Graphic*, Dec. 16.

Shoal Draft Boats.

CAMBRIDGE, MASS., Jan. 8.—*Editor Forest and Stream*: In the number of *FOREST AND STREAM* for Jan. 5, there is an offer from Mr. Clapham to furnish diagrams showing the method of designing boats of the Bouncer type, provided your journal will publish them. I wish to ask you on behalf of myself and several friends to publish the same. Your previously published lines of small boats I have found extremely interesting, especially those of the Badger; and I shall welcome anything of the kind you may publish in future.

Five of the members of the Lake Geneva (Wis.) Y. C., are building this winter from their own designs, small boats ranging from 15 to 21ft. waterlines, and I am sure they would gladly welcome further contributions from Mr. Clapham.

[We have written Mr. Clapham that we will gladly publish anything relating to the boats of which he has made such a specialty. We hope that he will favor our correspondent and many other of our readers.]

The Herreshoff Fin-Keels.

THE accompanying picture shows the Herreshoff fin-keel Wenonah, built for Mr. Henry Allan, whose successful performances on the Clyde last year have created such a sensation abroad. Wenonah is 25ft. l.w.l., 600ft. sail area, making $2\frac{1}{2}$ rating. We recently published a letter from Mr. Allan testifying to the excellent qualities of Wenonah. In the last issue of the *Field* the following letter relating to another fin-keel appears:

"As the owner of El Chico, the first 'fin-keel' built by the Herreshoffs, and sister ship of Wenonah, I can thoroughly endorse all that Mr. Henry Allan says of these much-rated $2\frac{1}{2}$ -raters in your issue

MR. HENRY ALLAN'S HERRESHOFF FIN-KEEL "WENONAH."

of Dec. 2. El Chico is a splendid sea boat in all sorts of weather, and although I have never sailed her the whole summer in New York and Newport waters, I have never seen her ship solid water, and she has frequently been out when big boats have been running for shelter. Like Wenonah, she has never leaked a drop, although she was on one occasion three hours on the rocks with a fresh breeze and lump of sea. My man has lived on board throughout the summer, although he had the choice of a bed on shore. After a day's trial before taking her from the builder's I had the fin shifted 3in. aft, which practically did away with the weather helm referred to by Mr. Allan, and El Chico, like all Herreshoffs' boats, big and small, steered beautifully. She has been sailed passages of 60 and 70 miles single-handed, and is altogether the most perfect little boat imaginable. She will shortly be shipped to Halifax, N. S., the fin being unbolted in a couple of hours or so, and laid on deck.

H. MAITLAND KERSEY.

Trial Races Abroad.

WHETHER or not there be a race for the America Cup next season, it is certain that the doings of the "100-rater Dacias" will outshine all the exploits of "0.5 rater Wes Wins," and yacht racing will return to its high condition again. With the two large cutters which Messrs. Henderson & Co. have been commissioned to build, from designs by Mr. G. L. Watson, for the Prince of Wales and the Earl of Dunraven, the German Emperor will stand a poor chance with Meteor, and the Iverna will be equally out of it. This will tend in the end to make a dull issue between the contests of the two new Watson boats and a third, or a fourth, or even a fifth from Eife, Nicholson, Payne and Ridsdale, should be produced to make the contests valuable both from a scientific and spectacular point of view. The Americans are certain to build three or four boats to find the possible defender of the America Cup, and if we do not do the same we shall be at a two to one disadvantage to start with. It is no use measuring the challenger by the Prince of Wales's yacht, or by the Meteor, or Iverna. We have had plenty of experience of this sort of thing, and found that, when we have improved, say, ten minutes on a previous model, the Americans have improved something like half an hour. We had it over again last season in the 2.5 and 0.5 classes, and we shall have it over again in the 100 rating class next year, and what we want to enable us to get abreast of this disadvantage is a large number of competitive designers who have worked out the speed problem from different starting points. The Americans know this, and as their *amor patriæ* appears to be stronger than ours they set upon it; if we do not adopt the same effective method of discovering speed and weatherly qualities, it is certain we shall not win the America Cup, and equally certain that we shall lose the R. V. Y. C. gold cup, and the Cape May and Brenton Reef cups. Finally, what we want is an independent trial yacht, to test the new Valkyrie before she leaves for America. If the Valkyrie proves the victress we shall follow her exploits in American waters with confidence; if she is beaten here we shall know that it is only the yacht, and not British designing, that is staked in the challenge. Surely some gentleman will try conclusions with Valkyrie before she leaves.—*Field*, Dec. 31.

Iroquois, schr., R. E. Ellis, has left New York for Jacksonville, where her owner and his father, with Mr. Lloyd Phoenix, will join her for a Southern cruise.

Gen. Benjamin F. Butler.

INTIMATELY associated with the old yacht America, the original winner of the Royal Yacht Squadron Cup in 1851, is the name of Gen. Benjamin F. Butler, whose long career is as much a part of American history as that of the yacht herself. Gen. Butler was born in 1818, and after graduating took up the practice of law in Lowell, in which city he has made his home for over 50 years. He went to the front in the early days of the war, and was one of the prominent figures of the great struggle.

Over 15 years since he purchased the yacht America from the U. S. Government, and since then he has used her constantly during the season, racing at times, but mainly cruising. In his hands the historic craft has been tenderly cared for, being kept in the best condition. She has been twice altered, the old stem being replaced by a more modern one, and the keel being removed under the direction of Mr. Burgess, and replaced by a wider one, with most of the ballast outside.

The America was with the fleet on the race to Marblehead last year, holding her own with many newer yachts. It was Gen. Butler who came to Com. Gerry's aid at Marblehead when no Massachusetts State flag could be had, and who finally procured one. His death took place at Washington on Jan. 11, a blood vessel bursting after a severe attack of coughing. Mr. Paul Butler, the general's only surviving son, is no less prominent in canoeing than his father was in yachting.

St. Lawrence Y. C.

THE St. Lawrence Y. C., of Montreal, has under discussion the following proposed changes of sailing rules, recommended by the sailing committee:

Having taken into their consideration the nature of the application of the sailing regulations of the club under existing conditions, your committee do recommend that the following changes be made:

That Rule II., relating to measurement, be amended.

First—In the clause relating to spinnaker booms, by striking out all the words beginning with "or of the height," etc., to the end of the clause.

Second—By inserting after the clause relating to the measurement of yawls, catboats, etc., this clause: This amendment will have the effect of preventing the use of a larger spinnaker than is measured for rating.

In the 18 and 21ft. classes 80 per cent. of the topmast shall be deducted from the length of the gaff, and the remainder of the gaff added to the base line. The perpendicular is to be taken to the upper halliard block and the topmast is to be taken as the distance from the hounds to the highest point of measurement. In the case of rigs to which the above rules of measurement do not in the opinion of the sailing committee apply, sail shall be measured as follows: To the actual area of their sails, exclusive of headsail and spinnaker, shall be added the area of forward triangle, which shall be computed by measuring a base line from the end of bowsprit or spinnaker boom (whichever be the greatest) to the foremast, and a perpendicular by measuring from the deck to the highest block used for setting the spinnaker, and dividing the multiple of these measurements by 2. In such case the sail area may be computed from a properly certified sail plan filed with the measurer.

That Rule XXIII. be amended by adding to it this clause:

"No protest relating to the length of the course shall be received unless entered in writing, within two hours after the arrival of the protesting yacht as provided for in Rule XXII., accompanied by a deposit of \$10, which deposit shall be forfeited if the course upon being measured shall be found to be within 3 per cent. of being correct."

A letter from Mr. W. A. C. Hamilton giving notice of a motion amending the regulation relating to classification laid before the committee, and they recommend the adoption of the changes there brought forward, as they will bring the limits of classification in the club's larger classes into harmony with those of existing clubs.

The motion proposed by Mr. Hamilton will have the effect of making the A class comprise all boats of 30ft. c.l. and over, the next class of all boats between 25ft. and 30ft., and the third from 21ft. to 25ft.

Building.

WITH one large cutter on the stocks, another keel ready to lay and a probable order for a third, to say nothing of more than the usual number of small racers and steam yachts, the Herreshoff shop is a busy place just now. The Carroll cutter is nearly ready for launching, but the cold weather and the ice in the bay may make it desirable to keep her out of water as long as possible. The keel of the Rogers cutter, whose owners are reported to be Archibald Rogers, J. Pierpont Morgan, of the Corsair, and John E. Brooks, of the Lasca, will follow in the main slipway, and if report be true, the Herreshoffs are likely to be called upon to build still a third 85-footer.

Admission to the works is denied to every one except the workmen and the owners or those closely connected with the new boat, and no information is given out by either builders or owners; so that beyond the general type of the Carroll boat there is little definite known.

The general work of the Herreshoffs includes several steamers, the largest, for Chas. B. Hayden, of Columbus, O., is 102ft. over all, 11ft. beam, and intended for lake and inland work. She will have triple compound engines. On deck there will be a large saloon as dining room and main cabin, fitted with folding berths. Aft of this will be the galley, and beneath the latter, directly aft of the engine space, will be a very large storeroom for the steward's department. Aft of this are the ladies' cabin, three double and one single staterooms. The yacht will be of the usual Herreshoff construction, steamed oak frames and double skin.

The next steam yacht will be of similar model but 92ft. over all and 7ft. l.w.l. The galley will be in the same position, but sunk partly below deck, still leaving room for a store-room below. In both of these yachts the forecabin will be aft. A third steam yacht for R. M. Ridsdale will be 62ft. over all, 10ft. beam. Beside these is a 25ft. sloop launch for the Enterprise.

Little was heard last season of a 30ft. centerboard racer sent in July to Great South Bay for John W. Masury, but the boat proved so successful that the firm are now building another for John Gibb, for racing in the same waters. She will be similar to the famous Alpha but with a wooden board, and will have the usual South Bay summer cabin. The rig will be similar to Dilemma, with two headsails, and the boat will be built of mahogany, like that craft and El Chico. There is also a 25ft. shoal draft cat for an unknown owner, a racing boat; and two 21-footers of the Alpha type. Miss Sutton, owner of Wes Wins, has ordered a 1-rater, a fin-keel, and another has been ordered by an Austrian yachtsman. There is also a 17ft. l.w.l. centerboard racer for an unknown owner.

Gallery Scores.

RECORD of shooting made at Conlin's gallery, northwest corner of Thirty-first street and Broadway, during the month of December. Rifle shooting at 12 yds. on British target:
Dr. J. G. Knowlton, 110 bullseyes, 171 shots.
L. Boulton, 30 shots in 35s, 128, possible 140.
L. Brullon, glance shooting, 10 shots, 50 possible 70.
Major D. Crocker, 3 full scores on small target.
Major D. Crocker, 3 full scores on large target.
Edward Tipping, 3 full scores on large target.
Edward Tipping, 3 full scores on small target.
James Wilson, 1 full score on small target.
Carlton, 2 full scores on small target.
C. R. Bendig, 1 full score on large target.
W. H. Slingerland, 1 full score on large target.
Joseph Kelly, 1 full score on large target.
C. Alkan, 69, possible 70, on large target.
L. B. Rathbone 136, possible 140, 100ft., large target.
William Dalton, 68, possible 70, 100ft., large target.
William Kinghorn, 1 full score, 15s., large target.
William Kinghorn, 9 bullets possible 10 bullets.
Major Crocker, 10 consecutive 1/4 in. bullets.
Major Crocker, 10 consecutive small pipes.
Dr. C. W. Abt, of Genoe Stock Farm, California, 205 possible 210.
Dr. J. G. Knowlton, 20 shots, 20 different positions, 116, possible 140.
Theo. Irwin, 20 shots in 1m., 19 ace spots, possible 20.
William Longmud, 1 full score.
Revolver shooting at 12 yds. on 12 yd. target:
George Bird, 3 full scores.
W. E. Carlin, 2 full scores.
H. C. Faile, 1 full score, right hand.
H. C. Faile, 41 out of possible 42, left hand.
H. C. Faile, 15 pipes, 18 shots.
William Rosenbaum, 30 out of possible 42.
Revolver shooting at 12 yds. on 30 yd. target:
Dr. C. T. Adams, 3 full scores.
Dr. C. T. Adams, 5 aces, possible 6 aces.
Major D. Crocker, 1 full score.
F. G. H. Blanchard, 1 full score.
J. B. Miller, 1 full score.
Theo. Beck, 3 full scores, 35s.
Barton Willing, 7 shots at 30 yds., 46 out of possible 49.
Barton Willing, 6 shots at 30 yds., 39 out of possible 42.
L. Boulton, 1 full score at the word. J. S. CONLIN.

A Revolver Record Breaker.

The genial Barney Walther is making great preparations for his shoot for the Winaus trophy against Mr. Wm. E. Petty, the present holder. The shoot has been fixed for the evening of Feb. 4, at the range at 12 St. Mark's place. Some of Mr. Walther's many friends have made him a favorite and are offering odds on him. Last Saturday afternoon Mr. Petty had an hour's leisure and went down for a

little record making for the N. Y. Pistol Club boys. He did indeed hoist the club record a bit, and the accompanying fac simile of his target shows a 99 in the possible 100 points in 10 shots, whereas the best previous record, made by George E. Jantzer and Barney Walther, stood at 93.
Among those who witnessed the scoring of Mr. Petty were Wm. A. Jones, Wm. Rosenbaum, B. Zettler and A. G. Heintz. The shooting was done with a S. & W. .44-calibre revolver at 30 yds.

Cincinnati Rifle Association.

CINCINNATI, O., Jan. 15.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended below. Conditions, 30 yds., off-hand, at the standard American target. The very unusual small attendance to-day was due no doubt to the cold weather (4° below) and heavy fall of snow. This weather is unparalleled for the last 10 or 15 years for this section of the country. Notwithstanding, some very good scores were made by the "faithful few."

New York Revolver and Pistol Club.

NEW YORK, Jan. 12.—The following scores were made by the members of the New York Revolver and Pistol Club at their last regular weekly practice shoot, held on the 7th inst. at their headquarters, 12 St. Mark's place, 10 shots on standard American target, distance 30 yds., S. & W. revolvers: C. E. Jantzer 84, B. Walther 84, H. Oehl 82, F. Hecking 77, E. Walz (22 Stevens pistol) 84.
The club will give at its headquarters, Jan. 27, 28 and 29, at 8 P. M. each day, a gallery revolver and pistol prize shoot, open to all comers. Score tickets, 5 shots, 50 cents; best two tickets to count. Re-entries unlimited. Only one prize obtainable by any one competitor. Prizes, first prize, a gold medal emblematic of the championship of New York city; cash prizes, \$10 to \$3; a premium of \$2 for the best five tickets; New York Revolver and Pistol Club rules to govern; any arm with length of barrel not exceeding 10 in.; sights open; any pull except half-trigger; any weight; standard American target; distance 30 yds. Committee—B. Walther, G. E. Jantzer, C. B. Bishop.

Beideman Rifle Club.

BEIDEMAN, N. J., Jan. 14.—The following completes the weekly scores of the Beideman Rifle Club, week ending Jan. 14. Conditions, 4-ring target, 1/4 in. bulls, 10 shots, possible 250, strictly off-hand. At 15 yds.: A. J. Yerger..... 246 J. L. Wood..... 244 J. B. Fontaine, Jr..... 240 A. L. Gardner..... 245 W. Gilbert..... 241
Twenty-five yards, same conditions:
A. J. Yerger..... 247 J. L. Wood..... 231 W. Gilbert..... 235 E. L. Gardiner..... 241 J. B. Fontaine, Jr..... 230
WALT GILBERT, Sec'y.

Zettler Rifle Club.

NEW YORK, Jan. 17.—The Zettler Rifle Club held its champion weekly shoot on Tuesday evening, with the following results:
H. Dorrier..... 248 B. Zettler..... 245 F. C. Ross..... 242
H. Holmes..... 247 C. G. Zettler..... 244 G. Krauss..... 241
F. Engel..... 247 R. Busse..... 242 H. Strate..... 241

Syracuse Rifle Club.

SYRACUSE, N. Y., Jan. 11.—At the annual meeting of the Syracuse Rifle Club, held Jan. 10, the following officers were elected: President,

F. A. M. Ball; Vice-President, Robert Robotham; Secretary and Treasurer, W. S. Seely; Captain, Rufus E. Smith; Lieutenant, H. J. Leighton; Directors elected for three years, C. H. Lewis, W. A. Koehler and A. A. Stillman.

A. A. Stillman wins class A gold medal, for his ten highest scores, off-hand, for 1892 with an average of 367. R. E. Smith and C. D. Lathrop were tie for class B gold medal, with an average each of 75.10; but by the rules governing match, R. E. Smith wins medal. Much credit is due the officers of 1892 for their efforts toward the welfare of the club, which ends the year in a prosperous condition.

Italian Rifle Club.

NEW YORK, Jan. 13.—The Italian Rifle Club held its bi-weekly shoot at Zettler's gallery, 12 St. Mark's place, with the following results, 10 shots per man, possible 250 points:
Reali..... 237 Rizzo..... 233 Zighan..... 160
Geolin..... 230 Pall..... 221 Bennett..... 160
Guida..... 223 Marzotti..... 118 Banoria..... 150

Poletto..... 242 Cerelli..... 140 Tranchi..... 150

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Jan. 25.—Live bird tournament and 50-bird match, Willey vs. Gasper, on Erb's grounds, Bloomfield avenue, Newark, N. J.
Jan. 31.—Union Gun Club tournament, Springfield, N. J. Live birds.
Feb. 14-16.—Reading Shooting Association, second spring tournament, at Shilling's, Pa. Two days at target, third day at live birds.
Address: H. W. Matz, Three-Mile House, Shillington, Pa.
Feb. 14-16.—Forester Gun Club tournament, Davenport, Iowa.
Feb. 21-22.—Highland Gun Club tournament, Des Moines, Ia. Live birds and bluecock targets.
Feb. 21-23.—Oneida County Sportsmen's Association tournament, at Utica, N. Y. Live birds and targets.
Feb. 22.—Live bird tournament, on Erb's grounds, Newark, N. J.
Feb. 22.—Syracuse Gun Club, "jack rabbit" tournament, at Syracuse, N. Y.
Feb. 22.—J. L. Brewer vs. E. D. Fulford, 100 live birds each, for \$100 a side.
March 10.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named), Hurlingham rules, Monaca boundary.
May 2-3.—Independence (Ind.) Gun Club tournament. Added money.
May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.
May 22-25.—Knoxville Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.
May 30-June 1.—Iowa State Sportsmen's Association, Clear Lake, Ia.
June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.
June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.
Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh.

THE AMERICAN MANUFACTURERS' ASSOCIATION desiring a better system of shooting handicap than any now known, herewith offer a prize of fifty dollars (\$50) for the best system of handicap offered it for its tournaments of 1893. Its Board of Directors to be the judges of merit. Answers must be made by Feb. 1 to G. HARRY SQUIRE, Secretary, 178 Broadway, New York City.

DRIVERS AND TWISTERS.

The Cincinnati Commercial Gazette publishes the following sketch of the tri-city medal winner in 1892, the medal being shot for at Teipel's Park, Covington, Ky.: "Thomas J. Hughey is known to the present shooting fraternity as plain 'Tug,' a *nom de plume* given to him for his cleverness in the many art of self-defense. He is the pupil of Kentucky's representative pigeon shot, Ben Teipel, 21 years of age, and said to be the quickest second barrel shot in this vicinity. At the start he was backed as the winner for the tri-city live pigeon medal, open to all residents of Cincinnati, Covington and Newport, Ky., winning the handsome trophy in the eighth shot with an average of 92 per cent. Mr. Hughey had a strong opponent in Mr. Ralph Trimble, who succeeded in taking the trophy twice, but never in the race did he for one instant believe any entry could wrestle the trophy from him, and that then unwon. He likes strong company, and is invariably one of the first to enter a sweepstake, be it either at live or artificial birds. The beauty of his is he is no place shooter, but looks toward the landing first or thereabouts, and shooting the rest out to a finish. The late Al. Bandle remarked of him a few months previous to his death to watch out for the boy; he's got the grit back of him to make a good one. Mr. Hughey was born in the commonwealth, but has been a resident of this city for the last five years. He will be chosen by the Independent Club, of this city, to shoot against Miss Annie Oakley at 100 live pigeons."

After the conclusion of the fifty-bird race at Erb's on Jan. 12, Howard Gasper, of New York City, expressed a wish for a match with Allen Willey, winner of the above race. Mr. Gasper wished to shoot at 25 birds each, but to this Mr. Willey would not agree as he did not consider a 25-bird race any test of a man's ability. Mr. Willey proposed shooting at either 50 or 100 birds each, his preference being the latter. They finally agreed upon 50 birds per man, for a stake of \$100 a side, the shoot to take place on John Erb's grounds in Newark between the hours of 12 M. and 2 P. M. on Thursday, Jan. 20, rules of the grounds to govern, both men to stand at 30 yds. As an earnest each man deposited a forfeit or \$30 in the hands of the trap editor of Forest and Stream. The birds, which the agreement stipulates must be good ones, will be paid for out of the purse, this leaving \$175 for the winner. The match is to take place on the above date regardless of weather conditions. On the above day there will also be an open to all shoot at live birds on Erb's grounds, beginning at 10:30 A. M. The program will be as follows: First event, 6 birds, \$5 entry (no more than 3 moneys); 10 birds, \$10 entry; 15 birds, \$15 entry; the latter two events if more than ten entries there will be four moneys; mass and out, \$2 entry, with privilege of one re-entry if missed on the first round. Modified Hurlingham rules will govern all events. The Willey-Gasper match will probably follow the 10-bird event.

The Sipe & Sigler cup, shot for monthly at Cleveland, O., and open to all shooters of Cuyahoga county, will be shot under a handicap system during 1893, those in the third grade to be allowed 5 more birds and those in the second grade 3 more birds than those in the first grade. The shooter having been classified as follows: Expert class—W. H. Tamblin, R. Worthington, Paul North, J. A. Prechter, J. C. Upson and R. E. Sheldon. Non-expert class, first division—Forrester, Haycox, Gault, Richardson, Calhoun, Roof, Elworthy, Auld, Bailey, Wheel, Huntington, Holt, Wherry, Phare, Wightman, Flick, Cross and W. G. King. Non-expert class, second division—Allyn, Babcock, Curtis, Harris, March, Safford, F. Tamblin, K. D. Bishop, Hubbard, C. C. Hogan, Held, Byrnes, Bacon, C. H. North, Taylor, Tegelbach, J. Allen, Zapf, Reiber, Beckwith, Clossie, Crotty, McMillen, Sigler, Wallace, Sweetman, F. Hogan, Harbaugh, A. B. Jones, McCracken, Feller, Dubroy, Loomis, P. Sherman, O'Connor, Bissett, L. O. Jones, Cogswell, Henderson, J. E. Jones, Silsby, Story, H. A. Bishop, Kilby, Murray, W. Calhoun, Brockway, Wilbur, Packard, D. Fish, Trunk, I. Sherman, Hinde and Warde.

UTICA, N. Y., Jan. 10.—We will give a grand midwinter tournament at live birds and targets on Tuesday, Wednesday and Thursday, Feb. 21, 22 and 23. This will be the greatest shooting event ever held in central New York, and will be open to the world, nobody barred! No handicaps! Live bird and target shooting each day for big guaranteed money and pro rata. Plenty of live birds, all strictly first class, and from King's fast traps; American Association rules. Bluecock targets from expert bluecock traps and kingbird targets from Crutten and Card's expert traps. Make your arrangements to attend. Arrangements are about completed for a contest at 100 live birds each between Capt. John L. Brewer and E. D. Fulford for a purse of \$200, which will be shot on Wednesday, Feb. 22. This will be a *bona fide* race to decide the question of supremacy between these shooters. Reduced rates on all railroads. Complete programmes will be mailed soon. Watch the sporting papers for full particulars. Send us the names of your shooting friends and we will mail them programmes. E. D. Fulford, C. H. Hunter, W. C. Harris, H. L. Gates, committee.

ALBANY, N. Y., Jan. 10.—At the quarterly meeting of the West End Gun Club, Albany, held at their headquarters, 316 Washington ave., Monday evening, Jan. 9, the annual election of officers took place. Mr. George W. Dorn being re-elected President unanimously. John C. Meyer Vice-President, Henry B. Kratz Secretary, Louis J. Lyons Treasurer, William J. Reinick Captain and John B. Sanders Director for three years, vice Mr. Henry Reinick, whose term had expired. The

several committees reported the club in a flourishing condition. Arrangements have been made to hold a tournament on Washington's birthday, Feb. 22. The club which numbers sixty members, is the strongest in the Eastern New York Trapshooters' League, their equipment consisting of three sets of inanimate target traps, the latest being a set of North's electric traps and pulls, and their initial tournament of the new year will, no doubt, be carried out with their customary enthusiasm and success. G. F. D.

The Union Gun Club of Springfield N. J., at its annual meeting held at the residence of Dr. Jackson, elected the following officers: President, T. J. Jackson; vice-president, L. T. Terry; treasurer, E. D. Miller; secretary and field captain, A. A. Sickle. The club decided that during 1893 the membership of the club shall be divided into classes A, B and C, and that for the season's competition \$15 in gold shall be awarded as three prizes in each class, the prizes to be in order \$7.50, \$5 and \$2.50, for the first to third highest aggregate number of breaks in any six of the monthly shoots. The club shoots will be at 30 targets, one-half of which shall be shot under the Keystone rapid-firing system, and one-half from three traps, unknown angles. The first club shoot will take place on Tuesday, Jan. 24, shooting to begin at 10 A. M. At 11 A. M. on the same day there will be a contest at 50 Keystone targets, \$5 entrance, open to all. Membership in this club is open, and the initiation fee and year's dues are covered by the nominal sum of \$1, payable in advance.

ALTON, Ill., Jan. 7.—The famous Alton Gun Club has been reorganized and has for its motto "The protection of game and fish," the principal object being to labor for the regulation and proper observance of the game and fish laws, although shooting tournaments will be held. The membership directory includes F. W. Joesting, D. C. White, J. F. Dunne, H. M. Schwegge, E. C. Hayward, John McAdams, J. H. Booth, John McKeon, R. W. Stantes, R. F. Seely, J. E. Collins, A. W. Dobe, Jos. G. Mellung, Wm. McAdams, J. McInerney, W. A. Haskell, John W. Coppinger, H. W. Chamberlain, F. C. Riehl, Clark McAdams, Eugene Gaskins, W. Halliburton, H. B. Starr, G. A. McMillen, E. H. Lahee, M. Kremer, Fred Pieper. An attempt will be made to secure the location of the State tournament for 1893 in this city.

LANSING, Mich., Jan. 5.—At a meeting of the Michigan Trapshooters League held in this city yesterday, it was decided to call a meeting of the entire league early in April for the purpose of arranging for an international tournament to be held here during the last five days in May. The following constitute the committee appointed for that purpose: John Parker of Detroit, E. E. Thresher of Kalamazoo, W. O. Wadsworth of Grand Rapids, U. W. Holt of Manchester and Samuel Howe of Battle Creek. The League has decided to hold a preliminary tournament in March. The following committee on finance and arrangements has been appointed: President Nichols, E. E. Thresher, Kalamazoo; John Parker, Detroit; Dr. O. Woodworth of Grand Rapids; W. W. Holt, Manchester; Samuel Howes, Battle Creek.

The trapshooters of St. Louis are raising money to build a club house and establish a shooting park somewhere near the city. The society will be known as the Trapshooters' Association of St. Louis, and will be incorporated with \$10,000 capital. More than 20 per cent. of the money was subscribed within forty-eight hours after the scheme was launched. The idea is to build a \$2,500 to \$3,000 club house in the north end of the city, and make it the grandest affair of the kind in the country. Necessarily it will be headquarters for trap-shooting in the West. The projectors are confident that the enterprise will be money-making one. The papers are open for signatures at Rawlings', on Pine street, St. Louis.

The Wyandott Gun Club of South Bethlehem, Pa., at their meeting on Jan. 9, changed their shooting grounds to Rittersville, a place midway between Bethlehem and Allentown. The ground covers seven acres and is inclosed with an 8 ft. board fence. There is a large club house and first class hotel adjoining. Can be reached by electric cars, which pass the grounds every ten minutes. Distance, either from Bethlehem or Allentown, two and one-half miles. Finest grounds in the State, and will be occupied by the John F. Wiler Club, of Allentown, and the Wyandott of South Bethlehem. A first class place to settle disputes by professional shooters.

PEEKSKILL, N. Y., Jan. 13.—At the regular annual meeting of the Peekskill Gun Club held Jan. 7, the following officers were elected for the ensuing year: President, Dr. H. B. Wygant; Vice-President, Dr. S. H. Horton; Secretary, E. F. Hill; Treasurer, G. W. Richmond; Captain, B. C. Everingham; Directors, G. W. Richmond, H. P. Dain, J. B. Hall. The club has a membership of thirty. It is proposed to hold a monthly handicap shoot during this year, varying the conditions each month in such a manner as to cover all methods of trap-shooting, and as nearly as possible all conditions of field work. E. F. HILL.

The Unknown Gun Club of Brooklyn held its annual meeting on Jan. 7, and elected the following officers for the ensuing year: President, Henry Knebel, Sr.; Vice-President, Carston Plate; Secretary, C. Munch; Treasurer, H. Van Stader. The clubs gold medal for best average during 1892 was awarded to E. Hyde, who killed 47 out of 49 birds. D. Snipe and E. A. Vroom were close up with 46 kills each. The club decided upon the team to represent the club in Coney Island Athletic Club's tournament. The monthly shoot of the club takes place to-day at Dexter Park.

The attention of those who use nitro powders is called to the advertisement of the United States Metallic Cartridge Company, printed on another page, which gives instruction how to obtain the best results with these smokeless powders. The U. M. C. Co. are placing in each box of shells which they send out, a circular of such instructions, which are of interest to all those who shoot with either at the trap or in the field. Especial attention is called to the primers made by this company, which are adapted peculiarly to the nitro powders.

There was a large attendance of the members of the Parkway Gun Club of Brooklyn, at their annual meeting, held Jan. 10. The election of officers resulted as follows: Henry J. Bookman, President; J. Bennett, Vice-President; D. J. Cummings, Secretary; E. Helgane, Treasurer; and H. Selover, Captain. J. Bennett was presented with the first prize, a \$100 gun, for best average scores for the last year's shoots of 59 out of 60. E. Helgane made the same average, but being the donor of the gun withdrew.

At the annual meeting of the Cresscent Gun Club of Brooklyn, on Jan. 6, the following officers were elected: Walter S. Gilman, President; L. Hopkins, Vice-President; J. S. Shepard, Secretary and Treasurer; and J. Vagts, Captain. The award for last year's shooting, a hammerless gun, was presented to Walter Gilman by Vice-President Hopkins, for the best average score. It was also decided to give an extra prize for the present year, valued at \$50 and increase the membership list to twenty-five.

The New Haven (Conn.) Gun Club held its annual meeting on Dec. 31 and elected the following officers: President, Charles E. Longden; Directors, Frank Potter, G. G. Clock, Frank Carter; Secretary and Treasurer, William H. Hazel; Assistant, J. H. Gould. The report of the Treasurer shows a balance of \$139.50 in the treasury. The membership is about 45. During the past year three members have died: John D. Sackett, Edwin Russell and Augustus L. Traeger.

So Dr. Carver, the "only champion of the world," has agreed to shoot a match at 300 birds against J. L. Brewer, also "champion of the world." And many part of it is that the Doctor, who wants to shoot at nothing but first-class, cunning, driving, zigzagging, twisting, lead-carrying, death-defying pigeons, declares that he will not be at liberty to shoot the race until July, an excellent month, truly, in which to find the Doctor's pet class of birds.

A. The Rochester Rod and Gun Club has contracted for 5,000 live pigeons for use during the New York State tournament in June. The committee is considering the feasibility of holding live bird shoots each day, instead of leaving all the events for the last day. It is hoped that the club will decide to make the proposed change, which would be pleasing to all the sportsmen.

The following scores were made in a shoot between teams representing the Detroit and Windsor Gun clubs, shot at Detroit on Jan. 5, at 25 bluecocks per man: Detroit—Parker, 20, Marks, 8; Secretary and Treasurer, 22, Drew 21, Walton 16, Weise 20, Wolfe 20, Newman 18, 169. Windsor—Don 18, Allen 21, Jones 21, Ford 21, Purser 17, Chauvan 18, Harrison 13, Brown 19, Drullault 20; total 168.

John Woolington and Herman Levy will shoot a match on the Union Hill Gun Club grounds at Guttenberg, N. J., on Feb. 2, the conditions being 25 live birds each, loser to pay for fifteen dinners. On Vasher's Bay, near Charles Woolington and J. Hughes will shoot a match on the same grounds under conditions similar to the above.

The Reading Shooting Association intends to give the visitors a big time at the February tournament at Harry Matz's Three-Mile House. One of the features will be a fox chase. The foxes to be furnished by Billy Fieles, of Christiana. And speaking of Billy reminds us that the great "Fieles target" has not yet been placed before the public.

The following is a list of the new officers of the Locust Point Shooting Club, of Cleveland, O.: John Vanek, President; Frank B. Many, Secretary; George S. Paine, Treasurer; John Shuck, W. B. Andrews, George S. Paine, Frank B. Many and John Vanek, Directors. The club owns 1,200 acres of land and will purchase 100 acres more.

The following officers were elected at the annual meeting of the West End Rod and Gun Club, of Newark, N. J.: President, Joseph Kehlenbach; Vice-President, Anthony Freund; Secretary, Louis Hemminger; Treasurer, Lawrence Spahn; Referee, Joseph Lums, Adam Freund; Captain, Eugene Astfalk; Referee, Joseph Lums.

The Forester Gun Club, of Davenport, Ia., held its annual meeting on Jan. 3 and elected the following officers: Pres. C. M. Leonard; Vice Pres., J. W. Howard; Sec'y, J. F. Croy; Directors, C. M.

Georgetown, Ky., will have a big tournament in February.

as follows:

"DANIEL—I am extremely sorry to inform you that Mr. E. I. Fulford, the man who poses as "champion wing shot of the United States," who has, according to one of our shooting periodicals of recent date, an "unbounded" or "unknown," or some other unaccountable "mountain of wealth in the State of Texas," who though very mentally competent, is unfortunately afflicted with a "bad cold," a "very bad cold," or "cold," which he caught from two of your club members, the same being accepted by you in behalf of your club as per conditions named in your letter to me under date of Jan. 5, which was accepted by Mr. Fulford by long distance telephone on the morning of Jan. 6, did fail me to communicate said acceptance to you by mail or by personal visit on the afternoon of Saturday, Jan. 14, as the day of

shooting the match. I am at close in receipt of the following telegram (copy of which I enclose). In conclusion, I leave for the River-ton Gun Club's members much space to extract from these telegrams the sweetness evidently born of a full-grown "Foxy" of the "Hi-Lo-Jack-Bird" class—self-styled champion—and ask that they exonerate me from having had any dealings with such farce-actural yaller.

Yours respectfully,

HARRISBURG, Pa.

J. H. WORDEN.

Down at Wiedenmayer's Park.

On Jan. 12, in a blinding snowstorm and a gale, with the mercury close down to the zero mark, members of the East Side-Mutual Gun Club, of Newark, and the East Orange Gun Club, of Harrison, gathered on the Newark grounds of the former to shoot off the tie for seventh prize in the New Jersey League series. The tie was shot off by teams of 3 men each at 35 targets per man, and the result was a victory for the East Side-Mutuals by the following score:

East Orange.		East Side-Mutual.	
S Hedden010100000100001100111-11	A Hedden11101100110110000000-13

Shooting at Morristown.

MORRISTOWN, N. J., Jan. 12.—Since Frank Class took possession of the Morristown Driving Park and fitted up a shooting ground thereon, the sport of trap-shooting has taken on a great boom in this section. When the Class-Mitchell and Class-Riggott matches took place on these grounds the shooting was done on the level piece of ground inside of the track, directly opposite the grand stand. This was very inconvenient, especially in cold weather, there being no shelter at all for the shooters. Class has overcome this difficulty by moving the shooting outfit to a point directly in front of the hotel, the shooting being done from the path running along by the verandah, the traps being on the opposite side of the track. The contestants can thus remain inside the hotel sitting room while awaiting their turn to shoot.

On New Year's Day a party of prominent citizens of the town went out to the park for some sport at the traps and before nightfall a considerable number of pigeons had been trapped. The day was fairly good and the birds flew well.

The opening event was at 9 birds, handicap rises, and the next three were miss-and-out events. The scores:

	No. 1.	Tie.	No. 2.	No. 3.	No. 4.
Dean (25yds.)	110121222-8	0	21	110	21
Davis (27)	200111210-6		10	10	11

Footo	21101-4	2221112221-10	02122-4	
Randolph				1110

On Jan. 9 Robert Footo and John Leonard shot an interesting race at 25 live pigeons each for \$50 a side, the birds being a fine lot of flyers. The scores:

Footo	1112110121112212111222212-24
Leonard	11222112111211211111211-23

Jan. 11 brought half a dozen local shooters to the grounds, and during the afternoon they enjoyed both live bird and target shooting. The opening shoot at a match at 20 targets each between Messrs. Cole and Day for \$25 a side. This was a close race, as shown below:

Cole.....10111101110010000-11 Day.....01101010100010001-10
Then followed a series of 10 target sweeps, \$1.50 entry, two moneys in each:

Coney Island Rod and Gun Club.

Ten members of the Coney Island Rod and Gun Club were present at their regular monthly shoot for the Eppig diamond badge at Woodlawn, Gravesend, L. I., on Wednesday, Jan. 11. This was the smallest attendance that has been seen for several years, partly on account of the weather and several members are down in North Carolina looking for quail. A good race took place for the medal between W. Lair, C. Plate, A. Eppig and C. Engelbrecht, who tied with seven straight. Engelbrecht won on the seventh round of the shoot-off. H. Blattmacher won the second prize and the third was divided. The scores:

Club shoot:		Shoot for Eppig badge, sweepstake, \$5 entrance:	
Dr Van Zile	0111102 5	A Eppig	1221122-7
W Lair	1211121-7	L Eppig	1111110-6

ANSWERS TO CORRESPONDENCE.

R. T. N., Cambridgeport, Mass.—We have no record of the powder and lead used.

CONSTANT READER.—Please let me know a good grease for hunting boots. Ans. Post's Waterproof Oil and Leather Preservative is a good dressing. See our advertising columns.

NASSAU SHOOTING.—A reader of FOREST AND STREAM wants information regarding the shooting at Nassau, in the Bahama Islands, the game found there, game laws, etc.

An English View of One American Institution.

A CELEBRATED English author recently made a short tour in the United States, and speaking of his trip from New York to Niagara Falls by "America's Greatest Railroad," he makes use of the following expressions:

"I have two ineffaceable visions before me, a river of peace, the broad waters of the Hudson, a river of tumult, the roaring cataract of Niagara. For about 170 miles the New York Central runs along the margin of the Hudson, and if the eye were never lifted higher than its level it would feast on a bouquet of colors, like a rainbow spread upon the earth." Speaking of the dining and sleeping cars, the bath and buffet and barber shop, he says: "With luxuries like these, the thousand miles to Chicago may become a day's holiday, and if the journey be made by the New York Central, it will be amid some of the most exquisite spots of this vast and beautiful country. After the Palisades come the Highlands of the Hudson. The river itself can never be forgotten. The eye cannot escape it. It fascinates. It is majesty amid the majestic; beauty among the beautiful. Memory cannot obliterate it. A word about the New York Central. It is the only line in the States having four tracks, and the only trunk line running into New York city. To make itself worthy of the unique position it has erected a magnificent terminus from which any part of the city may be reached in half an hour, and on rainy days without even wetting the sole of the foot. The fastest train in the world leaves here every morning for Niagara Falls, accomplishing 440 miles in less than eight and one-half hours, or deducting stoppages, in 425 minutes actual running time—more than a mile a minute."—*Adm.*

FAMILIAR ACQUAINTANCES.

THE SKUNK.

ALWAYS and everywhere in evil repute and bad odor, hunted, trapped and killed, a pest and a fur-bearer, it is wonder not only that the skunk is not exterminated but that he is not uncommon.

With an eye to the main chance, the fur-trapper spares him when fur is not prime, but when the letter "R" has become well established in the months the cruel trap-gaps for him at his outgoing and incoming, at the door of every discovered burrow, while all the year round the farmer, sportsman and poultry-grower wage truceless war against him.

Notwithstanding this general outlawry, when you go forth of a winter morning, after a night of thaw or tempered chill, you see his authentic signature on the snow, the unmistakable diagonal rows of four footprints each, or short-spaced alternate tracks, where he has sallied out for a change from the subterranean darkness of his burrow, or from his as rayless borrowed quarters beneath the barn, to the starlight or pale gloom of midnight winter landscape.

More often are you made aware of his continued survival by another sense than sight, when his far reaching odor comes down the vernal breeze or waft of summer air, rankly overbearing all the fragrance of springing verdure, or perfume of flowers and new-mown hay, and you well know who has somewhere and somehow been forced to take most offensively the defensive.

It may be said of him that his actions speak louder than his words. Yet the voiceless creature sometimes makes known his presence by sound, and frightens the belated farm boy, whom he curiously follows with a mysterious, hollow beating of his feet upon the ground.

Patches of neatly inverted turf in a grub-infested pasture tell those who know his way that the skunk has been doing the farmer good service here, and making amends for poultry stealing, and you are inclined to regard him with more favor. But when you come upon the empty shells of a raided partridge nest, your sportsman's wrath is enkindled against him for forestalling your gun. Yet who shall say that you had a better right to the partridges than he to the eggs?

If you are so favored, you can but admire the pretty sight of the mother with her cubs basking in a sunny nook or leading them afield in single file, a black and white procession.

If by another name the rose would smell as sweet, our old acquaintance is in far better odor for change of appellation from that so suggestive of his rank offenses. What beauty of fair faces would be spoiled with scorn by a hint of the vulgar name which in unadorned truth belongs to the handsome glossy black muff and boa that keep warm those dainty fingers and swan-like neck. Yet through the furrier's art and cunning they undergo a magic transformation into something to be worn with pride, and the every-day wear of the despised outlaw becomes the prized apparel of the fair lady.

If unto this humble acquaintance is vouchsafed a life beyond his brief earthly existence, imagine him in that

unhunted, trapless paradise of uncounted eggs and callow nestlings, grinning a wide derisive smile as he beholds what fools we mortals be, so fooled by ourselves and one another.

A "NESSMUK" MEMORIAL.

As was briefly told last week, the friends of the late George W. Sears, "Nessmuk," propose to provide, by subscription, a memorial to be placed over his grave in the village cemetery of Wellsboro, Pa. The original suggestion was made in these columns shortly after "Nessmuk's" death in 1890, but the project was abandoned for the time being because of conditions which appeared to make such a course the wiser one. "Nessmuk" had designated to be his last resting place a chosen spot beneath the hemlocks in the home yard, which his hands had planted and his loving eyes had watched through their years of growth; and in accordance with the wish so often expressed in his lifetime, here he was laid to rest. The property, however, belonged to others, and it was found that the site could not be retained permanently for such a purpose. As was stated last week, a removal has now been made to the village cemetery, and there the memorial will be placed.

Among all the contributors to the FOREST AND STREAM—and what a host of sterling men and women they are—none have ever won quite the place in the affectionate regard of readers that belonged to "Nessmuk." Into his writings was put not alone the lore of the woods—Nature's secrets, revealed to such a woods hunter as he had been—but there was more than this—the philosophy and sentiment and wit and wisdom of a shrewd, observant, keen and penetrating student of human nature. A wonderful knowledge of the woodlands and of the ways of the woodland creatures was his, and a wonderful knowledge of his fellow men as well. Some one else might have written "Woodcraft" and another pen have written "Forest Runes," but the "Nessmuk" who could write them both may be found not once in a century. But it is not our purpose now to attempt to analyze the secret of "Nessmuk's" popularity, nor to detail the causes of the strong friendships that sprang up between the writer and his readers. Enough to say that such a sentiment existed; that there is kindly thought of "Nessmuk" today, and that this thought has prompted the present undertaking to provide a stone for the Wellsboro grave, which is now unmarked.

The project is not an ambitious one. A costly monument is not intended; it would not be appropriate. The purpose is to set up a stone of fitting design, having in form or chiseling some suggestion of the woodlands, perhaps; but of a simplicity in ornamentation that shall in some degree typify the character of him whose name is to be commemorated on its face.

The sum of \$200 has been fixed as the minimum amount it is desired to provide. Of this something over one-half (\$131) has already been contributed by a few of those who noted the previous announcement of the enterprise. They are:

DR. THOS. C. BRAINERD, Montreal.
DR. ROBT. T. MORRIS, New York.
DR. R. F. ROONEY, Auburn, Cal.
CAPT. L. A. BEARDSLEE, U. S. Navy.
JUDGE L. B. FRANCE, Denver.
MR. E. E. MILLARD, Ariosa, Wyoming.
GEN. D. H. BRUCE, Syracuse.
MR. F. H. THURSTON, Central Lake, Mich.
MR. E. L. STRATTON, Grand View, Tenn.
MR. ROWLAND E. ROBINSON, Ferrisburgh, Vt.
MR. G. H. BUNNELL, Auburn Four Corners, Pa.

FOREST AND STREAM.

There must be a goodly number of others, who will be grateful for the opportunity to express their estimate of Mr. Sears and their loving remembrance of him, and they are invited to join in the subscription. The FOREST AND STREAM will acknowledge by mail to each contributor the receipt of his subscription, and in these columns, as above; and it will assume the responsibility of putting the stone in place, rendering to the subscribers an accounting upon the completion of the work.

OUR best compliments to the multitude of contemporaries who have so pleasantly noted the FOREST AND STREAM's auspicious beginning of the XLth Volume.

THE Florida tourist shooting crank has as much idea of sport as a kicking mule.

SNAP SHOTS.

JOHN WALLACE, the taxidermist, who died at his home in Paterson, N. J., had a wide acquaintance among the sportsmen and naturalists of this country. For more than thirty years his little shop in North William street, first on one side of the way and then on the other, had been a favorite stopping place for the bird men of this city, who liked to keep track of the many interesting specimens which found their way there. Among the well-known scientific men who in years gone by used to drop in at Wallace's shop were Prof. Spencer F. Baird, Mr. George N. Lawrence, Prof. O. C. Marsh and Dr. Hart C. Merriam. An Englishman by birth, Mr. Wallace came to this country many years ago and at first had a hard struggle to get along. He was fond of relating the hardships that he had undergone and the economies that he had been forced to practice before he at last established a successful trade. Wallace was master of his craft and when he was interested in a special piece of work his skill was very great. He prepared many specimens for the Smithsonian Institution, as well as for the American Museum of Natural History in this city. He did a great deal of work for the showmen and was known to all of them. Mr. Wallace was a man of most kindly disposition and would go to almost any lengths to assist his friends. He was a man of great enthusiasm and took up a variety of hobbies, most of which he rode successfully. We recall very well the remarkably fine collection of birds' eggs which he had at one time gathered together, and later in life he took to raising orchids and made several large sales of them. At one time he started a museum in Paterson, but the local patronage was not sufficient to keep it going. Many of the sportsmen of this city and vicinity used to have their work done at Wallace's shop and a tremendous amount of material passed through his hands.

The death of Hon. L. Q. C. Lamar, Justice of the United States Supreme Court, will be heard with regret by all readers of FOREST AND STREAM. Mr. Lamar was the first Secretary of the Interior who manifested any especial interest in the Yellowstone National Park, and it was largely due to his efforts that this reservation has of late years received so much attention from the executive branch of our government. A student, a soldier, a legislator and a Cabinet Minister, Mr. Lamar's broad mind readily grasped the importance to the public of the preservation of the National Park. His recommendations as Secretary of the Interior dealt intelligently with this subject: he appointed a special agent of the highest character to visit and report upon it, and he frequently urged upon Congress the necessity of preserving its integrity. He was appointed Secretary of the Interior by Mr. Cleveland in 1885.

This issue is an Arctic number. Those philosophic souls who argue that the true way of enjoying Arctic exploration is to sit by a cosy fire and read of the boreal adventures of other people, will find in our columns this week an abundant store of material. Mr. W. E. Meehan, of the editorial staff of the Philadelphia *Ledger* and a member of the Peary Relief Expedition, contributes the first of three chapters descriptive of hunting in Greenland. Mr. Frederic S. Webster supplies an illustrated paper on an "Arctic Rover," the musk ox; and our well-known contributor, Mr. H. G. Dulog, writes of the exploration and hunting experience of Mr. Warburton Pike on the "Barren Grounds of Northern Canada."

Maine sportsmen and a greater multitude of sportsmen in other States are deeply interested in the selection of a commissioner to fill the place made vacant by Mr. Stilwell's death. Among the numerous candidates mentioned are Messrs. Tom Allen, of Bangor salmon pool fame; Mr. P. S. Vickery, of Augusta, well known as a sportsman specially interested in game protection, and Mr. Lewis McLellan, of Gorham. Warden Jonathan Darling's name has also been mentioned, as has that of Mr. Everett Smith, of Portland, who, however, it is said, would not seek the office.

We have reported at considerable length the proceedings of the New York State Association for the Protection of Fish and Game, on the assumption that the discussion was of more than local interest. The problems confronting those who have to do with game and fish protection in New York are in large measure the problems existing everywhere; there are everywhere similar obstacles to success, and the same solutions must everywhere be found.

The Sportsman Tourist.

HUNTING IN GREENLAND.—I.

With the Peary Relief Expedition.

BY WM. E. MEEHAN (BONIFACIUS),
Member of the Expedition.

DURING the summer Greenland is a paradise for the hunter. In the valleys torn out of the tremendous blocks of solid rock by great glaciers, now extinct, thousands of reindeer roam, spending most of their time in browsing on that handsome lichen known as the reindeer moss, and such other vegetation as they may chance to find. Among the rocks and boulders polished and worn by the mighty action of moving ice, are arctic hares in countless numbers, dozens sometimes being in sight at one time. With them, but not so plentifully, are arctic foxes, smaller, but just as shy and cunning as their more showy southern relatives. The ice-dotted waters of the Arctic Sea teem with seals, walrus, white whales and narwhales, and frequently polar, or properly speaking water, bears, may be met with, lumbering over the floes of a great ice pack, themselves on hunting bent. On the water, in the air and on the rocky shores are birds—eider ducks, little auks, geese and other edible birds—in flocks of such vast size that any one of them would seemingly contain more birds than the average sportsman would meet with in a year at his usual hunting grounds. To crown all, the sport of hunting this plenitude of animal life may be had in a climate which for several months is at once a delight and a source of health.

This last statement may cause some surprise, for there is a general impression that Greenland is perpetually a place of almost unbearable cold. In the imagination of many people the warmest day in summer would be of a zero temperature. Greenland explorers are in the minds of such people fools or heroes; and the natives objects of pity, as supposed to be dragging out a miserable existence so muffled in fur garments to keep out the bitter cold as to make locomotion difficult. Others firmly believe that there is scarcely a piece of land or rock visible anywhere; that the whole country is perfectly buried deep under mountains of snow and ice.

It seems almost a pity to attempt to shatter these fancies, for it appears to dim much of the glory which has hitherto surrounded the members of the three last Philadelphia expeditions to the polar regions, and disgust future would-be explorers who think that only in great danger the path of glory lies. The truth is, nevertheless, that for nearly four months every year, namely, the greater parts of May and August, and the whole of June and July, the weather is either delightfully pleasant or almost hot, much like the May weather in the Middle States.

During that whole period it is perpetual day. The sun never sinks below the horizon, casting, except when obscured by clouds, a steady warmth upon the whole country. Under his genial rays vegetation flourishes, outcrops and moths in multitudes flutter from one pretty flower to another, while swarms of mosquitoes in swampy places attack defenseless explorers with a ferocity that would put to shame their New Jersey relatives.

It cannot be denied that the little over seven remaining months are for the most part bitter cold, and that from Nov. 8 until the middle of February there is no daylight, but the cold is described as being not as great as usually believed, or the night as dreadful or tiresome as imagined. It is true also that the whole interior of Greenland, from its southern termination to its northern limit, is buried thousands of feet deep by a vast sheet of ice, and that at frequent intervals, portions of this great frozen mass, under the name of glaciers, flow into the sea through wide, deep valleys; but the coast line itself, many valleys, and much of edges of the tablelands are almost perpetually free from snow and ice.

I came to know of these things in this wise. Early last spring it was determined by the Academy of Natural Sciences of Philadelphia, on account of widespread uneasiness in the public mind, to send an expedition to Greenland to the relief of Lieut. and Mrs. Peary and five companions who had been left at McCormick Bay in 77° 43' north latitude the previous summer. I was fortunate enough to be one of eight selected to form that expedition. The others were: Prof. Angelo Heilprin, leader; Henry G. Bryant, F. W. Stokes, Philadelphia; Samuel W. Entenrich, West Chester; Charles E. Hite, Burlington, N. J., taxidermist; Albert White Vorse, Boston, and Dr. Jackson M. Mills, New York, surgeon.

All save Prof. Heilprin and Mr. Stokes were enthusiastic hunters and all started on their great journey well armed. As a consequence the steamer Kite, which was chartered for the voyage, as she bore the party away from St. Johns, Newfoundland, on the afternoon of July 5, presented rather the appearance of a filibuster than that of a peaceful vessel carrying a party of intelligent gentlemen on a humane and scientific mission.

Until a few weeks before departure most of the members of this party were unknown to each other, but the close companionship which their common purpose afforded, and restricted size of the vessel rendered necessary, speedily revealed the character of each man, and each formed for the other respect and friendship, which were not only unbroken throughout the voyage, but still continue.

Nine days' steaming, three of which were vexatiously spent in a great field of ice which had floated around from the eastern shores of Greenland, brought the Kite to Godhavn, a Danish settlement on the Island of Disco. Here we took on board Daniel—faithful Daniel—who formed such an attachment for us that when six weeks later, on our return to his home, we bade him good bye, he carried out to the letter his oft-repeated threat to "much cry when ship go way."

Daniel was engaged as an interpreter, and is one of the few full-blooded Eskimos yet remaining in South Greenland. He was recommended to us by Governor Carstensen, of Godhavn, not so much for his English speaking qualities as for his great good nature, willingness to oblige, strict honesty and hunting qualities. To these Daniel himself modestly added one other, that he "much wash," which last, in view of the love of filth the Eskimos generally exhibit, was a virtue not to be despised. We found, by subsequent experience, the recommendations of the Governor, as well as the one urged by

Daniel himself, were honestly given and we became much attached to him, and he rapidly acquired under our tuition the one qualification he was deficient in—a knowledge of English.

We did not remain long at Godhavn, we had little business there, and game, beyond a few ptarmigan, scarce. As soon as possible our voyage was resumed and on the morning of July 20, stopping in the meantime a few hours at Upernivik, we arrived off Duck Islands, three small rocky bits of land not far from the dread Melville Bay. These are famous as one of the chief nesting places of the eider duck and generally visited by whalers every year.

As soon as the Kite was brought to in their vicinity, two boats were lowered and every member of the relief expedition and such of the ship's crew as could get leave tumbled in, and all armed to the teeth, were rowed to the largest of the group. When the boats touched the low, rocky shores there was not a sound to indicate that there was an eider duck within miles of the place, and only a few guillemots were swimming about in the water. We had, however, scarcely clambered over the rocks a short distance inland before a plump eider flew up from directly in front of the feet of one of the hunters. At least a dozen shotguns were discharged at the unhappy bird, which fell about 50 yds. away with a heavy thud, a shattered and useless mass of flesh, feathers and broken bones, chiefly through the fact that the shells used by the ship's crew were all loaded with buckshot.

If up to that time there had been a fear in the minds of any of us that there were no birds about, the simultaneous discharge of all our guns showed us our mistake. Scarcely had the sounds echoed back to us from the huge boulders and rocks before the air became darkened by thousands of eider ducks, which flew hither and thither with affrighted cries. Some hurried toward the safety of the sea, others to the fancied security of a small lake which occupied the center of the island.

Seeing the vantage to be gained by so doing I stationed myself at the head of the lake, and immediately after several birds flew by, took aim, and fired at them; but to my amazement and disgust, the big birds flew heavily on unharmed and quacking to the sea. My next shot, as well as several succeeding ones, yielded no better results, except occasionally to knock out a few feathers.

As I was about to give up disheartened, one of the crew came along, and noting my ill success said: "Them birds you're shootin' at are too far off."

"Too far!" I exclaimed, "not one I have fired at has been more than 20 yds. away."

"A hundred, if an inch," he replied sententiously. "This is a deceivin' country. Try agin but don't shoot till ye kin see their eyes."

I followed his advice and found the wisdom of it, for in the next hour I had as much sport as the most enthusiastic hunter could desire, and when at the expiration of that time I stopped and the remainder of the party came up, each bending under a burden of birds, I had more than two dozen plump ducks in a heap at my feet, and with the proud record of having twice killed three birds from two flocks passing at the same time, with four shots from my Winchester repeating shotgun.

We might have kept up the hunting all day and killed innumerable birds, but between 150 and 200 were deemed quite sufficient to sustain our craving for fowl through the dangerous Melville Bay, even though we might be detained therein by the ice for a week or more.

Returning on board, therefore, after a little more than an hour on shore, the Kite, which had been in the meantime slowly steaming about, took up again her journey, and a few hours later, with some trepidation we found ourselves opposite the famous Devil's Thumb, and in the apparently illimitable fields of ice of Melville Bay, with the added danger of a dense fog surrounding us.

Nevertheless, by carefully choosing his "leads" or lanes of water, which during the summer months extend in various directions through this ice, Captain Pike brought us safely out of it 52 hours to Cape York, where we met our first wild Eskimos, that strange race of men, to whom Sir John Ross gave the name of Arctic Highlanders. As the Kite made fast to the shore ice which extended perhaps half a mile out to sea, mingled with the cries of "Chimo, chimo" (welcome, welcome) of the natives, were heard sounds from the lofty cliffs which towered from three to five thousand feet above the water, and from the air. These sounds bore a striking resemblance to those made in summer time at home by multitudes of small frogs, when heard from a distance. These were caused, as we had learned during the previous day or two, by millions upon millions of "little auks," a bird about the size of a robin. We had read much in various works of Arctic travel, of the toothsome qualities of these birds, and were eager to find out for ourselves whether our palates would agree with those of previous explorers. As the birds were in such vast quantities, it was thought best in order that there might not be useless slaughter, that only two should take guns ashore, and Mr. Hite and I were detailed on the ground that we were two of the best shots in the party.

Filling our belts with shells loaded with No. 6 shot, we sallied joyfully forth, promising the others the materials for a savory feast on our return. We made our way quickly over the broken ice floes to the shore, and with infinite pains and labor clambered up the rough rocks and cliffs to a sloping piece of table land, and thence to the foot of a great mountain whose ragged peak was lost in the clouds far above. In a few moments a vast flock of little auks came flying by, so closely packed together that both Mr. Hite and I fired into it with perfect confidence that a shower of dead birds would tumble to the earth. But nothing of the kind happened. The entire flock flew screaming away, and settled in security 1,000 ft. below on the few patches of water of the otherwise frozen sea. The reports of the guns, however, frightened from their rocky perches untold numbers of flocks of the same birds, which flew about us in great sweeps, and so thick that at a short distance they resembled great and swiftly moving black clouds. Into one of these flocks with diminished confidence we again fired, each carefully sighting a bird, but to our mortification neither of us did more than kill the birds we aimed at.

By the time we had used a dozen or fifteen shells between us, with only little more than as many birds, we came to the conclusion that little auk shooting was the most difficult of any kind we had ever before attempted, and we at length had to return to the ship and bear with what cheerfulness we could the sarcastic congratulations of the others. But before we left Cape York these scof-

fers, who in turn tried their luck, were silenced, for they met with no better results than we.

Like many other things in that wonderful country of the midnight sun, we found that the trouble rested not so much in a lack of ordinary skill, but in not understanding the conditions which surrounded what was undertaken.

In regard to the little auks, in a few days, by closely studying them, we found wherein lay the difficulty. They are very erratic in flight, moving right or left, up or down, with indescribable swiftness, never holding the same position with each other more than a second or two. When we learned that, we had no further trouble. We simply let birds flying overhead alone, and contented ourselves with shooting at flocks which flew by on a level with our own heights. When we did this two or three shots would secure enough birds to give a royal feast to all hands at the next meal.

We found furthermore that however much former explorers might have drawn the long bow in the relation of their experiences, they had told nothing but the truth when lauding the delicacy and delicious flavor of the meat of the "little auk." Split and cooked with butter by the cook in his galley just before meal time, or by us in the engine room, with a shovel for a frying pan, held over the bright coals of the engine's furnaces about midnight just before going to bed, it was equally an epicurean dish: juicy, tender and toothsome, the most delightful of the many appetizing meats of Greenland.

After leaving Cape York the spirit of hunting passed away from us for a time. Even with the slow-going craft we were in it was but a two days' journey from McCormick Bay. The knowledge that we were so close to the chief objective point of our great journey drove everything else from our minds. Would we find the Peary party? If we did, would they all be alive and well? Had Mr. Peary's leg, which was broken in the upward journey the previous year, become sound again? Had he made the great journey over the vast and mysterious forbidding interior ice cap? These and many other similar queries filled us with such excitement that the gentle-eyed seals sported with impunity about the vessel's side; gulls flew overhead without having a charge of shot hurled after them, and even schools of white whales gambled in close proximity, without running the risk of carrying away in the blubber beneath their skins several ounces of rifle bullets.

At length, about ten o'clock in the evening of July 23, the Kite entered Whale Sound, and came within sight of McCormick Bay. Fifteen minutes later, across the lower face of a great iceberg, shining and sparkling in the bright sunlight, about two miles away, there appeared a black speck, which by-and-by becoming larger, we made out to be a boat, in which were several wild looking human beings, some rowing with all their strength, and others by their wildly waving arms seemed to be under the stress of great excitement. A quarter of an hour later the boat came alongside, and with unchecked tears of gladness, three of the hearty explorers, Messrs. Gibson, Cook and Verhoeff, who had braved the cold of the high arctic winter, were welcomed on board, and we learned that our expedition had not been in vain, that not a life had been lost, an undue hardship experienced, or a plan of the gallant leader, Mr. Peary, miscarried.

By midnight the Kite was safely anchored in McCormick Bay, opposite the "Red Cliff House." Mr. Peary's cozy winter quarters.

Natural History.

AN ARCTIC ROVER.

THE musk ox (*Ovibos moschatus*) is considered by naturalists one of the rarest of our North American mammalia. In a climate of almost perpetual winter, within the Arctic Circle, this animal lives and thrives. In a land which has been so fascinating and so fatal to the many explorers who have sought to solve the mysteries of these desolate rocky ice-bound fields, in which no animal, it would seem, could exist, the hardy musk ox roams at will during the entire year. The ability to stand the rigors of such a climate is a striking feature of its interesting life history.

The musk ox is at present found only in the most northern parts of North America, where it ranges in small bands on the barren grounds between the sixtieth parallel and the shores of the Arctic Sea. Its southern range is gradually contracting, and it is no longer met with west of the Mackenzie River. It is found through the Parry Islands and Grinnell Land to North Greenland, reaching on the west coast as far south as Melville Bay. It was met with by all the Polar exploring expeditions, including the De Long, Hall and Greely parties. Lieut. R. E. Peary in his late Greenland journey secured several specimens of various ages and reports it comparatively abundant. The German Polar expedition of 1869-70 found it at Sabine Island on the east coast. In former times the musk ox roamed in other parts of the world. Its fossil remains, or those of an allied species, have been found in northern Siberia and the plains of Germany and France. It has also been found in the gravel beds in several parts of England, as Bromley, Bath and Freshfield, and also in the brick earth of the Thames Valley at Crayford, Kent.

In size the musk ox equals the smaller varieties of Scotch and Welsh cattle, but in structure and habits it is more like the sheep; and the combination of characteristics is well expressed by its generic name, *Ovibos*. It is gregarious in habit, going in herds of twenty or thirty head, and sometimes ninety or a hundred have been observed. The bands contain one or two full-grown bulls. Notwithstanding their short legs, they run with considerable speed. When frightened, they gather together like a flock of sheep, and follow a leader as sheep do an old ram. This habit makes the total extermination of a herd an easy task, when it is the desire of its destroyers to accomplish it. When thoroughly alarmed they easily ascend precipitous slopes, their curved, sharp-edged hoofs greatly aiding them in gaining a foothold.

The name of musk ox is given on account of the musky odor exhaled by the animal. The odor does not proceed from any special gland, as in the case of the musk deer and other animals which secrete a musky odor. The cause of this peculiar odor has not been satisfactorily explained.

According to Sir John Richardson, "When the animal is fat its flesh is well tasted and resembles that of caribou, but has a coarser grain." According to other authorities

the flesh of the bulls is highly flavored, and both bulls and cows, when lean, smell strongly of musk. This odor does not seem to be confined to either sex, or to any particular season of the year. At times the flesh of some of the animals is said to be tender and very well flavored. The carcass of a good-sized male will weigh 300 to 350 lbs. In summer they accumulate considerable fat, and during winter use up this fatty tissue. The males are considerably larger than the females. The cows calve about June 1, giving birth to one young one. The animal is also known as musk buffalo and musk sheep, both very expressive names.

The animal has a very prominent tendency to a hump. The dorsal processes of the vertebral column, as shown in the skeleton, indicate this. The dense, long and somewhat stiff bunch of hair over the shoulders plainly proves that the animal possesses a hump. All specimens which have been heretofore mounted do not show this feature of the animal. The head is large and broad. The horns in the old males are extremely broad at the base, meeting in the median line and covering the whole top of the head. They

the musk ox here given represents the character of the animal. The specimen from which it is taken is the largest in this country or Europe. The skin of this specimen was obtained by E. V. Skinner, Esq., of the Canadian Pacific R. R., and placed in the hands of Messrs. Sowdon & Webster, of 14 East Forty-second street, this city, who have prepared it, as faithfully represented by the plate. Through the kindness and by the permission of Mr. Skinner we have the pleasure of placing before our readers this handsome likeness.

This specimen was skinned by natives over 1,400 miles near Fort Franklin, and was received here in fine condition. The order for it was given three years since and the specimen has been in transit most of this time. These few measurements may serve to impress the reader with the proportions of this particular specimen. The animal stands at the shoulder 4 ft. 5 in.; the length from nose to stern is 6 ft. 7 in.; height at the rump 3 ft. 10 in.; length of head from base of skull to end of nose 24 in.; length of horn from median line, following the outside curve to tip, 24 in.; width of both horns at base 12 in.; diameter of

of wolves of the Pyrenees having come down in the villages on the mountain side and attacked the stock and devoured persons, so that it may fairly be assumed that European wolves are more ferocious than those of our own country.

In the old days in the West, a man no more thought of being afraid of a wolf than of a ground squirrel. With a stick, or without one, a man could chase a pack of gray wolves as far as he could run, and as long as his wind held out. Even in the bitterest weather the wolfers never thought that there was any danger of being attacked by wolves. The only case of which I ever heard which suggested anything like this, was toward the end of a very long snowy winter, when a large white wolf one night followed a friend of mine up to his cabin door. The animal trotted along only a few steps behind the unarmed man, who confessed to feeling somewhat uneasy lest the beast should spring at him, but it made no demonstration of this kind.

Of late years more or less frequent accounts have been published in the newspapers of packs of wolves attacking

Mounted by Sowdon & Webster, New York.

MUSK OX (*Oribos moschatus*).

Copyrighted, 1891, by E. V. Skinner.

are directed, at first, slightly outward, and then suddenly downward by the side of the head, and then they turn upward with a graceful curve, and forward, ending in the same plane as the eye. The horns at the base are rough, but gradually grow smooth, from the center to the tips, which are round, glossy and black. At the base they are a dull white. The horns of the females are much smaller, and at their base the space between them is much broader in the middle of the forehead. The ears are small and are concealed in the hair. The space between the nostrils and the upper lip is covered with a short, close hair, as in goats and sheep, and has no trace of the bare "muffle" of oxen. The general color of the hair is a rich brown, shading into black. It is long, matted and rather curly at the neck and shoulders. On the back and hips the hair is long and straight, on the sides of the body exceedingly long, so long as to hang below the middle of the legs. In some specimens which we have measured the longest hairs have been 20 in. long. In the center of the back there is a patch of soiled brownish white, termed the saddle.

There is a closely matted short under wool, exceedingly soft and fine of texture and so dense that it is impervious to snow and rain. On the chest the hair is long and straight and hangs down gracefully like fringe. The tail is short and hidden in the long hair on the hips. On the legs the hair is short, stiff and without any underwool. The hoofs are much curved and larger than those of the caribou, which they resemble in shape, and the eye of a skilled hunter would be taxed to detect the difference between the tracks of the two species in the snow. The bones of the animal are very dense, those of the legs have the weight and appearance of ivory.

The food of the musk ox is similar to that of the caribou, and consists of grass at one season and lichen at another. The curved hoofs enable the animal to scrape away the deep snows which cover their scanty food. Their sense of smell is very acute. The illustration of

horns at base 9 in.; breadth of muzzle 4 in.; circumference of muzzle 14 in.; circumference of hoof of front leg 17 in.; circumference of hoof of hindleg 13 in.

There are but four other mounted specimens of the musk ox in this country. One is at Harvard College, Cambridge, Mass., and three compose a group at the United States National Museum, Washington, D. C. Of these one is a male, one a female and one a two-year-old, none of them superior specimens.

FREDERIC S. WEBSTER.

THE WAYS OF WOLVES.

Editor Forest and Stream:

I have been much interested in the splendid figure of the wolf presented in your issue of January 5th, and have been amused by one or two comments on it which I have seen in the FOREST AND STREAM since then. The correspondent who says that wolves are never fat, evidently never saw wolves on the buffalo range in the old times. Then they used to be very fat, as did also the coyotes, badgers and foxes.

There is one question on which I should like to hear the opinions of your readers, and about which I know nothing very definitely, although I have been familiar with gray wolves for about a quarter of a century.

Does the American wolf ever attack human beings? Up to a few years ago almost the only account of the killing of persons by wolves is the one found in Audubon and Bachman, which tells of the devouring of a slave by a pack of wolves in some one of the Southern States. This account came to the authors at second or third hand, and to my mind it is not at all convincing.

We have always been taught that the wolves of Europe commonly attack men in severe winter weather. Books of travel abound in stories of this class where packs of wolves pursue travelers in sledges and frequently one or more of the persons so pursued is sacrificed to save the lives of the others. This winter the press dispatches speak

human beings in Minnesota and North Dakota, but I have always believed, and still think, that such despatches are mere newspaper "fakes" and no more to be credited than the bear and hoop snake stories which so frequently adorn the pages of the journals to-day.

What I am in search of now is authentic testimony as to the ferocity of American wolves and their disposition when forced by hunger to attack human beings. Does any one know of a case where a man, woman or child has been attacked by gray wolves, and under what circumstances did such occurrence take place? I do not want hearsay evidence, but good convincing proof.

If such occurrences have taken place I think they ought to be put on record. I presume that it is only within the last few years, since wild game became so scarce, that anything of this kind has occurred, if it has ever occurred, which I very much doubt.

If you are willing to give space to this note in your columns it may perhaps bring out some interesting evidence.

ET. VIEJO.

California Academy of Sciences.

THE officers elected Jan. 3 for 1893 are: President, H. W. Harkness; First Vice-President, H. H. Behr; Second Vice-President, J. G. Cooper; Corresponding Secretary, T. S. Brandegee; Recording Secretary, J. R. Scupham; Treasurer, L. H. Foote; Librarian, Carlos Troyer; Director of Museum, J. Z. Davis.

Beaver Dam Horse Feed.

HERE appears to be foundation for another Kekoskee fish story. It is an advertisement in the Appleton (Wis.) Crescent:

BULLHEADS FOR SALE.

Will contract to furnish Bullheads in 1,000 bushel lots at 50 cts. a bushel, undressed, F. O. B., Beaver Dam, Wis. Fish guaranteed good quality. Address W. G., care of this office. 7646*

Game Bag and Gun.

BARREN GROUNDS OF CANADA.

SOMEWHAT over a year ago, on my way to the Okanagan country, I stopped for a few days at Victoria. It was my wish, while there, to get a bearskin for a friend. The trapping of bears I had always despised as a form of sport, and the legitimate capture of the animal was, for me at least, highly unreliable, so I called on the accomplished curator of the museum to get advice about buying a skin.

Just outside, on the porch of the museum, lay a pile of hides of unusual attractions—not bear skins to be sure, but quite as desirable—with their dull, dark, wavy hair relieved by patches and shadings of soft dun color. These were hides of musk ox brought in by Mr. Pike; and heads of the same species which Mr. Pike had given to the curator were already set up and hung on the walls. A couple of weeks later reminiscences of the same enterprising sportsman met me at every turn, for I had engaged a half-breed to hunt with me who had been formerly in Mr. Pike's employ, and my guide would point out camping spots occupied on the earlier trips, and show me the big stakes driven in the grassy marsh for picketing the hunter's horse, while his master stayed on in search of woodland caribou with a defiance of rough weather and a stubborn contempt for the passage of great stretches of time which were amply illustrated in his later work. My guide knew, even then, that Mr. Pike had undergone stirring experiences in the North, but not until the issue of his book on the "Barren Ground of Northern Canada" has the full detail been accessible.*

The trip therein recited began in June, 1889, from Edmonton. The same point was reached on the return in March, 1891.

There are three main divisions to the journey. The year 1891 was consumed in trips by canoes and dog sledges from Fort Resolution on the Great Slave Lake to the upper reaches of the Coppermine River about latitude 65°.

Starting from Fort Resolution again in May, 1890, and going by canoe down the Great Fish River, Mr. Pike got as far north as Lake Beechey, about latitude 65° 30', and returned to Resolution for a second time at the end of August in that year.

The third division of these adventures, and the most exciting and dramatic, notwithstanding the more familiar nature of the country and the surroundings, embraces the unsuccessful attempt to reach Fort McLeod by ascending Peace River in the winter of 1890.

It is worth while to follow the adventurer's steps with some closeness, for the countries, the people and the fauna to which he introduces us are all unusual.

As a narrative of sport there is little that is attractive in the book. By sport I mean the exertion of skill, knowledge and strength necessary for the capture of wary game. The game in the barren grounds, when it is to be found at all, seems to be stupid to the verge of idiocy, and the monotonous and tedious slaughter can only be of interest from the point of view of the commissariat.

Nor is there much of scientific moment to be found directly stated. Valuable pictures of the habits of the animals hunted abound, but there are no estimates of the size, weight or measurements of either musk ox or caribou, except the statement that the barren ground caribou is about two-thirds the size of its woodland cousin, while we feel positively robbed of the animal stories, which the half-breed King Beaulieu told in such profusion, and which Mr. Pike seems to have looked on much as Hotspur looked on tales of the "mold warp and the ant."

The barren ground which Mr. Pike visited lies south of the Arctic circle. In no instance was that parallel reached, but the characteristics of much of the region are strikingly arctic. Nothing is lacking to make the picture complete except mountains and seaboard with resulting glaciers. The district is thickly strewn with groups and chains of lakes and seamed with rivers, along which lie the chief lines of travel. Sandstone and granite rocks are common, as well as iron stone, whatever that may mean, and on one occasion mention is made of a considerable exposure of stratified rocks. Generally speaking the land consists of stretches of rolling ground, with occasional low buttes and one or two sand ridges which extend for great distances, and are important landmarks. At times, however, a rough broken rock covers the entire visible country and makes progress very difficult. The timber line runs irregularly, according to the exposure of the locality. The pines, which are of considerable size on the Great Slave Lake, become stunted by the rigor of the climate further north and finally cease about 64° 30' of latitude, but scrub willows along the stream reach up much further, while mosses abound, and during the month or two of summer grasses and flowers sprout and bloom with rapidity and profusion.

The weather is often astonishingly severe, even as late as July, gales and storms of snow and heavy frosts frequently alternating with warm days, while Lake Mackay, 100 miles long, was still solidly frozen at the end of June.

But even this grim waste has moments of beauty, and its mysterious charm cannot be better indicated than by the words of the Indian Saltath when he asked the priest about the delights of heaven: "Is it more beautiful than the country of the musk ox in summer, when sometimes the mist blows over the lakes and sometimes the water is blue and the loons cry very often? That is beautiful, and if heaven is still more beautiful my heart will be glad and I shall be content to rest there till I am very old."

If that northern country has produced nothing but the delicate poetry of Saltath's description it is not quite a barren land.

The last part of the year 1889 was taken up by two journeys over nearly the same country; the first journey by canoe, the second by dog sledge. On Aug. 19 Mr. Pike started, accompanied by half-breeds and their wives and children to the number of more than twenty, for Fond du Lac, a point on the north shore of the Great Slave Lake.

Mr. Pike kept with him a Winchester rifle and a blanket. A little bacon was brought along and two hundred pounds of flour—supplies which were only sufficient to provide a

text for reflections on the greed of his companions. There was only enough tea and tobacco to last part of the time. There seems to have been nothing else, not even a sack of salt, not even a thermometer nor a compass.

The expedition was "heavily unprovided," but the explorer was the possessor of a capacity for endurance which went far to remedy all wants. Almost impervious to arctic cold, always ready for necessary labor, patient, or at least enduring, in the face of starvation, and able to thrive on a long course of "meat straight," whether the meat were raw or sodden, fresh or far advanced in decay, the traveler was in one sense provided with the best possible equipment.

At Fond du Lac half of the half-breed army was left behind. Eight men and two women started north in two canoes on Sept. 7. One canoe was soon abandoned, and by Sept. 13 the party had paddled and portaged up to a lake called Lac du Rocher, a distance, on the map, of some sixty miles. There they waited, eating wolverine and a few fish, until caribou were found. On Sept. 15 and 16 thirty-four caribou were killed, some of which were cached.

On the 17th Mr. Pike started, with five men, after musk ox, but soon sent back two of his attendants. On the 22d nine caribou were killed, yet on the 24th we find the party glad to drive off the ravens and feast on carcasses a month dead. On the 25th eight caribou were killed and on the 27th two musk ox were captured, after which the party turned back to rejoin the detachment left behind and await the advent of winter. Retracing their steps they killed enough caribou for immediate use on Oct. 3 and 8.

On Oct. 9 they killed twelve caribou and found their friends, already rejoicing in an abundance of meat, where they had left them at a point about half way between Fond du Lac and the northern terminus of the hunt.

This dry recital of a list of victims shows the amount of killing done under favorable circumstances, when there was no wanton destruction and when much of the meat killed was cached for future use.

It must not be understood that Mr. Pike approved of useless slaughter. He speaks with proper disgust of such unworthy deeds. But the principles on which his expedition was conducted—namely, to carry nothing and kill the requisite food—necessitated alterations of starvation and waste, while the careless nature of his companions made restraint difficult. Later on Mr. Pike fell in with a camp of Yellow Knife Indians, who had waited at a river crossing and speared a herd of over 300 caribou in the water, more than 200 of which were left to rot where they floated, without being even dragged ashore. When such things are possible the extinction of game is, at least, not improbable.

Mr. Pike remained in camp with the half-breeds for a month, until dog sledges were brought up for a winter expedition, which was really the better way of reaching the musk ox.

It was on Oct. 20, while thus waiting in camp, that the main herd of banded caribou, called by the half-breeds *la foule*, began to pass and continued streaming by southward for about six days. "All the south side of Mackay Lake," says Mr. Pike, "was alive with moving beasts, while the ice seemed to be dotted all over with black islands, and still away on the north shore, with the aid of the glasses we could see them coming like regiments on the march."

Mr. Pike's account of the habits of these animals given on page 45 is so complete that it should be quoted entire.

"The range of the barren ground caribou appears to be from the islands in the Arctic Sea to the southern part of Hudson's Bay, while the McKenzie River is the limit of their western wandering, although not many years ago they are known to have crossed the Slave River in the neighborhood of Fort Smith. In the summer time they keep to the true barren ground, but in the autumn, when their feeding grounds are covered with snow, they seek the hanging moss in the woods. From what I could gather from the Yellow Knife Indians at the east end of the Great Slave Lake, and from my own personal experience, it was late in October, immediately after the rutting season, that the great bands of caribou, commonly known as *la foule*, mass up on the edge of the woods, and start for food and shelter afforded by the stronger growth of pines further southward. A month afterward the males and females separate, the latter beginning to work their way north again as early as the end of February; they reach the edge of the woods in April, and drop their young far out toward the sea coast in June, by which time the snow is melting rapidly and the ground shows in patches. The males stay in the woods till May and never reach the coast, but meet the females on their way inland at the end of July, and from this time they stay together till the rutting season is over and it is time to seek the woods once more."

Add to these details the fact that the female caribou has horns which are annually shed like those of the male, and we have a clear idea of this interesting animal. Mr. Pike thinks that these caribou are not diminishing in numbers, but his pages give ample reason to distrust his conclusions.

It is true that few white men invade the barren ground, but the weapons of the white man, the repeating Winchester, are playing on the herds at all seasons, without regard to the necessities of the hunter; while the old-fashioned wasteful slaughter of swimming game, which has been spoken of, keeps on in full vigor; so that the future of the barren ground caribou may well be compared to that of deer in the Adirondacks. The caribou are vastly more numerous and their country more difficult of access, but the beasts are more stupid and their enemies quite as blindly determined on extermination as those of more southern *Cervide*.

Mr. Pike makes an interesting comparison between the numbers of existing caribou and those of buffalo in early times; and from the truly extraordinary extent of *la foule* as he saw it, he is inclined to think that the buffalo were not more numerous. It seems to me that Mr. Pike leaves out of account the fact that the buffalo herds never contained practically the whole race, as does *la foule*, but that, in the vast extent of territory ranged over by the buffalo until after the transcontinental railroads were built, there were several bands, any one of which could be regarded as the "main herd" of its great but distinct region. It is not now supposed that the bison emigrated annually from Manitoba to Mexico; but that perhaps the Texan bands ranged as far as the Canadian River. The herds that fed the Pawnees might have traveled hundreds

of miles north and south of the Platte, while the northern masses would cross the Missouri and return to the Belly River and the Saskatchewan.

Although many of the "tall stories" told about the swarming crowds of buffalo may be justly discredited, there is a mass of reliable evidence as to their immense range which seems to put the army of the caribou into a decided minority.

On Nov. 11, 1889, Mr. Pike started with six sleighs, twenty-four dogs and seven men to look for musk ox. The dog sledges were for the transportation of baggage. The men walked, and here, as throughout their journeys, marches were short and progress very slow.

The dogs and their ways are full of interest. There seems to be no pretense of affection or attachment between the dogs and their masters. The dogs are beaten until they pull the loads. After the camp is made, the dogs are beaten to keep them out of the kettle. The dogs, therefore, occupy their leisure by quarreling among themselves until after they get their supper. When the men go to bed the dogs break into the lodge and curl up on top of the nearest sleeper. If an attempt be made to shove or kick the dog off he promptly mistakes the man's foot for a hostile dog and chews it. When not chewing his masters or his companions the dog chews the snowshoes, sledges, gloves, deerskin lodges and other furniture. The dogs have to be watched.

Shortly after starting, the party saw an animal in the fog which was thought to be either a musk ox, a caribou or a wolf. It turned out to be a mouse, magnified by the haze.

At first the party ate the meat from the caches. Soon, however, they killed more caribou, and got to the end of all provisions before finding musk ox. The next day after their supplies gave out, however, two herds of musk ox were sighted. The dogs were let loose and held a portion of the first herd while the men killed them, some twenty in number, "without any more trouble than killing cattle in a yard."

A couple of days after 18 musk ox were killed out of the second band in a similar artistic way, and the party then turned back with their loads, reaching Fond du Lac on Dec. 10, and arriving at Fort Resolution shortly after.

Mr. Pike says of the musk ox he killed on his canoe trip: "In crossing an occasional piece of level ground he walked with a curious rolling motion, probably accounted for by the waving of the long hair on the flanks."

The young males have round, sharp horns, separated on each side of the head, like a young bull's. As the males grow older, the bases of the horns swell and grow until they meet in the middle of the head. In the summer the herds consist only of cows and calves, while the bulls are found wandering singly.

Mr. Pike stayed at Fort Resolution, hunting in the neighborhood, until May 21, 1890, when he set out for a trip down the Great Fish River, which he descended in a canoe as far down as Lake Beechey. There is nothing in this trip except the geography which calls for remark. Caribou and musk ox, half-breeds and Indians have already been well portrayed, and Mr. Pike met no Esquimaux except a boy that he took with him.

In closing this division of Mr. Pike's travels, it is needful for a full understanding of his troubles to consider the anomalous relations he had with his men. Mr. Pike is certainly not a born leader. He seems to have kept on terms of a rough comradeship with his companions, enlivened by perpetual quarrels. He says that the half-breeds were respectful in address but treacherous, and that the Indians were submissive but beggars. As side lights to these general statements it appears that when he held a consultation with the half-breeds about a musk ox hunt "the same old wrangle and abuse of each other ensued." On one occasion he states that he opposed a scheme strongly and "for once managed to get his own way," and as a crowning comment I cite the passage on page 145: "By the way, it is as well when going for a hunting expedition in the North to leave at home all the old fashioned notions of shooting etiquette. If you see a man in a good position for a shot, run up, jostle his elbow, and let your gun off; if an animal falls, swear you killed it, and claim the back-fat and tongue, no matter whether you fired or not; never admit that you are not quite sure which animal you shot at. It is only by a strict attention to these rules that a white man can get a fair division of plunder when shooting with half-breeds and Indians."

It is hardly necessary to call attention to the impropriety of these remarks. If you have engaged men to help you hunt, the men should be controlled, for the shot is yours. Either make them leave their guns, or, if you can trust them to carry guns, tell them not to shoot until you have had your chance. If this method fails it might be well to select a large, convenient stick and reason over the matter. If the men are merely companions and not subordinates, above all if you supply the ammunition for them, as Mr. Pike did, they have as much right to shoot as you, and it is at least indelicate under those circumstances to jostle the shooter or trifle with the truth for a piece of back-fat. I can only think that the passage quoted is meant to be humorous.

In one way Mr. Pike's relation of semi-equality with his men is of benefit to us. Perhaps in no other manner could we have got an account of such evident truth, such transparent fidelity, about the lives and natures of the dwellers in the barren ground. Every page has the stamp and color of the great wilderness, and we turn from the book with a sense of refreshment begot from studying a vast new region and a strange life.

Returning from the Great Fish River to Resolution at the end of August, 1890, Mr. Pike set out to ascend the Peace River to Fort McLeod.

The plan was unusual and adventurous, to go by canoe up the Peace River to Fort McLeod on a lake of the same name high in the mountains, and from there to go south by snowshoe and wagon until the Canadian Pacific Railroad should give access to the civilized world. As far as Vermillion, on the Peace River, progress was slow, but not difficult.

At this point it was necessary to engage a new crew with the exception of the faithful Murdo Mackay, who followed Mr. Pike's fortunes from Fort Resolution.

One additional man, an Englishman called John by Mr. Pike, was the only reinforcement taken on at this point, and John seems to have been of no advantage; lazy, selfish, cowardly and insubordinate, he stands out a solemn warning against engaging men rashly.

From Vermillion up the river to St. John's and Hudson's Hope, touching at various posts and settlements, Mr.

* BARREN GROUNDS OF NORTHERN CANADA. By Warburton Pike. London and New York: Macmillan & Co. Price \$2.

Pike passed in about a month, although the distance on the map does not seem to exceed 300 miles.

Here Twelvefoot Davis, a man famous in the mining annals of British Columbia, was encountered, and from Davis's party Mr. Pike secured an Indian and a half-breed to complete his crew.

It was now Nov. 5 and only two hundred miles lay between Hudson's Hope and Fort McLeod. Unfortunately the party hesitated about taking advantage of the open water which still continued, and after waiting three weeks for winter to set in, finally started in a canoe.

After six days of canoe work, rendered perilous by the floating ice, the stream froze solid at the junction of the Findlay and Parsnip rivers, which unite to form the Peace River. The rest of the journey must be on foot, but not until three days had gone by was a start made to put an end to a situation that was fast becoming critical.

The march was slow and difficult. Four miles were made the first day and rather more on the three days following, for, though the men carried little, the country was densely forested and the ice on the river very rough. On the morning of the fifth day all provisions had been consumed and kettles and blankets were left behind to be picked up later by dog sleighs from McLeod, while the men pressed on light to reach their destination as soon as possible.

The party tried a cross cut over the hills, and after camping without food or blankets in the woods, were able to get a view of the valley of the Parsnip the next day and of a tributary stream which, the guides said, was McLeod's River. Two of the men had been sent on ahead to seek the foot the day before, but it was the day after when a thin column of smoke led the remainder of the party to an old cabin where the scouts were found crouched over a smouldering fire and confessing that they were lost.

This fact was speedily proved and seems to have thoroughly demoralized the faculties of the guides.

The retreat began down the stream, and at the junction of this river with the Parsnip was found a high yellow cut bank, which none of the party recognized, although two of them had passed it in their down trip but a few weeks before. This certainly was not excusable. It is true that a well-known country takes on a strange and foreign appearance after a heavy snowfall, so that familiar sites are passed unnoticed even by old woodsmen. It is also true that this cut bank may have been passed by the Indians in their canoes at nightfall or in the mists of the morning, but that all the party, after weeks of preparing and investigation, should have been ignorant of the existence of an important tributary of the Parsnip, which turned out to be the Nation River, a well-known stream, is highly remarkable.

The dreadful experiences of the rest of the retreat until Barrow's cabin was reached are told with a directness and simplicity that stamp the tale on the memory. For twenty days the party subsisted on thirty pounds of flour, of which five pounds were stolen by the Indians, one grouse, a piece of moose skin and a field mouse, and this in the dead of winter, unsheltered and poorly clad in the forests of Northern Canada.

At last on the 27th of December, 1890, they staggered into their friends' cabin gaunt skeletons, speechless from starvation, partially blind and deaf, with the skin of their hands and feet cracked and their eyes wild.

That they survived these awful trials at all is due to one man, their leader. On this occasion Mr. Pike showed the rarest qualities. Endurance that would shame an Indian, dogged courage and wonderful self-restraint.

His worthless half-breed guide stole the flour he was intrusted with from his starving companions, and Mr. Pike correctly reasoned that he must kill the culprit or overlook the theft. He gave the thief his share of the failing rations. The lazy and selfish John lagged behind always for others to break the way and do the camp work. When John fell exhausted Mr. Pike halted the party. The half-breed refused to obey. Then at last Mr. Pike took up his gun and enforced obedience and John was rescued.

The salvation of this party of unbalanced and bickering men from the horrors of that wilderness of famine is a feat which, perhaps, the stoical heroism of the grim Saxon could alone accomplish.

H. G. DULOG.

PENNSYLVANIA GAME LEGISLATION.

MARSH, Chester County, Pa., Jan. 15.—*Editor Forest and Stream:* In your last issue I notice a good deal of interest is displayed by your correspondents in regard to legislation in the different States.

Your editorials upon the subject, although short, are right to the point, and they seem to bring out the most prominent defects in game laws generally. In one place you mentioned that Tennessee has demanded a "State law without county exceptions." Tennessee is a sensible State, and why should not our State and others do likewise?

Although not a member of the Pennsylvania State Sportsmen's Association, still I was glad to see Mr. Brelsford's views and ideas so ably expressed, and I hope, as all our sportsmen do, that the Legislature now in session will give the Association at least as much power to protect and propagate game, as has been given heretofore to the Fish Commission.

Pennsylvania has had pretty much the same laws for game in all her counties, but if as suggested by the many bills before the House, we were to have a law for every county, we would be as grandly mixed up as are the sportsmen of some of our neighboring States.

In this county (Chester) we have a bill out, which proposes closing the quail season for three years, and making it lawful to shoot rabbits in December only of each year, but that is all. The pheasant is to be banded at as usual for three months and the woodcock for six, while our squirrel may jump from limb to limb and take his chances for one third of a year.

Your Pittsburgh correspondent "M." proposes the best law that I have seen, and only by making universal laws, opening and closing them on the same days, can anything nearing to protection be accomplished.

A good State law for small game, to my mind would be, close season on woodcock Dec. 15 to Sept. 1, squirrels Oct. 1 to Sept. 1, pheasants, quail, rabbits, Dec. 15 to Nov. 1.

OCTAVIUS BULL.

Maine Winter Wildfowl.

PORTLAND, Me.—The severe winter has filled our bay with solid ice, and the little clear water is alive with eiders, coot, old squaw, black duck and whistlers. Snowy owls have been scarce so far.

C. D. S.

BIG GAME IN NEW BRUNSWICK.

AN instance of what a deer can do when wounded is furnished by the experience of Edgar Tower, of Rockport, on the 9th. When the buck was routed Edgar raked him fore and aft (or aft and fore) with his .44 Winchester. The bullet entered the left side of the rump, ranged forward through the upper abdomen, shattered two ribs and came out behind the right shoulder. Edgar used to see the flap of his tail going over the ridges now and then, but he traveled six miles before he got a bead on him again. Even then the buck had vim enough to mop the ground with Edgar before he gave in. Mr. Tower's wardrobe resembled that of a Highland chief at the close of the show.

How far does a deer jump when going at full speed? Billy Cott, of Kingsclear, fired at a doe near Tower's Lake with a smooth-bore. Three days later the Prowler crossed the trail and measured some of the jumps. The ground was covered with boulders and dead-falls, and it was a miracle that the animal hadn't broken its neck. Throwing away inches, here are six successive leaps: 13 ft., 15 ft., 14 ft., 17 ft., 18 ft., 15 ft. A short distance further on the trail struck the bank of the Gornish. The doe was evidently afraid of the glare ice and cleared the stream at a bound that measured 21 ft. Billy's jumps were not recorded. At last accounts he had stopped to "bile the kittle" somewhere south of Labrador.

W. H. Dykeman, a Jemseg blacksmith, claims to have had a close call from wolves last week. While in the woods near the Oromocto stream (so Dykeman says) he came on a couple of the brutes, and they sprang at him at once. The biggest one narrowly missed his throat (so Dykeman says), Dykeman had a revolver and sheath knife, and only after strenuous exertions (so Dykeman says) did he succeed in beating them off.

Just over the Cumberland line, in Nova Scotia, five moose were shot in the Shulee woods last week. Three were killed by Phillips, the hunter, and the other two by B. B. Barnhill and his son, a youth of thirteen years. Two of the carcasses came to friends in Saint John.

John Morrill, of Darling's Island, is very proud of some big shooting he did last Thursday. He and his boy started four deer and the lad shot one. Two hours later they sighted two more on the opposite side of a barren, fully 200 yds. away. It was impossible to work any closer owing to the open ground, so Mr. Morrill, who is an expert marksman, adjusted his sights carefully and was lucky enough to kill both of the animals in two successive shots.

The close season for moose, deer and caribou in this Province began with Jan. 15. In Nova Scotia moose can be killed until Feb. 1.

FREDERICTON, N. B., Jan. 20. PROWLER.

NATIONAL PARK NEWS.

WE are permitted to make some extracts from a private letter recently received by a gentleman of this city from Capt. George S. Anderson, 6th Cavalry, the Superintendent of the Yellowstone National Park. The account which he gives of the game seen during his short ride is most interesting and shows how valuable from one point of view our National Park is.

Captain Anderson is quoted in the Montana papers as estimating the number of elk now in the Park as not far from 40,000. Of course this is an estimate only, but it is an estimate by one who is carefully watching the Park and constantly informing himself as to its condition. Captain Anderson writes under date of Jan. 6:

"I made a little trip yesterday, an account of which may be of interest to you. I left here at 9:30 and rode around Mt. Everts via East Fork of Gardiner, the "Turkey Pen," and over the bluffs east of the main Gardiner, and got back at 3:30. Found about two feet of snow on top of the mountain pretty heavily crusted. Saw 17 elk, most of them at less than 300 yds., and but one of them showed the least alarm. Two lying down at less than 300 yds. did not arise. I saw a mule deer and fawn lying down at 75 yds. and they did not rise; four others watched me at 250 yds. without running off. Saw 13 mountain sheep, about a mile and a half from here; they were alert and watched me from a bluff 400 or 500 yds. away. Saw great numbers of antelope, surely 300 (probably 400 or 500) and got within 50 to 75 yds. of many of them. Pretty good for a short ride, isn't it?"

A Protest.

For the people of eastern Montana and America and for the welfare of our country in the preservation of the National Park from segregation for railroads or other purposes, I protest for the people. When the boundaries of our National Park were located and surveyed, and the Park set apart as a public pleasure ground by a generous Government for the use, benefit and amusement of those who wished to avail themselves of the sights amid nature's majestic wonders, why was not the Park so made and constructed by Congress that no act hereafter could disintegrate it; made to stand while our republic lasted; made as sound and solid as the constitution of the United States? If the papers tell aright there are soon to be men with money sent to Washington to get Congress to set aside a part of what now forms the National Park. For what purpose? They say a railroad to Cooke City, but if a railroad can be built from Stillwater to Cooke City for one-third of what it will cost from Gardiner to the same point, there must be another scheme afoot, for no railroad company would invest the enormous amount of money necessary to build a railroad from Gardiner to Cooke unless there were stronger inducements than the Cooke City mines.

The part of our National Park that is wanted by these few capitalists would make a colossal sheep, cattle and horse range, and shares would come high. Perhaps there is good coking coal or some rich mineral that is the aim of this most interested company to cut into our Park, we wot not of. A route from Stillwater, the Gate City, would not go into the Park in going to Cooke City, but through a level country most at the way; and besides, opening up two other mining camps in this route, Nye City and the Boulder mines, and splendid coal mines en route. It is not best for our country that a few men of means, to further their aims and schemes for personal profit, that will be a detriment to the people at large, should be allowed to succeed. The game, buffalo, elk, deer and antelope, that roam over the hills and valleys in security and that have been protected by the Government at a great cost, will be exterminated in a few weeks and their hides staked out drying in the sun, if this segregation scheme is successful. It will cause other railroads and other schemes to be planned and carried through, until a network of railroads will have blotted from existence what was once a sight seen never to be obliterated from the memory. It wants a President at the head of our Government like Andrew Jackson to veto all such proceedings and talk loud enough for the people to hear him, that the National Park must and shall be kept inviolate.—*A Son of Montana in Stillwater (Mont.) Bulletin.*

Dr. W. A. Allen, of Allendale, Montana, writes us with regard to Cooke City and the surrounding country and strongly advocating the preservation of the forests in and near the Park. He is familiar with the region, and for the past ten years has been making professional visits to Cooke City. He strongly advocates the building of a railroad up Clark's Fork, saying that from the Northern Pacific a railroad could be built up to Cooke City, via Clark's Fork, the only practicable route to-day for a road.

This would save fifty miles travel for all eastern passengers, would give a road on the east and south side of the mountains, free from snow slides and heavy snowfalls.

"I want to ask some one who has traveled up Gardiner River or who has been to the Mammoth Hot Springs, or up the East Fork of Yellowstone, how they can get a line of road up that river, where fall after fall and rapid after rapid comes tumbling down like a cloud-burst, and where the mountains extend into the river. A trestle would have to be built over the river, and a cable to draw the trains up and down. The over-zealous capitalists are trying to force seven miles off the side of the National Park, not for Cooke City, but to get at the timber, game and perhaps coal there. They want the almighty dollar. But it does not stop there, they want to take in the head of Clark's Fork so as to completely shut out any other road from the only practical route into the Park; a double header if you please. I have seen sworn statements in regard to the practicability of the route up the Gardiner and to the effect that no game inhabited the Soda Butte valley. Persons who can take such oaths must think themselves the only ones who have ever been over this country. In conclusion let me say that all true sportsmen in this country have a warm feeling for the FOREST AND STREAM, the champion of the National Park. Should this national resort be thrown open to speculators the game would soon be a thing of the past."

COLD WEATHER NOTES.

OAKDALE, N. Y., Jan. 17.—*Editor Forest and Stream:* This morning while on my way to a spring hole in anticipation of bagging a duck, I found the quail which I send you. He was frozen to death, the thermometer two hours before having stood at two degrees below zero. You will see at a glance that this is not one of our big, strong Long Island beauties, probably a North Carolina bird that has been laid down here with others by the members of the South Side Sportsmen's Club.

I do not think that quail will freeze to death if they can get enough to eat. I should judge by feeling of this bird that there is not anything in his crop.

It is singular that a quail will die of cold and starvation while large flocks of the happy little snowbirds will derive their subsistence from the seeds of weeds that stand out above the covering of snow. When the snow is soft and fresh one can plainly see where the little fellows have held high carnival, and danced "all hands around" while picking the seeds from these straggling bunches of weeds on the fields and meadows, where the quail have the same chance. If this snow and severe cold last a little longer I am afraid there will be some dull days next November and December.

On reaching the pond hole I bagged a very fine specimen of duck called tweezer, or ocean sheldrake. They are very scarce here and I have seen only three in my shooting experience of twenty-seven years.

ALFRED A. FRASER.

[As our correspondent remarks, the quail sent is a Southern—perhaps South Carolina—bird, and it evidently perished of starvation and cold, for it is very thin. We have always believed that quail and most other birds could endure almost any degree of cold without injury, provided they had enough to eat; in other words, that if they could keep up the internal fires they cared little for the cold. Great loss often occurs among transplanted Southern quail, if their first winter at the North is a severe one; but if this first winter is mild, they can face the second without great danger, having become acclimated, and, what is perhaps more important, accustomed to the food of the North, where to look for it and how to obtain it. The duck referred to by Mr. Fraser is perhaps the red-breasted merganser (*Mergus serrator*), which is called tweezer on the south shore of Long Island. Its other common names are given in Mr. Trumbull's admirable "Names and Portraits of Birds Interesting to Gunners." The name ocean sheldrake, however, is new to us. It is somewhat surprising to learn that this species occurs but seldom on the south shore. On the mainland north of Long Island Sound it is the commonest of the three mergansers, and we have often seen fifteen or twenty of the birds fishing on a single air hole.]

A Game Protector for Oregon.

THE Multnomah, Willamette and Citizens' Rod and Gun Clubs have approved a bill drawn up by S. H. Greene and will take steps to secure its passage by the legislature. The bill provides for the election biennially by the legislature of a game and fish protector, whose term of office shall continue until his successor is chosen and qualified. He shall devote his entire time to the duties of his office and shall receive a salary of \$1500 a year and be allowed \$500 for traveling expenses. His duty shall be to enforce the laws of the State, and the provisions supplementary thereto made by any board of county commissioners or other proper authority for the protection of game, fish and song birds. For this purpose he shall visit suspected places and gather information relative to infractions of the law; and shall have authority to direct the commencement of actions for the violations of the law where sufficient evidence exists to justify such prosecution. These actions shall be begun by the district attorney in whose county the offense occurs, but if he be too busy the fish and game protector may engage other counsel who shall be paid out of the penalties and applicable costs recovered in such case; where there is a failure to recover or a deficiency of such funds for payment, then by the county in which the suit was begun. It shall be the duty of every sheriff, deputy sheriff and constable in the State to enforce the laws and they shall be under the direction of the fish and game protector. All moneys recovered shall be paid to the treasurer of the county in which the suit was commenced; one-half over and above the amount necessary to reimburse the county for outlays shall be paid into the State treasury, and the remaining one-half to the informer. Any officer may arrest without warrant anyone caught violating the law. The game protector shall make an annual report of his operations to the governor.—*Portland Oregonian, Jan. 14.*

Georgia Woodcock.

SAVANNAH, Ga., Jan. 16.—Sportsmen here say they have never seen the time when there were so many woodcock as there are now in and around Savannah. Hear of bags of fifteen, twenty-five and forty in an afternoon's shoot, one gentleman having eighty-one to his credit in the last couple of days.

JERSEY.

CHICAGO AND THE WEST.

(From a Staff Correspondent.)

The Weather.

The severely cold weather has been something of an impediment to activity in out-door sports. It has been coquetting with the zero point of late, sometimes nimbly plunging down 15 or 20 degrees below zero just to show what it could do when so inclined. Yet the Chicago weather was bad in appearance only. As compared with the weather of other places, it was quite healthful and pleasant. Nevertheless, it was not a bad time to hie southward to a more genial clime, and some of the shooters hied accordingly.

Mr. E. Hough, whose interesting and instructive writings appear each week in *FOREST AND STREAM*, left Chicago last Tuesday night for the Texan coast and prairies. He had a most destructive collection of outfit—a whole lot of cartridges, two guns and a mass of other paraphernalia. I would not be surprised if he killed some ducks and quail. Such was his declared intention.

The Last of the Buffaloes.

"Buffalo" Jones, of Kansas, made a pleasant call on us on Monday. He is making arrangements here for the publication of his book on buffaloes, and wild-west life.

It occurred to me that it was exceedingly strange that the same soubriquet has been produced by different causes. "Buffalo" Bill acquired his by killing large numbers of buffaloes; "Buffalo" Jones won his by his skill and success in catching a herd of buffaloes, and "Buffalo" Tom, I have been told, acquired his by constantly wearing a buffalo overcoat. Thus the same effect was produced by catching, killing and wearing the buffalo. The buffalo may be dead, but his fame and name live on. Mr. Jones is an energetic man of brains and would make a success in any calling.

Mr. Charles Willard, the popular representative of the Colt Patent Fire Arms Co., left on Wednesday for an extensive business tour through the Southwest.

The Destruction of Birds.

From reports so far received, the cold weather has proved most destructive to quail north of the Mississippi River. Its effects will be felt more directly next fall, when the shooter is afield with dog and gun, when few birds are found and the game bag at the end of the day is light.

Farmers would be doing a good deed by placing food in such places on their farms as would be found by the weak and starving birds.

Mr. J. E. Fisher, the well-known breeder and trainer of Riverside, Ind., writes me, concerning the destruction of birds, as follows: "The quail hunting will be very poor this year in this vicinity, on account of the continued heavy snow. The snow has been on the ground ten inches deep for thirty days, and the thermometer has repeatedly registered 15° below zero. Many quail have been starved to death, and in many cases whole coveys have been frozen. The pot-hunter, game hog, foxes and hawks have a harvest. The game hog does not now have to waste ammunition to get a bag—the frozen quail will sell anywhere. The quail which are still alive are so weak that they can hardly escape from the foxes, and they are an easy prey for the hawks. I am feeding what coveys I can find. I have driven several coveys to a patch of cane where they will find food and shelter. The boys will have to hustle to find quail enough in Indiana to train on this year." His letter was dated Jan. 17.

Such destruction is sad to contemplate.

From another section of Indiana, under date of Jan. 19, a correspondent writes: "We are having 22° below zero and over twelve inches of snow. Quail are being fed by farmers. Many have frozen, whole coveys being found dead."

A correspondent writes from Tennessee under date of 19th inst., as follows: "Just had a snow storm extending from Cairo to central Mississippi. Snow fell to the depth of a foot and over at New Albany, Miss."

The latter is not encouraging for the forthcoming field trials next month. It is to be earnestly hoped that the storm was not severe enough there to destroy the quail.

B. WATERS.

CHICAGO, Ill., Jan. 17.—Mr. C. J. Jones, alias "Buffalo Jones," now of Omaha, tells me that his herd will be represented at the Fair next summer, but whether or not in connection with that of Buffalo Bill he is not at present prepared to say. Mr. Jones saw the big bull lately mounted by the Wolf & Periot Fur Co., and says he does not know where the animal came from. The firm told him they got it from Indiana, where a single specimen had for some time been kept. This, in connection with the two other accounts given by the firm in regard to this same animal, may be considered a very likely story. Mr. Jones knows of no buffalo at Cheyenne, except one owned a few years ago by a Mr. Warren, of which he has had no word for a couple of years.

Mr. Ponce de Leon Mussey, with his friends Hamline, Dicks and Reed, has returned from southern Indiana, fresh from discovering the fountain of eternal youth, which is located at West Baden, Ind. There are wild turkeys in that neighborhood in very fair quantities, if the success of the local hunters may be held as any criterion.

Mr. C. E. Irwin, of Warsaw, Ind., spent a day or so in town this past week, much of the time with Mr. M. E. Moran, who owns a half interest in the Kosciusko Kennels at Warsaw. Mr. Irwin says the snow has not yet hurt the quail around Warsaw, so far as known, though the weather is unusually severe.

Mr. T. G. Davey, of London, Ont., announces an early onslaught on Chicago, by himself, with a pointer dog under each arm.

Mr. Geo. W. La Rue, late of New York, and of the Pointer Club, has removed to Chicago, and will be here probably for a year or more at least.

I am pleased to state that Mr. R. B. Organ has had a pup given to him, which he will give to Mr. J. P. O'Brien as legal tender for the setter Mollie O'Brien, of lamented memory. Mr. Organ says this is no shepherd dog, either.

In a late article I chanced to say that I was threatened with buying a dog of my own. It is astonishing how many letters I have had since then, offering me just the dog I want. The last one comes from a trainer who has a dog which certainly is a first cousin to Olympian Jove. He only wants \$100, and considerably offers to take payments of \$10 a week, he meantime training the dog \$10 worth a week, or as the intellect of the dog will progres-

sively stand it. I am sorry I can't buy this installment dog, because I know I should love him more as he became more and more my own. Unfortunately, however, or may be fortunately, I have had a dog given to me. Later on, I may tell about this dog, which, undoubtedly, without any fooling, is the best dog that ever graced the earth with its presence. I haven't seen it yet, but I am satisfied it is the best dog ever was, barring all these other dogs, installment and otherwise.

The latest Kansas enterprise is a kangaroo ranch. At least an Australian gentleman by name of Adams, has confided to a Montreal, Can., newspaper man his intention of investigating southwestern Kansas as a field for kangaroo culture. Let the Australian kangaroo beware of the Kansas grasshopper, which is something of a hopper itself.

The thermometer has been below zero here a whole week, and field sports are mostly reminiscent or prophetic in their nature. This is the severest winter known here for years.

E. HOUGH.

175 MONROE STREET, Chicago.

SOME NEW BRUNSWICK TRAPS.—IV.

Sable Trap (Fig. 4), Tobique River, N. B.

DEADFALLS for sable exist in endless variety of detail, built on logs or low stumps for early fall trapping, and upon stumps 7 ft. high, cut for the purpose, in the spring when the snow is deeper. Indeed, trap after trap may be seen on some old "lines" that are set upon stumps which (when the ground is bare) stand a foot higher than a tall man's head, and as the traps are built low the depth of the snow there can be imagined.

Slabs of wood from 8 in. to 1 ft. high, sharpened like wedges, are driven into the flat top of a smooth-cut stump. It is either cut V-shaped, or like the three sides of a square. In front of the opening a post stands. By a clever way of chopping the post can be left standing as a part of the stump whenever a tree must be felled. If the post cannot be left as shown in the illustration, a sharpened stake must be driven in separate. In the trap shown in the illustration, space enough must be left between the post and the "house" for a short, somewhat three-cornered, stick about an inch thick, to be laid between them for a "bed piece." The "fall," which may vary from 8 to 15 ft. in length and from 3 to 5 in. thick, was about the average size. The big end of the "fall" was hewed to the same thickness (or less) as the "bed piece" upon which it rests. The other end was also somewhat thinned to fit into the forked tump of a sapling that grew conveniently near and served to keep the pole level. Fir boughs serve as a roof to the "house" (or a few chips may be laid upon it). The "standard" is only 3 in. long and the "bait stick" is 8 in. long. Otherwise the triggers are like those of the fisher trap, and set in the same way. A piece of trout is regarded as the best bait, though smoked herring, fresh squirrel meat or a partridge's head will be taken.

TAPPAN, ADNEY.

BOSTON AND MAINE.

Ducks at Ragged Island.

BOSTON, Jan. 24.—The stories of good shooting enjoyed by Boston sportsmen the past season are not yet all told. A week or two ago the *FOREST AND STREAM* had an account of the departure of Mr. Walter L. Hill for the home of the Ragged Island Club, in Curricket Sound, for a try at the ducks. Mr. Hill is engaged with the firm of John P. Squire & Co., of Boston, the millionaire pork packers. He is a great worker, but delights in a shooting or a fishing trip as often as business permits, though this may not be oftener than once or twice a year. He went this time by invitation of Mr. C. A. Woodward, the president of the Ragged Island Club. It is worthy of mention that not many individuals can enjoy the shooting at this most favored spot, and only by invitation of some member of the club, and then under restrictions such as the club sees fit to impose. The membership is small and the preserve exclusive, though one of the best in the country. President Harrison is an honorary member of the club and so is President Cleveland. President Harrison has been to the club house on a shoot the past year and President Cleveland is expected when the weather permits. But at present the Sound is worse embargoed with ice than in the recollection of the oldest inhabitant. Mr. Hill's trip was, fortunately, before the coldest of the weather, though he had a very cold time of it. He went from Boston to Norfolk and thence to Virginia Beach. At that point a mule team was taken and twenty miles down the beach in the cold wind was made. Once at the club house, everything in the world was done for the comfort of the guest. Mr. Hill arrived on Monday, in season to shoot on that day and the next. The rules of the club are very strict. No shooting is allowed on Sunday. Monday and Tuesday are shooting days, but Wednesday and Thursday are not. Shooting is again allowed on Friday and Saturday. The object is to give the birds a chance, and it is believed that after all fully as many birds are taken, and that too with much more ease and satisfaction. They are given a chance to rest in the bay and around the islands, and are not being frightened away every day in the week.

Mr. Hill was charmed with the shooting. He says that it was better than he had ever dreamed. The shooting is done from blinds almost altogether, and the sport is rare. He brought home a barrelful of ducks. Among the rest were twenty canvasbacks. These he distributed among his friends in the packing business, and they are all telling how they feasted. He shot redheads, two or three varieties of teal, butterballs, mallards, widgeon and black ducks. With the shooters at Ragged Island Club the black is not popular.

One day Mr. Hill, tired of sitting in the cold blind,

thought he would take a turn out around a little point of land and back, to try and get warm. He left his companion, Mr. Woodward, in the blind. He had scarcely made the turn, when he saw a magnificent flock of canvasbacks settling down among the decoys. He dropped out of sight as much as possible, expecting to hear both barrels of Mr. Woodward's gun belch out. But he did not fire. Looking up carefully he saw that gentleman gesticulating to him wildly. At first thought it looked as though his companion, desirous that Mr. Hill should have all of the fun shooting canvasbacks, was trying to draw him forward to the blind in order that he might shoot. But Mr. Hill saw that it was impossible for him to reach the blind without alarming the birds, and he shouted to Mr. Woodward to shoot. His gun did not respond, but the gentleman shouted back for him to come. He made a rush for the blind as carefully as possible, alarming the ducks of course. There was Mr. Woodward in the state of the greatest excitement. One gun was fouled so that the exploded shells could not be drawn. The other gun he had in his hands with one shell partly in, and there it stuck. Mr. Woodward was lamenting the fate that had sent them a flock of 200 beautiful canvasbacks in excellent range and both guns "unhorsed" so that they were perfectly useless. But the Yankee boy—Mr. Hill—with his jackknife soon had the shells out and the guns in working order.

So pleased was Mr. Hill with his trip it seems almost a cruel dispensation of fate that it should have a sad ending. He was called home by telegraph at the end of the first week to attend the funeral of his father-in-law, the late John P. Squire, so well known as the great pork packer of Boston. Mr. Hill has a good scheme on foot now. Mr. Woodward, whose guest he was, and who did so much for his comfort, has never fished for trout in

FIG. 4.—SABLE TRAP.

Maine. Next season it is Mr. Hill's plan to take Mr. Woodward down to the Maine lakes and have him catch a big trout. So doth one kindness beget another.

Winnipissogee Pickerel.

A Wolfboro, N. H. dispatch to the daily papers on Saturday says that Mr. Rollin Jones's party of Boston, Haverhill and Plymouth sportsmen, mentioned in the *FOREST AND STREAM* last week, had a fair week's sport, considering the weather. They obtained pickerel and cusk from Winnipissogee in sufficient numbers for the table at least. But putting out lines with the mercury at zero and with the holes freezing as fast as they can be cut out, is not so much of a pastime as the books would make it. Still the party has got along without freezing or accident.

The Maine License Scheme.

The *FOREST AND STREAM* treated the possibility of a license system in Maine ably the week before last, and expressed the hope that an idea so repugnant to the sportsmen of a free country would not receive serious consideration at Augusta. Such is the hope of everybody interested in hunting and fishing, not residents of the Pine Tree State; but it seems that the measure has already made some progress. The Senate has actually ordered "that the committee on Fisheries and Game inquire into the expediency of providing a license system whereby residents of other States shall pay a reasonable fee or license for the privilege of hunting and fishing in the State, the proceeds to be used in paying the salaries of the Commissioners and in protecting fish and game." How about the foolish old woman who decided to kill the goose that laid her the golden egg?

SPECIAL.

Minnesota Game.

ST. PAUL, Minn., Jan. 9.—There is a strong probability that the game laws of the State will be changed by the incoming Legislature.

No doubt some of the provisions of the present law would be benefited by a radical change, but others would not.

It is rumored that the law concerning the hunting of rabbits is to be changed, so as to make it unlawful to hunt with hounds.

All sportsmen agree that the law protecting deer and fowl should be strictly enforced; but rabbits are likely to become a pest and hunting them is beneficial to the farmers, while at the same time it furnishes sport for hunters when other game is out of season.

C. L. S.

Florida Quail.

ENTERPRISE, Fla., Jan. 14.—I noticed in the issue of Jan. 13 a card from Walter F. Mickle regarding a record of quail shooting at Clermont, Lake Co., Fla., saying himself and friend shot 63 quail in one day, and would say, as a matter of record, that we can make a better showing. Mr. F. H. Cozzens went out at this place Jan. 6 and shot 65 quail—one gun, two dogs—and a few days previous Mr. Mixer of Boston and Mr. Cozzens together, shot 67 English snipe.

M. ROGERS.

CLERMONT, Fla.—On the 9th inst. John Hooks, John Abbenger, Gene Hunt and Mr. Arnold shot 78 quail over John Abbenger's pointer.

W. F. MICKLE.

NEW YORK STATE ASSOCIATION.

THE report of the proceedings of the winter convention of the New York State Association for the Protection of Fish and Game at Syracuse is concluded from last week. The entire report in circular form has been reprinted from these pages by the FOREST AND STREAM for the Association; and individuals, clubs and associations may obtain copies free of expense upon application to the secretary, Mr. John B. Sage, Buffalo. The purpose of supplying this reprint of the proceedings is to give local clubs an opportunity to make known in their respective communities the objects and character of the Association, and to awaken an interest in game and fish protection.

The delegates had been requested to bring to the convention reports on the following topics:

1. What active protective work has your club done?
2. What line of effort has been found most effective?
3. What has been your chief obstacle?
4. What is the attitude of your district attorney and other officials toward game law enforcement?
5. What can the Association do practically to help you in your efforts?

The discussion on these lines was full of interest, and demonstrated anew the usefulness of the Association as affording in its meetings opportunity for exchange of experience and suggestion.

The Adirondacks.

GEN. D. H. BRUCE—I think it must have been observed by you all that the changes which were wrought by the transformation incident to the convention, which was held about a year ago, has brought about a condition of affairs which gives every person in the State encouragement who desires to see better protection to fish, to forestry and to game. It is evident to all and to the public that unless some effective work shall be done in the direction of preserving these three important features sooner or later they must be destroyed. With all laws removed game and fish could exist but briefly. Without laws for the protection of the forest the Adirondack region would be speedily swept away. The people of the State, I believe, at least those people who are interested in the work, are looking to this Association to defend that majestic region. The interest which was exhibited by the attendance at the convention, the interest in the meeting of the executive committee, is seconded by the interest manifested here to-day. The proceedings of this convention are to be watched with great interest throughout the State.

Our special duty, as it seems to me, is to take such action as shall have force and influence upon the Legislature during its present session to the end that if we do not secure important amendments in our favor to the game laws then we shall be able to prevent such amendments as are to the detriment of the laws we desire to have advanced. We have a strong element in this State with which to contend. Already movements are being made at Albany to procure legislation of the most vicious kind. Bearing this in mind, as I said before, it seems to me it is more important to prevent bad legislation than to exercise ourselves too strongly in an effort to procure amendments to present laws.

This Association not only must let its power be felt in Albany, but it needs to extend its usefulness. It needs to adopt some plan by which a thorough organization can be effected in every county, and particularly it is necessary, it seems to me, to awaken an interest in those people whose financial interests are in the Adirondack region. It is to me, as doubtless it is to all of you, a matter of deep regret that so little interest is felt among the hotel men and the guides of the Adirondack. I have sometimes been so annoyed that I almost wished that protection were removed from the Adirondack region altogether. Recently, as a member of the Ways and Means Committee, I sent circulars to friends of mine in the Adirondacks—hotel keepers and others, asking for contributions to the Association, and yet I received no response whatever from most of them. One or two sent replies that were, to say the least, not satisfactory. They seem to take throughout the region little or no interest in the matter of preserving their game or fish or forest. One of them objected to the "city and country people." In reply I told him that if it were not for the city and country people the Adirondacks would very soon be bereft of game and fish. I speak of this in the hope that something may be done to reach these people, for the purpose of inducing them to organize and give us the effect of their influence in the effort that is being made to protect that vast region from spoliation.

I have little more to say, little of your time to take, further than to hope that in our deliberation to-day we shall keep the one object of our purposes in view, that of taking care of the present law and protecting it from assault from those who care nothing for protection beyond the feeling of their own pocketbooks. There is an element in the State of New York which would procure legislation which would permit them to buy and sell game at all times. A test law is soon to be introduced of that character.

The Henderson Harbor Fish Problem.

MR. TYLER, of Henderson, speaking for the Jefferson County Fishing Association—The subject of fish protection has occupied our attention for ten or twelve years. During the long years that we have worked to secure legislation, it has been terribly up-hill work. We have an organization in Watertown called the Jefferson County Fishing Association, of which Dr. E. H. Sizer is president. When that organization was formed we had a power that we could use. We have finally secured, in a measure, protection. By that protection we have had our fishes increased beyond calculation. It is simply wonderful how full the waters are to-day of bass where for years and years no man would attempt to cast for bass. Henderson Harbor, as Seth Green would say, is the great bass breeding ground in North America. We have had any quantity of litigation. Last March we won the last suit, and we have been successful in the courts above. The old law covered Henderson Harbor, but this new law does not; but it gives the effect of a mile limit. It is a close question where the mile limit fully breaks off. The last net pulled in Henderson was planted in the center. This was a large net, 35ft. square and 37ft. high, reaching to the bottom and 6 or 8ft. from the surface. Major Pond sent his men out and hauled that net after it had been in four or five days, even before leaders were fully shaped. It has cost our organization and individuals a great many

hundred dollars for the seizure of that net. They would get engineers to survey this territory and come before the courts and swear one way or another.

Then we had this difficulty to meet with—that they overdo in the matter of legislation. There is legislation in our waters that is unnecessary and unjust. We have farmers back twenty-five miles who say to their sons: "Well, let's hurry up and get our corn planted and go after suckers." They drive their wagons down to the lake, but they are not allowed to spear and it makes them mad all over the country, and it is almost utterly impossible to get a jury that will convict. I think that ought to be changed in justice to the people. It don't matter to me whether these fish are palatable or not. Get one of these men on the jury by accident and he is fatal to us every time. Nature provided those fish for those very people, and they ought to be allowed to get them. We have no use for them; they are a detriment to us. But we cannot tolerate netting, because when they net suckers they net other fish too.

We cannot get legislation just right—we never will, probably. I have been to Albany year after year—was down last year—and tried to shape legislation in this section. I kept up a correspondence with Gen. Sherman and tried to get the best legislation possible. We are gaining all the time. Henderson Bay is not mentioned in the game law. It should be for the reason that it is a close question where the net can be set in Henderson Bay and be a mile from either shore. It should be described as a body of water surrounded by the mainland and Six Horse Island. If that legislation had protected Henderson Bay we would have been a good many hundred dollars ahead.

There is a body of water between Borack Point, which is a point reaching across from Sackett's Harbor to Cape Vincent. Senator Mullin cut this out of the law because he had a couple of relatives down there who wanted to set their nets.

The river needs the bass bred on those grounds, and about Henderson Island, Stony Island and Little Gallou. All around these islands there are bass breeding grounds. In July you can come on those shores and see the bottom covered with bass. Our bass on Lake Ontario spawn in July. In Chamoux Bay is a point on which has been built a hotel by parties, a syndicate from New York and Watertown. They are going before the Legislature to ask to have the ground now open closed. Chamoux people and all the people living between Cape Vincent and Dexter have been fighting our organization for years. To-day the wealthiest and most influential men are for us in protection.

Then there is another injustice. I had been in correspondence and had had personal talks with Seth Green for twenty years back on this question. I know that this law that closed the season the first day of June for bass fishing is an injustice and unnecessary. The great, broad Lake Ontario to-day is full of bass in our section, and the farmers along Lake Ontario with their riparian rights reaching out into the water, are not allowed to row out and catch a mass of bass. Another trouble is that people who are used as jurors are denied the getting of a mess of fish until, as they put it, "the city people" want them. Seth Green's doctrine was that Ontario was the natural fishing place for the people of the whole State.

Forest Lake Club.

MR. G. HILLS (Hudson)—It gives me great pleasure to be present at this gathering of sportsmen from all parts of the State, and if we are here for protection let us be for that protection that protects, not only the game and fish, but the forest trees as well. You ask what has been done in the way of protection by the club that I represent. I reply to this, I can say, as a club nothing. Our club was not organized for this purpose, but its individual members are interested in the work. Through the efforts of some of its members we have had a game law passed by the Board of Supervisors at its last session which makes the closed season on partridges and woodcock from Dec. 1 to Sept. 1, on quail from Nov. 30 to Nov. 1, on rabbits and squirrels from Dec. 31 to Sept. 1, trout from Aug. 1 to May 1, and bass from Jan. 1 to June 30.

It has been said here by a gentleman that fishing for suckers should be allowed. With us sucker fishing means taking everything that comes into the net, and the brooks that furnish the most suckers in our county happen to be our best trout streams—at least, it is in the trout streams that they like to fish for suckers.

We have in Columbia county six men, that I know, and there may be others, who hunt for market and hunt all the time. There are three others living in an adjoining county who hunt in this county also, and who are shooting all the time and shipping to market. Now, with this new law just enacted by our supervisors prohibiting the shipping to market of game, I think we can do away with this. In 1891 I kept an account of partridge and woodcock killed in the county as best I could, and of the 3,500 killed, over three-fourths were sold, and you can well understand how a man can bring to market on the first day of September, 25 or 30 partridges, all killed on the first day.

Our district attorney is a young man, who, I think, will stand by us at all times, and will punish without fear of politics, if we will furnish the evidence.

As to what this association can do for us, I think they can do a great deal for all. First, by having it go forth that the annual convention of sportsmen mean protection. That a copy in brief or a number of copies of the proceedings of the meeting be sent to each club for distribution to work up the public generally in favor of better protection.

There is not a gentleman in the room at the present time who has forgotten how persistently the FOREST AND STREAM fought the summer shooting. At first they had but few sympathizers. The majority said, let us shoot in the summer and winter and at all times. All for the present but nothing for the future; but, thanks to them, they stuck at it, and aroused such a feeling against it that to-day I don't think you can find one man in twenty who would favor July or August shooting unless it is the man who wishes to furnish young partridges in July for hotel tables.

It has been said by legislators (and I must admit the truth of the statement) that sportsmen are generally selfish cranks. To a certain extent this may be so. We all ask too much for our own localities. Gentlemen, to make a success of this we must get together. There may be things that I wish, but if it is not for the general good of all I will not ask it. We shall have to give up some of our particular claims to make this a success.

I know there is a gentleman present who says, "So long as they shoot ducks and snipe on Long Island in the spring I must do it here." Gentlemen, we are not all living for the present. There is a hereafter, and unless we wake up and correct some of the evils that we have here, spring shooting among the rest, the time will soon come when there will be no ducks to shoot. One female duck shot in the spring means ten less to come back in the fall, and I am told that on the Hudson ducks were shot last spring that had eggs in them all ready to deposit. Just so with snipe. You would not think of shooting a robin or a thrush in the spring. Why a duck or snipe?

I feel that one of the things that I will be pleased to have said of this convention by my children's children would be, that "my grandfather or great-grandfather was a member of the State Association that planted the foundation for the laws that have given to us the shooting and fishing privileges that we now enjoy, and the grand old trees on Raquette, Blue Mountain and other lakes, where we can have our camps."

Later on we can talk over changes in the present law. Don't ask too much. Make such changes as you can by local laws and let us try the present law another year.

Columbia county did not like shooting grouse and woodcock Aug. 15, so we changed it to Sept. 1. We thought black bass should not be taken May 30; we changed this to June 30. We did not think it advisable to allow the hunting of rabbits until Sept. 1. We don't propose to have any one shoot young partridge and woodcock when they go for rabbits in July.

Monroe County Sportsmen's Club.

MR. FRANK J. AMSDEN—We have taken this position that a great many violations of the law are through ignorance, the people not having a knowledge of what the law is. We have taken great pains to post the people on what the law is. We have codified the law and put it on placards made of cloth and cardboard, and have had them posted all over our section. It has had great effect. Now, we have also notified all dealers in game what they are liable to if they violate the law, and we have got them on the anxious seat. They are extremely careful this fall. We have also notified the express companies what they are liable to if they offend. I have had one agent in my office to get a copy of the law and know just exactly what it was. The result has been that the dealers have been so careful that they have bought very little game from market-hunters in our locality. We think that our efforts have resulted in saving our game. The express companies will not touch any game at all unless they know it comes from outside the State. The dealers are going about in the same way. We are saving our game there at the expense of distant States.

I attended a convention of Fish Commissioners and people interested in fish at Detroit last month, where I met representatives from one-half the Western States. They are taking very advanced steps. They are really getting ahead of us. We must look out that we don't take a back seat. That convention decided to recommend to the different legislatures a very stringent law on game, and prohibiting exportation.

For the encouragement of some sections that have been in a weak state I want to tell you some of our experience in relation to Hemlock and Conesus lakes. They are beautiful waters and have been great places for fishing, but have been overfished. The pot-fishermen have depleted the waters. All were hopeless of ever seeing the fishing restored, but through the encouragement of people in our section we finally prevailed on them to organize in each of those localities. In both of those localities are organizations of cottagers and farmers—well organized, and all determined to stop illegal fishing. They are very much encouraged in that way.

I was just talking with my friend from Seneca county and the same condition exists around Cayuga Lake, Hammondsport and Bath. An organization is to be effected there next week.

My idea is that this organization with branch organizations all over the State, in harmony and unity, will accomplish great results. The local organization will affect the sentiment of the locality. That sentiment comes directly to bear on local legislation and finally in Albany, and by and by when we want work done in Albany, we can accomplish great results.

Glen Haven Game and Fish Protective Association

MR. E. D. CROSLLEY—We were organized on March 29, 1892. Our organization consists almost entirely of men who were formerly in the habit of fishing illegally. We made no initiation fee—charged them nothing. We wanted those men. We have now 105 members. We have an annual due of twenty-five cents. Seven members have paid. That is our financial standing.

I have no knowledge that any movement for protection was made there until that time. We, in organizing, sent committees to every locality and notified them that we were going to enforce the law. We aroused a formidable element against us. In Borodino they organized with fifty members to resist protection. The result is that we have forty-seven actions commenced or actions settled, among the defendants one preacher and one deacon of the church. They paid their fines like gentlemen, and to-day are looking at the matter differently. We have prosecuted about 100 men and successfully. We have been beaten in only one action, and then we happened to have some fish pirates on the jury. We have burned over 100 nets. After we had been started about four weeks I went to Borodino alone. I saw men run and hide. I saw women run and shut the door. I think they thought there was a demon coming there. About four weeks ago Protector Pond went through there. The first man he saw shook hands and said, "We are with you." The supervisor of Borodino voted in favor of raising \$500 for protection. That shows the change in sentiment in that locality.

We have several smaller organizations. I have paid my expenses everywhere. It has cost me over \$700. They burned my cottage and five boats on Otisco Lake. I have no fault to find. The sun rises and sets just the same. These smaller organizations are of the greatest importance—I know from practical experience. Truxton is a place where they fish illegally with nets. I went over there. I did not know anybody, but I had not got to the hotel before several men greeted me. "You are after us for fishing illegally," they said. "We are guilty. Last winter we fished illegally. Say how much we shall pay and we will pay." I said, "Fish no more." The result is that every man in Truxton is in favor of the law. My

idea of line of effort is to establish these little organizations everywhere you can. Get good men. Get them interested. The chief obstacle has been the determination of the fishermen.

Niagara County Anglers' Club.

F. K. SWEET—The Niagara County Anglers' Club was organized in 1876. We commenced with a membership of 11 and now number 140 active members. Our annual dues are \$2 and every member is in good standing, that is, his dues are paid. We have an annual tournament. This last summer at our tournament there were 1,100 fish caught. The day was very windy and was not as good a day for fishing as might have been. Altogether there were 219 black bass, the smallest of which was 1lb. 1oz. and the largest 4lb. 5oz. The cost of the tournament, chartering a regular train and steamer, was \$248, the balance on hand in our treasury being \$925.75.

The club is harmonious and enthusiastic in preventing illegal fishing. The club planted, in 1886, 250,000 salmon fry in Henderson Harbor. We now catch them up to 20in. in length and find them to be very fine fish. Game and Fish Protector Charles Ripson has done some noble work and our club would recommend that he be better paid, as it requires all his time and he is a man of large family. He has asked the Niagara County Club to purchase him a boat. We know he is doing good work. There are a lot of sharks at Wilson, at the mouth of Niagara River, that have to be watched between 1 o'clock and daylight. It is probably the worst spot on earth for illegal fishing, or has been, but through the aid of Mr. Ripson we have stopped the most of it. Mr. Ripson secured a net a half-mile in length and 8 or 10ft. in width about two months ago. This is the last seizure he has made.

There is one provision in regard to nets that our club is opposed to. It is the size of the bar. It is entirely too small. I have here a sample of this net that was captured. It should be at least a 2in. bar; this will catch almost anything. The legal net is 1 1/2in. There have been some 13 or 14 nets destroyed. It has been necessary for the protector to do most of his work at night. The netting is nearly broken up.

We have a very enthusiastic membership. We want to co-operate with this Association and other organizations, and to be with you in assisting in the culture of fish, the protection of game and the dissemination of right sentiment generally.

Trout Brook Fish and Game Club.

DR. M. R. SMITH—In August, 1892, we organized the Trout Brook Fish and Game Club of McGrawville. Afterward we came to the conclusion that it would strengthen us to become a member of the State organization. We have a little district there what, I suppose, is like other districts, yet it seems to me that we had more determined opposition to all law in that district than in any other place in the world. I am riding nights—my occupation is that of a physician—and I remember going over a trout stream nine nights last summer, when I saw from 1 to 15 jack-lights every night.

We sent a gentleman to represent us before the Board of Cortland county. There we met a most determined opposition, and they "sat down on" us most vigorously. They refused to appoint a special protector; said they had no right to do so. We asked them to shorten the time when trout could be caught in our streams, from the 15th of April to the 1st of July or the middle of July. They said they had no power to make any such change; that it was a State law. They opened on our streams sawmills and persisted in emptying the sawdust into the stream; and then coal ashes were emptied on the ice. We wish to know how we are to proceed with those sawmill nuisances and the garbage and privies, for privies are built out on the stream. We want to know how we are to proceed against these parties, and what steps we are to take. We have worked the best we could with the knowledge we had, and we are, of course, a very young organization and poor. We made our yearly dues to commence with 50 cents, and every man has paid his dues; we have an organization now of thirty two.

Syracuse Indoor Shooting Club.

MR. CHARLES H. MOWRY—The Indoor Shooting Club may not appear applicable to the protection of fish and game, but its members are composed of active and enthusiastic sportsmen, who desire the protection of fish and game to the fullest extent. I can only speak in a general way in relation to its work. What active protection work we have done has only been as an adjunct to other associations in this county.

Our District Attorney is apparently with us, heartily in accord with our intentions, and has signified his intention of working with us. We have recently, through hard work and active measures, secured an appropriation from our Board of Supervisors of this county of \$500 to apply for the protection of fish and game. [A delegate—"First case on record."] There is an example for other counties to follow.

Onondaga Sportsmen's Club.

MR. WIEDMAN, of the Onondaga Sportsmen's Club—Our club has had very little to do lately or for some years back with fish and game protection, but they are now making a better effort in both. Lately there were seventy partridges shipped into town. They were seized. They had been purchased by a grocery firm. We commenced action against them. We have another action now against the same party for the same offense. The action commenced first was settled yesterday for \$150 and costs.

Anglers' Association of Onondaga.

MR. WALTER MACGREGOR—Forty gentlemen met three years ago and organized the Anglers' Association here in Syracuse. It was to be primarily a protective association. We fixed the initiation fee at \$3. The money received was paid out in engaging detectives who would discover violators of the laws and for prosecution. We determined to punish these violators, not by criminal action, because we did not think the grand jury had been sufficiently educated, but we determined to reach their pocket-books. Our first agent was Harry Hawn, who was with us some eighteen months, and captured some 350 nets besides capturing a good many men and recovering judgments. Our Association now consists of 340 members, and there is an annual income of \$600. Every dollar of that money has been used to pay the wages of our special detective. We have driven, I think, three-quarters of the illegal fishermen of this county out of the business. We have educated the people so that they see the merits of our work. The

sympathies of the common people are with us, and that is the surest indication of the work that is being done. Since Mr. Hawn has left us, to be a State Game Protector, we have had Mr. Jackson, who has destroyed over 100 nets, besides capturing a great many men. I believe that the Anglers' Association has done more to educate the people in Onondaga county than all other influences put together.

Protection in Jefferson County.

MR. GEO. H. STROUGH—I would like to say a word with reference to Jefferson county, and incidentally do justice to one of the best protectors the State boasts of. I simply read you the work that has been done by Protector Joseph Northrup in District No. 11 during the year 1892. He seized 11 trap nets, 21 gill nets, 178 scoop nets, 42 set lines. Of the three actions commenced, one settled on payment of \$150 damages; one tried in Supreme Court resulted in a fine of \$50; one is to be tried at the next term of court.

Chemung County Sportsmen's Club.

CHEMUNG COUNTY SPORTSMEN'S CLUB, Elmira, N. Y., Jan. 11. CHAS. B. REYNOLDS, President: I would be glad to be present at your convention and regret exceedingly my inability to do so; but I have been elected District Attorney of this county, and shall be engaged in court all of this week so that it will be impossible for me to get away.

In reference to the matter of reports suggested in your circular letter, I would say, first, that our club has not pushed its work with the activity that it is expected will characterize the future, for the reason that our efforts have been directed mainly toward first securing the appointment of a game protector for this county. Strenuous efforts were made last spring when the additional wardens were appointed, but the commission saw fit to leave us out, appointing, as you know, a protector at Bath, Steuben county. We have not relaxed our efforts in that direction, and have been asking for the appointment of a special protector. The telegraph dispatches, published in our daily papers a day or two ago, announce that the commission have complied with our request and appointed DeWitt Staring, of this county, as such special protector. He is a very competent man, keenly alert to the interest of sportsmen; and we now expect to stop the open and notorious violation of the game laws which has characterized this locality for a number of years past.

The principal violations have been in illegal fishing from our trout streams, which we had stocked at much expense, both by angling and nets, also the drawing of seines in our rivers and spearing. The shooting and marketing of birds out of season. While these violations were well known in a general way it has been impossible to secure many convictions for lack of assistance in securing evidence. Two actions were prosecuted last year by the District Attorney of Steuben county for seining in our river here. The recovery of judgments in those cases has had a good effect upon the poachers here. I think this covers your inquiries marked 1, 2 and 3, and in reply to the fourth would say that while our last District Attorney was not a sportsman or particularly interested in their interests I am not filling that office and I think there will not in the future be any cause for complaint against the District Attorney's office in this county not being at the service of any complainant, and violators who are prosecuted will find that the prosecutions are conducted with sufficient vigor to secure for them in the future some of the punishment which they have escaped in the past.

I have not time to outline any suggestions for modifications of the game law. Again expressing my regret that I shall not be able to meet you I remain, very truly yours, CHAS. B. REYNOLDS.

Sec'y Chemung Co. Sportsmen's Club.

A Steuben County Association.

A MEETING was held in Bath, N. Y., last Friday, to provide a fish and game protective association for Steuben county. Mr. F. J. Ansdén, of Rochester, and Chief Protector Pond, were there; and the meeting was attended by representatives from all parts of the county. County Treasurer Z. L. Parker presided. Mr. Ansdén stated that the New York State Association, now well established on the line of protection, was desirous of a local organization in every county of the State, and that unity of action would give great strength. His remarks were well received and endorsed, and a committee of eight, including the chairman, was appointed to formulate a constitution and by-laws, and report at a subsequent meeting.

Mr. Ansdén writes us: "Steuben county has within its borders a number of streams that in early days were very fine trout streams. Sawmills and over-fishing have very much depleted them. The sawmills now have passed away and it would require merely reasonable protection and a little artificial planting to restore these streams to their original condition. Keuka Lake is also in this county and has been noted for its abundance of lake trout and bass, but for lack of proper protection and illegal fishing these fish have become very scarce. As they have diminished, the fish that were their food has correspondingly increased so that ciscoes and whitefish are very abundant, but these fish are not very good fish for angling, as they have a very tender mouth. There is no doubt that if the trout and bass had a reasonable protection they would increase and thrive on the young of the ciscoes and whitefish. A strong and vigorous local organization can bring these all about and I have confidence to believe that it will be done."

A South Carolina Woodcock Flight.

ST. AUGUSTINE, Fla., Jan. 17.—While I was in the city of Charleston, about the 10th inst., I was informed by Mr. L. W. Bicasse, a noted sportsman and dealer in sporting goods, that a very large flight of woodcock had suddenly appeared on the coast shores in the vicinity and roadsides, and even in the back yards of the city houses and public parks of Charleston. They were found in a dazed, weak and very thin condition, evidently exhausted by their long flight and want of food, having been driven from their feeding grounds further north and overtaken by the extremely cold weather and consequent frosts, which followed them onward. They were simply slaughtered by the boys and men, who shot them in hundreds on the ground. This lasted for over a week, when the birds appeared to have gained strength and to have sought their usual haunts. Sportsmen were mentioned who killed over one hundred birds in a few hours' shooting, and when I left there, on the 12th inst., I was told that bags of from ten to fifty birds were being made daily. They were then in better condition, yet they could be found on the market and bought for 50 cents the brace. Whether the continuation of the cold weather has driven them further south I cannot say, but I have been told they have been seen in the vicinity of St. Augustine, which is rather unusual. Snipe and all shore birds, as well as ducks, are plentiful. Deer and wild turkeys are also met with.

J. U. GREGORY.

Texas and Indian Territory.

JAMESTOWN, N. Y.—I lately returned from Texas and Indian Territory, where in company with four other rovers like myself, we enjoyed an outing of three weeks. We brought home twenty-nine turkeys, two geese, and two deer, besides prairie chickens and quail too numerous to count.

M. L. F.

An Ear-Marked Moose.

BROOKLYN, N. Y.—The inclosed clipping from *Shelburne, N. S. Budget*, may be of interest to *FOREST AND STREAM* readers. John Bower, the author, was my companion last summer on many a good cruise on the trout streams of Shelburne county.

Among other things he has found time to invent a fish-way, that is the best thing of the kind I have ever seen, and I am quite certain that when you see the plans, you will think so too. P. B. V.

In the spring of 1882, George Bates, his man Cyril, Daniel Bower and William A. Bower were trout fishing at Bluff Hill Lake, on the head waters of Shelburne River. One fine morning they espied a cow moose and two calves swimming across the lake. They immediately gave chase. In the excitement of the chase Dan broke one of the tholepins, and fell backward in the bottom of the boat. This detention allowed the cow to escape. But the calves were taken alive, and landed on the bank of the lake. The young bull was then marked by taking a swallow fork out of his right ear, and a lop off the left ear.

In the year of grace, 1892, Daniel Ryan, the great nimrod of Sable River, when out moose hunting, fell in with a very large moose track, and after following it for nine miles succeeded in getting a shot, and consequently bringing down one of the monarchs of the forest.

How this wily old chap escaped the unerring aim of so many rifles for so long a time is something marvelous. But the strangest part of the story is that the hunter sold the head and horns to my son Richard (and by the way the horns have a spread of 54in.), and when Mr. Ryan was unpacking the skin of the head, William A. Bower came in the store and recognized the marks on the old fellow's ears to be the same which he had put there ten years ago. Mr. Ryan informs me that if the moose had been fat he would have weighed 1,200lbs. As he was killed in October, when considerably run down, the meat weighed 800lbs. The head and horns can be seen at my store by any one who wishes to see them. JOHN BOWER.

The Ontario Moose Close Season.

WASHINGTON, D. C., Jan. 14.—*Editor Forest and Stream*: In your last paper is a note from a correspondent, whose name is not given, in which he says that last year he killed a moose north of Mattawa and west of Ottawa. At the distance he mentions north of Mattawa the Ottawa is called Lake Temiscamingue, and from his description he was in Ontario and in a region with parts of which I am familiar. Is not the Ontario law prohibiting the killing of moose until 1895 still in force? If so, what about your correspondent's admission? C. C.

MUSKOGA, Ont.—*Editor Forest and Stream*: For instructive and interesting reading from a sportsman's point of view, your paper is unsurpassed. I was, however, disgusted to see in a letter from "Medicus," in your issue of Jan. 12, an admission from that gentleman, that he and his friend had, last fall, while enjoying an outing in the Nipissing District, Ont., killed a moose. Now, every sportsman knows, or should know, that these animals are protected in Ontario until Nov. 1, 1895. I much regret that a game overseer did not happen to put in an appearance at the camp of "Medicus" and administer to him the full extent of the law as prescribed for violators and poachers. GAME WARDEN.

Virginia Partridges.

RICHMOND, Va., Jan. 17.—*Editor Forest and Stream*: The birds of this State are starving or freezing, and it is necessary that we should put forward our best efforts to prevent their destruction. I have advertised to the farmers of Virginia that if they will catch, house and feed them, we would permit them to turn them loose on their own farms after March 1, and pay for them at the rate of 25 cents per pair up to one thousand pairs. I have also agreed to supply with trash wheat, merchants and railroad station agents who will take the trouble to feed coveys near their premises. To this appeal many are giving heed, and money is needed to carry out our bargain. POLK MILLER.

President Virginia Field Sports Association.

Quebec Caribou.

BERGERVILLE, Quebec, Dec. 28.—Caribou were usually plentiful on the Quebec & Lake St. John road this season, but were hard to get owing to the bad weather.

There is a double ice on the lakes and rivers, the upper portion of which gives way, and makes the hunter's snowshoe anything but a feather-weight.

The Provincial Legislature of Quebec will contest the right of the Dominion Government to prevent fishing in the winter, on all interior lakes etc., in the Province. O. VON I.

Albany Fish and Game Legislation.

[Special Correspondence of Forest and Stream.]

ALBANY, Jan. 24.—*Editor Forest and Stream*: I am unable to find any trace of the new game and fish code, your Rochester correspondent inquires about. None of the members of the Fish and Game Committee know anything of it. I shall advise you immediately if such a bill shall appear.

Ice Fishing in Conesus and Hemlock Lakes. Assemblyman Roberts has an amendment to Section 141 of the game code which adds Conesus and Hemlock lakes to the other lakes in which bullheads, etc., may be caught through the ice.

Menhaden. Assemblyman Yetman has an amendment to Section 138 striking out the words, "except menhaden;" and adding at the end of the section the words "in the months of June, July and August."

Pay for Special Protectors. Senator Parsons has an amendment to Section 30 relating to special protection, allowing each protector \$8 a day during their services, the total expense of each one not to exceed \$100. Assemblyman O'Grady has introduced this bill in the Assembly.

A Genesee Valley Association. Senator Parsons and Assemblyman O'Grady have introduced a charter for "The Genesee Valley Fish and Bird Protective and Propagating Association." The incorporators are William A. Wadsworth and others. Real property to the amount of \$20,000, and personal property to the same amount, may be held.

By Mr. Hennessy—Making the open season for deer hunting from Sept. 1 to Nov. 1; for bounding deer from Sept. 1 to Oct. 15, and for trout fishing from May 1 to Sept. 1.

Manufactured A. D. 1639.

From "Concells, Clinches, Flashes and Whinzie," London 1639.

Why are tailors like woodcocks? A. Because they live by their long bills.

The Virginia Season.
SURREY COURT HOUSE, Va., Jan. 16.—With the close of the season for wild turkeys yesterday, one of the best sports has come to an end. Large numbers of turkeys were killed, and there was never known a better season for them. I know one man who killed six in one afternoon, and about sixty during the season. The deer season closed also on the 15th inst.; quite a lot were killed, but the hunters had a good deal of trouble, owing to one of the land owners killing all the dogs that ran through his place. There ought to be some law for the protection of dogs, as when a dog strikes a hot trail it is almost impossible to call him off. Quail were plentiful, but the small pines that abound in this section afford them splendid cover and they are hard to get at. Coons and squirrels are the only game for hunting we have now except ducks. The last three weeks have been the coldest that we have had here in years, the thermometer being as low as 6° and never going above 30°; snow has been on the ground all the time. What Virginia needs is a better system of game laws, and I hope that the sportsmen of the State will rise to the emergency, and when the Legislature meets in the fall try and get them altered. G. A. B.

The Currituck Season.
NORFOLK, Va., Jan. 14.—The shooting at Currituck during the past three weeks has been the finest perhaps for ten or fifteen years. Some enormous bags have been made. I went down to the Martin's Point Club the first of the year and shot ninety-one ducks and one goose the first day and sixty-five ducks and three geese the next day. The shooting since the sounds have been frozen has been principally at black ducks and mallards, which afford fine sport. Currituck Sound has been frozen now since Christmas. J. B. W.

Loaded Shells, 'Etc.
THOSE who want best rock prices on loaded shells or hunting clothing should write for catalogue to Jas. C. Merwin & Co., 1190 Fulton street, Brooklyn, N. Y.—Adv.

Sea and River Fishing.
The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

ON THE NORTH SHORE.—III.
The Trip Up.—III.
[Continued from page 74.]

THE morning opened with a clear sky and an east wind, and it being favorable for progress up the lake, we concluded to break camp and go to Pancake Bay in hopes of finding the *S. fontinalis* more in the humor for the fly. The dismantling commenced with rapidity immediately after breakfast, for we were exceedingly desirous of at once taking advantage of the present conditions. At 6 o'clock we were off, with a fine sailing breeze that made the water curl from the bow like molten silver. The sky was full of sunlight and the balsamic air carried healing on its wings, while shadows from the fleeting clouds painted their ceaseless changes across the landscape, reminding me of Emerson's lovely tribute to Nature so beautifully introduced in the following stanza:

"I do not count the hours I spend
In wandering by the sea;
The forest is my loyal friend,
Like God it useth me."

Emery, our Signal Service boatman, now had a fine opportunity to indulge in his theory, for a few floating scuds were appearing in the west. Upon these he at once sprang as a foundation to open anew the subject of his fears; in fact, he made a battledore and shuttlecock game of it. With one hand he batted out, with apparent ease, squalls, storms, tempests, hurricanes, tornadoes and typhoons, and with the other tossed out clouds, vapors, fogs, mists and scuds until we expected every minute to see him introduce the twelve signs of the zodiac and then ring in a chapter or two on the influence of tides. He was a marvel on observation of the elements, but we at last wearied of his theme and gave him to understand that some other subject would prove more interesting, for instance, the best and most rapid method of restoring anew old, rotten and patched-up sails. This silenced him, but he continued to watch those scuds as if his very life depended upon them.

We have passed many beautiful stretches of shore and woodland that were remarkably imposing under the drapery of drowsy clouds and the sound of wavelets that crumbled upon the beach

"In tender curving lines of spray."
Beautiful Bachowanaung Bay was reached in a cloud of glory. Its hills and vales, under the glowing sun, displayed a softness, purity and magnificence of color that would have delighted the artistic soul of a Rubens.

"I gazed upon them
And the unchanging lake, and felt awhile
Unutterable joy—"

A few miles more and we are at Pancake Bay, and it being some six miles across, with the favorable wind then prevailing, we concluded to go ahead and not stop as contemplated, but endeavor to make Mamaisa Point by noon. Emery looked up at the infant scuds which had increased, and ominously shook his old head, but did not openly protest against the onward move. The scuds, he said, had never failed him, but hoped they would this time. "It will be a nine-mile stretch before we reach a harbor," he further continued, as if he desired to warn us in time, for he appeared to have staked his reputation as a weather prophet upon a coming gale. His remark, however, had no terrors for us, and the word was given to go ahead. He obeyed the order without further comment, and held the nose of the Mackinac in a straight line for the point opposite. When about half way over the breeze showed a tendency to increase as well as the scuds. Emery again spoke up and said, "If's coming," and relapsing into silence took another gaze at the little floating clouds in the west and gave another shake of his wise old head.

The breeze evidently was perceptibly stiffening, and it was not long before we were swiftly gliding with an increased speed that made the water sing a lively chorus from the bow as it ran along the sides in a radiant sparkle. Emery, naturally timid, was delighted to see his observations verifying, and I really believe would then have rejoiced at a tempest if he only thought we could safely weather it.

We reached the opposite side with the old tattered rag straining at every patch, and the mast creaking as if it too shared in the dilapidation of the canvas. Four miles more and we would be snug and safe in the harbor, though we could have landed midway at a fishing station, but as our temper was up, and Emery realizing on his faith, we determined to make it if the sail went to ribbons, and the mast to splinters. Emery was in great glee, his friendly scuds were nobly coming to his assistance, and I verily believe he exulted within his timid heart at the situation. Every moment the wind seemed to increase, and the waves, which were rolling in froth, piled up higher and higher until the spray began to fly from the cut-water and frequently into the boat. The old astronomer was undoubtedly delighted although he inwardly trembled and at last even Ned and I began to think the old hulk would have a hard time to safely ride the gale which was now upon us in frightful form; still we were hardly holding our own, although I expected momentarily to see fluttering flags instead of a sail. One mile from Mamaisa point the wind stiffened so severely that it began to be questionable whether we could safely hold out to the end. We were rowing with the rowlocks on the lee side within an inch of overflow, although Ned and I threw our entire weight to the extreme edge of the windward. Our aim was to make a landing between the island and shore at the point, and the channel being narrow and the lake low, it was questionable which of the two openings before us was the right one. Ned insisted on the inner, but Peter, who now had the helm, paid no attention whatever to his opinion. The lake was in a fearful rage and foam, and beat upon the sharp splintered rocks along the shore with a violence perfectly appalling. The scuds had not only increased in number and size, but the heads and shoulders of ponderous storm clouds of dingy color were fast forming, and threatening a fury of the lake that foretold a tempest that "leaps with delicious bound."

"Take the inner channel," nervously shouted Ned, as we were nearing it. Peter stood as stolid as if of marble, with a firm grip on the rudder handle and his keen eye looking ahead as if measuring distance, while Emery was in the bow with his hand on the sprit and a sardonic grin on his face, ready to instantly drop sail at the helmsman's command. "Take the inner channel," again shouted Ned, but Peter paid no more attention to his howling than if he were a child of tender years, and continued to hold the quivering boat to the outer.

"You will run her aground," again bellowed Ned, but Peter, still unmoved, with his thin lips set firmly, and his eyes ablaze with determination, held her to the channel he so well knew.

"Great heavens! you will sink her!" tremblingly cried Ned once more, who was now wrought up to undue excitement.

Still the confident and unruffled helmsman kept her on the straight course; and as she slid into the channel Ned's lips quivered, his cheeks paled, and he clutched frantically at the side of the boat, as if momentarily expecting a shipwreck; but she went on and soon was in placid waters, and then "Down with the sail!" rang out, and the old rag slowly descended the creaky mast and was quickly gathered in the bow. Ned's composure returning, he acknowledged his error, while the weather prophet, towering o'er us with a triumphant smile, exclaimed: "I tell you it blow. You believe me after this." We allowed his single victory, but insisted that the tattered sail be immediately repaired and a new mast secured in the woods, as Ned was positive it had cracked just before we got in, and an examination proved the statement correct. Peter and Emery were sure the sail and mast would not have stood the strain they were subjected to many minutes more. The Kentucky angler and his boatman, who had arrived a day in advance of us, were on the shore opposite—for we had landed on an island—keenly observing our dashing entrance, and were positive the patchwork of a sail would be blown to shreds before we landed. They stood ready, they averred, to come to our assistance in case of accident. The moral of all this is—don't go to sea in a tub.

We had excellent camping quarters on the island, though, despite this, our boatmen chose to sleep in one of the deserted and dirty cabins on the main shore, which was almost within a stone's throw of our quarters. Soon the tent was placed in position and everything carefully stowed under cover, and then dinner was promptly prepared, which we enjoyed with an omnivorous appetite.

Toward evening we took our rods and made a few casts from the rocks on the outside shore, but not a trout rippled the waving waters. The Kentuckian had been before us and picked up two or three at the only choice places. We had not contemplated remaining, being perfectly aware that the waters here had long ago been almost completely decimated of the trout that once were so numerous. The first favorable breeze we determined would see us on our way up the lake, where we were confident of finding all the sport we desired.

In the evening about 10 o'clock the wind came with such terrific violence, that we momentarily expected to see the tent come tumbling down upon us. On the heels of this came a pattering shower that made lively music on the fluttering canvas. The rain was assuredly in unison with the rhythmic drops of the poem:

How it pours, pours, pours,
In a never-ending sheet!
How it drives beneath the doors!
How it soaks the passer's feet!
How it rattles on the shutter!
How it rumples up the lawn!
How 'twill sigh, and moan, and mutter,
From darkness until dawn.

After about two hours of a heavy rain storm it ceased, and then we passed into the realms of blissful sleep.

The morning was not at all propitious. Gray and watery clouds floated slowly above the dim horizon, and the damp air was indicative of more rain. Heedless of the threatened storm we went to the rocks on the outside, and whipped the waters with a persistency that really should have merited some reward, but nothing came of it;

so we tramped back to camp over rough and ragged rocks that made every muscle in our bodies ache. The boys in the meantime had nicely and strongly repaired the old sail, which would now, Emery stated, stand any gale.

After dinner the dark battlements which so gloomily shadowed the tender blue of the sky, suddenly broke and showered us with a heavy downpour, while the wind—a northwester—continued to blow as if it would never cease. No breaking camp that day, so we solaced ourselves with our books and a rubber or two of crib, and shortly after supper sought consolation in our blankets. The night drew her drapery around us as we courted slumber with a grand display of lurid lightning and heavy moans of thunder, to which the waters responded by violently pounding the cliffs and reefs with a roar that went rumbling along the lake and into the dense forest inland.

"A mighty wind like a leviathan,
Ploughed through the sea, and from those solitudes
Sent silence frightened."

The pale beams of the morning fell upon a rolling sea, which subsided in a short time sufficient to permit of our taking a proposed trip as far as Munaisa mines, in hopes of decoying some of the dandies that sported in robes of violet and crimson.

We did not start with high hopes, though we did with a determination to endeavor to capture a trophy or two. We flogged the waters as we went with most persevering energy, and thought with some skill, but the only reward till we reached the mines, was the inspiring of the trout which escaped from my hook, when nearly conquered, and one other rise which also unfortunately—as I missed it—fell to me, and thereby had it duly recorded as a languid strike, and therefore highly discreditably to my skill in the "art preëminent." I felt as if I were in the *consommé*, and sighed for the left hindfoot of a graveyard rabbit as a mascot. The rises I had lacked vigor, owing doubtless to the northwest wind which had been prevailing almost constantly for over two weeks. On reaching the mines we landed and lunched, and then went through the extensive works which had been idle for more than a decade, and which were still in a state of fair preservation. One and a half millions were, I learnt, spent upon the plant, which is now entirely abandoned, not even a watchman remaining to keep guard over the vast and expensive machinery and buildings. The failure to secure copper ore to a profitable extent caused the shutting down of the works.

On our return trip I had two more rises which I magnificently missed, and which satisfied me that I was not then in affinity with the peerless members of the *fontinalis* tribe.

Another day at camp ensued, owing to the prevalence of the heavy northwester, which seemed to be our old man of the sea. The boys thought this a favorable time to go to Mamaisa and lay in some tobacco, but as they were a little off in wood lore when they started, got on the wrong path and so returned, somewhat chagrined at their failure. After dinner they made another attempt to reach the place and this time they were successful. On their re-appearance they reported seeing en route a large number of partridges, which this year are more numerous than they have been for the last decade, owing to the very dry season they had just passed through.

The next morning being favorable for breaking camp, we at once embarked and sailed out on a fair breeze and a sea of sunshine, under a sky flecked with little white clouds soaring aloft like doves. As we glide under the touches of nature along this grand and picturesque shore are so constant that it is like a succession of the finest panoramas. The glimpses of little coves with glistening gravelly beaches, bold and jagged bluffs with bases of splintered rocks, jutting ridges o'er which the waves beat and the sun in radiance blazed, forests of pine and balsam with their green tops waving in the gentle breeze, receding hills

"Bathed in the tenderest purple of distance,
Tinted and shadowed by pencils of air,"

formed a landscape of surpassing beauty, which the grand old lake is forever presenting for your most fervent admiration.

To the credit of our celestial gazer be it said, he prophesied no tempestuous disaster, leaving the study of the heavenly bodies for the present severely alone. He was rapt in deep admiration of the renewed sail, which he had made doubly strong with new ropes and many new patches, and though it resembled a railroad map in its endless seams and curves, it had a source of beauty to him which he secretly cherished. The mast, however, was the same old crooked and cracked "stick" it always was, and this he had planned to strengthen by cutting off about a foot at the lower end where its weakness was apparent. Then, he stated, we could fight any gale, though inwardly knowing he would never get in one as long as there was a scud on which to hang a signal of danger.

About noon we arrived at our destination, Twin Sisters Island, four miles this side of Aquawa River. The Silent Sisters, there being two, are a solid mass of flint rock, divided by a narrow channel about 30ft. wide, making an excellent harbor for a small sail boat. The channel runs almost north and south, and can always be entered from one side or the other. This upheaval of rocks at random thrown has curious conformations, being decidedly irregular on their surface, with little hills, valleys, chasms, fissures, gorges and rifts greeting you on every side, while on the entire islands, which compose four or five acres, there is not a level foot of ground. It looks as if the whole face of the flinty mass is scarred, scaled, blotched and disfigured, and had been the play ground for the lightning freaks from time immemorial. In its crevices, where the soil has lodged, a few trees, bushes, shrubs and flowers have sprung into life. The trees, though, are exceedingly limited in number, there being only one solitary pine and very few balsams. Irish moss is everywhere on the rocks, while as if to add some kind of sustenance to this almost desert place, berry bushes are scattered here and there, which attract a large number of the sylvan warblers. Here, and on the main shore, but half a mile away, are splendid trouting waters. Ned, who had visited this place some four years ago, stated that he had had unalloyed sport in capturing the scarlet beauties around these islands.

Concluding to dine before having the camp put in order we so instructed the boatmen, who at once turned to with willing hands and soon had the *menu* ready and our platters filled smoking hot with the best the camp afforded.

while a pot of invigorating tea was ever at our elbows. As Byron says in "Don Juan:"

"Nothing more sure at moments to take hold
Of the best feelings of mankind, which grow
More tender, as we every day behold.
Thou that all-softening, overpowering knell,
The tocsin of the soul—the dinner bell."

The weather, which was delightfully pleasant when we started in the morning, had now changed into the very reverse. Broad tumultuous rain clouds, with their jagged breaks of flaming orange and crinkling gold, which ever and anon flashed out as if to remind you of the parting beauty of the morn, were piling up in heavy masses around the sun and over the azure blue. The wind also freshened as if to harmonize with the dismal picture forming, and the waves, ever ready to acknowledge their master, rose up and shook their foamy heads with unmistakable vigor. I thought this a good time to try the waters around the lee side of the island in hopes of arousing some gleaming beauty of the deep; so taking my rod, fly-book and landing net, I clambered down to the edge of a rocky cliff, and commenced sending my flies on a mission of duplicity. It was cast after cast, and flutter after flutter for fully an hour, and until I had covered all the available ground, and not a single ripple broke around my lures.

"Oh where is the angler's joy and the artist's dream,
Oh where is the spotted trout of the mountain stream?"

I sang, as I returned to camp in a somewhat disconsolate mood at my failure.

The boatmen, having finished their dinner, were hard at work as I returned from my fruitless outing, and in a fair way to soon have the camp in good shape. The provisions they had well covered with tarpaulins, and had established the cook-house and dining-tent in a little opening between two small hills, while our tent had been advantageously placed on the apex of the highest elevation, where it could make immediate acquaintance with either a hurricane or a zephyr. The boys with an eye single for their comfort, had erected their tent to our right, in a deep depression that sheltered them from unruly winds. Our settlement was somewhat scattered and on different plains. We had to go down to meals and up to our tent, while the boatmen had to go down for the provisions and up to the dining tent, and had also to go both up and down as well as over to their quarters. It was a sort of an all round settlement, with plenty of yard room front, back and sides. The tents were well anchored with heavy stones, and looked as if they would stand any ordinary blow, but if one of those howling blasts of cyclonic tendency ever did organize to attack that particular twin sister—the off sister—Ned and I were in for a lively time, as our tent was really the church spire of the island.

We made no further attempt that afternoon around the island for the iridescent tribe, as Ned was satisfied I had completely covered the ground, and that it would be love's labor lost to resort to any further beguilement.

[TO BE CONTINUED.]

ANGLING NOTES.

Prof. Phinni, Finny or Funny.

A FEW weeks ago I mentioned a newspaper clipping, sent to me by a friend, which related with great scientific detail how Prof. Phinni had discovered that fish swarm over Niagara Falls, passing from the sea to the Upper Lakes. This friend, a newspaper man, now writes me: "After I sent you the clipping from the *Journal* I had a little curiosity to find out who wrote the article, but I did not succeed. The other day I received a letter from a friend of mine in Chicago, dated at the Press Club. This friend is an innocent appearing fellow, who has done a heap of good work for the *Journal*. 'Bram,' as he was usually called, is of sanctimonious countenance and was often mistaken for one of our prominent clergymen; hence he was looked upon as the soul of veracity and it was generally thought that there was no guile in him. Now, this letter, which he wrote to me, asked if I had noticed an article in the *Journal* signed by Prof. Phinni in regard to fish climbing up Niagara Falls, and if the sportsmen's papers had made any comments thereon, and what was my opinion on the subject. I promptly replied that I had seen the article and sent it to you and you had given it a 'yazoo' in *FOREST AND STREAM*, that none of the sportsmen's paper had given it serious attention, knowing that it was an infernal lie, written by Ananias. This morning I received a card from this Chicago lamb, on which was written: 'I am deeply grieved that you should speak in such disparaging terms of Prof. Phinni, who is one of the most veracious of men, and the more especially as his name is a pseudonym of my own. If you don't believe the story I can show you the falls.'"

I am rather surprised that the article in question was not widely copied at once, but it will bob up in a year or so and go the rounds of the daily papers, as did the item about the experiment that the U. S. Fish Commission was making to remove the bones in the shad by crossing this fish with the jelly fish.

Protect Pike-Perch.

In the list of suggestions offered to the New York State Association as to the proposed changes in the fish and game law (I am aware that the Association has since postponed all action for a year), I find no reference whatever to pike-perch. At present this excellent food and game fish, a fish far superior to either the pike or the pickerel, is not protected in any of the waters of the State except in the Susquehanna and its tributaries, where it has a close season from Nov. 1 to May 30. The law says: "No fish shall be fished for, caught or killed in any of the inland fresh waters of this State in any manner or by any device except angling, save only, etc." If pike-perch are not netted then all signs fail. Pike-perch need a close season far more than pike or pickerel; and furthermore there should be a limit to the size of pike-perch to be legally taken. It is a shame to all concerned that in the fish markets bunches of little pike-perch about as big as sardines should be exposed for sale.

In 1890 and '91 the State planted 8,500,000 pike-perch fry, but as yet no measures have been taken to protect the growing fish or to give them a close season when grown. Mr. Skinner, of the executive committee of the State

Association, writes me that Commissioner Bowman and Supt. Green visited the St. Lawrence last August and declared that the river was in need of a large planting of pike-perch, and Mr. Skinner realizes fully that the fish should have a close season. When I wrote that pike-perch need a close season far more than pike (pickerel) I had in mind that the maximum number of eggs furnished by a pike-perch is about 200,000, while the maximum number furnished by the pike is over 600,000; and for the purpose of comparison I may add that the number of eggs furnished by a black bass of 5lbs. is about 20,000. All these things should be taken into consideration when fish laws are to be framed.

The "Cold Snap" and Future Fishing.

I wonder how many fishermen realize the effect this cold weather may have on stream trout fishing in the future? On the southern border of the Adirondacks the streams were low when the cold weather came, and on all sides I hear that the water has frozen solid to the bottom in very many of the streams, and this must mean disaster to the spawning beds of the trout in the mountain brooks. The sources of the brooks being frozen, a thaw now would send the water whirling away on the surface to the larger streams. When the trout beds are dry and frozen solid the ova is worthless, and the breaking up of the thick ice may plough up beds further down, so I fear that the prospect for a large crop of trout fry next spring is not rosy; but, perhaps, it will be a good time to cross this bridge when we come to it.

Senator Kenna as an Amateur Photographer.

FOREST AND STREAM has just come, and I find in it a reproduction of one of the late Senator Kenna's photographs, and a friend asks how he took the picture which he appears in. He had just taken a photograph of his two companions and without moving the camera he put in a new plate and took his seat on the stump, and told a colored man that we had with us to take off the cap when he said "now," and to put it back when he repeated the word. This accounts for Senator Kenna's lips being slightly parted in the original photograph in the possession of the editor of *FOREST AND STREAM*. Senator Kenna excelled as an amateur photographer, and photography was something of which he was particularly fond. In looking over his personal letters I find frequent allusion to his camera. In one he says: "I had scarcely touched the latch string on my return from Washington, before I had to be off again—this time for Jefferson county in the eastern part of the State, the scene of John Brown's insurrection, trial and execution. John Brown's body is said to be still marching on. If that be so, it is about the only thing I have not fired my camera at since I saw you."

Announcing his return to the United States Senate after a long contest he uses this allegory in conclusion: "When I started in the amateur photograph line I had not contemplated all the difficulties which sometimes beset the adventurer of the camera. I had the focus all right, and the picture in the end developed finely, but the exposure required a longer period than Fleet would want to sit on a rock or the Texas Club hold a rod without a bite. It was, seriously, a serious sort of an affair." I could fill a page with extracts from these letters, every one breathing the love of nature, but I conclude with one of a different character. Fleet Porterfield was Senator Kenna's kennel-man, huntsman and boatman; a colored man that I fully believe would have given his life for his master (on one occasion when Mr. Kenna was thrown out of his boat in running a rapid and a fall in the river, I saw Fleet dive for him before his feet were fairly below the surface), and in scores of photographs that I have Fleet is represented sitting on a rock. "I have just read your letter in *FOREST AND STREAM*, and it afforded me much pleasure, in which Fleet had his regular standard share. * * * Your article gave him a very deserved tribute. * * * Oh, the days on the Greenbrier! They will come back with pleasing recollections as long as I live!" A. N. CHENEY.

INCLOSURE OF BROOK TROUT.

Editor *Forest and Stream*:

I should be very much obliged for some information and your opinion on the following subject: I have a small stream, about a mile in length and averaging four feet in width, which rises and runs its entire course on my own property, emptying into a large lake at the end. As I can completely protect the stream, I intend putting some four or five hundred yearling brook trout into it, in hope of getting some really good fishing in time.

First—Could these trout be put in in February, provided the stream is thoroughly open?

Second—Would a dam at the end of the stream be the best way to keep the trout from running into the lake? A strong wire netting at the mouth of the stream would surely be carried away in the spring freshets I suppose.

OWAHGENA.

[Brook trout can be successfully planted even under the ice by cutting holes for their introduction. Yearling trout are now being distributed in frozen northern streams. Rainbow trout are feeding in the aquaria in Washington, D. C., in water that is almost icy cold. Young salmon just out of the egg are found in water not many degrees above the freezing point. Wire netting at the mouth of the stream described will be swept away by floods; the only safe and practicable means of penning will be by a well-built dam. We take for granted that the stream is subject to great changes of level and has a rapid flow, otherwise it would not be a typical trout brook. An important subject in connection with the stream is the amount and kinds of fish-food it contains. If it is not supplied with insect larvae, fresh-water shrimps, harmless minnows, and suitable vegetation, it will be necessary to introduce these essentials. See *FOREST AND STREAM* catalogue of books on trout rearing.]

A New Boston Firm.

AMONG the business changes of 1893 is one in the well known Boston firm of fishing tackle and fine cutlery dealers, formerly known as Geo. B. Appleton & Co. The name has been changed to that of Appleton & Bassett, but there will be no departure from those business methods which have, in the past, achieved success and popularity for the "old stand" at No. 304 Washington street.

REARING BLACK BASS.

Editor *Forest and Stream*:

RICHMOND, Ky., Jan. 7.—I have an artificial pool 21×41×4ft. fed through a 1in. or 4in. pipe from our water-works lake. I built this pool last summer, just below the dam of the lake, with the view of using it as a hatchery for black bass, so I could add fresh blood to the lake each year. There are twenty-two big-mouthed black bass in the pool now, which I brought from St. Marys, O., last October; they weigh from 1½ to 2½lbs. each; they are fed on minnows, beef hearts and grain. I would be pleased if you would kindly give me the addresses of gentlemen who have had experience in hatching and raising bass, as my information on this branch of the business is very limited and I desire to write to them.

CHAS. S. POWELL.

[You will get much better results by transferring your large bass next spring to a larger body of water, perhaps to the lake of which you write. The pool is too small for a breeding pond. The bass build nests in shallow water along shore on sandy and pebbly bottom. They protect the nests and young until the fry are able to forage for themselves. A pond covering one acre would not be too large for the fish mentioned. In a Government fish pond in Washington, covering several acres, fifteen big-mouthed bass were placed last spring. The progeny of these adults numbered 50,000 and upward of 30,000 of these were reared to an average length of 4in. during the summer; the rest were lost through the cannibalism of the larger individuals of the offspring. This pond was abundantly stocked with minnows, carp and small sunfish, which served admirably as food for the bass. At Neosho, Mo., Mr. W. F. Page feeds the fish commission bass with fresh liver. In most localities minnows form the sole food of the bass. You can obtain information from Mr. Page, Neosho, Mo.; Dr. Rudolph Hessel, U. S. Fish Commission, Washington, D. C.; W. J. Huddleston, Remington, O.; Hon. W. J. Green, Fayetteville, N. C.; and Col. Gilbert Moyers, Washington, D. C. You will find, however, that the common shiners, or minnows, of Kentucky will answer well for introduction into your bass waters. The young mud shad or gizzard shad will also prove suitable, and the brook silverside has served admirably wherever it has been tried. We mention these because they are common fish of your region. The growth of the large-mouth bass under favorable conditions is remarkable. At the pond in Washington several hundred of the young when only five months old measured nearly 10in. in length, the result of generous feeding. If you want to prevent cannibalism give your bass all the minnows they will eat.]

Snakes Galore.

A SMALL bottle in the exhibit of the U. S. Fish Commission for the World's Fair attracted our serious attention in the early morning a few days ago. Its capacity by actual measurement is only a half pint, but its potentiality is not to be measured by its size in ounces, for it is packed full of snakes, all belonging to a single brood, although forty-one in number.

Mr. Geo. A. Seagle forwarded the bottle from Wytheville, Va., and labeled it as follows:

"This bottle contains forty-one young water moccasin snakes, which were taken from the body of the mother, killed in Black Bass Pond, at Wytheville, Va., station, Aug. 8, 1892. The mother snake was 40in. in length and 6in. in circumference."

Perhaps some reader of *FOREST AND STREAM* may be able to estimate the prospective destroying power of this family; the problem is too difficult for us. They were located in the rock bass pond, too, where the greatest mischief was possible, since this bass has a small mouth and feeds upon worms, small shells, insects and crustaceans. Had they chosen the pond containing rainbow trout matters would have turned out differently when they reached a fair size, for the rainbow can kill snakes with great ease and rapidity. Evidently the water moccasin is as "wise as a serpent," although by no means as "harmless as a dove."

B.

Fish Plentiful in North Carolina.

"C. H." has written the following letter to the *Evening Telegram*, Washington, D. C.: "I have just come on from Newberne, N. C., where I have been sojourning throughout the entire cold term. Never before have the adjacent waters been so crowded with fish, chiefly sea trout and mullet, with some red drum, and the protracted cold weather has had the effect to render them torpid. They swarm into the Neuse River and up the Trent above the city in dense masses, so that they are scooped up with baskets, dipped with nets and picked up with oyster tongs. Seines dropped over the bows of fishing boats just below the city are hauled in full of fish. The quantities marketed are numbered by the millions. The fish are large, fat and delicious."

Readers of *FOREST AND STREAM* will recall Mr. Hallock's interesting account of North Carolina fishing, published Feb. 18, 1892. He referred to the capture of shad, bluefish, red drum, croakers, weakfish and mullets in December, while in January the list was increased by the addition of spots, perch, pickerel and black bass. The fresh waters are prolific and the sea yields a plentiful harvest, yet angling, according to Mr. Hallock, is a dead art in North Carolina waters, as far as the native population is concerned.

St. Augustine Fishing.

ST. AUGUSTINE, Fla., Jan. 21.—Fishing does not appear to have been enjoyed by many. Whether this is due to the weather being too chilly for the anglers to go near the water or the fish not coming to the bait, I am unable to say; but I hope soon to investigate the subject and may let you know the result.

For one accustomed to fly-fishing for salmon and trout in Canadian waters, bait-fishing has little attraction; but it may do for a *passetemps* and be a novelty in its way. No doubt the fish will prove so, for I am told when your hook is taken you never can tell, unless you know his tug at the line, whether you have a young shark or a sea trout or some other hideous or beautiful denizen of the waters fastened on until he reaches the surface.

J. U. GREGORY.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Good Work on Rock River.

CHICAGO, Ill., Jan. 18.—Mr. J. St. John Greenough, president of the Whiteside County Fish Club, sends me the following interesting letter, which I commend to the earnest attention of Dr. Bartlett and Dr. Shields, of Hannibal, who were chosen a committee on canvas and organization at the last meeting of the Illinois State Fish League. The letter reads:

"STERLING, Ill., Jan. 12.—We are reorganizing the Whiteside County Fish Club and expected to be in the League of Illinois Fish Clubs to have a representative at the annual meeting in Springfield this month, but through sickness and bad weather we did not get our membership together and dues collected in time. We will be with you full one hundred strong in a week or two. Senator V. S. Ferguson, of Whiteside, would have been our delegate, as he is in Springfield and is an ardent member of our club. Two years ago he was the means of saving the present fish law as it now is. The southern members are in favor of a repeal of all fish laws, as they want to seine. I inclose you clippings from our local paper and a Dixon local paper, to show you what we are doing to stir this thing up. This is a bad time of the year to do it, too. We had the best fishing in Rock River last fall that we have had for years. One pickerel was caught weighing 30lbs."

The clipping from the Dixon paper is as follows:

Rock River is the only rock bottom stream between the Alleghenies and the Rockies. It is the home of the black bass, and some effort has been made to make it the home of several other desirable varieties, but, if things are allowed to go on in the future as in the past, it will only be a question of time when our beautiful stream will be depleted of all game fish. The time has come to act, and to act unitedly and determinedly. Several fish clubs have been made to organize a fish club in Dixon, but while our city is the only one in the county directly on the banks of the river there are sportsmen and others in Amboy and elsewhere equally interested in the matter, and we would suggest the immediate organization of a Lee county fish club.

The Sterling paper has the following:

The Whiteside County Fish Club had one of the best attended and most enthusiastic meetings in its history last evening. The newly elected officers were installed, and a constitution and by-laws were adopted. The proposition to unite with the Illinois State Fish League was adopted, and that the club will have the co-operation of the State next summer in its efforts toward the preservation of the fish supply in Rock River, and the prevention of illegal seining is now an assured fact.

John Dickson, the Whiteside county fish warden, read an interesting report showing that, even hampered as it was last year by limited financial resources, the club, from September, 1891, to February, 1892, had made sixteen arrests for illegal seining, and out of these had secured fourteen convictions, nine in Whiteside and five in Henry county.

Messrs. F. D. Rosebrook, Charles Mentzer, John Hirshberg, Frank Butten, H. J. Bessler and John Dickson were appointed a committee to collect dues and solicit new membership. Undoubtedly this is the best showing protection ever had on the lovely Rock River stream. Matters in the State League are at low ebb this winter, apparently, but with the spring we hope a greater activity. The loyal clubs like the Whiteside deserve every compliment and every wish for success.

E. HOUGH.
175 MONROE STREET, Chicago.

Fishculture.

FISHCULTURE IN NEVADA.

THE Fish Commission was established by an act of the Legislature entitled "An Act to provide for the preservation of fish in the waters of this State," approved March 5, 1877. The eighth biennial report of the operations of the commission was sent to Governor Colcord, Dec. 31, 1892, by Fish Commissioner Geo. T. Mills.

The beneficial results derived from fifteen years of fish hatching and planting, erecting fishways, and protecting fish by means of a close season, and in other ways have become apparent. Opposition to the close season and non-export law came from large exporters of fish, and not from any other class of inhabitants. The clause requiring the introduction of screens into irrigating ditches was not adopted, but many citizens voluntarily established them and found them inexpensive and easily managed.

Commissioner Mills devotes a short but very useful chapter to a description of the methods of taking and developing the eggs of trout.

With the help of the California Commissioners, the pollution of the Truckee River by sawdust has been stopped. The mills and factories either burn the dust and shavings or convey them into bulkheads from which they cannot pass into the stream. In September, 1891, giant powder was used in the East Fork of Carson River for killing fish. Mr. Mills notified Sheriff McCormack and Peter Milich of the infraction of the law. He also advised Hon. W. P. Merrill and the editor of the *Genoa Courier*. The watchfulness of the gentleman named and the publicity given to the affair by the *Courier* checked the unlawful practice.

By means of fishways and passes in the dams, the Truckee is everywhere accessible to trout west of the Pyramid Lake Indian Reservation; but in the Reservation, a dam at the mouth of the River prevents the ascent of fish. It is hoped this obstruction may be removed by Congressional action.

The report contains mention of the following sportsmen's clubs:

"The Reno Anglers' Club is composed of some of the most prominent men in Washoe county, with headquarters at State Line Mill.

"The Capitol Hunting and Fishing Club, a Carson City organization, has a membership of nearly 100 active members. This club has expended over \$1,000 in the construction of the club house, barns, stables, storerooms, etc. Their main building, located on the grounds of Hon. Theodore Winters, at Washoe Lake, is 48 by 16ft. * * * The organization consists of a president, secretary and board of control, with a competent attendant or keeper constantly in charge of the premises.

"In the membership of these clubs we find active and zealous supporters of our game laws, and it is hoped more organizations will follow in other portions of the State."

The Commissioner distributed 545,000 Eastern brook trout in 1891, chiefly in the Truckee, Carson and Humboldt rivers, and 362,800 in 1892. Landlocked salmon, obtained from the U. S. Fish Commission, have done reasonably well in Lake Tahoe. Arrangements have been made to exchange 300,000 eggs of Eastern brook trout with the California Commission for the same number of rainbow trout eggs during the season of 1893.

The fish of the salmon family now found in Nevada are described by Mr. Mills under the names rainbow trout, Eastern brook trout, Lake Tahoe trout, McCloud River trout (Dolly Varden), landlocked salmon and steelhead salmon.

The Virginia & Gold Hill Water Company granted the Commission free use of the spawning beds in their ponds and reservoirs. The railroads, with their accustomed generosity, transported fish free during distribution, and Wells, Fargo & Co. conferred many favors.

The Kennel.

FIXTURES. DOG SHOWS.

Jan. 25 to 28.—Northern Ohio Poultry and Pet Stock and Kennel Association, at Akron, O. W. A. Caldwell, Sec'y.
Feb. 7 to 10.—Chicago Kennel Club, Chicago. G. H. Goodrich, Sec'y.
Feb. 21 to 24.—Westminster Kennel Club, New York city. James Mortimer, Sup't.
Feb. 28 to March 3.—Keystone Kennel Club, at Philadelphia, Pa. James Watson, Sec'y.
March 7 to 10.—Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderfer, Sec'y.
March 14 to 17.—Washington, D. C. F. S. Webster, Sec'y.
March 21 to 24.—City of the Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.
March 22 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 18 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 7 to 10.—Hamilton, Ont. A. D. Stewart, Sec'y.
FIELD TRIALS.
January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgariff, Sec'y.
Feb. 6.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y.
Feb. 13.—United States F. T. Club Trials, New Albany, Ind. P. T. Madison, Sec'y-Treas., Indianapolis, Ind.

Remember, Chicago entries close Jan. 27, with G. H. Goodrich, Unity Building, Chicago.

WINTER MEET OF THE BRUNSWICK FUR CLUB.

The fifth annual winter meet of the Brunswick Fur Club was held at Westminster, Mass., Jan. 16 to 21, and was a complete success. The club headquarters were at the Westminster Hotel, and the proprietor did everything in his power to please his guests and succeeded admirably. The attendance throughout the week was large. Among those present were A. C. Heffenger, Portsmouth, N. H.; O. F. Joslin, Oxford, Mass.; W. S. Perry, J. A. Smith, W. R. Dean, Guy Whitten, G. W. Barnes, Worcester, Mass.; W. B. Stone, L. E. Conant, C. L. Wellington, L. O. Dennison, Waltham, Mass.; H. A. Dwyelle, Kendall Green, Mass.; F. W. Eddy, West Newton, Mass.; E. W. Gill, Benj. Holden, Princeton, Mass.; F. P. Shaw, Captain E. B. Nickerson, Ed. Barron, Harvey Given, H. H. Stetson, E. M. Snow, Brunswick, Me.; A. McDonald, Rockland, Me.; Bradford S. Turpin, Dorchester, Mass.; N. Q. Pope, Brooklyn, N. Y.; R. D. Perry, Ed. Miller, Geo. Chaffin, C. H. Esty, Phillipston, Mass.; Geo. Holmes, Poland, Me.; A. H. Perry, East Princeton, Mass.; A. H. Cushing, Fitchburg, Mass.; R. C. Cressy, Brattleboro', Vt.; G. W. Rell, Jr., Tamaqua, Pa.; Chester A. Bigelow, Wellesley, Mass.; Henry Newell, Frank Sweet, Ashburnham, Mass.; John Hunt, Henry Brown, West Fitchburg, Mass.

The hunting was good. Foxes were found in abundance, and, though the number killed was small, yet some of the runs were as exciting and interesting as the most exacting fox hunter could desire, and will long be remembered by those who were fortunate enough to take part in them. The weather was extremely cold, but, aside from that, the conditions of good sport were more favorable than could have been reasonably expected in midwinter. The snow was only four or five inches deep and perfectly dry. There was no crust to cut the feet of the hounds and spoil the driving. On three days out of four devoted to hunting there was not a breath of wind, and the music of the pack could be heard for miles.

Many fine hounds were present at the meet and among them are some well-known to all fox hunters as winners in the Brunswick Fur Club field trials. Those present were: CLINKER—R. D. Perry's b. and t. dog (Avent). QUILLIE—R. D. Perry's w. b. and t. bitch (Wild Goose—Native).

CAMP—R. D. Perry's b. and w. bitch (July). TRIMMER—L. O. Dennison's blue ticked dog (Buckfield—Byron).

GYPSY—C. L. Wellington's blue bitch (English blue). HUNTER—F. W. Eddy's w. b. and t. dog (Native). RECTOR—F. W. Eddy's w. b. and t. dog (Native). ROVER—W. B. Stone's blue ticked dog (Native). DIAMOND—W. R. Dean's w. b. and t. dog (Native). SAM—A. McDonald's b. and t. dog (Native). CARL—G. W. Barnes's b. and t. dog (Native). SPORT—Henry Newell's w. b. and t. dog (Native). LOUD—Henry Newell's t. dog (Native). CLAY—N. Q. Pope's w. b. and t. dog (Goodman). FLUTE—N. Q. Pope's w. b. and t. dog (Goodman). STERN—N. Q. Pope's w. b. and t. bitch (Goodman). ZACH—N. Q. Pope's w. b. and t. dog (Goodman).

The work done by the hounds during the week was excellent. Nearly all showed that they were good starters and knew how to handle their game when once it was afoot. The pack would, no doubt, have been larger had it been generally known that there was so little snow in Westminster; but there were hounds enough present to do the work, and do it well, and no more were needed. All the pack were not in the field on any one day, but the work was so divided that fresh hounds were ready each morning; a few, however, of great endurance hunted throughout the meet.

MONDAY.

Fox hunters with their favorite hounds arrived at the club headquarters singly and in groups, at all hours of the day, and when evening fell the hotel was thronged with as enthusiastic a crowd of sportsmen as were ever gathered under one roof, while the stable echoed to the voices of the pack. The day was bitterly cold and the roaring fires of the smoking room and parlor were the center of attraction; about them hearty greetings were exchanged between old friends, strangers were cordially welcomed, and that freemasonry which always exists among sportsmen, and fox hunters in particular, made all feel at home immediately.

The interest of the day centered about the annual meeting of the club which was called to order by President Heffenger at 7:30 P. M., in the parlor of the Westminster Hotel. The room was well filled with members, and in addition to the president, the following officers were present: Master of Foxhounds, R. D. Perry; Treasurer, W. B. Stone; Executive Committee men, L. O. Dennison, H. J. Given and O. F. Joslin. The first business was the election of new members, and Fred W. Eddy, West Newton, Mass., Charles L. Wellington, Waltham, Mass., and Bradford S. Turpin, Dorchester, Mass., joined the club. The reports of Secretary Baird and Treasurer Stone were read and accepted. The latter report gave the pleasant information that the club is out of debt and has a handsome balance to its credit in the Brunswick Savings Bank. H. J. Given, for the committee on charter, reported progress. President Heffenger, in his annual address, spoke of the rapid growth of the club in members and influence since its organization in February '88, and of the great interest in fox hunting and foxhounds, which has been excited by the field trials of the Brunswick Fur Club. Flattering letters have been received from English sportsmen, and in other countries the lovers of the hound have not been silent, even Finland has been heard from.

The election of officers for 1893 resulted in the choice of the following gentlemen: President, A. C. Heffenger; Portsmouth, N. H.; First Vice-President, A. B. F. Kinney; Worcester, Mass.; Second Vice-President, Henry A. Stetson, Bruns-

wick, Me.; Third Vice-President, O. F. Joslin, Oxford, Mass.; Master of Foxhounds, R. D. Perry, Phillipston, Mass.; Secretary, Bradford S. Turpin, Dorchester, Mass.; Treasurer, W. B. Stone, Waltham, Mass.; Executive Committee: N. Q. Pope, Brooklyn, N. Y.; L. O. Dennison, Waltham, Mass.; H. J. Given, Brunswick, Me.; S. Decatur, Portsmouth, N. H.

The question of changing the running rules next came before the meeting for discussion. President Heffenger was in favor of dividing the hounds entered in the trials into two packs and running these under two or three judges each on the first day. On the second day the judges should select those they wished to see run again. On the third day the hounds, which by that time would be well weeded out, should be run as one pack under all the judges. B. S. Turpin was also in favor of the spotting system, and E. W. Gill strongly supported him. N. Q. Pope suggested that the whole matter be referred to a committee, and L. O. Dennison approved the suggestion. O. F. Joslin thought that in the future no notes regarding the work of the hounds should be handed to the judges at the field trials by the members. H. J. Given supported the views of the last speaker. R. D. Perry had no doubt that the rules ought to be changed, and approved the adoption of the spotting system. The discussion was continued by Messrs. Gill, Heffenger, Dennison and McDonald, and finally the whole matter was referred to Messrs. Dennison, Perry and Turpin, with power to draw up rules for the government of the next field trials.

It was proposed that the club should join the A. K. C., and considerable discussion ensued. Many were in favor of so doing, and the question will come up for settlement at the next club meeting.

The president then called the attention of the club to the selection of suitable grounds for the fifth annual field trials. Princeton, Ossipee, Westminster and some favorable locality on Cape Cod were in turn suggested, and the selection was left to the following committee: N. Q. Pope, S. Decatur and B. S. Turpin.

A unanimous vote of thanks was given the retiring secretary, J. H. Baird, for the faithful discharge of his duties while secretary of the Brunswick Fur Club.

The president appointed N. Q. Pope, O. F. Joslin and S. Knight, Jr., as committee on membership for the year 1893. It was announced that a number of gentlemen had offered medals to be awarded at the next field trials. A. B. F. Kinney will give a medal for the hound doing the best hunting. A. C. Heffenger for the hound showing the greatest speed. O. F. Joslin for the hound doing the best trailing. Richard Seeley for the hound showing the greatest endurance. N. Q. Pope for the hound making the highest general average in all classes. The meeting adjourned at 10:30, and soon all retired so as to be ready for an early start on Tuesday.

TUESDAY.

Tuesday dawned clear, still and very cold. The thermometer registered 5° below zero in the open air and considerably below the freezing point in some of the sleeping rooms, and it was only after repeated efforts that the hunters gained sufficient courage to leave their warm beds. However, when the horn sounded at 6 o'clock all appeared at the breakfast table, and one hour later a number left the hotel for the hunting grounds attired in the thickest winter clothing, with heavy felt boots and caps pulled well down over the ears. In order to cover the country to the best advantage, the hunters divided into two parties. The first, in charge of R. D. Perry, the master of hounds, included W. R. Dean, J. A. Smith, L. E. Conant, G. W. Barnes and F. W. Eddy, and they took with them the hounds Diamond, Earland Hunter. Walking rapidly to a point just beyond the cemetery, the pack was cast off and it was not long before they began to trail. In a few minutes their fox was jumped, and led away toward the north, now and then circling and doubling in the woods and swamps. In the dry snow the pack drove slowly, but followed without any serious check to the first Gardner road, where they were at fault for some time, as the fox had cunningly run a long distance in the road before crossing. At last they were driving merrily once more, carried their game across the second Gardner road, and were heard going further and further north.

In the second party which left headquarters were L. O. Dennison, C. L. Wellington, W. B. Stone, A. McDonald and Benjamin Holden, with the hounds Trimmer, Gypsy, Rover and Sam. This division went in the opposite direction to that chosen by the first party and cast their pack off near the head of Meeting House Pond. The hounds became separated in hunting for a track, and in less than half an hour Sam had a fox up and soon after Gypsy jumped another. Meantime Trimmer and Rover were having some sport by themselves and drove a third fox across the reservoir and off to the north. A little later in the day Mr. Dennison twice saw a fox that was followed by Rover and Gypsy, but did not get a shot at it. Trimmer in the meantime was away by himself. As the day became warmer others of the club took the field and the country was well covered with hunters, but all were ignorant of the runways and so were at a disadvantage. After two or three hours' driving the hounds of both parties were far to the north of their starting point, well scattered, some thrown off altogether and others still following.

At this time as a lone huntsman stood on the crest of a hill near the school house, the youngest and one of the most enthusiastic hunters appeared. He was not more than three feet tall and, dinner pail in hand, came hastily from the halls of learning. After explaining that he was excused from school because he was sick, he exclaimed, "You come down here and I'll show you tracks, I know where they go, hurry up," and he set off down the hill at a pace that showed he had entirely recovered. Finally one of the many foxes jumped during the morning turned toward his starting point and was hemmed in by L. E. Conant, W. S. Perry and B. S. Turpin. On he came, driven by Diamond, and just as the three hunters were in a state of glorious expectation, two reports announced that J. T. Kelly, of Westminster, had shot the fox. This was the only one secured during the day and was a small vixen.

While this hunt was in progress, N. Q. Pope, with his handsome pack of Goodman hounds, had jumped a fox, which led to the south far away from any of the hunters. After dinner L. E. Conant, F. W. Eddy, W. R. Dean, W. S. Perry and G. W. Barnes made a second attempt to get a fox. Without trouble Rector, Rover and Diamond jumped their game and ran him prettily till nightfall, but no one secured the coveted chance to shoot. In the evening occurred one of the pleasantest events of the week, and the musical talent of the club won new honors, and fairly covered itself with glory. The many soloists were accompanied with piano, flute, violin and bones, the whole club gave tongue lustily in the chorus and the time passed all too quickly.

WEDNESDAY.

The sun rose as clear on Wednesday as it had on Tuesday, there was no wind and the weather was warmer—only four degrees below zero. The hunters, under the direction of the master of foxhounds, divided into two parties. One, containing L. E. Conant, H. A. Dwyelle, A. McDonald, L. O. Dennison, C. L. Wellington and W. B. Stone, with the hounds Trimmer, Gypsy and Hunter, started east from the village. Not far from the hotel the pack was cast off and soon the air was full of music. At first the hounds seemed to be all following the one fox, but soon they separated and it was seen that three foxes had been jumped and each hound had taken one. With three foxes running for their lives before three good hounds it was difficult to pick out the best place to wait. Soon A. McDonald heard Gypsy driving her game through a little valley, and started on a run for the crossing,

As he came in sight of the desired spot he saw that H. A. Dwelle, one of the veterans, already occupied it. As he was on the point of turning back a fourth fox, a stray one, jumped into the road between him and Mr. Dwelle. Reynard was too far away for the Rockland sportsman to shoot him, but he fired with the hope of turning him toward the Waltham hunter. The trick worked well. Up the road dashed the fox directly to Mr. Dwelle, who easily secured him.

Meantime Trimmer, further east, was running a fox that played in the pines for a couple of hours, circling many times around L. O. Dennison, who failed to get a shot, though he tried hard to be in the right place at the right time. Further west Rover and Gypsy had now united on one fox and their joint efforts were sending him along at a merry clip. Not far from a small pond A. McDonald fired one barrel at him at long range, and soon after L. E. Conant gave him two shots, and that excellent marksman has not yet been able to explain how he missed him. A little later in the day a local hunter fired two more shots at the same fox and how the chase ended is not known. It is fair to presume that he went into the ground, for it is certain that he was not born to be shot. Gypsy came home from this run badly torn by barbed wire.

About 11 o'clock, George Holmes and B. S. Turpin came on to this hunting ground with the hounds of the White Oak Hill Kennels, after a long and tedious tramp north of the village. The Goodmans were trailing prettily when they heard Trimmer far in the distance driving his fox; as he came nearer they left their cold trail, barked to him, and away they all went on the hot track with a ringing chorus that set the blood bounding through the veins of all who heard them. Over the open fields and into the woods they drove far to the east. A number of the hunters on the summit of the hill listened to the music rising and falling on the frosty air; the whole region was spread out at their feet and not for a moment was the pack out of hearing. As the hounds came through the valley on the next circle, the fox left the long pine swamp just out of shot from B. S. Turpin, and again took up over the hill and away once more to the east.

As the music grew fainter and fainter to those listening to the chase from the hilltop, two shots, fired by L. O. Dennison, were heard far in the distance, but still Reynard flew on. The next time he came around to the hill W. B. Stone, who had spent all day there and had not been out of hearing of driving hounds even for a moment, took a long shot at him. Badly frightened, the fox dashed up the hill and over the open fields to cover. He had now been running nearly seven hours, had been steadily driven all the time and had been shot at twice. He was both tired and frightened, and with a wonderful burst of speed, he led straight away for his burrow and was soon out of the reach of the pack. C. L. Wellington found the den, with the hounds curled up on the ground at its mouth. The drive was one of the best of the week. All the hounds did well, but special praise should be given to Steve, a Goodman, only eighteen months old, who ran steadily with the pack to the finish, though he had been in a race several hours on Tuesday and had not found his way home till 4 o'clock on Wednesday morning.

In the second party which left the hotel in the morning were R. D. Perry, R. C. Cressy, O. F. Joslin, W. R. Dean, W. Perry, F. W. Eddy and a number of others, with them went Clinker, Quiltie, Camp and Hunter. The hounds were cast off west of the town, and Hunter soon had a fox afoot. He drove Reynard prettily for some time, and as he came over the crest of a hill F. W. Eddy got a long shot at him, but without success. Soon after Quiltie, Clinker and Camp barked to Hunter. The great speed of this trio is well known and Hunter, who is true but slow, soon found himself in too fast company. The flyers drove beautifully at a great pace for four hours, and finally lost their fox on the town road. Neither the hounds nor their owner could find where he had left the road, though they followed it for more than a mile.

This day will be marked on the calendar of the Brunswick Fur Club with a red letter; not for the marksmanship displayed by its members, but for the fine work of the hounds, the abundance of foxes and the perfect weather for winter hunting. During the evening a telegram was received from Geo. G. Garrett, Columbus, Ga. It extended to the club the best wishes of its Georgia friends for the success of the meet. Mr. Garrett was present at the field trials last fall, and the club hope to have the pleasure of seeing him at many of its meets in the future.

THURSDAY.

At daylight snow was lazily falling and the thermometer stood at four degrees above zero; about 8 o'clock, however, the sun broke through the clouds and looked down on a perfect hunting morning, clear, cold and still. The hunters, for the first time during the meet, all started together and went to the hill where such splendid sport was enjoyed yesterday. Choosing favorable stands they waited for the hounds to begin the driving. J. O. Dennison put Trimmer in near the pond, F. W. Eddy with Rector and Rover went north of the hill, W. R. Dean and C. L. Wellington cast off Diamond and Gypsy in the long pine swamp and A. McDonald set Sam loose further west. After a long silence Trimmer was heard trailing in the distance and soon a yell told that he had jumped his fox. Rover and Rector meanwhile trailed rapidly to cover east of the hill, and soon were heard tonguing merrily as they drove their game in the distance.

Gypsy and Sam worked well together, and in a short time they too had a fox afoot. Diamond was out of luck and failed to make a start. The hunters on the hill, which fairly bristled with guns, were on the alert as soon as the first fox was jumped. But the quarry had learned a lesson on Wednesday, and had no intention of being swept from the face of the earth by the fire from the hill. The foxes led straight away for unknown fields; Gypsy and Sam drove toward Fitchburg, and those who attempted to follow and get into the line heard their ringing notes for only ten minutes, and where they went and what they did no one knows. Rover and Rector ran a bee-line toward Princeton, and Trimmer went in the same direction. When the hounds had gone out of hearing and failed to circle as expected, it became evident to those on the hill that they must hurry on, if they intended to be in the hunt. They started at once in the direction taken by the hounds, but not a note could be heard, and after listening on the hills for some time, all, with one or two exceptions, returned to headquarters for dinner.

After a hasty meal a number of the hunters who were unwilling to lose a whole day's sport, took Hunter and cast him off a short distance beyond the cemetery. He hunted a number of coverts to no purpose, but at last his grand voice rang out in full cry. The hunters quickly separated to find good stands, but before they were stationed the music ceased as quickly as it had begun.

Col. J. F. Thornton, on whose ranch the trials started, was a close attendant on horseback, and took a lively interest in the respective qualities and training of the dogs. Capt. A. A. Bogan, an ex-journalist of New Ulm, Minn., attended with his dogs and took in Texas ranch life with joy and pleasure. The Captain is not yet too old to become civilized to the mild tropics of Texas.

B. M. Chambers, of St. Louis, Mo., who has traveled the wide world over made his first visit to Texas and to the trials. He became an enthusiast in praise of our Texas climate, and will carry away some grand impressions of the Lone Star State.

W. H. Wheeler, of Hempstead, Texas, made a visit to the trials and left highly pleased.

Hermann Breusing was the only newspaper representative on the grounds.

FRIDAY.

The wind whistled and shrieked about the hotel all night, but the sun rose in a cloudless sky and the thermometer stood at ten degrees above zero. Though the temperature was higher than it had been before during the hunt, yet this strong west wind made the day the most uncomfortable of the week. But the discomfort was but a trifle compared with the fact that the gale made it impossible for the hunters to hear the hounds, unless the pack was directly to windward or very near. But the B. F. C. cannot be dismayed by unfavorable weather, and at the usual time the party left the hotel. A part of the hunters started on the Worcester road with Hunter, Trimmer, Gypsy, Sport and Loud. The hounds were put out just beyond the pond and almost immediately went out of hearing. Soon after Messrs. Eddy, Conant and Turpin saw a fox on a hillside more than a mile away. Expectations rose at once in the belief that the pack had jumped him, but, no hounds appearing, it became evident that he was a stray fox; and then the temperature seemed to fall even lower than before. Occasionally a hound could be heard far away for a moment, but no one succeeded in getting into the hunt except C. L. Wellington and W. B. Stone. They had an hour's sport with a fox driven by Gypsy, but neither got a shot, and finally Reynard made his escape over the crest of a hill, where the wind filled his tracks with snow and entirely obliterated them.

Henry Newell, who had lost the rest of the party, had a novel hunt by himself. Walking along the road he saw two foxes in a field, one following the other. There were no hounds after them and they soon disappeared in the cover. Not long after he caught sight of another fox coming directly toward him. There was no opportunity to hide, and standing perfectly still he had the satisfaction of seeing the fox come within 50 yds. Then Reynard caught sight of his foe, but did not turn quickly enough to escape a charge of shot. Though hard hit he disappeared in the brush. Mr. Newell thought him mortally wounded, and followed the track a mile or more, but failed to come up with his game. Unfortunately he had no hound to put on the track, though two of his were in the hunt. Other hunters had started in the morning with Clinker, Quiltie and Camp, and their experience was a repetition of that of the first party. A fox was started, but the hunters lost the hounds and returned early to headquarters.

This hunt ended the winter meet of the Brunswick Fur Club. The prizes offered for the first fox shot, the largest number of foxes shot, and the largest fox shot, were all won by H. A. Dwelle, of Kendal Green, Mass., who killed one on Wednesday. Some of the club members had gone home on Wednesday and Thursday; a number departed on Friday and by Saturday noon Westminster had resumed its accustomed quiet.

BEXAR FIELD TRIALS.

[Special Report.]

A GATHERING of a large number of gentlemen at the depot of the San Antonio & Arkansas Pass Railway on last Sunday afternoon seemed to indicate something unusual, even to the ordinary observer, at the time of departure of the south bound train.

Among several groups the theme of conversation was pointers and setters in particular and dogs generally. They were members of the Bexar Field Trials Club and their friends bound for Floresville in Wilson county to attend the third annual trials to be held at and near the Thornton ranch near that city on Monday and Tuesday last.

The canines had been forwarded before to the battlefield, and the party, after arriving at Floresville continued their trip to the country, some six or seven miles southwest of Floresville, where quarters had been secured at the residence of Col. J. F. Thornton, Mr. Timberlake and W. A. Coughran. Messrs. A. M. Young, of Manchester, Tenn., and W. G. Pilkinton, of Pilkinton, Va., are the two gentlemen who had agreed to come and act as judges, and though they had sent word not to make any other arrangements, did not materialize after all, nor yet seemed to have thought of it of sufficient importance to wire their inability to come. They were tendered the thanks of the club for non-appearance.

Your correspondent was specially requested by the ladies not to say anything of glowing, flushing faces from the sun, indeed they would have put a full blown damask rose to shame.

Mrs. C. M. Rounds was a fine hostess and proved herself to be a first-class equestrienne in the hunt.

The two Misses Thornton made an excellent record as true American girls, keeping at close quarters, afoot, with the hunters and dogs, and outdid the "other fellows" in quick runs.

Mr. and Mrs. W. A. Coughran, our host and hostess, and Miss Timberlake were in attendance at the first day's sport. Col. J. F. Thornton, on whose ranch the trials started, was a close attendant on horseback, and took a lively interest in the respective qualities and training of the dogs.

Capt. A. A. Bogan, an ex-journalist of New Ulm, Minn., attended with his dogs and took in Texas ranch life with joy and pleasure. The Captain is not yet too old to become civilized to the mild tropics of Texas.

B. M. Chambers, of St. Louis, Mo., who has traveled the wide world over made his first visit to Texas and to the trials. He became an enthusiast in praise of our Texas climate, and will carry away some grand impressions of the Lone Star State.

W. H. Wheeler, of Hempstead, Texas, made a visit to the trials and left highly pleased.

Hermann Breusing was the only newspaper representative on the grounds.

MONDAY.

The morning dawned bright and clear, and immediately after sunrise every one was alive and full of expectation of

coming events. There were three stakes to be run for, with entries as follows:

PUPPY STAKE.

For dogs under one year of age that have never run in any trials. Entrance \$5 to start. Retrieving not required. Rod's Deuce—West End Kennels, San Antonio, Tex. Rod's Clip—West End Kennels, San Antonio, Tex.

DERBY STAKE.

Open to setters and pointers not having won first in any recognized field trial be eligible to enter. Entrance \$10, \$5 to nominate and \$5 to start. Retrieving not required.

Argentine—A. J. Ross, Dallas, Tex. Rushmore—J. Leicht, Victoria, Tex. Modoc—F. F. Myles, New Orleans, La. Shell—H. W. Adams, San Antonio, Tex. Waif—Mrs. C. M. Rounds, San Antonio, Tex. Count Noble III.—A. A. Bogan, New Ulm, Minn. Lady Spot—S. Vieth, San Antonio, Tex.

ALL-AGE STAKE.

Open to setters and pointers not having won first in any recognized field trial. Entrance \$10, \$5 to nominate and \$5 to start. Retrieving required.

Jesse James—F. F. Myles, New Orleans, La. Jack the Ripper—F. F. Myles, New Orleans, La. Modoc—F. F. Myles, New Orleans, La. Barney—J. M. George, San Antonio, Tex. Daisy Hope—W. G. Bering, Valda, Tex. Manitoba Frisk—West End Kennels, San Antonio, Tex. Duchess of Kent—West End Kennels, San Antonio, Tex. One Loustar—J. Leicht, Victoria, Tex. Force—Edgenot Point Kennels, Victoria, Tex.

Trials to be run under Bexar Field Trials Club rules. Entrance money in each stake to be divided as follows: 50 per cent. to first, 25 per cent. to second and 15 per cent. to third, 10 per cent. to be retained by the management for expenses.

Puppy Stakes.

The Puppy Stake was an innovation in field trials and never yet has been undertaken by any organization. The stake was brought in for the purpose of encouraging the breaking of puppies, and owing to the newness of the idea had but few entries. Geo. Chabot, the enthusiastic secretary of the club, had intended to enter his Tobias Twinkler, but the pup was not in proper condition for work. In consequence the run was left to Rod's Deuce and Rod's Clip, as Count was also spotted out. Deuce outranged and left Clip second. These are bright and promising pups and will make their mark in the future. They are only ten months old.

Derby.

First Series.

WAIF AND ARGENTINE.—They were cast off at 10:22 and taken up at 10:41. Run on spotting system there was hardly enough work done to determine which was best, but both showed good and efficient work. They each marked two beavies of birds.

MODOC AND LADY SPOT, the latter of your "Pedro," were the next and were cast off at 10:50 and taken up at 11:23. The first, after chasing a rabbit, showed best range and speed; after an eight-minute run pointed a covey of birds. Lady was brought back to order. Modoc again pointed, and while Lady was chasing a rabbit could not be gotten back and Judge McCartney ordered a flush.

RUSHMORE AND COUNT NOBLE III. were next in order and started at moderate speed. After running five minutes Bush found a covey, while Noble brought up the rear. Both dogs were steady. Noble went to a flush and pointed while loading. Birds flushed wild.

SHELL ran a bye. Started off at 12:10 and after running fifteen minutes was ordered up.

Second Series.

WAIF AND MODOC showed to be the best brace in the run so far, birds were plentiful, a good deal of point work was done by both dogs, and they acquitted themselves well. Modoc showed more style and bird sense after running forty minutes. Modoc was awarded first ribbon and Waif second.

Lunch had been provided by some of the lady attendants, and was served by them in first class style to about seventy-five people at George Coughran's water tank. Viands were plentiful. Hot coffee was soon made and handed out by Mrs. C. M. Rounds, assisted by Miss C. Thornton and Miss Mary Thornton. Served as it was, it was equal to the "nectar of the gods." Much like the "seven loaves and fishes," there was plenty left after everybody's appetite had been appeased.

SHELL AND ARGENTINE were the next in order; and were cast loose at 1:50 p. m. After running fifty-seven minutes there were no birds and the dogs were called back, shifting ground about two miles, and Lady Spot was added. After another thirty-five minutes run, Spot came to point, the other dogs called to back. After birds were flushed Argentine came to point, and the other dogs called to back, and Lady Spot flushed. The judges gave third prize to Argentine. Adjourned for the day.

TUESDAY.

All-Age Stake.

First Series.

BARNEY AND JESSE JAMES were first put down Tuesday morning. After very good ranging Jesse came to point. Barney ordered to back. Mr. McCartney ordered to shoot, which he did, but missed. Both dogs charged at the instant. Started again; after twenty minutes' run Jesse came to another point and Barney was ordered to back but was unwilling to do it. McCartney was ordered to shoot and kill, which he did, and Jesse retrieved very nicely. The dogs were started again and had gone but a short distance when both handlers claimed a point; the handler of Barney was a trifle ahead in claiming point, which was granted, and he was then requested to shoot and kill, but missed. The dogs were started again; Jesse was outranging Barney and went along in much better style in beating the ground more completely. The judges spotted Barney out.

JACK THE RIPPER AND DUCHESS OF KENT came next. The dogs started with lightning speed; Duchess came to point and Jack was ordered to back, which he did nicely. The handler of Duchess was ordered to shoot and kill, but missed; both dogs steady to shot. Ordered out again and running but a short distance Jack came to point and Duchess was ordered to back, but Jack had flushed his birds before dogs started to work on scattered birds, in which Duchess showed superior merit over Jack and the judges, convinced that Duchess was far superior, spotted out Jack the Ripper.

MODOC AND COUNT NOBLE III.—After 45 m. run only one bird was found by Modoc. Count Noble when ordered to back flushed the bird and chased it. The dogs were started again, and after 20 m. run no birds being found, the judges spotted both dogs out; as they saw that both had no chance whatever, though Modoc had done some good work the day before.

During this heat Manitoba Frisk was ordered to run a bye of 15 m.

Second Series.

BARNEY AND JACK THE RIPPER now came in, but after a run of 1 h., no birds were found. Jack outranged Barney; the dogs were called up and spotted out.

MANITOBA AND JESSE JAMES started at lightning speed

* There were puppy stakes at the American Field Trials Club trials, at Columbus, Ind., 1892.

and in 3m. struck a couple of beves of birds upon the same ground which the other dogs had just left, Manitoba coming to a point first, and Jesse James backed. Mr. Rounds, the handler of Manitoba was ordered to shoot and kill but missed; both dogs charged at the same time. Ordered out again they struck birds at once, at the same time. The handler of Jesse James was ordered to shoot and kill which he did, but dog refused to retrieve. It was claimed that the animal had not been taught to retrieve. Both dogs went out again with Manitoba in the lead and came to a point at once. Jesse James was ordered to back, which he did nicely. The dogs had been run for some time, when the judges called them in and an adjournment for lunch was agreed upon. Thus ending two of the finest sport days in this State. The prizes were awarded as follows:

Manitoba Frisk first; Duchess of Kent second; Jesse James third.

PACIFIC COAST FIELD TRIALS.

BAKERSFIELD, Cal., Jan. 16.—The trials that commenced here give promise of being the best ever held on this coast. A party of twenty-two arrived here this morning from San Francisco to find nine other brother sportsmen already here from Los Angeles. Besides the large number of local enthusiasts upon the field to-day there are some forty-eight sportsmen from all over this State and Nevada, many of them accompanied by ladies.

At a meeting of the executive committee this morning it was decided to change the order of the running of the stakes, running off the Derby first, following with the All-Age and finishing with the Members' Stake.

At about 1 P. M. a party of about sixty left the Southern Hotel, which is always the rendezvous of the club, for the grounds. Among the party were the officers of the club, President, J. G. Edwards; Secretary, J. M. Kilgariff, P. D. Linville and Wm. Schreiber, of San Francisco; J. M. Bassford, of Vacaville, members of the Executive Committee, and Geo. Crocker, W. S. Kittle, M. Sperry, H. J. Kilgariff, F. J. Norris, Dr. F. W. Skaffe, A. Russell Crowell, C. W. Kyle, G. P. Hubbard, W. H. Schockley, Robert Liddle, Thos. Higgs, Henry Huber, of San Francisco; J. C. Cline; W. G. and A. P. Kerckhoff, E. B. Tufts and F. S. Schumacher, of Los Angeles; Judge Post, of Sacramento; J. W. Harper, of Suisun; L. P. Thibault, of Montana; O. H. Allison, of Elmhurst; J. B. Banning, of Wilmington; Rev. W. H. Knowlton, of San Mateo, and others.

The judges of the trials are: R. T. Vandervoort, of Pasadena, D. M. Pyle, of Bakersfield, and Wm. Dormer, of San Francisco.

The handlers are: G. T. Allender, of Watsonville; D. M. Walters, of Galt; H. M. Farmer, of North Ontario; Wm. De Motte, of Raymond, and Chas. Stundarns, of Sacramento.

The Derby.
First Series.

Of the forty-seven original entries to this stake, 18 have paid the second forfeit, against 8 last year—12 pointers, 5 English setters and 1 Gordon.

SPORTY BOY AND JOHANNA.—The first brace was put down in short, low cover, about four miles south of town, on the grounds used last year for the Members' Stake, at 1:45 P. M. Mr. Howard Black's liver and white pointer dog Sporty Boy, by Duke of Vernon—Patti Croxeth, was handled by G. F. Allender, and the California Kennels' English setter bitch Johanna, by Gladstone II.—Janet, by R. M. Dodge. Johanna soon proved to be much the best in style and pace. Both were under good control. Johanna made game first, but the spectators were a little too near, and before she could locate the bird it was flushed by the crowd. Going on a few rods further, Johanna pointed, but broke the point and a small bevy flushed. Sporty Boy, working over the same ground at the same time, did not make a semblance of a point, and finally returned to handler and refused to go out. After a short walk the judges flushed a brace, the dogs were called to the spot and the ground hunted over. Neither of the dogs could find, but the judges and handlers found several. On being removed to new ground, Sporty Boy made a semblance of making game, a small bevy flushed all around him and he dropped and crawled back to handler. Ordered up at 2:15, Johanna won the heat.

COUNTRESS NOBLE AND DOCTOR P.—H. T. Payne's English setter bitch Countess Noble, by Stanford—Lilly C., handled by owner, and Jas. E. Watson's black pointer Doctor P., handled by D. M. Walters, were put down at 2:25. Both dogs ranged out splendidly from the start. Doctor returned quite often to his handler, Countess in the meantime working independently and keeping up her hot pace. Not finding any birds the dogs were ordered up at 2:40. After driving about a mile they were again put down at 3 P. M. Countess made game immediately, roared nicely and came to a staunch point. Doctor P. circled around her in front and behind, but not making game. The handlers put up a big bevy. Moved on a few rods Countess secured two more points in rapid succession. Doctor P., when called up to back, refused to do so, but catching scent of the same birds pointed staunchly. Walters shot, and both dogs dropped to shot. Countess's points are snappy and stylish. Her style on point is superb. The dogs were ordered up at 3:15. Countess was easy winner of the heat. Her work in roading and general bird sense is of unusual quality.

TRAMP AND CARMEL.—W. W. Foote's lemon and white pointer dog Tramp, by Pat P.—Donna Blanks, handled by Walters, and Henry Huber's liver and white pointer dog Carmel, by Beppo III.—Sally Brass II., handled by Allender, were put down near a bevy recently located at 3:25. Tramp showed a trifle the best range and speed and seemed to be hunting, but neither of the dogs did anything worth mentioning. Both ran over birds and all around them. Carmel flushed a big bevy. Apparently both dogs had left their noses at home. Walters yelled point after the dogs had been down about 30m. and Tramp dropped as if shot; a bird started up about the same time and the point was allowed. The dogs were immediately ordered up and the heat given to Tramp.

BROWN BETTY AND JAVELIN.—H. M. Tonner's brown pointer bitch Brown Betty, by Bruner's Nig—Amaryllia, handled by owner, and W. H. McKittick's white, black and tan English setter dog Javelin, by Gladstone II.—Janet, handled by Dodge, were put down at 4:10. Betty pointed where bird had just left, immediately after being put down. Both dogs went to hunting merrily in high cover; Javelin started to chase a jack rabbit but answered his handler's call quickly. He ranged the best of the two at first but Tonner whistled in his bitch whenever she ranged out much. After being down some time Betty proved fully equal in range, and much the superior in style and pace to the other. Betty false pointed once or twice but gives promise of doing good work on game. She shows the work of a careful handler. This is Mr. Tonner's first appearance in our trials here and the impression given is very good. Dogs ordered up at 5 P. M. and heat undecided.

A bona fide new subscriber sending us \$3 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$3 value for \$3.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

DES MOINES DOG SHOW.
(Special Report.)

THE first annual dog show, given by the Des Moines Poultry and Pet Stock Association, was held Jan. 10 to 13. It was a success in every particular and will do much toward advancing kennel interests in Iowa. The show was well patronized, although the weather was the worst we have had this winter.

The State Agricultural Society and the Iowa Breeders' Association were both in session in the city, which helped to give the association a very favorable reputation throughout the State.

At the annual meeting, which was held during the show week the name of the club was changed to the "State Poultry and Kennel Club" and one-half the offices given to the dogmen; this insures the giving of a larger and better show next year. The club could not give a large show this year on account of not being able to secure proper accommodations, but as contracts have already been let for a large auditorium there will be no difficulty on that score next winter.

There were sixty-eight dogs entered, and all but one were present. The quality of the dogs in most of the classes was good, but there were some rather poor ones out as usual. The mastiffs were good and some of them showed considerable quality. The St. Bernards, though few in number, were fine specimens. Laurence Garza, owned by M. Hilger, of St. Joseph, Mo., is out of the great sire Alton, by Judith, and is a good one. Three of the four Great Danes exhibited were very typical.

There were some very handsome English setters present, two in particular that would be in the money in almost any show. In Irish there was one rattling good one that may be brought out at Chicago next month. The quality of the collies was good; so was that of some of the smaller breeds. The club did its own best thing. The dogs were fed with Spratts dog cakes and Sanitas was the disinfectant used. Mr. F. H. Perry judged all classes and gave general satisfaction. Everything passed off pleasantly and the boys are anxious for another year to roll around. The following were the awards:

MASTIFFS.—Dogs: 1st, L. D. Rood's Maximilian; 2d, F. M. Blackman's Lance II. Very high com. reserve, A. L. Moeller's Dom Pedro. Very high com., W. C. Pipino's Don. Bitches: 1st, L. D. Rood's Lady Clare. Puppies: 1st, Wm. M. Lewis's Sampse. Bitches: 1st, J. A. Colby's Donna.

ST. BERNARDS.—ROUGH-COATED.—Dogs: 1st, Dr. G. M. Chappell's Lion; 2d, J. C. Ford's Luce Flora. SMOOTH-COATED.—Dogs: 1st, M. Hilger's Laurence Garza.

GREAT DANES.—Dogs: 1st, C. F. Huttenlocher's Colonel; 2d, Alva Green's Cesar. Bitches: 1st, J. C. Ford's Lady Inca; 2d, R. H. Lyman's Lady Jane Grey.

NEWFOUNDLANDS.—1st, G. P. Jennings's Rover; 2d, J. A. Lewis's Carlo.

GREYHOUNDS.—1st, W. Weatherly's Blueher.

FOXHOUNDS.—1st, F. C. Lewis's Jack.

POINTERS.—OVER 50LBS.—Dogs: 1st, A. J. Zwart's Dr. Jekyll.—UNDER 50LBS.—Bitches: 1st, F. C. Whitney's Lena Fly; 2d, M. Bruse's Furgent.

ENGLISH SETTERS.—Dogs: 1st, N. Lichty's Zippo II.; 2d, A. J. Zwart's Sancha. Bitches: 1st, C. O. Perkins's Chic; 2d, Burnett & Perkins's Dot. Puppies: Dogs: W. Burnett's His Royal Nibs; 2d, R. B. Cottrill's Young Climax. Very high com., O. E. Pearson's Don Pedro. Bitches: 1st, J. E. Stout's Susie; 2d, J. A. Morris's Samol II.

IRISH SETTERS.—Dogs: 1st, H. C. Hansen's Dan; 2d, R. B. Cottrill's Robin. Bitches: 1st, J. Mitchell's Mitchell's Nell.

GORDON SETTERS.—1st, C. Knowlton's Drake.

FIELD SPANIELS.—1st, R. H. Lyman's Daisy; 2d, Will H. Retter's Jet Black.

COCKERS.—Dogs: 1st, O. D. Carnes's Bonnie Boy Blucher. Puppies: F. A. Allen's Keno.

IRISH WATER SPANIELS.—1st, M. F. Carss's Ted Ballow.

COLLIES.—Dogs: 1st, W. Souers's Frederick. Bitches: 1st, J. C. Ford's Lady Al De Bar; 2d, Lassie Jean. Puppies: 1st, L. L. Talbot's Bruce; 2d, Watters's Clute.

POODLES.—C. F. Handy's Flake.

BULLDOGS.—1st, F. C. Neafie's Sunlight; 2d, J. H. Harris's Grip.

BULL-TERRIERS.—Dogs: 1st, Jack. Bitches: 1st, W. R. Watterman's Thurlless Girl. Puppies: Equal 1st, A. W. Fellow's Crib and Ed. Powers's John L.

FOX-TERRIERS.—Dogs: 1st, Dr. W. Hutchinson's Pukka Neb; 2d, Mr. Bailey's Rex; J. L. Thornton's Dixie. Bitches: 1st, L. V. Dunham's Judith Ellen; 2d, Mr. Bailey's Cate. Puppies: 1st, H. M. Jones's Zealand.

SCOTCH TERRIERS.—1st, C. W. Barwell's Velvet.

BLACK AND TAN TERRIERS.—1st, J. C. Ford's Jerry. 2d, H. D. Johnson's Cate.

YORKSHIRE TERRIERS.—1st, J. C. Ford's Peek-a-Boo.

PUGS.—Dogs: 1st, H. H. Lyons's Hippathera; 2d, C. E. Whittier's Hal. Bitches: 1st, J. McGregor's Daisy.

MISCELLANEOUS.—1st, Mrs. F. E. Stutsman's Pomeranian dog Moffet.

INDIANAPOLIS DOG SHOW.
(Special Report.)

THE seventh annual exhibition of the Indiana Poultry Association was held at Tomlinson Hall, Indianapolis, Jan. 12 to 18, 1898.

A dog show has been held in connection with the Poultry Association for several years past, and has generally been well patronized, especially last year, but owing to the extreme cold weather just previous to and during the show, the poultry exhibit was not as large this year, although the quality was excellent, and there was a noticeable falling off in the number of entries in the kennel department for the same reason. Many of the entries were not present on account of the owners being afraid to wash their dogs or ship them, hence most of the dogs shown were owned in this city, although Mr. J. L. Glascock, of Fowler, Ind., E. Leon and Thos. Ambrose, of Liberty, Ind., each had dogs on exhibition.

It is safe to say that there is no city in this country where there are as many fine dogs owned in proportion to the population as in Indianapolis and their owners rightly deserve censure for not patronizing this show. The officers of the Poultry Association are anxious to make their kennel department a special feature and solicit membership from the "doggy" men of Indianapolis to whom they offer great inducements for a good dog show. Tomlinson Hall is well lighted and thoroughly heated and ventilated, and could accommodate the largest show held in the United States. A first class show under proper management held at the right time would be well patronized by the people here, and without doubt at least pay expenses.

The officers of the association are: B. F. Hill, President; A. E. Meredith, Secretary; W. L. Hagedorn, Treasurer; J. E. Dougherty, Superintendent of dog show, and too much cannot be said of the efforts of these gentlemen (all of whom with the exception of Mr. Dougherty are poultry men) to please and make their exhibitors happy.

It is all new business to the secretary, Mr. Meredith, but he attends to his duties faithfully and correctly, never being too busy to answer the many questions incident to such an office; but much of the burden is lightened by his genial wife who assists him, and in fact took sole charge of all the entries.

Mr. Dougherty was present early and late administering to the wants of his canine friends and must be highly commended for his attention and painstaking.

"Sanitas" disinfectant was effectually used in poultry and kennel departments and the cleanliness was particularly noticeable. The benching, though rough, was good, and all dogs were given ample room.

That estimable gentleman, Mr. Frank C. Wheeler, judged all classes, and his awards gave general satisfaction and he will long be remembered by all who had the pleasure of meeting him. We learned for the first time that Mr. Wheeler is a poultry crank as well, but his fancy leans to the "pugilistic" varieties.

As the entry blanks used did not provide for breeding or name of the dogs the same was unavoidably omitted in some cases.

Among the dogs worthy of special notice is A. A. Anderson's Irish setter dog Quaker Tom, which is far ahead of the average and a good specimen.

J. W. Springsteen's Newfoundland dog Pluto, imported from Lapland, is undoubtedly one of the largest and best in this country.

J. B. Heywood's mastiff dog Carlo is a good type, although tail is a little shaggy and in movement rather loggy.

Wm. Patton's great Dane bitch Jumbo has good coat, fair head, but is too short in legs; his dog puppy Major promises well, but will never make a large dog.

G. W. Stewart's English setter dog was the best English setter shown, and is a fine large dog, well feathered, with elegant carriage.

Joseph Becker's English setter bitch Queen Regent is a fine well built dog of small type.

E. R. Leach's collies Gladys and Zippie were fair specimens and would pass muster in good company.

LIST OF AWARDS.

MASTIFFS.—1st, E. W. Bronson's Prince Caution; 2d, J. B. Heywood's Carlo. Very high com., H. E. Heine's Bruno.

ST. BERNARDS.—ROUGH-COATED.—1st, P. Travers's Spruce. Puppies: 1st and 2d, Mrs. E. M. Chamber's dog and bitch.

GREAT DANES.—1st, Wm. Patton's Jumbo. Puppies: 1st, Wm. Patton's Major.

FOXHOUNDS.—Dogs: 1st, W. G. Burnhart's dog. Bitches: 1st, W. G. Burnhart's bitch; 2d, Wm. Zaisen's Nellie.

ENGLISH SETTERS.—Dogs: 1st, G. W. Stewart's dog. Bitches: 1st, J. Becker's Queen Regent; 2d, J. L. Glascock's Gay. PUPPIES.—Dogs: 1st, J. A. Soltan's Little Bennie; 2d, B. Garver's Dick. Very high com., J. Becker's Spot. Bitches: 1st, J. Becker's Crickett Blaine; 2d, Geo. Hamilton's Ruth B. E. Very high com., E. Leon's Belle.

COLLIES.—Dogs: 1st, Tweed. Bitches: 1st, E. R. Leach's Gladys. Puppies: 1st, E. R. Leach's Zippie.

IRISH SETTERS.—Dogs: 1st, A. A. Anderson's Quaker Tom; 2d, G. L. Jones's Hoosier Jack. Very high com., M. Crosby's Boss. Bitches: 1st, A. A. Anderson's Frankie. Puppies: 1st, G. L. Jones's Gladstone.

NEWFOUNDLANDS.—1st, J. W. Springsteen's Pluto.

PUGS.—Dogs: 1st, W. W. Sutherland's Cate. Bitches: 1st, D. C. Bryan's Queenie.

TOY TERRIERS.—1st, M. Ryan's Axtell.

BEAGLES.—1st, Thos. Ambrose's ——— C. K. F.

DOG SHOW AT DETROIT, MICH.
(Special Report.)

THE Michigan Poultry and Pet Stock Association gave their annual show in the Auditorium Jan 10 to 13, with a very large and choice entry of poultry, with dogs as an extra attraction. There were 127 entries of dogs, with all classes pretty well represented. Although the dogs were nearly all owned in Detroit or its immediate vicinity, there was some very good quality in some of the classes that will make a good showing at the show held here next March. In the St. Bernards some good ones were shown, the winner, a fine young dog owned by L. Tichenor, of Chelsea, Mich., is by Casper, and will be heard from later. In the spaniels there were 23 entries, with Bendigo and Busy in the challenge classes. The winners in open classes were above the average quality, and will be shown again.

Dr. Lansing, of Detroit, made a very pretty exhibit of Italian greyhounds.

The show was fairly well attended, considering the stormy and extremely cold weather, and every one was pleased with the exhibit. A great many were surprised to see the improvement in dogs in the last few years, and the show seemed to stir up an interest in dogs, so that I shall not be surprised to see some first class dogs owned in Detroit before long. Mr. John Davidson judged all classes, and Tom Blake superintended, and the association was well pleased with the way that the show was conducted.

AWARDS.

MASTIFFS.—Dogs: 1st, Desire B. Willenhi's Romeo. Bitches: 1st and special, Tracy Bros. Belle of Detroit; 2d, Tracy Bros. Beantula. Puppies: 1st, N. W. Vannier's Matchless.

ST. BERNARDS.—ROUGH-COATED.—Dogs: 1st and special, L. Tichenor's American Caesar; 2d, Belle Isle Kennels' Earl Douglass. Very high com., Lidgetwood Bute. Bitches: 1st, Belle Isle Kennels' Fernwood Urania; 2d, Thos. Jones's Lady Linoud. Puppies: 1st and 2d, Dr. McCollum's Lord Bute, Jr. and Prince Royal.

ST. BERNARDS.—SMOOTH-COATED.—1st withheld; 2d, E. H. Donnelly's Juno.

GREAT DANES.—Dogs: 1st and special, Wolverine Kennels' Brutus and Pascha. Bitches: 1st and special and 2d, Wolverine Kennels' Young Pearl and Iris.

NEWFOUNDLANDS.—1st withheld; 2d, P. F. Ryan's Jack.

POINTERS.—1st, E. J. Barrett's Sailor.

FOXHOUNDS.—OVER 50LBS.—Dogs: 1st, Washtenaw Kennels' Quick; 2d, A. J. Van Patten's Don M.—OVER 50LBS.—Bitches: 1st, A. J. Van Patten's Tilley.—UNDER 50LBS.—Dogs: 1st and special, George Huntington's Juniper; 2d, Wm. Geneker's Bit Bang.—UNDER 50LBS.—Bitches: Wm. Predhomme's Rosy P.—PUPPIES.—Dogs: 1st, Washtenaw Kennels' Kent of Washtenaw. Bitches: 1st, J. Van Patten's Bell.

ENGLISH SETTERS.—Dogs: 1st and special, E. Smith's Max Noble; 2d, Washtenaw Kennels' Albert Gladstone. Very high com. and high com., H. L. Wurder's Zaldie and Spot. Bitches: 1st, E. Haug's Bell; 2d, withheld.—PUPPIES.—Dogs: 1st, Albert Gladstone; 2d, Albert Breeze. Very high com., Washtenaw Quail. Bitches: 1st, E. Haug's Belle; 2d, Washtenaw Kennels' Nellie Breeze.

IRISH SETTERS.—1st and special and 2d, L. Hilsendegen's Lalla Rookh and Nora.

GORDON SETTERS.—Dogs: 1st and special and 2d, E. Horn's Gunner and Shot.

FIELD SPANIELS.—BLACK.—Dogs: 1st and special, G. Meller's Toledo Snap; 2d, G. J. Pepin's Grover Cleveland. Very high com., Chas. Bassett's Jack. Bitches: 1st, W. Gregory's Daisy; 2d, G. Burnell's Chloe R. Jr.—OTHER THAN BLACK.—1st, E. D. Roberts's Fritz.

COCKER SPANIELS.—BLACK.—CHALLENGER.—Dogs: 1st and special, C. Backus's Bendigo. Bitches: 1st, G. Miller's Busy.—OPEN.—Dogs: 1st, A. T. Knowlson's Tom Blake; 2d, F. H. T. Barbour's Pluto, Jr. Very high com., C. Thurman's Corkstown Comet. Bitches: 1st, Blake & Herbertson's Nora; 2d, A. T. Knowlson's Maud S. H. Puppies: 1st, A. T. Knowlson's Tom Blake; 2d, F. P. Striker's Don.—ANY OTHER COLOR.—Dogs: 1st, Blake & Herbertson's Brownie B.; 2d, C. Lightner's Liver Obo. Bitches: 1st, P. Fahlman's Nora. Puppies: 1st, G. Miller's Miller's Cherry Boy.

IRISH WATER SPANIELS.—1st, T. C. Ouellette's Fan.

BEAGLES.—Dogs: 1st and 2d, G. D. Wilton's Joe and Pomp. Bitches: 1st, G. D. Wilton's Daisy. Puppies: 1st, G. T. Wilton's Woodlender.

COLLIES.—Dogs: 1st and special and 2d, Grampian Kennels' Grampian and Jerry. Bitches: 1st and 2d, E. A. Rogers's Maggie and Dollie. Puppies: 1st, Grampian Kennels' Charlie; 2d, E. A. Rogers's Scollia R.

POODLES.—Dogs: 1st, J. M. Wentz's Daisy. Bitches: 1st, F. M. Baily's Mirza Dam.

BULLDOGS.—1st, H. P. Hamilton's Climber.

BULL-TERRIERS.—1st and special, Jas. Hendrick's Dick; 2d, O. M. Delam's Dick.

FOX-TERRIERS.—Dogs: 1st and special, F. T. Rork's Jerry. Bitches: 1st, Fred Richmond's Snap.

BEDLINGTON TERRIERS.—1st, L. R. Baldwin's Doc; 2d, J. Brydon's Toney.

SCOTCH TERRIERS.—Withheld.

BLACK AND TAN TERRIERS.—OPEN.—Dogs: 1st, H. H. Hull's Dick. Bitches: 1st, Blake & Herbertson's Rose M.

SKYE TERRIERS.—Withheld.
YORKSHIRE TERRIERS.—1st, J. Wright's Toodey; 2d, W. C. Bishop's Royal. Very high com., E. Emmens's Doc.
TOY TERRIERS.—1st, J. Wright's Pet.
PUGS.—OPEN—Dogs: 1st, Alice Wilbur's Neddy; 2d, J. H. Herbertson's Punch. Bitches: 1st and special, Miss Bertha Wolfertz's Tutie W.
ITALIAN GREYHOUNDS.—OPEN—Dogs: 1st and 2d, Dr. R. R. Lansing's Fawn and Ginger. Bitches: 1st and 2d, Dr. R. R. Lansing's Beauty and Nellie. Very high com., G. H. Stark's Nellie.
WHIPPETS.—OPEN—Dogs: 1st, N. Pepin's Tipp; 2d, Wood Campbell's Ben. Bitches: 1st, very high com. and high com., N. Pepin's Winnie, Nellie Grey and Birdie. Com., F. Shaughnessy's Gordon.
MISSCELANEOUS.—1st, Miss Bernart's Waldie; 2d, H. Farmer's Jersey.
SPECIALS.
 Best collie, Grampian Kennels' Grampian. Best exhibit of Great Danes, Wolverine Kennels. Best Irish setter, L. Hilsendegen's Lalla Rookh; Best English setter puppy, E. Haugh's Bell.

POINTS AND FLUSHES.

Birds in Tennessee.

CHICAGO, Jan. 21.—Mr. H. S. Bevan, of Somerville, Tenn., writes me: "Birds are as few in numbers as black swans and I feel some misgivings about my dogs' work in consequence. I will start two in the Southern. I have left Lamar and I am very nicely fixed here."

The American Field Trial Club.

The American Field Trial Club held a meeting recently, at which they decided to give guaranteed purses amounting to \$1,200 at their next field trials.

The U. S. F. T. C.

From a correspondent, an officer of the club, I learn that the United States Field Trials Club, notwithstanding the heavy expenditure and delays last November, is in a healthy financial condition.

The Chicago Kennel Club.

This club's forthcoming bench show is promising most encouragingly. Many of the prominent handlers have signified their intention to be present with their large strings.

Classifying Pointers by Weight.

I notice the remarks of Mr. G. Muss-Arnolt, on the "Division in Weight of Pointers," in *FOREST AND STREAM* of Jan. 19. I beg that he will permit me to correct him on one point which he makes, as follows: "The new club at Chicago, which has proposed such innovation, has certainly no pointer man among the framers of the law, and it seems to me, is only trying to have something new at all hazards." Mr. John W. Munson, one of the oldest and best known pointer breeders in the country, was one of the promoters of the new departure. There is one point on which I think Mr. Muss-Arnolt could make a strong case by citing evidence or producing good argument to sustain it, namely, What good reason is there for classifying pointers by weight?

Jan. 16.—My attention was called to a brief skit in a contemporary concerning *FOREST AND STREAM*'s list of field trial winners for 1892. Said contemporary said, referring to itself: "This week it publishes those for 1892." Does not that show "always ahead?" "1892?" There can be no proprietary interest in news, or usages free to all; but the journal aforementioned, with charming naivety, adds: "We observe that a contemporary in imitation of us last week published such a list, but as it necessarily had to be compiled by some one who had never done it before, it had the usual omissions and errors of the novice and imitator." To publish a list of winners a week in advance of all contemporaries is not an imitation. If a novice can publish matter a week in advance of the old-timers, the day of the novice is bright; that of the old-timer is gloomy. Moreover, it is not correct to say "in imitation of us last week," when there was nothing in last week to imitate, and when really *FOREST AND STREAM* was a week ahead of all contemporaries. "A wink," etc.
 B. WATERS.

175 MONROE STREET, Chicago.

FLAPS FROM THE BEAVER'S TAIL.

TORONTO, CAN.—The beaver has not been "flapping" his "tail" to much effect lately or you would have heard more frequently from me.

The weather the past week has caught many with young puppies and in fact immature dogs of a more advanced age, and I hear of many deaths. One man who had a fine litter of fourteen St. Bernards has lost all but five, the effects of frost bite, and this is not an isolated case by any means. It is inadvisable for bitches to whelp during our winter months, the weather being so uncertain. For the last few days it has kept below zero and has gone as low as 25 to 30 deg. below.

Mr. A. D. Stewart has had what he calls a "lightening" sale of his fox-terriers and now has left but My Fellow and two bitch puppies by Raby Domino.

The Ottawa bench show committee has filed a claim for dates with the C. K. C.—Sept. 26 to 29, 1893. This is a week later than was first decided on.

Mr. Wm. Howard, Toronto, has bought the wire-hair fox-terrier bitch Luna (imported). She is by Halifax Bugler out of Nettie and has been bred to Mr. Howard's imported Ben.

The Bowmanville St. Bernard Kennels' recently imported St. Bernard bitch Maypole has given birth to a fine litter of ten, six dogs. Maypole came over in whelp to Prince Bute, and her arrival was at the time announced in *FOREST AND STREAM*.

Messrs. Geddes & Cunningham, Ottawa, are selling all their cocker spaniels, and are going in for Irish terriers. The bitch Ballymouey is now in their possession, and is now suckling a nice litter of half a dozen, of which five are "gentlemen." They also own a bitch by Valley Boxer ex Sissey, which is awaiting the attention of Jack Briggs at the Salem Kennels.

The Toronto Kennel Club is providing more solid and instructive matter for its members than any club of like nature that we know of. Papers by specialists are read at each meeting, and three or four local shows are given each year. At the last meeting an interesting paper on the Airedale, a breed of which little or nothing is known in Canada, was read by Mr. H. P. Mullens, who kindly traveled up from Cobourg to present his paper in person to the members.

A British Columbia correspondent writes me that at the bench show held in Victoria this week Mr. James Chalmers will take collies, Rev. J. Granville Christmas fox-terriers, and Mr. Oscar Jones and Rev. Mr. Christmas all other breeds. The latter gentleman has done considerable judging in England.
 H. B. DONOVAN.

Kind Words from Virginia.

In reviewing the progress of that well known sporting newspaper *FOREST AND STREAM*, we cannot but join with the public in extending our congratulations to its managers and staff in the able manner in which its reputation is being maintained. Those who are not as yet subscribers to this valuable journal should take advantage of the trustworthy correspondence to be found in its columns.—*Richmond Dispatch*.

DOG CHAT.

New York St. Bernard Kennels.

Mr. W. C. Reick returned from Europe on the fleet *Majestic*, Wednesday, Jan. 18, looking stout and well after his trip. He brought no dogs with him nor did he purchase any. Having decided to give up breeding it would be like bringing coals to Newcastle had he done so. While in England he saw Duke of Maplecroft and the notables including Lola IV., the smooth, which is said to be about the best there is over there with the possible exception of Keeper. The other day we took a run up to the New York St. Bernard Kennels, having heard so many contradictory stories about the condition the crack Sir Bedivere and his no less illustrious consort Princess Florence were in. To set at rest all doubts on this score we may say that with the exception of lack of profuse coat we never saw Sir Bedivere looking healthier or in better flesh. He is as lively as a kitten and pranced about in the snow as if he enjoyed it. His coat is coming in nicely, and the abscess from which he suffered has healed up under Dr. Sherwood's doctoring, and there is now very little mark to be seen. Sir Bedivere is certainly the St. Bernard of the age, some dogs may have more bone, or this, that and the other, but no dog on the bench to-day is such a symmetrical whole and withal so brimful of undefinable quality and dignified carriage. To see Sir Bedivere now, when out of coat, is to form the very best estimate of his superiority. That Sir Bedivere was a sick dog there is no doubt, when he came to Mr. Reick's kennel, and it is quite a feather in Harry Friend's cap that he has him already in such good fettle. Princess Florence is expected to be in whelp to Marvel again, and though she is short of coat still, she is healthy and looking quite stout and matronly. We had also our first look at Marvel. One is at once carried away by his grand head, which completely overshadows his other good parts. No wonder this dog was thought so much of on the other side, and we would advise those who would wish to gain an idea of true St. Bernard type to study this dog's head. Put his head on to Princess Florence and what an animal we should have! Mr. Reick has done the next best thing and the result is anxiously awaited. The other dogs in the kennel, with the exception of Refuge II., who has been under the weather lately, are also looking well. Mr. Reick has bought about 20 acres in Fordham and while building a house for himself will not ne-

A. E. MEREDITH.

Secretary Indiana Poultry Association, Indianapolis, Ind.

glect his canine friends. He will move to the new place in May. Mr. Reick has an idea of sending a team of St. Bernards to England this summer, and if he does will make arrangements so that the Paris and Spa (Belgium) shows can be taken in. Such a team, well put down, would create a sensation at those shows.

Valuable Dachshund Trophy.

In the W. K. C. premium list there was an important omission, which we hasten to remedy as far as possible. The conditions under which the \$250 dachshund cup, so generously donated by Mr. E. A. Manice, should have appeared. This cup is to be competed for twice annually, at the New York and Boston shows and is for the best dachshund in the show. Entries, which must be sent to the *FOREST AND STREAM*, which has charge of the competition, are \$5 each, and these fees will constitute a sweepstake which goes to the winner of the cup each time it is competed for. The cup becomes the property of the exhibitor winning it five times. It is a very handsome trophy, and should call forth the best energies of our dachshund breeders to win it. Entries close Feb. 6, with the *FOREST AND STREAM*, New York city.

Duquesne Kennel Club.

There will be a feeling of disappointment if the Duquesne Kennel Club does not hold its annual show this year. Pittsburgh is a fixture very popular among the "boys." It was decided not to hold a show this year, but having been urged to do so the club will reconsider its decision at the meeting to be held this week at the Hotel Schlosser, when officers for this year will be elected. There is a date open after the Detroit show which would come in well for them, and this is the only practicable one as the circuit is now arranged from New York show till that week, March 28 to 31.

Death of Kent of Bloomo.

Mr. A. B. Tuman, and in fact kennel interests generally on the Pacific Coast have suffered a loss in the death by poison, Jan. 13, at Bakersfield, Cal., of the pointer Kent of Bloomo. This dog is noted on the Coast as a field and bench performer, as he won first in the light-weight pointer class at the late San Francisco show. He was a son of King of Kent out of Lass of Bloomo, and a half-brother of Rip Rap, etc., and litter brother of Lady Peg. It is said Mr. Truman's dogs were tampered with at the bench show in San Francisco, and Mr. Truman thinks Kent of Bloomo's death was prompted by jealousy on the part of some enemy.

Detroit Show.

The judges for the Detroit show are Mr. John Davidson for sporting dogs and Mr. C. H. Mason for non-sporting classes. Mr. Belmont was asked to take fox-terriers. The special committee are working in good style, having already received \$400 in cash. In all the club expects to put up \$1,800, which should secure a good entry.

Connecticut Law and Dogs.

The following bill has been introduced to the law makers of Connecticut by Mr. Lounsberry, of Darien, Conn.: "Be it

enacted, that any person or persons who are the owners or keepers of any dog or dogs, who shall suffer or permit the same to run out upon any highway to the annoyance of any traveling vehicle or person by running in front or after the same, shall pay a fine of not more than seven dollars and the costs of prosecution, upon conviction, to the treasury of the town in which said conviction was obtained, or be imprisoned not more than thirty days in the county jail, or both: notice having been previously given to said owner or keeper of said dog or dogs."

The Export of Greyhounds to America.

We have forwarded a copy of the following article, which appeared in the London *Field* of Jan. 7, to the Solons at Washington who framed the peculiar customs laws now in vogue in regard to importation of dogs from abroad: "A rather peculiar *crux* has just come to light with respect to the landing of English bred greyhounds at American ports. Quite recently the keeper of the Greyhound Stud Book was requested to make out the requisite documents for three animals, about to be shipped at Liverpool for New York, the property of a gentleman in New Jersey. The shippers at this end furnished the keeper of the 'Stud Book' with the customs regulations in force in the United States, which may briefly be stated as follows: No animal taken into the States from foreign countries for breeding purposes can be admitted free of duty, unless the importer furnishes a certificate of the record and pedigree, according to a form given, showing that the greyhound is pure bred, and registered in a book of record established for that breed. Further, that both its sire and dam were similarly recorded, and that there have been four successive top crosses by recorded sires of that breed on the side of the dam. In accordance with these regulations, the preparation of the particulars required was plain sailing, seeing that the greyhounds referred to are of the most fashionable blood on both sides of their lineage, and the keeper of the 'Stud Book' certified that the dogs had been duly registered in the 'book of record established by this association (National Coursing Club) for breed of greyhounds.' Anxious, however, to be in possession of every detail of the regulations, he at once communicated with the Collector of Customs for New York, only to find that the 'Greyhound Stud Book' is not considered the 'book of record established for that breed' in the United States. On the other hand, it is stated that, 'under instructions of the Secretary of the Treasury, such dogs from Great Britain are not admitted to free entry at this port, unless recorded in the Kennel Club Stud Book.' That this discloses an anomaly of an extraordinary kind is self-evident. Firstly, the Kennel Club Stud Book merely includes greyhounds as one of the numerous classes of its operations; secondly, the Greyhound Stud Book was established over a dozen years ago by the National Coursing Club, an institution that has been in existence for nearly half a century. Again, taking last year's volumes as a criterion, the Kennel Club Stud Book contained no more than seventy-five registrations of greyhounds, some of them distinguished by pedigree unknown; whereas the Greyhound Stud Book, which naturally excludes from its pages such flotsam and jetsam, had a total of 3,002 registrations. We have not unjustly styled this an anomaly, and there cannot be any possible doubt that the common sense and commercial acumen of the United States fiscal authorities will, without loss of time, rectify an evident misunderstanding or lack of knowledge at the time of the enactment of the regulations in question. Indeed, it cannot be anything more serious than the stroke of a pen, a totally different thing to the absurd quarantine legislative laws in force in our Australasian dependencies." We trust that the Treasury Department will see fit to make this evidently needful correction and recognize the English Greyhound Stud Book as one of the most carefully compiled registers in existence.

The M. K. C. Show.

Messrs. W. S. Diffenderfer and T. C. Sheubrookes were in town last week making arrangements with Spratts Co. for benching and attending to other details regarding judges, superintendent, etc. Mr. John Read will be the latter, as he is a great favorite in the Monumental city. It is whispered that Mr. Watson is down for collies and spaniels; Mr. Muss-Arnolt for the German breeds; C. D. Cugle for bulldogs; Major Taylor some of the sporting breeds. The show will be held in a building which will afford ample space for a large show, besides having an annex 250ft. long by 60ft. wide where dogs can exercise, and in the main building is a gallery which will afford an excellent view of the show. The building is only three minutes' walk from Union station. There will be a trick dog team engaged, and it is expected the show will draw well. The premiums will also be on a more liberal scale. The brunt of the work will as usual fall on W. S. and C. D. Diffenderfer, Will Forbes, Tom Sheubrookes and W. Thompson.

Col. Rupert Buys Hepsy.

The Duchess Kennels by the purchase of the St. Bernard Hepsy from Mr. E. B. Sears will be materially strengthened. Col. Rupert is gradually getting together a collection of breeding stock that will surely have to be reckoned with, as he can put down a kennel of bitches to-day that, as the saying goes, "will take a lot of beating." It is safe to say that the price paid for Hepsy was not one-fifth of what she cost Mr. Diffenderfer. St. Bernards are getting down to their values.

Conrad II. Found.

We are glad to say that the missing collie, Conrad II., has been returned to Hempstead Farm Kennels. The dog was found at Hicksville, about four miles from the farm, last Thursday, by a man who returned the dog to the rightful owners.

Chicago Dog Show.

The Chicago Kennel Club will give cash kennel prizes of \$15 for the following classes: • Collies, English, Irish and Gordon setters, pugs, bull-terriers, greyhounds, cockers and field spaniels, fox-terriers and wolfhounds. Kennels to consist of four or more. No extra entry fee. Also two open classes for toy spaniels, one for each sex, with a single prize of \$10 in each class. Also second prizes of \$5 in each of the open classes for Irish water spaniels. Also a novice class for St. Bernards, either sex, \$10 for first and \$5 for second. In class 50, open class, Gordon setter bitches, the prize is \$35 instead of \$25.

Canadian Custom Duties.

In answer to several questions we have received lately about the Canadian Customs duty on dogs imported into the Dominion, we may as well state that under no conditions can dogs be imported into Canada free of duty. A tax of 20 per cent. is levied in every case. Special provision is, however, made during the different fall dog shows, when dogs are entered in bond, and the surveillance is pretty strict.

A Fanciers' Club for Yonkers.

There has always been a feeling that some time the bustling little town of Yonkers would fall into line and have a poultry and dog show. There are many fanciers in and around Yonkers, and with its large population of working people it should be an excellent place for a small show. This the Yonkers Fanciers' Club, which was organized last Thursday evening, evidently had in mind. A meeting was held at 138 Nepperhan avenue, Yonkers, at which the follow-

lowing fanciers were present: L. A. Van Zandt, secretary Gordon Setter Club; W. J. Young, James Blair and R. Lamb. The club was organized with the object of improving the different breeds of fancy stock, especially dogs and poultry. The officers elected are: President, E. A. Lynde; Vice-President, Charles Piggott; Secretary, Emil Garnjost, and Treasurer, George Langran, who is well known among the setter and pointer fraternity. A committee was appointed to draw up constitution and by-laws, and the next meeting will be held at the same place on Thursday, Feb. 2, at 8 P. M.

W. K. C. Specials.

Among the additional specials offered at the W. K. C. show are the following: A lady offers a Japanese bronze jar for the best Japanese spaniel dog in the show. The National Greyhound Club offers the following cups: The Westminster Kennel Club challenge cup for the best deerhound, to be won three times by one exhibitor before becoming his absolute property, at shows designated by the National Greyhound Club. The Westminster Kennel Club challenge cup for the best Russian wolfhound, same conditions as the deerhound cup. The Munroe challenge cup for the best greyhound owned by exhibitor. This cup to become the property of the individual winning it three times, at shows designated by the National Greyhound Club.

Elmira Kennel Club.

The annual meeting of the Elmira Kennel Club was held Saturday evening, Jan. 14. The following officers were elected for the ensuing year: President, Ray Tompkins; First Vice-President, Dr. H. DeV. Pratt; Second Vice-President, W. D. Dunham; Third Vice-President, C. W. Jones; Secretary and Treasurer, Charles A. Bowman; Executive Committee, P. C. Pettit, Manfred H. Davis, Prof. J. W. Roberts, Frederick A. Cheney and L. D. Little; Standing Committee, Bench Show, Ray Tompkins, Joe Christen, Clermont S. Wixom, Frederick A. Cheney and Charles A. Bowman. Their first annual show will be held in the old armory, under A. K. C. rules, March 22 to 25. The premium list will contain about 130 classes and the prize money will be \$10 and \$5 in all classes, excepting puppies. Premium lists will be ready for distribution Feb. 20.

United States Field Trials Club Meeting.

The annual meeting of the United States Field Trials Club, for the purpose of electing a board of fifteen governors and transacting such other business as may come before the meeting, will be held in New Albany, Miss., Wednesday evening, Feb. 15, at 8 o'clock.

Two St. Bernards were seized by the Customs people on board the steamship Coya, which stopped here on the way to Chili. The owner, an officer on the ship, intended to take them as a present to a friend in Chili, but the rough voyage had made them sick, and thinking they would not live through a further voyage advertised them for sale, telling the Customs officer on the dock of the circumstances, with the full understanding that he would pay the duty of 20% when the dogs were sold. He advertised them and made an arrangement with a prospective purchaser, each agreeing to pay half the custom dues. Then a meddlesome customs officer swooped down on the dogs and made the officer lead them to the Customs House, where they were held. On representing the facts of the case to Deputy Collector Phelps, he stigmatized the seizure as entirely unwarranted and ordered the dogs returned to the ship.

Messrs. S. Davis & Son, of Montreal, have donated another cup to the Canadian Fox-terrier Club, to be competed for by kennels of four or more.

During the Des Moines show a little excitement was caused by some one stealing a collie pup. A detective was put on the track of suspected parties, and there being a woman in the case a search was made of her rooms, where puppy was found under her bed, though she strongly denied that she even knew there was a dog show in town. The law attended to the woman and the man who had stolen the pup for her, and the collie was restored to its rightful owner.

The Charlottesville Field Trial Kennels have sold a brother to Rip Rap to a Mr. Little, of North Carolina, for \$250.

The English Kennel Club Field Trials will be held April 14, on Capt. Prettyman's estate, Orwell Park, Ipswich, Essex. Col. Le Gendre Starkie and Dr. J. H. Salter are the judges. The Gordon setter trials will be held on Lord Cranborne's Hatfield estate, April 5. There will be two stakes, an all-age and one for Gordons not exceeding 20 months of age. The judges are D. J. H. Salter and Mr. G. Lowe.

The medals won at the N. G. C. show, at Brooklyn, have been ordered from the silversmiths in England, and as soon as ready will be forwarded to the winners of them. As these medals are three inches in diameter, great care has to be used in striking them off, so considerable time is consumed in getting them into presentable form. Another delay was caused by the action of the customs authorities in demanding 50 per cent. duty on the medals already sent over here. The law was appealed to and decision given in favor of the N. G. C. Their money was returned and medals will now come in free of duty.

We are pleased to find that the Brunswick Fur Club has made such a good choice for secretary as Mr. Bradford S. Turpin. A thorough sportsman, in fact he spends most of his time, lucky man, in pursuit of one sport and another, shooting principally, he is also not afraid of using his pen, as the many interesting reports of the trials of the Brunswick Fur Club, beagle hunting, etc., which have appeared in the FOREST AND STREAM will attest, and for this reason his election is peculiarly happy.

Mr. H. F. Peck, who was for some time manager of Mr. Logan's kennel of fox-terriers, has now gone into the broiler raising business, but still keeps an eye on the dogs. He will manage the Akron, O., show that takes place this week.

Mr. E. M. Oldham donates two \$5 specials at the Keystone Kennel Club show.

Mr. Geo. Douglas is earnest in his resolution to give up spaniel breeding for a time, as his business must be attended to. He offers some good dogs, such as champion King Pharaoh's Sister, Sallie Hamilton, etc., in our business columns this week.

Mr. Geo. Raper has sustained another severe loss, his father having died Jan. 9 at the age of 75. Mr. Tom Raper was at one time a most noted greyhound slipper, and for fourteen years slipped at the Waterloo meeting, from 1857, when it was made a sixty-four dog stake, to 1870, when he sent Sea Cove to victory. This was the year when the celebrated Master McGrath was put out in the first round by Lady Lyons. Mr. Raper was known in his day as the prince of slippers and was as well thought of for his integrity as for his ability in that direction.

Mr. A. D. Stewart has closed out his kennel of fox-terriers and will now devote himself to bulldog breeding. The kennel was disposed of as follows: Ruby Domino to Mr. E. K. Hart, Albion, N. Y.; Silver Domino to Mr. S. H. Thompson, Toronto; Silver Lover to Mr. B. H. Ross, Lindsay; Silver Belle

to Mr. Samuel Simms, Ottawa; Hillside Baroness to Mr. Albert M. Young, New York city; My Queen to Mr. J. R. F. Boyd, Hamilton; Dear Heart to Mr. Alfred Baker, Buffalo, N. Y.; Tom Boy to Mr. H. T. Gage, Detroit, Mich.; Dynamite to Mr. Alex. Dewar, Chicago, Ill.; Silver Rose to Miss Carrie Bowman, Hamilton; Silver Dolly and Silver Bee to Mr. S. S. Keller, Richfield, N. Y. Only the good young dog My Fellow remains unsold, and he will be shown at New York if not sold before that show comes on.

The St. Bernard bitch Judith is already famous as the dam of the great smooth litter by Alton, most of which are owned by Morse. Last fall she was mated with Sir Bedivere and the result is very gratifying, and their owner, Mr. G. P. Wiggin, by advertising them in our business columns, affords St. Bernard lovers an opportunity to secure specimens of this excellent cross.

The manager of the Oak Grove Kennels, Joe Lewis, always had a penchant for English setters, and, not content with the fine lot of red dogs the kennel owns, they are buying extensively in the English setter market. We note that recently they have purchased from the Blue Ridge Kennels Ouida F. and Hinda Mark II. by Gath's Mark out of Barby's Girl; Piedmont, Belle F. and Blue Belle, by Antonio out of Belle of Piedmont, Jr.; King Antonio and Dixie F. by Antonio out of Princess Joy; Nellie F. by Gath's Mark out of Mollie Belton; Fowler's Mark II. and Gypsy Mark, by Gath's Mark out of Ollie T.; Count Antonio and Huntress, by Antonio out of Miss Nellie G. From Mr. Paul Gotzian they have purchased Monk's Nun and Furness Maid, by Monk of Furness out of Bloom Nun; Daisy Furness and Beulah Furness, by Monk of Furness out of Suspense. This fine array of young bitches of both good bench and field blood should prove very useful to the kennel.

We have received a letter from Mr. Twyford on the Elliott-Twyford matter. Owing to the contradictory statements given out we prefer not to have anything further to do with the case until the official report is published in the A. K. C. Gazette.

Mrs. Eugene Clarke, so well known as the principal exhibitor of Japanese spaniels, allowed her spaniel Ootah to give a birthday reception last Thursday to her numerous friends in the cultured dog world. Among the visitors was Mr. Mer-

BOSTON TERRIER "DANDY,"
Owned by Mr. Charles F. Leland.

rell's newly imported black and tan terrier Princess Dagnair, who arrived late and created a sensation, as a Birmingham winner should. The affair was daintily arranged and quite "Jappy" in every particular.

Mr. Geo. Raper sails from England on the Aurania on Feb. 11.

The following special was omitted from the premium list of the W. K. C. show: The Westminster challenge cup, value \$500, contributed by Col. Jacob Ruppert, W. C. Reick and the Westminster Kennel Club, for the best American bred St. Bernard, sired in America, and born on or after March 1, 1890, the cup to remain the property of the Westminster Kennel Club until won three times by the same dog, competition open to all exhibitors.

Mr. Smythe, owner of the Swiss Mountain Kennels, has purchased a litter sister to Scottish Leader from Mr. Sydney W. Smith. The new purchase is expected to be in whelp to Young Bute, and has already had a litter by Monte Miranda. She will come out by the steamship British Prince.

It is reported that the noted trotting dog Doc was burned to a crisp in the accident on the Pennsylvania Railroad at New Brunswick on Thursday night.

The Newfoundland, or big black dog, has again proved itself a hero. In the accident on the Long Island road last Thursday in which the fireman was pinned under the debris, this dog, owned by one of the Long Island Express Co.'s employees, was the first to get to the spot, and before the shovelers could get to the body the dog had dug the snow from the fireman's face. When removed to the express office the dog stood guard over the body and at first would not allow even the doctor to approach. It would be interesting to know what the dog thought of the occurrence.

We are sorry to say that the gate receipts of the Gloversville show fell short of expectations, the club taking in only \$300, as against \$500 last year.

The Western Michigan Kennel Club has elected the following officers for the coming year: President, Eugene Glass; Battle Creek; Secretary, William O'Byrne, Kalamazoo; Treasurer, A. T. Lakey, Kalamazoo. The election of vice-presidents and board of directors was deferred until the adjourned meeting Feb. 7, at which time it is proposed to make some changes in the constitution and by-laws.

The annual Spaniel Club meeting will be held at Madison Square Garden, Feb. 22, at 5 P. M. The dinner will be held at Hotel Bartholdi the same day at 8 P. M. Tickets \$3 each.

We did not have the opportunity to ask Mr. Reick what he paid for Sir Bedivere, but he told the editor of *Stock-Keeper* (Eng.) that \$2,400 was the figure. This is the sum that was mentioned in several papers on this side, and is a little over a third of what the dog originally cost.

The Irish water spaniel Eileen Shaughran that, it will be

remembered, Mr. Mortimer purchased while in England and resold to Mr. George Davis, her former owner, has just whelped a splendid litter of puppies to Mike McCarthy.

A whole galley full of new advertisements this week; that shows how the FOREST AND STREAM is appreciated as an advertising medium. Among the new offers for sale are: U. R. Fishel, some well-known field trial and bench winning English setters; Woodbury Kennels, dogs of all sorts; Hermitage Kennels, mastiff puppies, sale or exchange; Dr. Foote, black and tan terriers; Geo. W. Lovell, trained pointers and setters; Geo. Douglas, noted cocker spaniels; G. P. Wiggin, St. Bernard pups; J. Hope, dogs of all sorts; C. G. Brownell, Gordon setters; C. S. McChesney, pointer bitch pups; H. H. McVeigh, broken Irish setter; J. Jeffers, foxhound pups; Swiss St. Bernard Kennels, kennel of St. Bernards; W. H. Hyland, prize winning pointer; Lyon, setter dog; Handsome Brook Kennels, trained cocker dog; S. Ramsay, Irish setter pups; J. F. Stoddard, beagles; 24 East Twelfth street, English setters. In the stud: We draw particular attention to the fine array of Great Dane stud dogs that the Cumberland Kennel Club advertises; also their pug and Italian greyhound. This is the first time Ch. Melac has been placed at public stud. We also draw attention to the Wankie Kennels' array of Scotch terrier stud dogs. Owner, offers the service of the noted Irish setter Bedford. Wants—Florida, foxhound pups; Trainer, a man to take charge of a St. Bernard; Fred P. Kirby, dogs to handle at shows.

Our reports of the Des Moines, Indianapolis and Detroit shows arrived too late for press last week. To insure insertion in the current issue we must beg our correspondents to forward all communications intended for the kennel department so that they may reach us on Tuesday at the latest. We wish to give the news with the dew on it, not when it has become dry by repetition elsewhere.

The New England Field Trial Club seems now to be firmly established, and with its new list of officers may be depended upon to enlarge the sphere of usefulness in New England field sports that the club was organized for. It was a great compliment to Mr. E. K. Sperry, the retiring secretary, that the new régime insisted that he should remain secretary, but Mr. Sperry, with that disinterestedness he is noted for, declined the honor on the score of inability to attend the meetings, feeling that a secretary nearer the base of operations would be more acceptable. The peculiar methods which obtained under the old régime precluded that publicity of the club's doings which would insure its greater prosperity, but this was not Mr. Sperry's fault, for he personally afforded us all the information that he could. Mr. Lovering has started with the same intentions and we trust now that the club will afford the sporting press every opportunity to help the good cause along by giving timely notice of matters of interest both to the club and the field trial public.

Dr. H. T. Foote seems in earnest this time in his intention in giving up the breeding and exhibiting of dogs for a time, at least. In this issue he advertises his whole kennel for sale, and as it contains a number of dogs, black and tan terriers especially, which won the principal prizes at the shows for two or three years past and contains such noted dogs as champions Broomfield Sultan and Meersbrook Maiden, this should afford a good opportunity to some one anxious to get a winning kennel ready made as it were. The bitches in the kennel are all well mated and several of them now in whelp, and the stock is of high quality.

Mr. Charles K. Farmer writes: "The prospects for the immediate organization of a kennel club in Indianapolis are very bright with such gentlemen as named below at the head of it. Mr. Harry New, proprietor of the Indianapolis Journal; Peter Travers, of the Indianapolis News; Mr. Henry Schwing, a leading grocer; Mr. A. A. Anderson, secretary and treasurer Citizens' Street Railway Co.; Mr. Joseph Becker and many others, and it is hoped a show will be held to follow Detroit."

BOSTON TERRIERS.

Editor Forest and Stream:

I am surprised to read in your usually impartial paper rather severe criticisms on the Boston terrier—especially as you were most complimentary to the dog when the idea of starting a club originated. I only desire to see impartiality, and as there is no reason scientifically why the dog may not be bred to a certain type, this hostility of seemingly interested persons is little short of absurd. There is something in the fact that very few people know what the dog should be and are misled into thinking that any lumbering brindle dog, with evident bulldog blood, must be a Boston terrier. In order to enlighten the public as to what this terrier really is like I inclose a photograph of one of mine—one that I consider very typical. Would any one with even slight knowledge of dogs mistake the dog for a bulldog? Are not terrier characteristics prominent? I think you will have little hesitation in pronouncing the dog decidedly terrier in type. I am interested only as a fancier, and have no Boston terriers to sell, but I do wish to see fair play toward the breed and to see this senseless babble of the dog being a "mongrel" stopped. That it is a well-directed effort to form a new type between the white English terrier and the bulldog is true, but why not? Is there a single sound reason against it? I should like to know it if there is. I have been familiar with these dogs for over ten years, and my experience has shown me that to-day these dogs, intelligently mated, will produce offspring like themselves with as much certainty as the average recognized breed.

The opposition to these dogs is purely selfish and I cannot understand FOREST AND STREAM allowing itself to be influenced by such motives. What right had the Bulldog Club to refuse to exhibit where Boston terriers were shown? May I ask how it could possibly affect them? I can only say I never knew a more unsportsmanlike thing done by a club. There seems so much opposition to the dog from certain quarters that an open discussion on his merits and demerits might prove whether he is entitled to recognition or not. Any one caring to argue the matter with me I should be most delighted to try and convince him. I hope that you will see fit to print the photograph I inclose, merely in fairness to the dog.

CHARLES F. LELAND.

RUSSIAN WOLFHOUNDS.

Editor Forest and Stream:

After reading the letters in your paper of Jan. 5 about the Russian wolfhounds it strikes me as remarkable that these \$7.50 and even \$3 imported hounds were expected (last spring) to kill a Colorado wolf singlehanded, while in Russia it takes three \$1,500 hounds to kill a young wolf. Now, let me ask your readers who is to blame for last spring's fiasco, the poor hounds or their owners? As I hope you will keep your readers posted on the result of the Russian gentleman's offer to bring his hunting pack to this country you will oblige me by sending your paper to my address.

Y.

MONTCLAIR, COLO.

LETTERS MISLAID AGAIN.

Editor Forest and Stream:

I have mislaid a number of unanswered letters in reply to my advertisement in FOREST AND STREAM. I wish that any who have written me and not received a reply would write again, as I do not intend to leave any inquiry unanswered.

H. V. JAMIESON.

WEST DUXBURY, MASS.

MR. WASHINGTON EXPLAINS.

Editor Forest and Stream:

I have noticed a comment in your paper upon my advertisement of the Irish setter dog Ormonde, which had appeared in the last few issues of *Shooting and Fishing*.

The advertisement has been printed word for word as it was written, but the change of single capital letter and the substitution of a period for a comma has changed the sense entirely. I had not read the advertisement in question more than casually and did not notice this error, which alters the meaning it was intended to convey.

The advertisement, as you state, read: "Ormonde. A son of the great Sarsfield, out of Red Bess. Same litter as Champion Kildare, Challenge, Beau Brummell and Challenge Seminole, Ormonde is thoroughly typical, etc."

It was my intention to have it read, although I may have been careless in punctuation, and I am reasonably sure that I did not use a capital "S" in the word "Same," as follows: (Please note that the words are identical, though the punctuation is different.) "Ormonde. A son of the great Sarsfield; out of Red Bess, same litter as Champion Kildare, Challenge Beau Brummell and Challenge Seminole. Ormonde is thoroughly typical, etc."

The latter expresses my exact meaning and is a fact. I have never intended to claim that Ormonde is out of the same litter as Kildare, Beau Brummell and Seminole, but that Red Bess, his dam, is of the same litter as these famous Irish setters. As you have already mentioned, I have sold Ormonde. I wish to add that his purchaser fully understands the facts as above stated.

You have remarked that comment upon your statement is unnecessary. I beg to differ with you and trust that you will publish this correction in full in an early issue of *FOREST AND STREAM*. W. L. WASHINGTON.

PITTSBURG, Pa., Jan. 22.

UNITED STATES FIELD TRIALS CLUB.

Editor Forest and Stream:

Permit me to say through the columns of your paper in answer to many inquiries about a consolation stake for pointers born on or after Jan. 1, 1891, that have not won a first prize in any stake at any recognized field trials in America, being run by this club at its trials at New Albany, Miss., in February next, that I have no authority to order such a stake. But I will take pleasure in bringing the matter before the club at its meeting. If a sufficient number of dogs are on hand ready to start, I have no doubt of a satisfactory stake being ordered. P. T. MADISON, Secretary-Treasurer U. S. F. T. Club.

INDIANAPOLIS, Ind.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. W. Colchester, Conn.—It would be invidious on our part to say who has the best kennel of St. Bernards. The principal ones are advertised in our business columns.

W. C. T. Durand, Ill.—By staghound we suppose you mean the deerhound. He runs by sight as a rule and is a distinct breed. The true staghound is a large foxhound and hunts by scent.

Answers to W. F. Cleveland, O.; J. H. H. Schuyler's Lake, N. Y.; W. K. Parkersburg, W. Va.; E. W. T., New York City; J. P. Grand Crossing, Ill., and Loup, have been forwarded by mail.

H. E. R., Charleston, W. Va.—You will have to write to the secretary of the American Kennel Club for pedigree of Dashaway, as the Stud Book for 1892 containing his pedigree has not been published yet.

J. E. W., Brooklyn, N. Y.—You must list your fox-terrier pups with the American Kennel Club, 44 Broadway, New York City, before you can exhibit at the W. K. C. show. Fee, 50 cents each dog. It is not necessary to register them. Entries close Feb. 6, with Mr. James Mortimer, 44 Broadway, New York City.

H. L. W., Adrian, Mich.—The dachshund is a game dog in a sense, but may be more properly termed a vermin killer. He is not used in the pursuit of feathered game, but occasionally specimens are found which will tree a partridge (ruffed grouse). He is a dead game dog as a rule, is principally used to go to earth for fox, badger, woodchuck, etc. He can also be used effectually in squirrel hunting. He can be taught to retrieve, but it is the exception when the dachshund will take to water. He is more generally used for rabbit hunting, and in Germany is also used for trailing wounded deer. A good dachshund should be from 8½ to 12 in. in height, the lower the better to a certain extent, and a dog 10 in. high should be 40 to 42 in. long. Weight from 17 to 20 lbs., and certainly not more than 25 lbs.

New York and Florida Special.

The Pennsylvania Railroad Company announces that, commencing Wednesday, Jan. 18, 1893, Friday, Jan. 20, and every Monday, Wednesday and Friday thereafter, "The New York and Florida Special" will be placed in service for the season, leaving New York at 9:30 A. M. and Brooklyn at 9:00 A. M., arriving at Jacksonville at 3:00 P. M. and St. Augustine at 4:15 P. M. the following day. This train will run via the Wilson "Short Cut" of the Atlantic Coast Line (via Fayetteville), shortening the schedule almost two hours between New York and St. Augustine as compared with last year's schedule. The train will consist of drawing-room car (containing six drawing-rooms with all conveniences), dining car, observation car, and drawing-room sleeping cars—all vestibuled. Engagements of space may be made in advance on application to Ticket Agents of the Pennsylvania Railroad.—*Adv.*

If you want dry feet use Post's waterproof oil and leather preservative. CAMEYER, Sixth avenue and Twelfth street, New York.—*Adv.*

Answers to Correspondents.

J. S. S., Fremont, Nebraska.—The teeth you send are from the alligator of the South (*Alligator mississippiensis*).

S. K.—You may procure from any of the large dealers camp sleeping bags to answer purpose of "Assnuk's" Mackinac blanket bag. We do not know of any supply of his cooking utensils.

J. D. Cona, Wyo.—Kindly inform me through the columns of your paper what *Grus americana* gives as definite a description as possible. Ans. It is the whooping or white crane, a very large bird measuring 50 in. in length and 90 in. in spread of wing, and standing nearly as tall as a man. It is white in color, except the ends of the wings, which are black. The top of the head has a patch of naked red skin often warty and thinly clothed with half-like bristles. This naked skin extends back in a point on top of the head and under each eye and the feathers grow between it. Here are some measurements of the bird in addition to those already given: Wing from bend 24 in., tail 9 in., tarsus 12 in., middle toe 5 in., bill, measured along crest 6 in. The young is said to be gray, but must not be confounded with the brown or sand hill crane. Note that the naked patch on the top of head is present in all our cranes and absent in all herons, which are quite a different group.

J. S. L., Syracuse, N. Y.—The following was clipped from a local newspaper: "The Australian jungle fowl (*Meagapodius fuscatus*) makes its nest in the shape of earth mounds of prodigious size, one of which measured 15 ft. in perpendicular height and had a circumference of 150 ft." Isn't that something of a whooper? Likely the same fellow told that who said "the condor has a wing spread of 40 ft. and feathers 8 in. in circumference, etc." Ans. The record finds a place in works on natural history. The *Meagapodius* (big-footed) *fuscatus* (a mound), breeds in the shape of mounds of earth, into a conical mound, in the center of which holes are scratched to the depth of five or six feet, running down obliquely, in which the eggs are deposited and then covered up again. The eggs are hatched by the heat generated by the decomposing vegetable matter. The same mounds are used year after year, added to each season, the largest on record as having been measured was 150 ft. in circumference, the large end rising 14 ft. above the ground.

Yachting.

FIXTURES.

28. Pavonia	MAY.
4. Pavonia	JUNE.
4. Larchmont	JULY.
4. N. Y. Y. R. A.	SEPTEMBER.

In the letter to the *Field*, which we republish this week, Mr. Maitland Kersey, Lord Dunraven's representative in the late negotiations for a race, places himself on a plane of sportsmanship and fair play very far above that of the "practical yachtsmen" whose narrow and partisan views found expression in the new deed of gift. If the necessary task of attaching to the America Cup certain supplementary limitations to meet the altered conditions of modern match sailing had been undertaken in any such broad and liberal spirit as that shown by Mr. Kersey, the yachting public would have witnessed several more contests for the Cup, and the New York Y. C. would have been spared much mortification and discredit. The letter is a strong appeal for fair play and mutual goodwill from both sides, but at the same time neither explains nor alters the present condition of affairs, and in no way removes the possible grounds for future disputes. The cold hard facts in the case are that the New York Y. C. has accepted Lord Dunraven's challenge only as under the new deed; that it considers that deed as standing intact as the only legal document governing the match; and that it has made no promise nor agreement to alter the reading, or to add any new conditions as to holding the Cup in future. So far from accepting all of Lord Dunraven's conditions, it has caused him to withdraw all allusions to the original deed, and has worded all of its communications with the greatest care, to avoid any expressions which might reflect in any way on the new deed. It is quite possible that both Lord Dunraven and Mr. Kersey understand that Clause 3 is to be embodied in the paper to be signed by the Royal Yacht Squadron in the event of a victory for Valkyrie No. 2, but we fail to find anything in the whole correspondence that will compel the New York Y. C. to such a step.

Such modifications and amendments as have been made to secure a race in 1893 are purely incidental and temporary; the new deed has not been changed, and there is nothing but public opinion to prevent the New York Y. C. from demanding of a future challenger a literal compliance with every word of the dimension clause. That certain important points have been conceded since the last race is quite true; but it is equally true that every successive contest for the Cup has been under more liberal terms than the previous one. While securing advantageous terms for himself, Lord Dunraven has done absolutely nothing to secure the rights of future challengers to fair and honest conditions.

We have not yet seen a clear and direct statement of the exact terms on which Lord Dunraven's challenge has been accepted, and we doubt very much whether any one of the five members of the Cup committee could draw up such a statement; or whether, if each of them tried it independently, the five statements would agree. Even if they did, we feel very certain that even Lord Dunraven, much less the Royal Yacht Squadron, would not for a moment assent to the views of the committee.

The simple fact is that the "blue ribbon" of the sea is still tangled up with the red tape woven about it by Com. Gerry and ex-Sec'y Bird; if Valkyrie should be defeated, the next challenger must fight the new deed just as Lord Dunraven has fought, we hope with better judgment and proportionate success. If Valkyrie should win, there will in all probability be a renewal of the long and tedious negotiations of the past six months before the Royal Yacht Squadron will sign such a paper as the lawyers of the New York Y. C. will draw up, and she is allowed to sail away with the coveted trophy.

We publish this week the fixtures thus far announced for 1893. Yacht clubs are reminded that an early selection of dates will prevent much confusion later in the season.

The severe cold of the past two weeks has brought no joy to the ice yachtsmen, as the deep snow has spoiled the ice. Long Island Sound is frozen so far out that yachtsmen walk and skate to Execution Light, and from Greenwich to Captain's Island.

It is not quite clear what the Emperor of Germany has done to deserve all the hard things said of him by the American papers. He has given for competition a challenge trophy to be sailed for annually by a fleet of not less than six yachts. While the object presumably is the encouragement of yachting in Germany, the contest can hardly be called an international one, as it will be sailed in British and French waters, and the competing yachts will be nearly all under the British flag. The natural conditions of themselves prevent any general participation by American yachts, and it is a very small matter whether or no American clubs are specifically included. Any American yachtsman who desires to compete can do so by joining a British yacht club, and as a matter of fact if he is doing much sailing in British waters he is more than likely to belong to several clubs.

If the Emperor had started in to establish another international trophy, open to the world, these very critics who now abuse him for his illiberality would have been the first to attack him for attempting to destroy the prestige of the America Cup.

Lord Dunraven and the New York Y. C.

The following letter appears in the *Field* of Jan. 14: Sir—Having represented Lord Dunraven in New York in the matter of the negotiations for the race for the America Cup this coming autumn, I have read with much interest your report of the meeting of the N. Y. Y. C. Dec. 13, and your comments thereon.

At the annual dinner of the club last winter, the chairman of the regatta committee referred to the demoralized condition of racing in the big clubs on both sides of the Atlantic, and expressed a hope that something might be done to meet the objections raised against the deed of gift of 1887, so that international racing might be resumed.

Lord Dunraven, it is well known, was equally anxious that, for the sake of sport, racing for the blue ribbon of the sea should be resuscitated, and expressed his willingness to challenge if the objectionable features of the deed of 1887 were overcome.

Both sides, generally recognized on both sides of the Atlantic that a mistake was made when framing this deed, in producing a document calculated rather to addle the brains of sea lawyers than to promote friendly rivalry and sport, and I think there is no doubt that the dimension clause, and the no time allowance clause (the latter in the event of failure of mutual agreement) are almost as strongly objected to in America as over here.

At the same time, it must be borne in mind that not many years ago we were unwise enough to bar centerboards, and that, unfortunately, a very serious error was made in the statement as to Thistle's L.W.L., when the challenge of 1886 was issued, causes which led Americans to feel that they must protect themselves, first as to the challenge; secondly, as to protection for the centerboard should they become challengers.

Both sides, therefore, desiring a race and the renewal of sport, negotiations were commenced with the view of bringing about the event under such conditions as might be mutually satisfactory.

It was perfectly well understood *ab initio* by the various members of the club, who were approached in the premises, and also by the cup committee, that, whether rightly or wrongly, the deed of 1887 was objected to here, and that no English club would challenge unless its conditions were modified or amended, and on this premise the negotiations were conducted.

Lord Dunraven, no doubt recognizing the value of many clauses to the deed of 1887, and without wishing to recapitulate them in his preliminary letter of Sept. 10, took the deed as a basis to work upon, eliminated the dimension clause, made proposals to cover exactness of design in referring to the L.W.L. as to time allowance, and so forth. The N. Y. Y. C., in a sporting spirit, practically accepted all his conditions, and in due course the formal challenge of the Royal Yacht Squadron followed. Neither the formal challenge nor the acceptance thereof alludes to the deed of 1887, and it is expressly stipulated that, should Valkyrie win the cup, the Squadron holds it subject to a challenge on precisely similar terms to those contained in its challenge.

When Gen. Paine's original resolution, read before the club, was merely passed on to Lord Dunraven without embodying this condition, the latter at once called this "is Valkyrie over again, equally impossible, &c.," and upon this being passed on to Gen. Paine, steps were at once taken to give effect by cable to Lord Dunraven's requirement. I cannot conceive anything more fair than this. It is true that the Squadron cannot refuse a challenge according to the conditions laid down in the deed of 1887; but it is conceivable that any one but an absolute lunatic would challenge under the deed of 1887, giving all his dimensions, etc., when he receives a challenge from the N. Y. Y. C.

It is, of course, understood that if Valkyrie wins the cup, the document to be signed by the Squadron in accepting it will embody Clause 3 of the Squadron's challenge; and is it not true, Sir, as you remark, that the N. Y. Y. C. has set a precedent of accepting a challenge upon terms less onerous than those set forth in its deed, and is it not probable also that the terms objected to in the deed will become a dead letter? Our racing rules and conditions have not been passed by the past, and in the interest of sport there must be some give-and-take. The N. Y. Y. C. have, I think, in this instance shown their desire for sport and fair play, and, as a direct outcome of Lord Dunraven's persistency, we shall undoubtedly see this summer, on both sides of the western ocean, the finest big cutter racing that has ever been witnessed.

Many Americans think that the deed of 1887, with its mutual agreement to racing rules and conditions, is a challenge can be construed in almost any conceivable way, is less objectionable than the deed or conditions of the Royal Victoria Gold Cup, which *inter alia* compel a challenger to give his sail area (i.e., L.W.L. and rating according to the Y. R. A.); to sail inside courses in strong tidal waters, and which, for instance, obliges Mr. Royal Carroll, if he wins this year, to defend the cup in American waters according to the rules and regulations of the Y. R. A. for the time being.

Let it be understood here that there are no better sportsmen, no more hospitable hosts afloat or ashore than our American cousins, and we shall soon be able to dispense with legal documents and volumes of cable correspondence, and enjoy international racing every summer. MATT LAND KERSEY.

No. 33 St. James Place, S. W., Jan. 6.

YACHT NEWS NOTES.

At a meeting of the Corinthian Y. C. of Marblehead, at the Parker House, on Jan. 17 the following officers were elected: Com., W. P. Fowle; Vice-Com., J. P. Loud; Rear Com., D. C. Percival, Jr.; Sec'y, Everett Paine; Treas., J. B. Rhodes; Meas., J. W. Dunlop. Executive Committee, John L. Sargent, Jr., W. S. Eaton, Jr., Robert C. Henderson, Henry Taggard, G. W. Mansfield, J. B. Paine, H. F. Benson, A. G. Wood, Membership Committee—Herman Parker, J. W. Hodgkins, R. H. W. Dwight, F. C. Newhall. House Committee—W. I. Field, J. B. Forsyth, Albert Poor. Board of Judges—Daniel Appleton, G. W. Mansfield, W. N. Merriam, D. H. Follett, Jr., D. W. Lane.

Iroquois, schr., arrived at Jacksonville on Jan. 17, ten days out from New York. The weather was very bad all the way, with strong head winds or bad following seas. Ella, steam yacht, of Baltimore, was also in port on Jan. 18.

Ituna, steam yacht, has been sold by Vice-Com. Morgan to August Belmont, owner of Mineola, which gives additional color to the report that Mr. Morgan has purchased the May, although this report has been contradicted this week. Ituna was designed by Watson and brought out from England last year by Mr. Morgan.

Mr. Archibald Rogers has resigned from the America Cup committee, as he is the head of the syndicate which will own one of the new yachts. Mr. Phillip Schuyler has been appointed in his place.

The 46-ft. class is largely on the sale list. Wasp, Gloriana, Harpoon, Barbara and Mineola. There is no reason why this fleet should not make good racing through the season in new hands, the best of them are so nearly equal that it would be but a matter of handling between them.

The Hudson River Y. C. has elected the following officers: Com., H. F. Allen; Vice-Com., E. Langerfeld; Sec'y, A. G. Bucholz; Treas., R. V. Freeman; Meas., D. Little; Fleet Surg., Dr. William Grogan; John L. Sargent, Jr., Trustee; Joseph H. Henderson, John Kelly, T. P. Wilson, S. E. Burris, J. E. Grover, George Allen, E. Helmstadt, C. Walden and R. V. Freeman.

A very sensational report was cabled from Nice last week to the effect that John N. Luning, of the New York Y. C., had become insane aboard of his yacht Alert and had been taken to an insane asylum in Paris. The Alert arrived at Nice on Dec. 20, having left New York on Dec. 20 and spent some time in English waters. With Mr. Luning were Charles M. Donnelly, Reginald Travers and Mr. Olcott, all of New York. The story of insanity is denied by Mr. Luning's friends, but there is no doubt as to the fact of his serious illness and temporary derangement. He is now in Paris, while the yacht has sailed for New York.

Atlantic, schr., is frozen in at Bridgeport, Conn., but will start on a Southern cruise as soon as she is free. Mr. C. B. Seeley, one of her owners, has been laid up with a broken leg from a skating accident, but will accompany the yacht.

Sagamore, steam yacht, Mr. E. M. Fulton, Jr., arrived at Bermuda on Jan. 17 and was to sail in a few days for New York.

The Quantum (Class.) Y. C. has elected the following officers: Com., W. S. McFaint; Vice-Com., C. H. Johnson; Treas., F. E. Balger; Sec'y, J. E. Drew; Fin. Sec., G. H. de Huif; Fleet Capt., J. N. Tewksbury; Directors, the Board of officers and Hamilton Flood, A. W. de Huif and W. E. Murrill.

The Y. C. Y. C. has elected the following officers: Com., N. L. Weatherly; Vice-Com., C. E. Wilson; Sec'y, W. S. Hyde; Fin. Sec., M. L. Barnes; Treas., Geo. Hirsop, Jr.; Trustees for three years, N. L. Weatherly, J. E. Van Hagen; Meas., J. E. Van Hagen.

At the annual meeting of the Buffalo (N. Y.) Y. C. the following officers were elected: Com., Frank B. Hower; Vice-Com., A. S. Chisholm; Hon. Sec., Howard A. Baker; Treas., W. C. Cowles; Meas., Fred L. Bennett; Fleet Surgeon, Dr. E. P. Hussey; Dr. H. D. Mickle; Directors, H. D. Williams, L. D. Northrup, J. S. Thompson, H. M. Birge. The new club house, a handsome three-story building, will be commenced shortly, \$25,000 having been subscribed. The yacht Volante has been purchased in Boston and will be brought to the lake.

Miranda, schr., is now at South Brooklyn completing her fitting out. It is reported that Mr. Coleman will sail her out to San Francisco by way of the Suez Canal.

Restless, steam yacht, has been sold to Messrs. Sibley and Barringer of Michigan.

Rockford, Ill., has a steam yacht club.

At Monument Beach, C. C. Hanley has a shop full of new Cape cats, one for F. W. Flint, of Larchmont, owner of Nymph, 40-footer; one for W. W. Winslip, to be 30 ft. over all and 24 ft. L.W.L.; one for A. A. Beebe, of Boston; one of 20 ft. for Henry Steers of New York, and a steam launch for Mellen Bray, of Boston. The Steers boat was designed by her owner. The Winslip boat will be 30 ft. over all, of light build, double skin, with a 10 ft. bronze board.

Saunders, at Bristol, is building three cruising yachts: one for W. G. Lord, of Brooklyn, to be 30 ft. over all, 23 ft. L.W.L., 9 ft. beam, and 5 ft. draft, with lead keel of two tons. Another is for C. H. Merriam, of Providence, to be 23 ft. 6 in. over all, 20 ft. L.W.L., 9 ft. beam and 6 ft. 3 in. draft, with over 6 ft. headroom.

Lawley & Co. have a number of yachts of all classes under way, the largest being a composite steam yacht designed by Geo. F. Lawley. She will be 102 ft. over all, 93 ft. L.W.L., 15 ft. beam and 7 ft. draft, with triple compound engine and Almy boiler. She will be schooner rigged. The firm will build a 31 ft. fin-keel from Stewart & Binney's design. About 100 men are at work in the yard.

Shelton & Co., of Boston, will build a steam yacht of 90 ft. L.W.L., designed by L. C. Hanscom, their designer; also a 21 ft. jib and mainsail boat for W. F. Spun, and a 20 ft. catboat.

Waterhouse & Chesebrough have designed a 20 ft. L.W.L. fin-keel cruiser, to be used about Narragansett Bay. She will be 30 ft. over all, 7 ft. 6 in. beam, 5 ft. 6 in. draft, including a 3 ft. fin, and will carry a cigar of 3,000 lbs. weight. The cabin will have 5 ft. headroom; she will be rigged as a cat yawl.

Harlan & Hollingsworth, of Wilmington, Del., are building a steam yacht for Mr. Wm. Dupont.

This committee has no recommendations to make for changes in

"MINGO"—SPOONBILL CRUISER.

laws or rules, as it is evidently most desirable that any changes which might be required should be framed by the new committee who are to administer them. There were some doubts as to the correct meaning and reading of Rule 1, but the general provisions of the rules as they stand seem to be satisfactory.

The full accounts of the regatta committee are as follows:

PRIZE FUND.			
<i>Receipts.</i>		<i>Expenses.</i>	
Subscriptions, as per list....	\$85.00	Paid Rehm & Co. for 3 bunting flags.....	\$4.50
	\$85.00	Balance in hand for prize fund.....	80.00
			\$85.00
GENERAL EXPENDITURES.			
Printing circulars, Corlies, Macy & Co.....			\$3.50
Exchange of log, as arranged by Com. Lawson, S. Thaxter & Co.....			5.00
Sailing numbers, E. N. Little.....			15.00
Rope and wire for buoys.....			9.11
Labor at camp.....			16.50
			\$49.11

Vouchers for these items are herewith submitted.

(Signed) Respectfully submitted,

R. S. OLIVER,
E. H. BARNEY,
H. LANSING QUICK,
FORD JONES,
R. W. GIBSON, Chairman.

Singlehanders and Small Cruisers.

Editor Forest and Stream:

At the close of the racing season on White Bear Lake in October a sailor comrade who is quite handy as an amateur woodworker asked me to fix up a spoonbill within his ability as a builder for use on the river under either sails or oars. Residing in town he desired a fairly light and fast boat for occasional cruises, with or without a companion, on the Mississippi, Minnesota and lower St. Croix, on such days when the yachting contests at the lake would not demand attention. So one evening the following design was projected. Before ice interfered with aquatic sport he had completed and given it several trials. The little cruiser is 16ft. over all, 11ft. l.w.l. and 3ft. 10in. beam, carrying a main and mizzen of 125 sq. ft. with an extra mast step for a single rig.

As the deep dropping board is frequently a cause of embarrassment in river sailing, the device illustrated was adopted and, with good results. This form of board is not new to some boatmen, but its mode of suspension whereby either end, or the entire plate, can be dropped or hoisted without jamming has not to my knowledge ever been utilized by any other than the subscribing boat crank. The plate and arms are of quarter inch plate iron copper bronzed, and when dropped the upper edge lies just within the external keel, and by drawing a couple of pins the whole board can be quickly released to facilitate sundry purposes in lightening the boat. The floor is raised to the top of the shallow trunk, on either side of which are detachable floor strips to give foot room when working a spruce breeze.

Pine enters solely into the construction, except the ribs, which are of white oak, and the clamps and coaming, wrought out of elm; planking is 3/4 in. thick, rather broad strakes put on carvel build, and the deck is of 1/2 in. stuff covered with muslin laid in paint and varnish. Tight bulkheads are fitted at stations 1 and 7, being the moulds used in building. The total cost of materials used in the hull, rig and fittings, fell inside of \$15, but the estimation of value reaches a fair figure based on careful workmanship and finish as well as ability of performance.

Mingo, the present design, shows several departures from the sneak-boat type, and, in the orthodox style of moulding in which fair lines dominate, and are augmented forward by the addition of the false stern or moulded keel band which carries out the lines, giving a fine entrance.

But the original sneak-box method of construction is preserved which, while being strong, having the rigidity of a well hooped barrel, and offering no direct lines of resistance to any shock of collision, or trusting strain, is so well adapted for amateur work both in economy and facility of construction.

CATGGA.

ST. PAUL, January, 1893.

P. S. I trust both the editor and my esteemed Cobourg controversialist will not institute proceedings for any infringement on their "spoonbill" form of architecture.

With or Without.

The Herreshoff fin-keel is now generally admitted to be a sailing appliance of undoubted value, combining as it does the lowest possible center of gravity with the most effective plane of lateral resistance.

In practice it is usually a rectangular plate with a "cigar" of lead attached to its lower edge, and it is either fastened permanently to the keel or drops vertically through a low trunk; and while it is unquestionably an efficient device it becomes a source of danger when sailing on unknown waters. Now, it is for just this kind of work that the old pivoted boat or "Dutch lead line" is admirably adapted, as it will rise at once on taking ground.

The writer has sought to combine the desirable features of both board and fin-keel in the board he has devised, and the reader can decide in how far successful he has been from the accompanying drawings. The lead hangs entirely in the keel and is held there by the rods C C (Fig. 1), which screw into sockets in both ends. The board, as will be seen, is pivoted at its forward end in the lead and is worked like, and in fact is, an ordinary centerboard.

Now, let us suppose we are sailing in deep water with insufficient ballast and a puffy wind, under the very conditions that a fin-keel becomes invaluable. To obtain the keel one has only to push a pin through the middle of the board at E or rather the pin would already be in place with the board hoisted, then unscrew the rods C C when the pin, E, would take the whole weight of the board and lead, withdraw the pin and drop the board until the handle, D, rests on the top of the trunk. The lead will now hang horizontally at the bottom of the board supported at the forward end by the pivot A and at the after end by the projecting spur B, which cannot pass through the slot in the lead, and there you have your fin-keel.

Very good, you will say, but you forget the big slot which will tear up the water to the detriment of speed, as it would undoubtedly do were it not for a stout brass plate, Fig. 5, which lies on top of the lead and just fits the slots. The plate, which is slotted for the board, would drop with the board were it not for the small ears, A, Fig. 5, which bring up on the brass edge of the centerboard slot, making the bottom flush and smooth. The radial sweep of the front and rear edges of the board are alike for the purpose of filling the slot in the brass plate when lowered in order to prevent any swinging in a fore and aft direction. The sweep will cause the board to drop aft slightly as it goes down, but this is rather an advantage than otherwise, as it changes the center rather less than if it dropped vertically. Fig. 4 shows the horizontal section of the lead. In Fig. 3 the shape of the lead as shown is not arbitrary and could very well be changed, to a triangular section should it be thought that the flat top as shown would affect the scending of the boat.

I will say in conclusion that the board has not been carried beyond the drawings, which by the way are not accurate enough to work from, although they will answer to illustrate the principle. I have omitted many details in the drawings lest they might obscure the principal features of the plans.

ROBT. H. PEEBLES.

CANOE NEWS NOTES.

At the annual meeting of the Shuh-Shuh-Gah C. C., of Winchester, Mass., the following officers were elected: Capt. Raymond Apollonio; Lieut. F. B. Moulton; Sec'y. Harry C. Holt; Purser, Roland Cutter, Member of Ex. Com. at Large, J. Murray Marshall.

The Park Island Canoeing Association held its annual meeting on Jan. 11 and elected the following officers: Pres. C. E. Booz; Vice-Pres. E. D. Anderson; Sec'y-Treas. C. Lawrence; Trustees, Fred B. Yard, J. B. Agnew, Clark Cooper, Fred W. Donnelly and J. Wallace Hoff.

The Knickerbocker C. C. has elected the following officers: Com.,

E. C. Griffin; Vice-Com., A. E. Whitman; Sec'y, J. K. Hand; Treas., J. P. O'Shea; Meas., F. C. Moore.

The Canoeists' Club, of New York, held a meeting on Jan. 18 to reorganize for the present season and elected the following officers: President, Wm. Whitlock; Vice-Pres., L. D. Palmer; Sec'y, C. V. Schuyler; Treas., F. L. Dunnell; Members of the Council, R. Peebles, F. C. Moore, Jas. O'Shea, H. C. Ward and W. S. Elliott.

The Brooklyn C. C. has selected June 10 for its annual regatta off the club house, Atlantic Basin.

The present purser of the Central Division is Mr. Chas. E. Wardwell, Rome, N. Y.

Mr. W. T. Markham, 5 Wiley street, Jersey City, is the secretary-treasurer of the Crescent C. C.

The annual meeting of the Hartford C. C. was held on Jan. 17, the following officers being re-elected: Pres., Dr. Geo. L. Parmele; Com., John D. Parker; Sec'y, Frederick B. Lewis; Treas., Wm. D. Davidson. These and Geo. D. Wright comprise the executive committee. The annual dinner of the club is to take place at the Heublein on Jan. 28.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1892-93.

COMMODORE: LIEUT.-COL. W. H. COTTON, Kingston, Ontario, Canada.
SECRETARY-TREASURER: R. EASTON BURNS, Kingston, Ontario, Canada.

ATLANTIC DIVISION.

Officers:
VICE-COM.: J. R. Lake.
REAR-COM.: H. L. Quick.
PURSER: F. L. Dunnell, B'klyn, N. Y.
EX. COM.: M. V. Brokaw, W. E. Lawrence, W. E. Dodge.

CENTRAL DIVISION.

Officers:
VICE-COM.: T. H. Stryker.
REAR-COM.: W. C. Witherbee.
PURSER: C. E. Wardwell, Rome, N. Y.
EX. COM.: C. V. Winne, W. R. Hunt, Kingston.

EASTERN DIVISION.

Officers:
VICE-COM.: Geo. L. Parmele.
REAR-COM.: F. A. Sears.
PURSER: F. B. Lewis, Box 89, Hart'd.
EX. COM.: Paul Butler, W. U. Law-son, R. Apollonio.

NORTHERN DIVISION.

Officers:
VICE-COM.: J. N. MacKendrick.
REAR-COM.: F. Minns.
PURSER: W. G. MacKendrick, Tor.

Rifle Range and Gallery.

Dorrlor's Fine Gallery Work.

For a number of years M. Dorrlor, the well-known expert of the Zettler Rifle Club, of New York, has sustained the reputation of being the finest gallery shot in the country. Three years ago, in a 100-shot match, on the 75ft. ranges of the Our Own Club, in Newark, he made a world's record of 2,447 points on the German (4in.) ring target. This record has never been equalled. On Dec. 29, 1892, in a 50-shot match, on Zettler Brothers' ranges, 219 Bowery, with such an expert and nervy opponent as Bernard Walther, Mr. Dorrlor again established his claim to the title of champion gallery shot by scoring 1,235

New York Revolver and Pistol Club.

NEW YORK, Jan. 15.—The following scores were made by the members of the New York Revolver and Pistol Club at their regular weekly practice shoot Jan. 14, at their headquarters, No. 12 St. Marks place, 10 shots on standard American target, distance 20yds., S. & W. revolver:
B Walther, 44.....86 E Walz, 38.....80
H Oehl, 44.....85 F Hecking, 38.....73
G E Jantzer, 44.....82 F G Allen, 38 (Colts),.....72
G L Hoffman, 38.....80 F. HECKING, Sec.
Jan. 23.—Record scores made on the 21st:
H Oehl,.....92 G B Bishop,.....83 F Hecking,.....79
G E Jantzer,.....85 G L Hoffman,.....83 E Walz,.....83
The club will have a gallery prize shoot open to all at their headquarters, 219 Broadway, Jan. 28, 29 and 30. Any .22cal. rifle, .25-ring

strictly off-hand, 10 shots, possible 250, targets ¼in. ring, 1¼in. bull, ½in. center:

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Jan. 31.—Union Gun Club tournament, Springfield, N. J. Live birds, February.—Live bird tournament on Erb's grounds, Bloomfield avenue, Newark, N. J.
Feb. 2.—Zwirlein's tournament, Yardville, N. J.
Feb. 9.—Newark Gun Club shoot, Erb's grounds, Newark, N. J.
Feb. 14-16.—Reading Shooting Association, second spring tournament, at Shillington, Pa. Two days at targets, third day at live birds. Address H. W. Matz, Three-Mile House, Shillington, Pa.
Feb. 14-16.—Forester Gun Club tournament, Davenport, Iowa.
Feb. 16.—Essex Gun Club shoot, on Heritage's grounds, Marion, N. J.
Feb. 21-22.—Highland Gun Club tournament, Des Moines, Ia. Live birds and bluecock targets.
Feb. 21-23.—Oneida County Sportsmen's Association tournament, at Utica, N. Y. Live birds and targets.
Feb. 22.—Live bird tournament, on Erb's grounds, Newark, N. J.
Feb. 22.—Syracuse Gun Club, "Jack rabbit" tournament, at Syracuse, N. Y.
Feb. 22.—J. L. Brewer vs. E. D. Fulford, 100 live birds each, for \$100 a side.
March 10.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.
May 2-4.—Independence (Ind.) Gun Club tournament. Added money.
May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.
May 23-25.—Knoxville Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.
May 30.—Eastern New York Trap League tournament, at Canajoharie, N. Y.
May 30-June 1.—Iowa State Sportsmen's Association, Clear Lake, Ia.
June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.
June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.
Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh.

DRIVERS AND TWISTERS.

It is rather curious that while shooters all over the country are crying down the practice of "dropping for holes," so few of them favor a system which will effectually do away with the practice. The only system which will do this is the "Jack Rabbit" system, and to our way of thinking, this should be the popular system. With this system any handicaps can be used. Of course the "Jack Rabbit" is not devised for the "pot-hunter," but after all the majority of this class are in receipt of salaries and expenses, and should not be considered in the arranging of a shoot. If clubs wish to add money to purses they can do so as well under the "Jack Rabbit" as any other system. The Harrisburg Shooting Association, Syracuse Gun Club and Rochester Rod and Gun Club have given this system a practical test and have pronounced strongly in its favor. Let other strong clubs arrange tournaments under this system and they will surely be assured of its value. It will not attract "pot-hunters," but what is better it will bring out the medium-paced shooters, who have been driven from the ranks by the "wolves." Ordinarily a man who shoots a 60 to 70 per cent. gait at a tournament gets nothing out of the purses, but under the "Jack Rabbit" system he is bound to get back from 60 to 70 per cent. of his money (less the cost of targets), while the man who shoots an 85 to 95 per cent. gait is getting back from 85 to 95 per cent. of his entrance money, besides coming in for a share of the 50, 30 and 20 per cent. division of the balance of the purse after broken targets are paid for. This still leaves the better shot a chance to get above his expenses, while the poorer shot is not left entirely "in the cold." The American Manufacturers' Association would do well to give this system a fair trial, combining with it Jack Parker's handicap. If this Association goes into the field with the above combination it will show its willingness to cater to all classes of shooters.

At the annual meeting of the Cleveland (O.) Gun Club, officers were elected as follows: President, C. C. Sigler; Vice-President, Dr. E. J. Cutler; Recording Secretary, S. S. Saffold; Treasurer, Fred A. Tamblin; financial secretary, F. H. Wallace. Directors were elected as follows: W. S. Harris, W. A. Babcock, Ralph Worthington. The report of the secretary showed that 37,572 targets were used during 1892. Hereafter the first shoot of each month will be at 50 singles from five traps, and the second shoot in each month will be at 30 singles and 10 pairs from three traps. Every member of the club will have a handicap, and a committee, comprising J. A. Flick, W. A. Babcock and W. H. Tamblin were appointed to arrange the handicap with the instruction to make it so that the poorer shooters of the club will have as good an opportunity to win the badges as the crack shots. The badges will be in number and the shooters will be divided into five classes. There will be a badge for each class. After the meeting a banquet was discussed, during which W. H. Tamblin was presented with the badge for the best average made in the shoots in 1892. This badge was donated by Will Huntington and is a beautiful one. Mr. Tamblin's average last year was 25 19-23. The club shoots were at 30 birds, and Mr. Tamblin's average then is very good indeed. Ralph Worthington was next best, his average being only a fraction of a bird under that made by Mr. Tamblin. The club's lease on the ground at Cedar Heights expires in June, and as the property has been sold it will not be possible to renew it. A committee has been appointed to look for new shooting grounds.

The Free Press, Detroit, Mich., says: "While the trap-shooters are preparing for an active season at artificial targets they should not overlook the fact that the Legislature is in session, and if they want to kill any live pigeons at the trap in the next two years, now is the time to act. Michigan has the same law in regard to pigeon killing that prevailed in almost every State at some time. Sections of the community would imagine that pigeon killing was a most inhuman sport and would prevail upon a Legislature to make it a misdemeanor. In nearly all the States which have been thus bothered the obnoxious law has been repealed and it devolves upon the sportsmen themselves to have the Michigan law set aside, for if they do not take any steps in this direction it is not like some of the societies that framed the law will do so. If the killing of pigeons resulted in a waste, and was merely to gratify a low-bred instinct on the part of the shooter, the law would be all right; but in England and among the fashionable clubs down East, no sport ranks higher. Then, too, there is never a pigeon shooting contest but that some neighboring hotels are ready to take the birds and serve them to the public, which does not run across morsels like well-cooked pigeons every day. The repealing of this law would revive interest in shooting and splendid tournaments could be held here with more at stake and more of the true sportsman air about them than the very low-priced target shoots now held every week or so."

Miss Annie Oakley, "Little Sure Shot," is living at Pompton, N. J. A Pompton paper is responsible for the statement that her feats of marksmanship are weaning the village children from their love of the school. And apropos, the Kansas City Journal of Jan. 12 says: "Miss Annie Oakley, the famous rifle shot, has started for a ride from New York to Chicago on a bicycle. She will give shooting exhibitions on the way." When the above item appeared, Miss Oakley was on Jersey soil. During the winter she has been keeping in practice and among other feats has mastered that of shooting at moving objects from the saddle of a safety bicycle, keeping the machine in rapid motion meanwhile. This will be one of her star feats during the World's Fair.

The Keystone Shooting League of Philadelphia announces an all-day shoot at live pigeons to be held at Bridge Station, Philadelphia, on Feb. 6, beginning at 10 A. M. The main event will be at 25 pigeons, \$20 entry, the money to be divided on the basis of one money for every four men. There will also be sweepstake shooting before and after the above event. Entries for the 25 bird sweep will close with A. J. Rust, Alleghany avenue and Emerald street, Philadelphia, Feb. 3, and each entry must be accompanied with \$5 forfeit money. Mr. Rust, who is field captain of the above club, assures us that there will be plenty of good birds on hand, and expresses the hope that the New York and New Jersey shooters will attend, and take part in the fun, thus increasing the interest.

At the annual meeting of the Willamette Rod and Gun Club, of Portland, Oregon, the following officers were elected: J. S. Seed, Pres.

250 243 246 249 247
DORRLOR'S RECORD SCORE.

out of the possible 1,250 points, a record that is likely to stand for many days.
We publish herewith full-size fac-similes of Mr. Dorrlor's targets, which score respectively 243, 246, 247, 249 and 250. On Jan. 1, 1893, in a 100-shot match, on the 100ft. ranges at 12 St. Marks place, Mr. Dorrlor won the championship of New York with a total of 2,412 out of a possible 2,500 points. His targets showed, in order, 240, 245, 243, 240, 241, 240, 247, 241 and 241.
In both the above record-breaking feats Mr. Dorrlor used a .22cal. Ballard rifle, with peep and globe sights, 28in. barrel, weight 6lbs. 6oz., trigger pull 3lbs., and used the United States Cartridge Company's new .22-short ammunition.

Beideman Rifle Club.

BEIDEMAN, N. J., Jan. 21.—The following completes the weekly shoot of the Beideman Rifle Club week ending Jan. 21, open air range,

dent: Judge S. H. Greene, Vice-President; G. M. Stearns, Treasurer; A. E. Guist, Secretary; J. S. Seed, Al Lambert and Frank Laise, Judiciary Committee. The reports of the retiring officers show that the club has 111 members and is in a sound condition. Judge S. H. Greene and Capt. Joe Paquet, who were appointed at the last meeting to draft and report to the club a bill for the appointment of a game warden, and to provide for the better protection of game, made their report, which received the indorsement of the club. Captain Paquet was appointed to go to Salem and lobby for the passage of the bill by the Legislature.

PORTLAND, ORE., Jan. 10. At a recent meeting of sportsmen held in this city the Multnomah Rod and Gun Club was organized, the object of the club being to protect game and fish and promote the general interests of sportsmen in this city. The constitution and by-laws of the old Multnomah Rod and Gun Club were adopted by the new club with a few changes and amendments. The officers for the ensuing year are as follows: W. Chapman, President; Dr. F. Cauthorn, Vice-President; T. G. Farrell, Secretary; I. Humanson, Treasurer; Frank Thorn, Field Captain. It was decided that the club apply for membership in the Northwest Sportsmen's Association. A committee was appointed to secure permanent quarters for the club. Following is list of the charter members: H. F. Hudson, W. L. Storey, J. Seed, T. G. Farrell, D. Williams, J. H. Humanson, C. E. Cauthorn, E. W. Moore, Frank Thorn, C. L. Doty, Jas. Carragher, J. W. Keen and W. Chapman.

The Interstate Manufacturers' and Dealers' Association held its first meeting under the new charter at Taylor's Hotel, Jersey City, Jan. 23. The following officers were elected: President, Charles Tatham; Vice-President, O. D. Delano; Secretary, H. A. Penrose; Treasurer, J. A. H. Dressel; Executive Committee—Charles Tatham, J. A. H. Dressel and Justus von Lengerke; Classification Committee—H. A. Penrose, Noel E. Money and Justus von Lengerke. The Board of Directors consists of Justus von Lengerke, H. A. Penrose, Noel E. Money, J. A. H. Dressel, Charles Tatham and George Sampson.

The Riverside Rod and Gun Club, of Rochester, N. Y., has elected the following officers: President, Charles W. Peart; First Vice-President, H. Peeters; Second Vice-President, W. Pauckner; Third Vice-President, W. H. Davenport; Secretary, W. E. Abbs; Corresponding Secretary, H. Peeters; Treasurer, B. G. Gibb; Shooting Master, John Pauckner; Assistant Shooting Master, W. Peeters; Fishing Master, J. N. Bates; Assistant Fishing Master, M. E. Perry; Directors, Charles W. Peart, H. Peeters, W. E. Abbs, B. G. Gibb, John Pauckner, W. Peeters, J. N. Bates.

The newly organized Hell Gate Gun Club held its first shoot on the Pelhamville grounds on Jan. 20, each man shooting at 10 live birds, handicap rises. The scores follow: Doenick, 28yds., 8; A. Kiechle, 25 yds., 6; H. Hanlein, 25yds., 6; A. Moeller, 25yds., 5; C. Weber, 25yds., 5; L. Miller, 25yds., 2; Col. J. H. Voss, 30yds., 6; J. Schubert, 25yds., 2; J. Linck, 25yds., 6; Ch. Rieger, 25yds., 7; J. Danneberg, 25yds., 6; E. Foerster, 25 yds., 9; G. Schaefer, 27yds., 7; S. Schaefer, 27yds., 10; F. Drostel, 28yds., 4. E. Foerster won the first-class badge and S. Schaefer that of the second class.

MATTAWAN, N. J., Jan. 19.—The annual meeting of the Midway Gun Club took place to-day, and the following officers were elected: President, John Applegate; Treasurer, James H. Bedlee; Secretary, Daniel W. Walling. The shooting which followed resulted as follows: First event, for gold club badge, 10 live birds, Hurlingham rules: E. Mulcahy and John Terhune each killed 5, and on shooting off Mulcahy won. In a 7-bird sweepstake Mulcahy won, killing 6, Frank Worrell being second with 5. The final event was a miss-and-out, which was won by Charles Muirhead.

The annual meeting of the Erie Gun Club was held on Jan. 14. The election of officers resulted as follows: Frederick Graef, President; M. Elssasser, Vice-President; Carston Plate, Treasurer; C. H. Lührsen, Secretary; D. J. Lynch, Captain. A resolution to amend the shooting rules for the year was adopted. It was decided to handicap the shooters according to classes as follows: Class A, 27 to 30yds.; Class B, 25 to 27yds.; Class C, 23 to 25yds., the best average scores of 7 shoots out of 12 to count for the winner of the prize in his class.

NORRISTOWN, PA., Jan. 21.—A grand shooting match at standard targets, rapid firing and class shooting, will be held on the Penn Gun Club grounds, Norristown, Montgomery Co., Pa., on Saturday, March 18, for a first-class Parker breech-loading, double-barrel 12-gauge gun and a \$50 gold piece. Tickets 50 cents, birds free. Shoot to commence at 10 o'clock A. M. Come one and all and have a good time. Squire loaded shells for sale at the shoot. Sweepstake after the match.

At the annual meeting of the Syracuse Gun Club these officers were elected: President, H. H. McMurtry; First Vice-President, W. A. Holden; Second Vice-President, H. M. Chase; Secretary, A. C. Ginty; Treasurer, C. L. Becker; Executive Committee, George H. Mann, H. R. Becker, A. S. Spangler; Field Committee, A. S. Spangler, George H. Mann, H. R. Becker; Delegates to the State Association for the Protection of Fish and Game, C. L. Becker, H. M. Chase, A. C. Ginty, W. E. Hookway, W. A. Holden.

The West End Gun Club, of Davenport, Ia., has decided to incorporate with a capital stock of \$3,000, of which nearly \$2,000 has already been subscribed. The club will purchase ground in a central location and erect a cosy club house. The officers are as follows: President, Henry Frahm; Vice-President, George Raible; Secretary-Treasurer, Sam Hoffman; Directors, Henry Frahm, George Raible, W. F. Sitz, Carl Thode, Sam Hoffman, Edward Emerson, J. J. Friday.

Herr Bilderbock, of Wilmington, Del., wonders how a club can afford to hold shoots under the "Jack Rabbit" system, under which you pay 10 cents for each target broken, the balance, if any, to be divided 50, 30 and 20 per cent. among the highest three scores. Herr Bilderbock is advised that the above money comprises the "entrance money" to an event, the targets being an extra charge and not included in said entrance money.

From time to time we receive applications from various sportsmen asking for opinions as to the pattern, penetration, etc., of one powder as compared to another. For obvious reasons we must decline to give opinions, not only on the above subjects, but also as to the shooting qualities, etc., of the various makes of firearms. These queries should properly be submitted to the manufacturers of firearms and ammunition.

What has become of the West Virginia State Sportsmen's Association for the Protection of Fish and Game, formed at Martinsburg last summer? The members of the Island City Gun Club, of Wheeling, did their share toward awakening an interest in the sport, but it is not likely that they received any support from other places. An association of this character is sadly needed in the State.

A. E. Spangler, for several years manager of the engraving department of the Hunter Arms Company, has resigned his position and is about to return to Cincinnati, his old home. Mr. Spangler is the inventor of the famous Spangler crimper and is well known to sportsmen throughout the country. He will be missed by his Syracuse friends.

The Rahway (N. J.) Gun Club held a shoot on its Milton avenue grounds on Jan. 21, each man shooting at 10 live pigeons. The scores: W. Tucker 12, W. H. Kelly 6, J. Bernhard 8, H. Blove 18, S. Crowell 10, J. Lawrence 10, W. McGrath 11, H. Mead 6, G. Wilson 9, G. Potter 7, A. Crane 1, H. Harris 10, G. Goodman 9, M. H. Acken 10, J. Mead 10, J. L. Crowell 11, Geo. Acken 10.

In its election of officers the New Jersey Trap Shooters' League was guilty of an oversight in not electing an official scorer. It is absolutely necessary that the League should have such an official, who should receive a salary for properly keeping the scores in manifold. His duties should comprise looking after sweepstakes as well as team scores.

The Union College Gun Club, of Schenectady, N. Y., held a shoot on Jan. 19. In the first event, at 10 United States targets, D. N. Tallman scored 9, B. H. Sanders 8, L. C. Baker 7, G. H. Miller 6, E. D. Lines 6, L. Meliens 5, F. Baldwin 5. Event No. 2 was at 15 targets in which Miller broke 14, Tallman 14, Meliens 11 and Lines 11.

The Lancaster (O.) Rod and Gun Club has elected the following officers for the ensuing year: President, Fred Beck; Vice-President, C. B. Martin; Secretary and Treasurer, Ed P. Boyer; Captain, Wm. Cox; Directors, Fred Beck, C. B. Martin, E. P. Boyer, Wm. Cox, Chas. F. Nester, and Wm. B. McCleneghan.

The Phoenix Gun Club, of Phoenix, Ariz., has been reorganized with the following officers: President, Gov. Murphy; First Vice-President, Dr. Jessup; Second Vice-President, Thomas Hine; Secretary and Treasurer, L. H. Chalmers; Scorer, E. C. Cram. The club will shoot at both live birds and targets.

The Park City Gun Club, of Bridgeport, Conn., has elected the following officers: President, William A. Thomas; Vice-President, William B. Wheeler; Secretary and Treasurer, William H. Longten; Board of Directors, William Jennings, F. W. Smith, Archie Wheeler; Captain, A. H. Deau.

The Chatham (N. Y.) Rod and Gun Club has reorganized with officers as follows: President, Dr. G. W. Vedder; Vice-President, John T. Spoor; Secretary, Frank Richardson; Treasurer, S. C. Howland; Captain, Henri Billaudel; Directors, D. J. Ames, G. Vanderburgh, H. Billaudel.

The Colt hammerless shotgun is fast growing in popularity. The bores are true to measure, which obviates the necessity for loading shells with larger size wads. The workmanship and material of these guns are first-class. Their latest improvement is the concave matted rib.

A meeting of the Connecticut Shooting Association will be held at the Hotel Heublein, Hartford, on Tuesday, Feb. 5, 1898, at 2 P. M. All gun clubs in the State are requested to send at least one delegate with power to act for the club. JOEL W. WEBB, Pres.; ALLEN WILLEY, Sec.

The Forester Gun Club, of Kansas City, Mo., held its annual meeting on Jan. 14 and elected officers as follows: President, J. Scott Harrison; Vice-President, F. K. Hoover; Secretary and Treasurer, J. W. Jones. In the medal shoot at 15 birds each C. F. Holmes won with 14 kills.

The Harrisburg Shooting Association is beginning to move in the arrangement for the Pennsylvania State shoot to be held under its auspices in August. With such hustlers as "Jk. Rbt." Bradsford and J. M. Worden at the fore the arrangements are not likely to drag.

Montgomery Ward & Co., of Chicago, are well fixed in their gun and ammunition department, which is looked after by Rolla O. Heikes, Ed Bingham, C. W. Grubbs and M. E. Moran, all of whom are expert shots and well versed in the needs of sportsmen.

Secretaries of clubs in the New Jersey Trap Shooters' League are requested to send to Wm. R. Hobart, secretary, 59 Halsey street, Newark, N. J., a full list of their members. Only those whose names are recorded as above will be allowed to shoot on teams.

The New Jersey Trap Shooters' League will start out under favorable auspices with twelve clubs on the list. Still there are over a score of other clubs in the State which should have furthered the interests of the sport by affiliating with the League.

If sportsmen desire to secure something neat and pretty in the way of a catalogue of guns, ammunition, etc., they should send for the one issued by Von Lengerke & Anfoine, 246 Wabash avenue, Chicago, Ill. The front page of cover is a work of art.

The second application for stock of the World's Fair Trap-Shooting Association, from the Chamberlin Cartridge and Target Company, was signed by Paul North, who is one of the best known and most popular target shots and business men in the country. He has been

with the above company ever since its organization, and the success of the company is largely due to his systematic business methods. He is also the inventor of the North electric pull, which has become so popular with target-shooting clubs all over the country. Accompanying is a half-tone cut, which is an excellent likeness of the "ruddy-faced boy from Cleveland."

We publish an excellent half-tone cut showing the genial features of Chas. M. Hostetter, of Pittsburgh, Pa., who is better known to the shooting fraternity as "Old Hoss." Mr. Hostetter has the distinctive honor of being the first one to apply for stock in the World's Fair

Trap-Shooting Association, and will undoubtedly receive share No. 1 of the Association's stock. He is one of the most expert as well as most enthusiastic sportsmen in the State of Pennsylvania, and is always ready to do his share toward promoting the interests of trap-shooting.

The Ansonia (Conn.) Gun Club has elected the following officers: President, C. M. Platt; Vice-President, C. A. Cowles; Secretary and Treasurer, E. S. Sperry; Captain, D. E. Currie; Directors, A. E. Hotchkiss, G. B. Clark, J. W. Begg.

Send along your subscriptions for the stock of the World's Fair Trap-Shooting Association. Every American sportsman should have an interest in this Association. Invest \$1, if no more, and help along the good cause.

The officers of the Windsor (Mich.) Keystone Gun Club just elected are: President, Rev. J. W. Cates; Vice-President, W. C. Donaldson; Lieutenant, J. W. Cates.

It is probable that in the near future a match may take place between teams of ten men each, representing Philadelphia, Pa., and Newark, N. J., each man to shoot at 10 or 15 live pigeons.

Enoch D. Miller says he will have a big lot of good birds for the Union Gun Club tournament at Springfield, N. J., Jan. 31. Trains will be met by hacks at the Millburn depot.

Sauuel Castle of Newark and Jean Pier of Pine Brook were to have shot a match at the latter place on Jan. 17, but Pier's backer failed to materialize and the match is probably off.

The shoot at 25 pigeons, \$20 entry, to be held at Philadelphia on Feb. 6, should attract a big crowd of entries. Here is a chance for New York and New Jersey cracks to show their skill.

We have received a fresh supply of the American Shooting Association rules published by the United States Cartridge Company, and copies will be sent on receipt of stamp.

Harry Harlowe and Al Stout, of the Wilmington Rod and Gun Club, are matched to shoot a team race against James White and George Miller, of the Wawaset Gun Club.

The Eastern New York Trap Shooters' League will hold a tournament at Canajoharie under the auspices of the lively Canajoharie Gun Club on May 30, Decoration Day.

The Chamberlin Cartridge and Target Co., of Cleveland, O., is using large quantities of the Lancaster cork gun wads. They are rapidly growing in favor with shooters.

Harry Thurman called at our office on his return from his Virginia hunting trip, but unfortunately we were in another part of the town at the time.

The Wilkesbarre (Pa.) Gun Club has excellently appointed grounds near the gun factory and a target and live bird tournament is thought of.

Lewis Wirth, formerly with Hurlbert Bros., of New York, has assumed charge of the sporting goods store of E. G. Koenig, in Newark, N. J.

Henry Max, formerly with Von Lengerke & Detmold's Newark branch, is going on the road for E. K. Tryon, Jr., & Co., of Philadelphia.

Dr. J. G. Knowlton of the Oneida County (N. Y.) Sportsmen's Association was in town last week. He had just returned from a Western trip.

The Rochester Rod and Gun Club should not fail to provide for daily live bird events during the New York State shoot in June.

The 100-bird match between Fulford and Brewer, to take place at Utica, Feb. 22, will attract a big number of spectators.

"The Kay" Keller went westward from Hamilton and will make an extended trip on U. S. Cartridge Company business.

The combination of American Wood Powder, L. C. Smith gun and Jack Parker was too hot for the boys at Hamilton.

Another live bird tournament will be held on Erb's Newark grounds the latter part of February.

The Perth Amboy (N. J.) Gun Club will hold a tournament on Washington's Birthday.

John A. Hartner will hold a target tournament at Bengies, Baltimore county, Md., on Feb. 22.

Altoona, Pa., will probably have a two or three days' tournament in the early summer.

The monthly shoot of the Newark Gun Club will be held on Erb's grounds, on Feb. 9.

The shooters of Rochester are in love with the "Jack Rabbit" system.

Lafayette, Ind., has a new gun club with 25 members.

C. H. TOWNSEND.

New York German Gun Club.

TWENTY-TWO members of the New York German Gun Club had a fine day's trap-shooting at Dexter Park on Wednesday, Jan. 23. The weather was fine, but the bright sunlight on the snow interfered a great deal with the shooters. Only two making straight scores of 8, P. Garms, Jr., and M. Borden. The former won on the shoot off and took the club medal. It was nearly dark when the team race took place which resulted in a tie, but P. Garms, Jr.'s, team won on the shoot off miss and out. The scores:

J. Frazer	10212111-7	C. Stradtman	01003011-4
P. Garms, Sr.	11101111-7	D. Schrecke	00013011-3
P. Garms, Jr.	11321111-8	J. Carwitz	12100101-6
F. Schlecht	00122121-6	J. Goerlitz	01111101-6
F. Sauter	01101000-3	A. Schmitt	01310101-5
J. Wellbrook	11002230-5	M. Borden	11112111-8
J. Bosenecker	11001112-5	A. Busch	01110111-6
F. Huff	00121011-5	J. Steurnagel	10300120-4
H. Thurnford	00221200-6	J. Danneberg	00000121-3
H. Nobel	00021010-2	G. Schroeder	00000121-3
F. Schraeder	20000002-2	F. Ahlers	11021211-7
P. Garms, Jr.	102-2	M. Borden	200-1
Team shoot, losing side to pay:			
F. Sauter, Capt.	21-2	P. Garms, Jr., Capt.	11-2
J. Frazer	11-2	A. Schmitt	21-2
J. Wellbrook	10-1	J. Steurnagel	00-0
A. Busch	00-0	J. Schlecht	00-0
M. Borden	01-1	L. Miller	10-1
F. Huff	10-1	J. Goerlitz	21-2

Emerald Gun Club.

THE Emerald Gun Club, of New York, held its first day's outing of the year at Dexter Park on Tuesday, Jan. 17. Nearly a score of members went to the traps to compete for the club medals in the two classes. Each man shot at 10 birds. Emerald Gun Club rules, gun below the elbow until bird is on the wing, both barrels allowed. L. Gehring won the Class A medal with 7, and C. Maesel after being H. Thau with 5 won the Class B medal on the shoot off. The weather was fine and cold, but the reflection of the sunlight on the snow made the hitting of the light-colored birds very difficult, which resulted in some poor scores, the birds being a good fast lot. The scores:

Class A.	0211200011-6	R. Regan	2111030012-7
G. E. Grieff	01001101-5	J. H. Moore	1100110011-3
D. Klein	000023101-4	J. H. Voss	1120000102-6
E. Klein	000023101-4	J. H. Voss	0122201322-8
J. Voller	2201021001-6	N. Maesel	0112102300-6
W. Cody	1010121000-6	W. Hogan	0011012000-5
L. Schortemeier	1010121000-6	W. Hogan	1222011110-8
Dr. Leverage	1010110120-6	H. Thau	0110011110-6
E. Doenick	0201100101-5	J. Horn	1001100021-3
Dr. Hudson	0001200002-3	J. Maesel	1001100021-3
L. Gehring	0121212002-7	C. Maesel won on shoot off.	

Sweepstake shoot, 25yds., entry \$1, 3 runners:			
L. Schortemeier	1222-5	J. Colley	00000-4
E. Doenick	11110-4	H. Thau	02102-3
E. H. Voss	11112-5	W. Hogan	00010-1
R. Regan	01012-3	N. Maesel	12220-4
J. Bowen	01012-3	C. Maesel	02112-4

Young Wins the Garfield Medal.

CHICAGO, Jan. 14.—The third contest for the diamond in the Garfield Gun Club took place to-day, and no man can claim a "cinch" on the little stone "Cop" is in the lead by a small per cent., with three men close after him, so that interest is at fever heat to pick a winner. Below are the scores, Illinois State rules, 5 unknown King traps:

Cop.	222212222212201212-18	Flemming	0122111222210020110-14
Esman	210020012122212112-17	Paterson	1112222100000221122-15
Brown	2020100001001021211-12	Hicks	2202222122201302102-16
Baird	202202121212020210-14	A. M. Field	222101201212022100-15
W. Palmer	2210022222222221212-15	Antoine	300012102222212120-14
S. Palmer	2230102222222212130-13	Young	222221212121212121-16
Blue Bird	121212222222222121-18	O'Neil	122221222222222100-18
O'Brien	0130121121212221212-18	Campbell	0212220202010112020-13

G. H. B.

Hanover Gun Club.

Tax Hanover Gun Club is a new Long Island shooting organization, and is composed principally of members of the Hanover Club in Williamsburgh, Brooklyn. Only four of its members were present at the initial shoot at Queens County Driving Park, Maspeth, L. I., on Friday, Jan. 13. Each shot at 10 birds, club handicap, modified Hurlingham rules. C. M. Meyer and J. M. Meyer tied with 10 each for the best averages. The scores:

Club shoot:			
H. Starkey	032020200-4	W. R. Smith	2012010101-7
C. M. Meyer	111112122-10	J. N. Meyer	221121212-10
First match, 10 birds, for the birds:			
W. R. Smith	100011010-5	C. M. Meyer	111110111-9
Second match, 3 birds, then miss and out:			
H. Starkey	220-100	W. R. Smith	110-202

North Side Gun Club.

THE northwest gale and driving snow that blew across the Queens County Driving Park at Maspeth, L. I., on Tuesday, Jan. 10, were too much for some of the North Side Gun Club members. Only six faced the traps and the weather to shoot for the best averages for the club's gold medals at seven birds each, club handicaps, modified Hurlingham rules. Three tied with six each. In a sweepstake shoot, miss and out, Charles Meyer took the money. The scores:

J. Mecke	222201-6	J. Lührs	121001-5
L. Grass	010021-4	J. Bowen	2112220-6
C. Meyer	102021-5	J. Robinson	202212-6
Sweepstake, \$1 entry, miss and out:			
Chas. Meyer	212-1	J. Bowers	110-110
C. M. Meyer	210-1	J. Lührs	0-0

Suggestions from Pennsylvania.

WILKESBARRE, Pa., Jan. 16.—*Editor Forest and Stream:* The question of handicap, or the equalization of trap shooters, is now being discussed in the columns of *FOREST AND STREAM* in view of finding a plan to prevent "dropping for place."

I have a scheme by which this practice is impossible, which protects the amateur and pays each man according to his skill. While I think it quite impossible for a club to hold a shoot and give the poor shots the most of the money, there should be some plan to give them what they earn.

I have always found that the better shots—the experts, perhaps—are the ones who come to your tournaments, and come to stay, while the management depended on the poorer class of shooters for their entries they would have a rather slim attendance.

So give the expert a chance to live and the amateur a chance to stay. For the average amateur does not expect to make anything any way and only attends "just for the fun."

But here is my plan: Give every shooter who is in first place twice the amount of entrance, all who are in second place get their entrance back, those in third place get one-half of entrance back and those in the fourth place get one-fourth of their entrance, which is about as much as fourth place usually pays. You will find that in the average tournaments, with bluebirds and expert traps, that there would be some surplus in most of the matches, and this could be carried over to the end of the day and divided into four or five moneys for the best average in each class; as there would be no "dropping" for place each man would be where he belongs.

Read the trap columns of this paper and select the scores of any large tournament and figure it up for yourself.

But some one will say, "Oh, yes; that is a good plan, but if all broke 10 straight where would the balance come from?"

So I say, figure it up for yourself and you will find enough surplus in one match to make up any deficiency in another match, and at the end of the day there will be enough for average; and I would like to see the man who would "drop to place" and make anything by so doing.

For example, take a 10-bird sweep, \$1 entrance, with 10 men entered:

Three men break 10 each, receive \$2; total.....	\$6 00
Two men break 9 each, receive \$1; total.....	2 00
Three men break 8 each, receive 50c; total.....	1 50
One man breaks 7, receives 25c; total.....	25
One man breaks 6, receives 0c; total.....	00
	\$9 75

Surplus of 25 cents, and this would amount to much more in some events.

I counted up the first 200 targets shot at by the South Side Club, of Newark, on Jan. 2, and found that with such men as Miller, Collins, Hobart, Breintnall and Van Dyke there would have been a surplus of \$27.01 and a loss of \$5.62, leaving a total surplus of \$21.39 to be divided for average money. And taking one of the shooters whose average was less than 80 per cent., found that he would make more money under this plan than under the usual way of division.

While this plan may not be quite perfect and leave a chance for improvement, I think it would do away with "place" men and protect the amateur.

W. BARRE.

New Jersey Trap-Shooters' League.

BRIGHT OUTLOOK FOR 1893.

JUDGING from present indications the season of 1893 will break all previous records for trap-shooting in New Jersey, for which the enterprising projectors of the New Jersey Trap-Shooters' League will be largely responsible. When the League was started, a year ago, many Jersey sportsmen predicted dire failure, but despite the gloomy forecasts the organization went through the season with ten clubs on its roll, and at no time were there less than seven clubs represented at the monthly tournaments. The present year opens under even more favorable auspices than the last, there being twelve clubs on the list and a prospect of two or three more entering.

The annual meeting of the League was held in the *American Field* office, in New York city, on Jan. 15, the following delegates being present: E. D. Miller, Union Gun Club, of Springfield; S. B. Tillou, Maplewood Gun Club, of Maplewood; C. W. McPeak, Endeavor Gun Club, of Jersey City; P. A. Jeanneret, Boiling Springs Gun Club, of Rutherford; W. R. Hobart, South Side Gun Club, of Newark. The election of officers resulted as follows: President, Paul A. Jeanneret; Secretary and Treasurer, W. R. Hobart; Manager, Enoch D. Miller; Governing Committee, S. B. Tillou and C. W. McPeak.

Communications were received from the Riverside Gun Club, of Red Bank, Hackettstown Gun Club, of Hackettstown, and Newton Gun Club, of Newton, declining to enter the League. The East Orange Gun Club, of Harrison, resigned from the League. The Union Gun Club, of Springfield, Irvington Gun Club, of Irvington, and Endeavor Gun Club, of Jersey City, were elected to membership. A communication was received from the Somerville Gun Club, of Somerville, asking for further information in regard to the working of the League.

The League by-laws were looked over and altered in some unimportant parts.

The governing committee was empowered to solicit prizes of merchandise, etc., from firms and individuals, and the arrangement of the prize list was postponed pending their report. It was decided that all awards for prizes should be computed on the aggregate number of breaks in the number of shots necessary to a qualification, the club making more than the requisite number of competitions to select its own prize. In order to qualify for prizes clubs and individuals must take part in one more than one-half of the competitions.

The drawing for the opening tournament resulted in favor of the Union Gun Club, of Springfield.

A Virginian's Opinion.

LYNCH, Jan. 17.—I noticed Mr. Crutten's article on division of purses in tournaments in your last issue and think he makes a mistake in advocating such a system, as it is virtually a system whereby you shoot for the amateur's cash, as I will try to show. It is generally conceded that the amateur's average is from 60 to 70 per cent., and the expert's from 80 to 90 per cent., and upon this basis we will figure by dividing said averages, which gives the amateur 65 per cent., and the expert 85 per cent.; hence the amateur gets back 65 per cent. of his money, which in a 10-bird race would leave him to pay 30 cents for birds and 35 cents in entrance to go to the pot, while the expert would pay 30 cents for birds and 15 cents entrance toward pot, or, in other words, Mr. Amateur would pay two and a third times as much entrance as Mr. Expert, and if the purses were divided on a basis of 50, 30 and 20 per cent., Mr. Amateur, with a two and a third more entrance, would only get one-fifth of the pot, or, in other words, he pays out 35 cents entrance and 30 cents for birds, 65 cents in all, to win one-fifth of Mr. Expert's—15 cents. Truly, this is protection for the amateur—in a horn. But, Mr. Editor, you may ask how are we to protect the amateur. Only by a judicious system of handicap and a reasonable entry, when targets can't be set up the whole purse, as under the above system. Thirty per cent. of the entrance is the price of your targets, which makes the management of our tournaments eat up both expert and amateur. The cry against dropping for holes can only be stopped by abolishing class shooting, which is an American idea, introduced

to assist in gambling, whereby you could tickle the fancy of the novice while you win his money, and it should go like all other crooked things, as trap-shooting should be put upon a basis that the best must win on their work, not necessarily the best shots, but the best scores made. Then with an equitable handicap Mr. Amateur and Mr. Expert will be about on an equal, when our tournaments will be better attended. It sounds very nice on paper to talk of shooting for the sport and a reunion of shooters and the like, but such things exist only in the imagination, as the shooters are nearly all after the almighty dollar, and were you to eliminate that and expect a turnout to shoot for fun and the pleasure of meeting one another for a jolly time you would seldom meet a dozen men at a tournament. If you wish to see them flock in countless numbers give big added money, when all have a living show, and you will see them dropping in from the most remote points ready to keep pegging away till the last target is thrown.

W. T. MITCHELL.

Harrisburg Wants the Premium.

HARRISBURG, Pa., Jan. 18.—I notice the American Manufacturers' Association offers a prize for the best handicap system submitted to them. Will you kindly ask them to forward me the \$50 through the *FOREST AND STREAM*? By a handicap I presume they mean the best method to induce large numbers of shooters to attend their tournaments. There is only one combination that will bring shooters together, one that gives the "cracks" a chance to make some "boodle" and the poor amateur a chance to save some of his from the "sharks." Now, to make rules that will govern these points is the simplest thing in the world, and why so many people are bothering themselves over the matter and lying awake at night thinking up new schemes is

something I can't fathom. All you have to do is use the North handicap partially, make all winners of first and second money shoot the next event which they enter at known traps, unknown angles. Make any one who is in a chance to win first or second, if he drops his last target either intentionally or otherwise, lose a dollar on that bird, to be deducted from his winning and go in the pot. This will make easily rattled shooters like Helkes, Budd, Miller, ad nauseam, fairly shake when they come to the last bird—and break it.

Make all your races the same number of targets. Divide by the jack rabbit system, making all entries value 10 cents a bird, penalty for missing 20 cents, cost of targets extra. Now you have got it fine—but on second thought don't fail to send the \$50 direct.

JACK RABBIT.

Coney Island.

The first shoot in the series for the possession of the Long Island Athletic Club's silver cup was held on the Atlantic Rod and Gun Club's grounds, at West End, Coney Island, Tuesday. Teams of five men each, to shoot at 15 live birds each, modified Hurlingham rules, handicap on the gun. To enable the shoot to be carried out in one day, the Captain decided that each man going to the score should shoot out his five traps.

Atlantic Rod and Gun Club—D. Mounse, 28yds., 15; J. B. Voorhees, 28yds., 13; H. Balzer, 28yds., 12; H. Kromka, 28yds., 12; C. E. Morris, 30yds., 11. Total, 65.

Coney Island Rod and Gun Club—C. Plate, 28yds., 13; I. Hyde, 30yds., 13; F. Pfander, 28yds., 8; C. Detlefsen, 28yds., 13; C. W. Northridge, 28yds., 11. Total, 58.

New Utrecht Rod and Gun Club—C. Furgueson, Jr., 28yds., 9; D. C. Bennett, 28yds., 13; C. M. Meyer, 28yds., 11; C. Williams, 28yds., 13; G. E. Nostrand, 28yds., 12. Total, 58.

Parkway Rod and Gun Club—J. Blake, 28yds., 10; H. Bookman, 28yds., 11; E. Helgans, 28yds., 12; T. Short, 28yds., 12; J. Bennett, 30yds., 11. Total, 56.

Northside Gun Club—Chas. Meyer, 28yds., 12; C. M. Manning, 28yds., 9; J. Tiernan, 30yds., 13; G. Siemus, 28yds., 13; J. Chevalier, 28yds., 7. Total, 54.

Glenmore Rod and Gun Club—W. Hartye, 28yds., 10; J. A. Eppig, 30yds., 11; J. Schliman, 28yds., 12; C. Engelbrecht, 28yds., 14; W. Levens, 28yds., 8. Total, 54.

Crescent Gun Club—J. Vagts, 28yds., 9; C. Simmons, 28yds., 10; C. Hubbell, 28yds., 12; J. W. Shepherd, 28yds., 7; A. Hopkins, 28yds., 11. Total, 49.

Vernon Rod and Gun Club—J. B. Osterhout, 28yds., 9; Dr. Little, 28yds., 10; W. H. Thompson, 28yds., 7; G. Greiff, 28yds., 14; F. A. Thompson, 28yds., 6. Total, 40.

Referee, H. Goodwin; scorer, C. Dellar.

Erie Gun Club.

The members of the Erie Gun Club adopted their new shooting rules for the season at the first shoot at Woodlawn Park on Wednesday, Jan. 18. Eleven competed for the class prizes, the best seven averages during the season to count in each class, at seven birds each, class handicap, modified Hurlingham rules. As the light was bad it was decided to divide the added club prizes for the three best classified scores. The scores:

Class A.	
C. Plate.....	1111112-7
J. Plate.....	1111112-7
Class B.	
M. Elssasser.....	1011101-5
F. Graf.....	00121-5

New Utrecht Rod and Gun Club.

FIFTEEN members of the New Utrecht Rod and Gun Club competed in the regular monthly shoot at Woodlawn Park, L. I., for the live bird trophy, a diamond badge, and three handsome prizes for the best average of seven out of twelve shots during the year.

Mort Van Brunt was the only straight scorer with ten. Four killed nine and five killed eight, making a good showing for such bad weather.

One of the features of the shoot was the good score made by D. Lohman, Jr., a boy ten years of age; he killed seven out of ten, beat his father in the club shoot by two birds. In stature he is very small but uses good judgment with his second barrel. The score of the shoot:

W. Van Brunt.....	111111211-10
G. Nostrand.....	100121111-8
P. Hegeman.....	121301111-9
D. Bennett.....	110101101-8
A. Hegeman.....	202102011-8
D. Lohman, Jr.....	1202010102-7
D. Lohman, Sr.....	010101002-5

C. A. Sykes.....	010120221-7
C. Furgueson, Jr.....	112232302-9
A. Squires.....	110121110-8
C. Winger.....	210111112-9
W. F. Sykes.....	120202111-8
J. F. Cottier.....	120000220-4
D. Diamond.....	01101-5

Unknown Gun Club.

The members of the Unknown Gun Club did not fare much better in regard to the weather than their fellow shooters by the sea on Thursday, Jan. 12. Fifteen competed for the club's new medal and extra prizes, at 7 birds each, club handicap, modified Long Island rules. The veterans, John Akhurst, like Hyde, G. Boyd and C. Perry tied with 7 each. It was too dark to shoot off any ties so the prizes were divided. The scores:

H. Van Staden.....	1100011-5
J. Akhurst.....	1111111-7
D. Snipe.....	0112011-5
C. Muench.....	021222-6
G. Boyd.....	111212-7
I. Hyde.....	121212-7
J. Marlborough.....	0030210-3
P. May.....	0100001-2
C. Perry.....	212321-7
J. Sampson.....	1000101-3
E. A. Vroome.....	2121210-6
J. Lahden.....	0000221-3
H. Dietrich.....	0120222-5
P. Sweeney.....	0012002-3
Dr. Little.....	1101201-5

Washington Bridge.

One of the most beautiful structures of its kind in the world is the Washington Bridge. This engineering marvel of bronze, steel and stone is one of the sights of the metropolis. It spans the picturesque Harlem River and the tracks of the New York Central and Hudson River Railroad at 181st street, New York. The length of the bridge is 3,375 ft., height 133 ft. above the river. It has two steel arches, each with a span of 500 ft., supported by three stone piers and two stone abutments. The piers are 98 ft. long and 40 ft. thick, of solid concrete, faced with dressed granite. The abutments are semi-circular arches of masonry, each having a span of 60 ft. There are a 50 ft. driveway and two footways, each 15 ft. wide. It cost \$2,700,000. A photograph etching of the famous view of Washington Bridge, taken by Mr. W. H. Jackson, the noted landscape photographer of Denver, Colorado, has just been issued by the Passenger Department of the New York Central. The *Journal* has received a copy. It is a splendid piece of work, the finest example of this style of art produced in recent years. It is the work of the New York Photographic Co., which fact alone is a guarantee of its excellence. A copy of this beautiful etching, 17x22 in., on fine plate paper, 24x32, can be obtained at the New York Central ticket offices, No. 413 Broadway, No. 942 Broadway, or at the Grand Central Station, New York; No. 38 Washington street, Brooklyn; or of Frank J. Wolfe, General Agent, Albany Station, Albany; W. E. Brown, City Passenger Agent, No. 127 Washington street, Syracuse; J. C. Kalbfleisch, City Passenger Agent, No. 11 East Main street, Rochester; Edson J. Weeks, General Agent, No. 1 Exchange street, Buffalo; W. B. Jerome, General Western Agent, No. 37 Clark street, Chicago; or of Carleton C. Crane, Pacific Coast Agent, No. 10 Montgomery street, San Francisco, for 50 cents; or it will be sent free, postpaid, to any address, on receipt of 75 cents in stamps or money order, by George H. Daniels, General Passenger Agent, Grand Central Station, New York.—*Albany Evening Journal*.—Adv.

ANIMAL PORTRAIT SUPPLEMENTS.

We print to-day the second of a series of five American animal portraits by Mr. Ernest E. Thompson. These are given as full page supplements, with the first issues of the months as follows:

- Jan. 5.—THE WOLF.
- Feb. 2.—THE WHITE GOAT.
- March 2.—THE COYOTE.
- April 6.—THE ANTELOPE.
- May 4.—THE FOX.

The dates of the former series (of which copies can be supplied) are as follows: Sept. 8, 1892—The Panther. Oct. 6—The Ocelot. Nov. 3—The Canada Lynx. Dec. 1—The Bay Lynx.

FEATHERS AND SNOWSTORMS.

It is generally believed that the present winter has been unusually severe on game birds, the most destructive that has been known for a long time. Intense cold, varied by frequent and heavy snowstorms, has made the obtaining of food very difficult for Bob White, the hardy little fellow who, to the average gunner, stands for a type of our feathered game. From many quarters we hear accounts of birds frozen and starved, covered by deep snows which afterward crusted so as to imprison the birds beyond hope of relief, and to confirm such accounts we have had sent to us from Long Island two or three imported quail which really had starved to death.

There can be little doubt that so far the winter has been a very hard one, and yet perhaps its dangers to the game have been exaggerated. While the cold has been bitter, and the snows deep, and food hard to find, there have been none of those much more dangerous storms, which, beginning with a heavy snow, turn into a cold rain and form an impenetrable crust over the whole country. Food was abundant last autumn, and the birds entered the winter in splendid condition. On the stubbles the crop of ragweed was luxuriant and its stems high; down in the swamps the spathes of the skunk cabbage bore heavy clusters of the fleshy berries, and the swelling buds of witch hazel and birch still offer abundant food.

While there has been suffering and some death among the quail, we do not believe that as yet it has been serious. Moreover the birds nowadays receive much more care from man than formerly. Wherever there is much shooting, some careful gunner is likely to sow buckwheat in a narrow strip along the hedgerows, and this, left standing, furnishes a food supply which will support a bevy of quail through almost the whole winter.

Whatever the loss among game birds, it is the quail that have suffered most, as they always do. Who ever heard of a ruffed grouse starved to death? He is better able to take care of himself, both as to food supply and danger from crusted snows. He does not always roost on the ground as do the quail, and often, in damp or snowy weather, while making your way homeward through the woods at evening, you may start him from among the branches of a low cedar, and if there is light enough and you are curious, you can take his back trail and see where

he has been feeding here and there until the darkness began to fall and he determined that a perch on a limb would suit him better for that night than his more usual resting-place on the ground. The grouse, too, takes more readily to the branches for food than does the quail, and keeps himself alive and fat on the buds of the apple, alder, birch and willow, when his lesser brother is still striving to pick up a hard living on the ground.

The waterfowl have had a hard time this year. Many of those slowly forced south by the freezing of streams and bays have sought the coasts of Georgia and Florida, but the black ducks are loth to go, and will stay on, half starved and constantly shot at, so long as any open water remains. We remember one season of intense cold when hundreds of black ducks congregated in a little warm spring hole, and how, on shooting two or three, they were found to be mere skeletons incased in feathers.

It is worth the while of every man who shoots to make a special effort at this season to see that the birds are supplied with food. A little time given to this work by the men who live near shooting grounds, a letter or two and a few dollars sent to farmers and shooting companions by men who live in the city, may yield next autumn an abundant return of pleasure. The example of Mr. Polk Miller, president of the Virginia Field Sports Association, is well worth following.

THE "NESSMUK" MEMORIAL.

THE friends and admirers of "Nessmuk" who knew him through his writings in *FOREST AND STREAM*, have undertaken to provide a monument for his grave, which is now unmarked, in the village cemetery of Wellsboro, Pa. Details of the plan were given in our last issue. All persons who may feel disposed to join in the movement and in this way to testify to their regard for "Nessmuk's" memory, are cordially invited to subscribe to the fund. The minimum amount to be provided is \$200, of which, as reported last week, \$131 was then in hand.

Subscriptions received since last Thursday have come from

YANKEE FRIEND, Lowell, Mass.
MR. ROLLIN J. TREAT, Lima, Ohio.
MR. WILLIAM POLLARD, Lawrence, Mass.

The total of the subscriptions to date is \$145.

"Piseco" sends us, printed in another column, a charming note of his first meeting with "Nessmuk" in the Adirondacks. Next week we shall print some appreciative comments on the memorial plan by others, and with them will be given a portrait of "Nessmuk."

THE WHITE GOAT.

THE Alpine antelope, which we know as the white goat, has been often described in *FOREST AND STREAM*, and in fact more has been put on record with regard to its characteristics and its ways of life in these columns than in all the other books and papers that have ever been printed. As is well known, to those who have studied it, the animal is an antelope, allied to the chamois of Europe, and closely related to one or two species of rock-inhabiting antelopes found in Asia. The only reason for calling it a goat seems to be that it lives among the rocks and has a beard, but it differs widely from the goat in its physical characteristics. Such erroneous names are constantly given in popular nomenclature, and the differences between the white goat and the domestic one are not greater than those which exist between the American and European robins or hedge hogs, or elks, or many other animals which bear like names in the two continents.

To one unacquainted with its habits the white color of the goat might seem to be a very serious disadvantage to it in exposing the animal to the attacks of its enemies. Nothing is more conspicuous than a patch of white against a summer landscape. In traveling over the prairies a bleached buffalo skull upon a distant hill will attract the eye long before a similar object of any other color. On the other hand, we know that animals which live in Arctic or snow-clad regions are protected by their color, which renders them invisible at a little distance. The ptarmigan, the snowy owl, some hares, a fox and the polar bear are examples of this, and in our own climate some weasels and some hares turn white in winter. The goat's color is protective, and it is not easily discovered on snow-clad mountains or where the snow lies through most of the year in patches and drifts.

Several years ago a map was published in *FOREST AND STREAM* giving the approximate range of this species and

showing that it occurred abundantly all through the mountains of the West as far south as Montana, Idaho and Oregon. South of these States it is not abundant, but it occurs in a few isolated localities such as Mts. Whitney and Kearsage, a peak or two in Colorado, and perhaps one or two places in Wyoming.

Stories are often heard of two species of goats found in the mountains of the Northwest, but beyond the vague account of hunters we know of no evidence to show that there are two kinds. It must however be admitted that among individual goats there is quite a difference in appearance. Usually they are quite small, not much larger than one of the largest of the domestic sheep, but every now and then monsters are killed which would weigh two or three times as much as those of the ordinary size. The goats of the main chain of the Rockies are very much more shaggy and heavily coated than those of the Coast Range, where the temperature in winter is so much milder.

As is well known, the goat usually lives very high up among rocks, above timber line in summer, but in winter, especially on the west coast, it works down nearer to the sea level. In the main chain of the Rocky Mountains, however, they seem to live about as high at one season as at another.

The goat is an animal of great strength, but of rather slow movements. It seldom runs, unless very badly frightened, and very seldom lifts its head with any appearance of alertness such as is common with deer, antelope and mountain sheep. Usually the head is carried low—below the level of the back, which seems higher than it really is on account of the long dorsal spines and the heavy roach, or mane, along the middle of the back. An examination of the bony frame work of *Mazama* shows that the bones of the legs are short and extremely stout; that the dorsal spines of the dorsal vertebra are unusually long, and that the animal is formed for strength and long continued exertion, rather than for great bursts of speed. So it is that the goat seldom attempts to escape by running, but when alarmed almost always points its nose toward the top of the mountain and climbs out of danger.

Readers who are interested in this animal can find a great deal of interesting information about it in past issues of the *FOREST AND STREAM*, especially in the volumes for 1888, 1889 and 1890.

SNAP SHOTS.

A note in "Dog Chat" tells us that a stag, a cart, a huntsman and a pack of hounds have been imported from "the other side," and they are to have carted stag hunting at a New Jersey summer resort. This is one of those ridiculous institutions of Great Britain which Americans have always contemplated with derision, and have regarded as being peculiarly foreign and un-American. Now that the carted stag is to be installed—or stabled—in the United States, the derision will break into a guffaw, if indeed the Society for the Prevention of Cruelty to Animals shall not interfere, as it did once with sundry caged fox hunting exploits at Newport.

Our Fishculture columns record the provision of an international fisheries commission appointed by the United States and Canada, to investigate the fisheries in waters common to the two countries, and to agree upon recommendations for legislation to control the fisheries. The representative of this country is Mr. Richard Rathbone, Assistant Commissioner of Fisheries, in charge of the Division of Scientific Inquiry; while Canada will be represented by Mr. William Wakeman. It is the purpose of the commission to make a thorough and exhaustive investigation, particularly of the fisheries of the Great Lakes. The work will probably extend over two years. Upon their reports will be based agreements between the two countries as to what legislation should be adopted, and this will then form the subject of treaties. This is a most important movement, and one which, if it shall be wisely and successfully carried out, cannot fail of securing immeasurable benefit to both countries. Aside from the apathetic attitude of the States and Provinces and their incompetent and inadequate treatment of the fishery preservation of the Great Lakes, international complications, jealousies and contrary pulling and hauling have been effectively working for the deterioration and ruin of the fisheries. The two countries should have come together decades ago to do this very thing they are now setting about; it will require decades in the future to restore the fisheries to the condition they should have been in to-day.

The Sportsman Tourist.

HUNTING IN GREENLAND.—II.

With the Peary Relief Expedition.

BY WM. E. MEEHAN (BONIFACIUS),
Member of the Expedition.

On Monday morning, the second day after our arrival in McCormick Bay, a boat journey was made to Herbert Island, twenty miles away in Whale Sound. Those who participated were Mr. Gibson and Mr. Verhoeff of the Peary party, Mr. Bryant, Mr. Hill, Dr. Mills, Mr. Stokes and Mr. Entrikin of the Relief Expedition, the head fireman of the Kite, and four Eskimo hunters, who had settled about Mr. Peary's winter quarters.

It was bright and warm when they started and the exercise of rowing and of keeping the numerous pans of floating ice from crushing the frail rowboats soon brought out the perspiration quite as freely and unpleasantly as a summer's day at home. After much difficulty and some danger the party reached the island, where, fastening the boat securely to some rocks, they all sat down together to luncheon. Scarcely were they comfortably seated when one of the Eskimos, with a jerk of his thumb toward the summit of a steep hillside, uttered the one word, "*Tuctu*" (reindeer). Then without asking leave or license seized Mr. Verhoeff's gun and began stalking the animal, which was plainly visible only a few hundred yards away. Presently, when the Arctic native hunter had got near enough to hit the reindeer with a stone, he stopped, and resting the rifle on a rock took a long, careful aim and fired. At the sound of the discharge the reindeer raised its head slowly and looked about him, and then went on feeding with apparent unconcern. Evidently the rifle ball had gone wide of the mark, and the report of the gun was too much like that of a breaking iceberg to cause alarm. The Eskimo took another shot with no better success, and a third without terrifying or harming the tuctu. Before the native could try again another Eskimo who had in the meantime made free with Mr. Hill's rifle in the same manner as the first, crawled up, and being either a better marksman, or having luck with him, put a bullet behind the reindeer's left foreleg and brought him down. The calm cheek of these two untutored savages of the far North in thus appropriating the rifles and going hunting on their own account had so much of humor in it that the party stood by and watched them stalk and kill the deer without any interference, although they regretted their inaction when it came time for them to return to the ship without having seen as much as the fur of another live tuctu, and this regret was much deepened by the time they had made the long and toilsome journey back to the ship, which they reached early on Tuesday morning.

A few hours after their return, it being reasonably certain that Mr. Peary and Mr. Astrup would not be back from their great journey over the great ice cap for at least a couple of weeks, Prof. Heilprin determined to make an effort to reach Humboldt Glacier. This great river of ice is believed to be the largest in the world, its discharging point in Kane Basin extending from the 79th to beyond the 80th parallel, or more than twenty miles. As this journey would take us not only into a section famous in Arctic exploration history, but into magnificent hunting grounds, where polar bears, reindeer and musk oxen are said to be plentiful, we heard the order to up anchor with great satisfaction and felt the Kite moving with us out of McCormick Bay a few hours after the decision was arrived at with much enthusiasm.

It was a glorious day. The sun shone from a cloudless sky and the green waters of the ocean were broken only by small waves, which sparkled like jewels. All about us were huge icebergs of countless and fantastic shapes, their dazzling white color, with here and there broad streaks of deep azure, forming a strong contrast to the water. On the right, close at hand, were the red cliffs of the western shores of Greenland, rising almost in sheer precipices for one, two and even three thousand feet from the sea, broken only at intervals by fiords or by deep valleys which slope upward gradually and sinuously to the great interior ice cap, which seemed to glare forbiddingly at us, and made us feel that there was small wonder that no Eskimos can be induced by any offer of reward to venture upon it, for fear lest the Korkoya, a powerful evil spirit, would eat him.

Toward evening we reached and passed Cape Alexander, said to be the handsomest piece of scenery in the whole of Greenland, entered Smith's Sound, and passed in rapid succession the winter quarters of Dr. Hayes and the abandoned settlement of the Etah Eskimos, where Dr. Kane spent much of his time during the winters of 1853-54.

When we entered Smith's Sound, with the exception of bergs there was no ice in sight, and there seemed nothing in the way of our making a quick and successful passage to the Humboldt Glacier. But exactly as 8 bells midnight were struck, as most of us were about turning into our bunks, the engines of the Kite were suddenly stopped, and a moment or two later we were nearly thrown from our feet by the vessel striking some object. The latter incident in itself would have excited scarcely a passing thought, for the Kite was almost continually striking bits of ice, but when in connection with it came a stoppage of the engines, the affair assumed a different aspect, and we rushed on deck to see what the matter was. We found out. Perhaps never was there a more desolate scene spread out before human eyes than we beheld. Overhead or nearly so blazed the midnight sun. Before us as far as our eyes could see a vast field of unbroken ice extended, binding the Greenland and the American shores, and rendering further progress impossible. Snow and ice completely buried the American shore, but the Greenland coast, free from this white covering, frowned darkly on the death-like stillness. The entrance capes of Rensselaer Bay where Kane's vessel, the *Advance*, was lost in 1854, loomed clearly up not far away. Cape Sabine, where the Greely party nearly all starved to death, was plainly visible, and the spot where the Proteus was crushed was in sight.

We were not left long to look upon this scene of desolation. Numerous sounds of barking broke the awful stillness of the sunlit night, and huge dark forms were seen swimming about in the water or lying asleep on the ice. They were walrus in vast herds. Admiration for scenery, awe at being in visible proximity to localities of famous Arctic exploits vanished, and in their place came power-

fully and masterfully the instinct of the hunter. Hastily a boat was lowered and it was speedily filled by sailors and members of the expedition, the Eskimo interpreter, Daniel, his black eyes flashing and his fat cheeks red with excitement, occupying the bow, armed with harpoon, line and bladder.

Before the boat was allowed to push off, Captain Pike made a careful survey of it, to be sure that it was well supplied with hatchets and gaffs, for it was a dangerous enterprise that was ahead. Finding things to his satisfaction, with words of caution he gave the party leave to go. Those of us who had been unable to find a place in the boat stood on the deck of the Kite and watched the frail craft with its load of precious human freight moving silently and swiftly toward a great iceberg less than a quarter of a mile away, at the base of which in a pan of ice some half dozen huge walrus lay sleeping. Presently we could see the rowers stop their work, and those who had rifles raise them and fire into the slumbering prey. Before the reports of the discharge had fairly died away, there was a great commotion among the walrus, and all save one dived into the sea with great splashes, throwing spray high into the air. The one, pierced by several bullets, lay dead upon the ice pan, and with a ringing cheer the oarsmen resumed their work, and in a few moments the animal was harpooned and the party started to tow it to the Kite, singing joyously.

But they were not allowed to proceed far uninterruptedly. Presently we saw a huge walrus thrust his ugly head and gleaming tusks above the water not more than a hundred yards from the hunters, and after giving a hideous bellow disappeared from view. Then another and another appeared until the sea on all sides of the boat seemed alive with enraged and bellowing walrus, and these made straight for the hunters. The latter had but little time to prepare for the onslaught, which was unexampled for ferocity, but they met it bravely. The oarsmen seized hatchets and gaffs, and the riflemen hastily charged their magazines. Then ensued a terrific encounter, a battle for life on the part of those in the boat, a fight for revenge on the side of the walrus. For fully ten minutes the air resounded with reports of the guns, the bellowing of the enraged animals, the cheering of the hunters and the shrill cries of Daniel. Suddenly, as by magic, the walrus disappeared, and the fight was over. With shouts of triumph the hunters resumed their way to the ship with another dead animal in tow, one of the many victims of the battle, harpooned by Daniel as it was sinking, riddled by bullets.

When these two monsters, 14ft. each in length and weighing combined perhaps more than two tons, were drawn upon the ice beside the Kite we could better see the kind of animal that had been hunted, and the better understand the peril the boat's crew had been in. Even in death the countenances of the brutes bore a horribly ferocious look, which their fierce whiskers and two long gleaming ivory tusks added materially to. But most of the members of the Peary Relief Expedition, as well as of the ship's crew, had become so habituated to danger that the battle that had but just passed became merely something to enthusiastically talk about, and a whetstone for more contests of the same character. As a result, as soon as breakfast was over, parties were made up and all day long fierce battles raged between the hunters and the walrus, in which many of the latter, probably a hundred or more, were slain and six or eight secured.

Toward the middle of the afternoon the hunters were all recalled, and then the Kite's nose was turned once more toward McCormick Bay. A stop was made at Littleton Island, and a visit paid to the abandoned Etah settlement on the shores of an adjacent bay. In this bay we had another walrus hunt with the usual accompanying battle, which in this case, while not so long, was perhaps more furious than the first one described, and which came more nearly having a disastrous ending for the hunters. In the boat with us on this hunt was Professor Heilprin armed with nothing more deadly than a Kodak. Leaving the ship we cautiously approached four huge walrus asleep on a small pan of ice, and when near enough the Professor proceeded to shoot them all with his Kodak, and then gave way for our more deadly weapons. Whether we were too greatly excited to aim straight or whether the boat rocked too much for correct marksmanship will never be known, but it is nevertheless a fact that at less than 30 yds. distant six bullets fired simultaneously failed to do more than make the ice fly in all directions and awaken the slumbering animals, who tumbled unceremoniously into the sea. A moment or two later one of them poked his head above water to see what it was that had so rudely disturbed him, and as he did so a ball from my rifle struck him fair in the neck and he sank dead to the bottom of the bay, leaving a stain of crimson on the blue waters. Then in solid phalanxes, it seemed, his companions who gathered as if by magic from far and near attacked us. Carried away by photographic enthusiasm, the Professor once more brought his Kodak into play, and as one huge beast rose a little above the waves attempted to take a picture of him, but at that instant another brute rose up beside the boat and seized with his teeth the oar the Professor had charge of, and nearly wrenched it from his grasp; at the same moment a third thrust himself up against the keel of our craft and nearly capsized it, causing the Professor's Kodak to take a beautiful photograph of the sky, and half fill the boat with water.

Each man was now fighting for dear life, each engaged with a separate animal mad for revenge. As rapidly and effectually as possible, each man discharged his piece at the attacking enemy. Then, in the midst of it all, I got into trouble. By some mischance a wrong sized cartridge had got into the magazine, and in throwing it into the rifle barrel, it stuck half way in. Here was a critical state of affairs. An enormous bull, with tusks more than a foot long, was swimming rapidly our way, and unless I was ready for him nothing could save us, for the other boys had their hands full. I tugged with might and main, and luckily, just as the brute was making the invariable short pause at the side of the boat, before attempting to throw his tusks over the gunwale, I succeeded in extracting the wrong cartridge and got a right sized one in its place, and as the animal with glaring, savage eyes, and huge red mouth extended into a ferocious bellow, was rising for his fatal attack, I held the muzzle of the rifle to his throat, and pulled the trigger. A volume of blood gushed up, and with a last roar of rage the walrus sank dying below the surface. A few minutes more finished the combat, in which, although it was estimated we had slain more than

a dozen of these mighty warriors of the north waters, we did not succeed in securing one.

Once more the Kite resumed her way southwardly, stopping here and there at important places for scientific and geographical work, so that it was not until about seven o'clock in the evening of the second day that we turned Cape Robertson, which divides the south side of McCormick Bay from Robertson Bay.

Just as we had done this Mr. Murphy, the first mate, who was in the crow's nest, a huge barrel perched on the top of the foremast as a lookout place, cried, "Polar bear on the point." Excitement ran high in an instant. Captain Rike made a rush for the bridge and signalled to stop the engines, while Mr. Dunphy and the first mate with two sailors made a break for the long boat and lowered it with all speed. Over the side of the vessel scrambled the members of the Relief Expedition, heavily armed; and Larry Hackett, the ship's steward, followed, holding a long sealing rifle, carrying an immense explosive bullet. As the boat was rowed rapidly ashore Larry, who had hunted polar bears before, gave us explicit directions how to behave, and when we landed we carried out his instructions to the letter. Separating into groups of two we cautiously approached the ridge, on the other side of which Mr. Murphy had seen the bears. Two of our party being quicker than the others reached the summit first; they were two sailors. They peered cautiously over and then as one man they uttered exclamations, and each seizing a stone hurled it at some object beyond. In less time than it takes to tell it, there were two flashes of white and two large Arctic hares went scampering up the mountain side as fast as their legs could carry them. A shout went up from all hands except Larry, who, remembering his long lecture on polar bear hunting, stood silent and glum, and bore with ill-concealed discontent the chaffing he got on the way back to the ship, and he only brightened up and allowed his countenance to resume its wonted serenity when, on reaching deck, the chaffing was transferred to Mr. Murphy, who took it good-naturedly and with the remark of, "What difference did it make; you all had a good time ashore, didn't you? You ought to thank me instead of chaffing."

[TO BE CONCLUDED.]

A TRAMP THROUGH THE MOUNTAINS.

I.

HAVING taken a long tramp through the mountains of East Tennessee and of western South Carolina, we want to convince the readers of the FOREST AND STREAM that it is unnecessary for them to go to Switzerland to find mountain scenery or steep ridges with which to tire their legs. My friend, Prof. Chas. Forster Smith, of Vanderbilt University, often varies the monotony of deciphering Greek inscriptions by taking tramps through the Great Smoky Mountains, and months ago began to urge me to go with him. Now, I had never "done" any mountains, but for years have been an enthusiastic angler for the black bass, king of all the fish that swim the waters, and am in consequence used to roughing it, and can walk all day without fatigue. Smith and I are light, active men, but Mr. W. E. Myer, of Carthage, Tenn., who was of our party, is built on more heroic lines, being 6ft. tall, and weighing 185lbs., not the build best adapted for taking long tramps over pathless mountains. Mr. Myer is an amateur geologist, but his chief passion is the gathering of Indian relics, and he has done some fine work for the Smithsonian Institution. On Tuesday, Aug. 3, we met in Knoxville, where we bought some provisions, canned meats and "sich like." These, with a change of under-clothing, we stowed in our haversacks (of the U. S. Army type), and strapped our gum coats on the outside. A flannel shirt, a soft hat, a coat, and a stout, broad-bottomed shoe completed the make-up of each man. A policeman gave me a familiar nod and said, "Hello, Hank! back again?" "Hello, Jack!" said I, and passed on. I am sure he took me for some tough whom he had "run in" more than once. Albert Henry, a negro preacher, our driver, was, by long odds, the best dressed and most dignified man in the party. At 5:15 we reached Wildwood, thirteen miles from Knoxville. We took our knapsacks on our backs and started for Mt. Nebo which may be on the very spot where Miss Murfree's "harnt walked Chilhowee." If so, he had some pretty stiff climbing. On the way we overtook Mr. Landon Smith, brother of one of our party, who had come on to join us. He was a welcome acquisition. In a little while we reached the Mt. Nebo Hotel, kept by Mr. and Mrs. Wilson, the last decent house we were to sleep in for many miles.

After an early breakfast the next morning we finished the ascent of Chilhowee and went down into Miller's Cove to find Devil Sam Walker, to secure him as guide. We met him near his cabin, with a half-bushel of corn on his shoulder, bound for mill and the polls. Dr. Smith, who is an old acquaintance of Sam's, introduced the party and said, "Uncle Sam, we want you to guide us to Clingman's Dome." "It's 80 miles thar and 40 back; it's too fur, boys." However, he wanted to go, and little urging was needed. While Sam was making a few preparations I talked with his wife and soon learned that Sam was made of "bibulous clay." On one occasion he and a vagabond doctor who was boarding at Sam's staid drunk for seven months. Finally Mrs. Walker grew indignant, poured seven gallons of "mountain dew" out to the pigs and smashed jugs and bottles. The spree was over.

Devil Sam no doubt deserves his *soubriquet*. He is now nearly 70 years old, and in appearance reminds you of an old bear. He is profane and vulgar, but with these exceptions, is thoroughly companionable. No man is better acquainted with the Tennessee side of the Smokies than is. Needless to say that he is proud of his knowledge, and a trifle fond of posing as the "Wild Man of the Mountains." He says that a life-size picture of himself is on exhibition in Cincinnati, and that some day he is going there to see it.

On we tramped toward distant Thunder Head, Through Miller's Cove into Tuckaleeche Cove, wading Little River several times, an operation most comforting to our feet. We stopped at a cabin, bought a peck of meal, a few pounds of bacon and a coffee-pot. We ate dinner at a noble spring near a school-house, and were soon joined by the "schoolmarm" and her 65 pupils. All save the teacher were barefoot. They were typical mountaineers, but their dialect was about the same as that of people of the same rank of life in middle Tennessee valleys. And so we found it all the way. We had mountaineers for

guides, stopped at the homes of mountaineers and talked with them long and often, and I am free to say that I don't think we saw a single mountaineer who would know what is meant by the lingo that our dialect writers put in their mouths. Several of them were indignant at the way in which they have been represented. Still, we met a writer of dialect stories who was boarding in a town 50 miles away from the mountains for the purpose of writing up these people whom she had never seen and never expected to see. Nor did we find the mountaineers living on the top of such peaks as are found in the Great Smokies or on any other high peaks, as readers of fiction would expect. These mountains are uninhabited wilds and the mountaineers live in the coves and settlements at the base of the mountains.

Passing through Tuckaleeche Cove and leaving Cade's Cove on our right, we began the ascent of Thunder Head. The climb was steep and the trail rough. A shower came up and gave us a wetting. As darkness approached we entered the "slicks," where it is dark even in daylight. But we stumbled up and on. Our big man began to grow weary, and two miles from the herder's hut, where we hoped to sleep, surrendered his baggage to a less tired comrade. For one mile further he struggled on, and then lay down in the trail, declaring that he could not move another foot. We fed and cheered him, and he struggled on about 25yds. further. Then he lay down once more, and we spread one coat under him and another over him. Two of the party went on to the herder's hut to see if help could be secured, while Dr. Smith and I remained to "cheer the faint" and, if possible, "raise the fallen." A few biscuits and a good deal of encouragement brought him to his feet. Then, with my arm to support him, he toiled on to the hut—Spence's cabin. The two herders were away, but five hunters had taken possession and were asleep on a mattress in front of a blazing fire, for at this altitude a good fire is necessary. In a pot we found a wild turkey, which we would certainly have eaten had it been done. As it was, we made some bread and fried some bacon. Landon Smith and Myer lay down on the floor, Devil Sam crowded in on one corner of the mattress, and Dr. Smith and I took our rest on the bare slats of a home-made cot, our only covering being our gum coats. But we slept never so sweetly. A twenty-mile tramp through the mountains will cure the very worst case of insomnia and make its former victim chime in with Sancho Panza in singing the virtues of sleep.

Next morning we woke refreshed and ready to tramp on. But we first cooked our peck of meal, as we had many miles to make before reaching another house. We had for breakfast coffee, bacon, bread and wild turkey. Mr. Myer's feet were in bad condition. Unfortunately, he had worn a pair of new shoes and they, no doubt, were the source whence "sprung all his woes," plus blisters. But he was full of courage and, as "to return 'twere tedious as to go o'er," we pushed on. A hard pull of a mile and a quarter brought us to the summit of Thunder Head, at an elevation of more than 5,000ft. Here, for the first time, I realized the meaning of the term "the everlasting hills." For adjectives suitable to the occasion, I refer you to "In the Clouds." Chilhowee, Maryville and Knoxville were visible in the distance, while at our feet lay the little coves in which live the mountaineers who manufacture illicit whisky. Twenty miles away loomed up Clingman's Dome. And there were cattle on the "everlasting hills." The pasturage on these balds is the finest I have ever seen and cattle are brought here for many miles to graze on it. Two men build a little hut and watch the cattle, salting them every fortnight, for five months, for 13 cents per month for each animal. The two in Spence's cabin had 700 in their care. All these stock are fat. The only dangers they have to be guarded against are occasional attacks from hungry wolves and bears, which are sometimes found on the mountains.

But on we tramped toward Clingman's Dome. Soon Devil Sam said, "Here's Bone Valley, where the world is cut e'namost in two." And it did look like it. Far down the precipitous sides of the mountains lay Bone Valley. It seemed that a man might jump right down into it. Devil Sam sang the praises of the trout that swim in the creek that runs through Bone Valley, but so far as I am concerned they may sport in its placid waters forever. My rod and reel are for streams more accessible. One party of anglers did venture down once and it took them all day to get out, and then their garments had to be supplemented with leaves and sacks before they could face the eye of man. This dreary spot takes its name from the fact that 300 head of cattle which were wintering on the mountain strayed down here and perished.

The nomenclature of the Smokies is usually suggestive. Huggins' Hell takes its name from a man named Huggins who got lost here and lay all night in a laurel jungle, listening to the howling of the wolves. When he got out he said that if he owned both places, he'd rent out this valley and take hell for a summer home. Defeat Ridge and Desolation Pass are suggestive names, and I was glad that we did not have to include them in our route. It was more pleasant to look at them and listen to Sam's tales of their horrors.

Owing to Mr. Myer's lameness our pace was slow, and for several hours we were without water. Our tongues were parched and dry. Finally Sam and I drank some dirty water out of a bear wallow, and he is confident that it saved our lives. About 4 o'clock we came quite suddenly to a beautiful opening clothed with long grass; and to our joy Sam said: "This is Siler's meadow, and there's a bully spring close by." So there was, and we drank long and deep. On my next tramp I shall certainly carry a canteen. Much refreshed, we pushed on, the two lightweights in front. Finally we sat down to wait for our companions, as we were near our destination.

In a few minutes a tall, good-looking fellow, who had a Winchester in his hands, approached from the opposite direction. He was Mel McLean, one of the guides for a party from Asheville. From him we learned that the Double Spring, where we had proposed to camp, had gone dry. He asked us to come down to their camp, which was not more than 200yds. away. We went and found Messrs. George, Walter and Fred Erdman, of Asheville, N. C. These young gentlemen gave us a most hearty welcome, and their guide, Mat Massey, made our coffee and cooked our bacon for us. Not content with this, they built an addition to their balsam tent and made another huge fire for our benefit. Supper over, Devil Sam told us a long yarn about riding a steer through a hornet's

nest, and then wound up with some miraculous bear stories. Then we laid our heads on our haversacks, wrapped our gum coats about us and sought sleep. Nor was she a coy maiden. About the middle of the night I waked feeling very cold, and found that Sam had lain down directly between me and the fire. I soon rooted him out and slept comfortably for the rest of the night.

In the morning our parties separated with the understanding that we would meet that night at the nearest house on the North Carolina side of the Smokies, we to go across Clingman's Dome and Andrew's Bald, and they to take a shorter and better route. As the Erdmans had two guides they kindly gave us one of them and we bade Devil Sam Walker a kindly farewell. Had he lived fifty years sooner Sam would have been a noted scout and Indian fighter. As it is, if you wish to do the Tennessee side of the Smokies, you can not find a better guide than Sam Walker.

Leaving Sam to go home by way of Black Bill's, his chief chum, we began the descent of Clingman's Dome. Here we had four miles of as tough climbing as is possible. The grass, weeds and briars were higher than our heads and wet with dew and fog. The trail was too faint to see and fallen trees barred our way. Sometimes over, sometimes under, sometimes around, sometimes through, but at all times up, we went. In ten minutes we were wet to the skin. But at an altitude of 6,000ft. such discomforts are not considered. At the Double Chimneys we got a fine view, but when we at last reached the summit of Clingman, 6,650ft. above the level of the sea, we could see nothing save the tall timber that stood around us. What a pity that some one does not clear up the summit. We found the rod left by the surveyors to mark the pinnacle. All the way from Thunder Head to Clingman we had followed the line between the States of Tennessee and North Carolina, but we were now to tramp in North Carolina. Clingman's Dome is but 51ft. lower than Mt. Mitchell, and next to it, is the highest point east of the Rocky Mountains.

Going down Clingman we found a good trail and, after a few miles of reasonably good walking, reached Andrew's Bald, the prettiest spot we had seen. The water of a fine spring was cold enough to make our teeth chatter, and the view was grand. Landon Smith and I, who are not coffee drinkers, concluded to try to milk a cow that had a young calf. We enticed her with some salt, but she objected to being milked, and after a severe struggle and a sharp race we decided that we preferred buttermilk and gave up the attempt.

Down we went—at least 3000ft. in the next three miles, and on the banks of Nolan's Creek we ate our dinner. About this time it was discovered that this scribe and his trousters were about to part company. Mr. Smith kindly agreed to be my tailor, so I divested myself of my nether garments, and while he repaired them I cast a fly for mountain trout. Five strikes and three trout was the result of about twenty minutes of fishing. Poor little trout! They were about as large as the steel-back minnows I use for bait when fishing for bass, so I put them back and wished them many long and happy days in their native stream. No mountain trout for me! I found the rest of the party taking a bath in this ice-cold stream, but deferred mine a couple of hours.

About three o'clock we reached the house of Mr. Jenkins, where we found the Erdman party awaiting us. Massey had killed a turkey. Mrs. Jenkins cooked it and we ate it. We had buttermilk and butter as firm as if fresh from a refrigerator. Two of our party, Mr. Smith and Mr. Myer, flung their weary limbs on a bed and were soon asleep. The rest of us amused ourselves in different ways until bed-time. Eleven of us slept in one room and a glorious night's rest it was. The next morning was Sunday. Dr. Smith and I decided to push on across the Cane Back Mountain and up into the Indian Reservation, while the Erdman party and our two jaded brothers walked down to Bryson City. Here the Erdmans took the train for Asheville, while the rest of our party got horses and followed us to Yellow Hill. M. M. Massey, Bryson City, N. C., was our guide, and he is the best I have ever seen. Forty years old, 5ft. 8in. high, weighing 125lbs., strong and active, talkative but not a braggart, and thoroughly acquainted with the mountains which he passionately loves. I commend him to all who wish to tramp or to hunt. He never fails to find wild turkeys, and, *mirabile dictu*, tells the truth about his exploits. Ten miles of this tramp was tough walking. We ate dinner at a Mr. Nelson's, and got a most excellent meal for 10 cents each. Thence on to Yellow Hill and the Indians. W. D. MOONEY.

AN AMATEUR BREAKING IN.

Editor Forest and Stream:

It has been my good fortune during the past season to gratify a long-desired wish and to make an attempt to acquire the noble art of shooting game birds on the wing with the assistance of a faithful dog. Perhaps my experience may not be wholly uninteresting to the readers of your valuable paper.

I have no stories to tell of great quantities of game brought to bag. In fact, I have made no large scores. My experience is simply that of a man who, having had previously to Oct. 1 practically no knowledge of this most fascinating sport, undertook to train a setter and incidentally himself.

My boyhood was spent on the rocky hills of northern New England. There it was my delight to shoot *Bonasa umbellus* as he sat perched bolt upright, motionless, stiff as a ramrod in the top of some pine or hemlock, whither he had been driven by the barking of the water spaniel or cur which accompanied me to "tree" the game. The water spaniel is the dog commonly used in those localities for hunting the "patridge," as he is called by the farmers. It was not often that I was gladdened by hearing the dull thud of more than three or four of these noble birds as they fell from the trees in answer to the report of my semi-hammerless in the course of an afternoon's shooting. I remember thinking that I had done very well when my score one fall ran up to forty-two ruffed grouse, eight or woodcock, as many snipe and numberless gray squirrels and hares which I cared too little about to count. Many a toilsome term of study at old Andover and afterward at college were lightened by joyous anticipations of the time when vacation would allow me to throw books aside and spend the whole livelong day (which was too short) tramping with dog and gun the hills of my native town seeking much needed rest. I prized the hours of my vacation as Pippa, the poor silk-girl of Asolo prized the

minutes of the one day in the whole year she could call her own.

I should not fail to mention also the sport which seemed to me then very enjoyable, i. e., the shooting of the great Northern hare as he circled ahead of one or two foxhounds, whose glorious music made the woods resound. It was the tuneful cry of the hounds that fascinated me, not the killing of the white-coated game. I do not know whether I would now find much pleasure in that method of hunting, but I am sure that the sound of hounds in full cry will always be to me one of the most delightful of sensations. The most elaborate interpretations of the "music of the future" to which it has been my good fortune to listen have never thrilled my nerves as has that wildwood melody.

Toward the last of my shooting in the North I began to try to kill my birds flying when I got a good open shot. I killed all the woodcock mentioned above and some snipe and ruffed grouse in that way, but a trained setter or pointer I had never seen. My attempts at wing shooting were inspired by George William Herbert's book called, I believe, "Field Sports of America." I do not refer to his sporting novels or his compilation on the subjects of fish and large game, but to that work which gives his own experience in woodcock, quail and snipe shooting in New Jersey, New York and elsewhere.

I have occasionally read copies of the FOREST AND STREAM and other journals of field sports to while away a weary hour of railroad travel, but I believe I have never known any writer to speak enthusiastically of Frank Forrester's work. Perhaps I am mistaken about the appreciation in which he is held. Possibly I have over-estimated his worth. I have not read him for years but I used to think he should be to the lover of the gun what Izaak Walton is to the angler of cultivated tastes. I grant that the piscators have a far better range of literature in which to enjoy themselves than we who are devoted to the dog and gun, but I believe that in that portion of Herbert's works to which I have alluded we have something as good as anything they can point to.

As I have said, inspired by Frank Forrester, I had just begun to try to kill my birds in a sportsmanlike way when I had to drop the gun completely. My profession called me to colleges and universities where I had no time or opportunity for shooting. For years I had not used a gun.

But this last October, on coming to the place at which I am now living, I learned to my great pleasure that I was in a fine quail country. I soon became convinced that I must have a dog. A friend, the editor of a local newspaper, a thoroughgoing sportsman and a capital shot, secured for me an untrained setter one year old. It had never been taken into the field.

I chained up my acquisition with some misgivings. He seemed a fine-looking dog, but I knew nothing about the marks of a well-bred setter. I had grave doubts about my ability to train him or to kill anything over him if he gave me an opportunity.

However, I thought I would see if he had the natural instincts, and the next afternoon I hastened with him to a field where I knew there were a bevy of quail. I had plied my friend the editor with questions on the methods of training dogs, but I had a very indefinite idea of the way that I should set about to accomplish a task that seemed so difficult. I had, however, a plan of my own invention for teaching him to retrieve if he should show bird sense.

On reaching the field a bevy was flushed before the dog had a chance to find them, and I killed one as they rose. Taking the dog up to the dead bird he quivered all over and took it into his mouth with an expression that showed unmistakably that he had never before experienced so extraordinary a sensation. I then put in operation my plan for teaching him to retrieve. It was very simple, but proved effective. Instead of hastening to take the bird away, I let him have it and walked away, calling him after me. I thought he would not like to leave the bird and so would bring it. I was not mistaken. He brought it over a high rail fence for 150yds. through the corn, when I took it from his mouth, patting him as I did so.

Following up the bevy in a ragweed patch, Scott suddenly stiffened out into as pretty a point as one could wish to see. I was delighted, for I knew then that he had the natural instincts. He remained perfectly steady while I walked up and kicked the bird out of the weeds within a foot of his nose. I killed it and made the dog follow again with the bird in his mouth. Since then he has retrieved well. Several more stands were made, and having killed another bird, I returned with them, feeling proud of the dog's first attempts.

I was a little too hasty, however, for the next time my confidence was badly shaken. I had forgotten about the danger of running rabbits. None had been found the first time, but no sooner had I entered the field on the following day than the dog went ki-y-ing like a cur till bunny disappeared in a thicket. I boxed his ears soundly, but in less than three minutes the performance was repeated. My feelings may be imagined. I gave him all the punishment I could administer. When my hand had become too tired to box his ears long, I used up all the sticks that were at hand, varying the blows with sundry applications of a heavy hunting shoe. I realized that that was hardly the ideal way to train a dog. It was breaking rather than training, but the circumstances seemed to demand strong measures. The lesson proved effective, and since that time I have had no trouble on that score. I have hunted him two or three times a week throughout the season, always preferring to let him go rather than to lose any opportunity to teach the dog his duty. I believe that I have now an animal of more than usual merit. I have become very enthusiastic on the subject of quail shooting. Already I have begun to look forward impatiently to the time in the spring when I can train my dog on snipe.

I have received a great deal of pleasure from my afternoons afield this past autumn. No small part of my enjoyment has come from seeing the dog develop as the result of my own handling. I would advise every man who intends to seek health or diversion in this form of out of door exercise to get a young dog and train it himself.

A DISCIPLE OF FRANK FORRESTER.

An Opinion After Fifteen Years.

You have now been sending me the FOREST AND STREAM for nearly fifteen years. At the beginning I ranked it among the very first in its particular sphere, and to-day I consider it far ahead of what it was then.

FORKED DEER.

Natural History.

ON THE PAMPAS OF ENTRE RIOS.—IV.

In a former letter I mentioned that ducks were plentiful in Entre Rios, but said very little about shooting them. They congregated in large flocks in any small pond that was out on the open pampas, but in the arroyos were only found in pairs. We used to construct a blind near the ponds by digging a hole about 4ft. deep, and planting high pampas grass around the edge, drawing it together at the top. We would ride out to the ponds, and get into the blinds, sending our horse away with the guacho, who would move off half a mile or so. The ducks would soon fly back to the pond, and with both barrels I could generally get three or four. After they had been shot at they would not come back to that pond for a long time, especially if there were other ponds near.

I made my reputation as a good shot soon after I went on the estancia, and took care not to lose it by taking any chances afterward. I was crossing an arroyo near the house, and saw two ducks swimming in a small hole. I told the gaucho with me that I would get my gun and return and kill both of the ducks. I did get my gun and when near the arroyo, dismounted, hobbled my horse, and crawled to the edge of the bank. The ducks were still there, but arose on seeing me, and flew rapidly up the arroyo. I let go one barrel at them, and to my utter astonishment both fell dead. This was called a great feat by the men who talked of it over their maté.

There is one very interesting bird that we sometimes saw when we visited the large ponds, or lakes, which was called the *chakar*. This bird is as large as a goose, but has much longer legs and a tuft of feathers on the top of its head. Its feathers are gray in color, but its legs and a large spot around each eye are bright red. They build their nests on mounds which they raise from the bottom in water 2 to 3ft. deep, by depositing clods and dirt which they bring from the shore. They take their name from the peculiar cry they utter when on the wing. They will start up when disturbed, and at every flap of their immense wings will cry *chakar, chakar*, the male bird in a deep bass and the female in a much higher tone. They are great soarers and will go upward and upward into the sky, their cry growing fainter and fainter until they disappear from sight. I never killed but one of these birds, as they were quite rare with us, but I heard that further south they were very plentiful. I ate the one I killed and found it very good eating, tasting like wild goose.

One of the most interesting animals we had in Entre Rios was the *vizcachas*, a small gray rodent that is common all over the Argentine Confederacy. They live in colonies of twenty to forty, and burrow a great many holes that lead down to connecting galleries which lead into the main chamber where they live. Some of the entrances to their burrows are immense, being 4 to 5ft. in diameter and several feet deep, but most of their holes are not over 8 to 10in. in diameter. The mounds of earth they throw up are raised considerably above the pampas, which keeps the water out of their holes when it rains heavily. The male *vizcachas* is larger than the female, and appears to have more curiosity, or more bravery, as they do not dart into their holes on the approach of danger as quickly as the female. They do not come out of their burrows until near sundown, at which time they congregate on their mounds and bark and frisk about. They feed at night on grass and seeds, and on bright moonlight nights travel considerable distances from their homes visiting the buildings and carrying off anything not too heavy for them in the way of straps, whips, knives and bones, which articles they pile up on their mounds, but do not seem to make any further use of them. When any small article such as described above was lost, we always went out to the *vizcachas* mounds and hunted for them, generally finding them there. On dark nights if any one wanted to know whether there were any *vizcachas* about all it was necessary to do was to make some loud noise, such as cracking a bull whip, or firing a gun, and immediately in response would be heard hundreds of little barks and cries which would seem to come from every direction, and which would be repeated several times. The gauchos are very much prejudiced against eating the flesh of a *vizcachas*, but I often ate them and found them very good. I used to shoot them, but unless they were dropped dead in their tracks they invariably managed to get into their burrows. During heavy rains we would dig ditches to lead the water into their holes to drown them out, for they are a great nuisance around a place, and eat up a great deal of grass. Small owls live with the *vizcachas*, digging out a side gallery in one of the holes, other intruders also make

use of the burrows, but all seem to live peaceably together.

About the most destructive insect in Entre Rios is the black ant, which shows an instinct amounting almost to intelligence. They have their relay of workers, one set carrying the leaves and grass to the mouth of the nest and another set carrying it down and stowing it away. They also keep an army of fighters, who swarm out, if the nest is disturbed, and soon make short work of any unfortunate beetle or other intruder who invades their nest. The paths to their nests are very plainly defined, being entirely bare of grass for quite a distance, then entering a tunnel through the grass, and finally a hole in the ground, which would extend six or eight feet before entering the nest. It was almost impossible to raise anything in a garden where they were numerous, as they would eat off the young shoots as fast as they came up.

We had a ponderous machine, which was brought from England, for destroying them in their nests. It consisted of a furnace, in which was built a fire fed with dry red peppers, tobacco stems and sulphur, the smoke from which was forced into the nest by a small pair of blacksmith's bellows. I have pumped this smoke into an ant's nest until I was tired and have seen it come out of the crevices of the earth yards away from where I started it in, which showed it had penetrated into the innermost recesses of the nest, but in a few days this same nest would seem to be as thickly populated as ever. The best way to destroy them after locating the nest is to remove the earth from above and around it without disturbing it any more than possible, then pour thirty to forty gallons of

DEER WITH BISON'S TAIL.

boiling water into the nest, breaking and working it up with the hot water into a stiff mass, which mass must be shoveled out, made into a mound and plastered on the outside with soft mud. I planted in a small garden I had cultivated several hundred seed of the Paradise tree, all of which had come up and were doing well. One morning I looked toward my grove of little pines and was surprised to see they had disappeared in the night. I found the black ants had invaded my garden and stripped the miniature trees of all their leaves and were there in hundreds carrying them off. At one time they invaded my house. If they get a good foothold in a house it is almost impossible to live in it. They infest everything, getting into all eatables, into the beds, the clothing, and crawling over the person, biting quite severely. They attacked a bag of coarse arrowroot that I had and I found they would soon rob me of all of it, so I hung it by a strap from the ceiling and thought for a time that I had circumvented them, but in a few days I noticed them carrying it off as freely as ever. They had found their way to the bag by the strap and to some small holes in the bottom, which (if they were not there before) they cut with their mandibles and from which holes several were pulling the grains and an army of them on the floor were carrying it away.

EDWARD A. ROBINSON.

West Virginia in Line.

WHEELING, W. Va., Jan. 27.—Fifty sportsmen met at the McClure House Jan. 20 and efficient steps are being taken to secure good game and fish laws. A game and fish warden is asked for, salary \$1,000 per year and 10 cents mileage on going and returning from making arrests of offenders, etc. A fund of \$250 is being raised to send two influential men to Charleston to secure the passage of these much-needed bills. The quail and pheasant law is amended, making the close season from Dec. 20 to Oct. 20, also making it unlawful for them to be shipped out of the State. I am delighted to say that the W. V. S. S. Association is booming.

J. A. PENN.

SOME WOODS NOTES AND QUERIES.

BOSTON, Jan. 21.—I haven't had time to write you of my Maine woods trip of December last, but will say that it was my seventeenth trip to the wilderness, and well nigh the most satisfactory one I ever made, and with the experience of it so fresh in my mind I am tempted to think that with a good winter camp in a good location the winter is the time for camping. If you do not believe it wait till I can tell you about it. Just now I can only beg leave to say a word or two on a few points suggested by recent issues of *FOREST AND STREAM*, and which must be taken while they are before the brethren.

Wild Animals in Maine.

First as to the Canada lynx. This animal used to be found everywhere in the Maine wilderness. Every hunter had frequent experience with it. Then there came a time of scarcity. This began about the time when I began to make an annual trip to the Maine woods. Consequently I have never seen a lynx in all my camping and tramping. But the tide is turning and the lynxes are coming in again.

My guide of last December, Mr. Mitchell, of Shirley Mills, tells me that last year a family of five were seen in his neighborhood, and all were caught before spring, two of them falling to his own lot. This year we several times saw their tracks, and it was Mr. Mitchell's intention to trap for them. He says they are the easiest to be trapped of all animals, and he felt perfectly sure of capturing the ones which made the tracks referred to. It was worth a

good deal to me to see even the tracks of a lynx. It is a peculiar track and I should now know it at a glance if ever encountered again.

Mr. Mitchell is of the firm opinion that the present abundance of deer is the reason of the return of the lynx to Maine, and that the wolf is also to come back, and for the same reason, and that both the lynx and wolf will have to be vigorously trapped and poisoned or they will again bring the deer supply to its lowest terms. He is certain that it was a wolf which howled around his camp one night last winter, though he admits that there are as yet but few in the State. This belief of Mitchell's is shared by many guides in Maine.

The ebb and flow, so to speak, of certain species of animals in the Maine woods is very interesting. Many, many years ago the caribou were plentiful, then practically disappeared from the country, so that in the boyhood of men yet in active life none were seen or thought of. Then began an influx of caribou. At first they were not hunted and were—at least in some sections—hardly considered of value for food. Finally they became known and valued as at present, but I believe that the caribou are now diminishing in the State.

I would be glad to get the opinion of Maine guides and hunters on this point.

Every one knows that deer were never so abundant as now. Once they were scarce. That was when the wolf abounded. I have heard Uncle "Vet" Abbey, of Brownville—now dead—tell when the last wolf was killed in that town. It was many years ago. I have heard another man tell of gangs of wolves over on Millinocket Lake, where I think not a wolf has been seen for many a year.

The pine marten and sable seem to alternate with the red squirrel as to periods of abundance. Only the fox seems to be everywhere and always abundant, and never more so than now. The fox and the partridge seem secure from extermination and there is a certain comfort in the thought.

The Guadalupe White Bear.

I am much interested in several recent communications from the town of Eddy in New Mexico and the region of the Pecos River generally, and especially in accounts of game from the Guadalupe Mountains. I have been on the Pecos near its mouth and near its source, but never with time to hunt or explore, though it was most tempting region.

One story about the Guadalupe range, especially interested me, for it was told me by a prominent citizen of New Mexico, a gentleman of undoubted character and of exceptional experience in all that region. It was to the effect that a remarkable variety of bear was to be found in the Guadalupe Mountains, which was so nearly white as to fairly deserve the name of a white bear. This was so extraordinary a statement that, bearing in mind the yarns that are told to a "tenderfoot," I questioned my informant very closely and more than once about the matter, and drew from him a mass of testimony which certainly seemed serious if not convincing. He said he had seen enough skins of this peculiar color—all from the Guadalupe Mountains—to establish the fact there was there to be

found a very remarkable variety, if not new species of bear.

Now, I would like to know of "N. A. T." and Gen. G. O. Shields, and H. B. Husey, and "Podgers," and any and all others who can answer for the region named, if they ever heard of the Guadalupe white bear!

The Maine Jack Rabbit Scheme.

One word more—and about the jack rabbit. I see that it is proposed to try to introduce the jack rabbit in Maine. This strikes me as both absurd and undesirable.

Aside from the question whether the jack could live under such changed conditions, of what value would he be in Maine, provided he could live there? Is he of any value to any one where he is? I do not deny that he may serve in an emergency for food, but when supplied with ordinary food I never thought of cooking one, and I have the impression that our own beautiful Northern hare, which is so abundant in Maine already, is vastly superior to the jack rabbit as the basis of a stew. If I am wrong about this will some one say so and set me right. As I write I have only to raise my eyes to see mounted on the wall of my den two heads of jack rabbits which I shot near Las Cruces, N. M. They are very interesting to me with their wonderful ears, "the most preposterous ears ever mounted on any animal," as Mark Twain says, but why do we want them in Maine?

Jan. 28.—I have just received a letter from Mr. A. T. Mitchell, of Shirley, Mo., who was my guide in the most enjoyable camping trip made last December to Big Indian Pond, in the vicinity of Shirley. I wrote you last week something about the impression on the part of many Maine guides that lynxes and wolves, once prevalent in Maine, and now for a long time almost unknown to the State, are coming in again. Mr. Mitchell writes me that since I was with him he has done his best to trap some lynxes, yet, notwithstanding, they seem to be plenty in his vicinity, gangs of ten having been seen together, he has failed to trap one yet.

He says: "They choose to catch their own living as yet, but I shall succeed in trapping them before the winter is out. I thought when you went away I would trap one and send him to you, but have had rather poor luck so far. I am learning some things of the nature of the animal. October and February are the two months to catch them. By the way, as I was going to look after one of my traps the other day I saw one crouched under some brush. I shot it, but made so many holes in his hide that I thought he would not do to set up."

"I had quite a travel last week, following a track that I thought at first was that of a bear, but concluded that it was the track of a panther. I followed him about 30 miles, but did not come up with him. I am now convinced that we have such animals here, though very scarce."

The above points seems to me to be very interesting. I was told that last winter a gang of five lynxes were seen together, and this year it seems that one of double the number has been seen. I had never heard before, in connection with this animal, of its habit of gathering and continuing in such gangs. As to the panther, many people were entirely skeptical as to its being found within the limits of Maine, yet every few years I have heard stories similar to the foregoing, and from men whose veracity and good sense I could not doubt. My old guide Billings—best of companions and most skillful in wood-lore—told me that once only had he seen panthers in Maine. That was about a lake in the Allegash region, where, from a safe distance, he saw two of these great cats gamboling upon the snow which covered the ice of a large pond. As he expressed it, he "concluded he had lost no panthers," and after watching them, wisely retired, leaving them undisturbed. That the panther was once well known in Maine is evident from the Indian word "lunxus," which is, as most commonly interpreted, "Indian devil." This is traditional all through the State. C. H. AMES.

A TOAD'S SUPPER.

Editor Forest and Stream:

Did you ever see a toad catch and eat his supper? That has been my good fortune; and it was a revelation. I was sitting one evening in my back yard, contentedly smoking and looking with some pride at a small garden patch, where I had spent many hours on various vines and plants that were now rewarding me by a vigorous growth. That garden was the home or resort of many toads, and we had become well acquainted with each other, although I thought them rather a stupid lot. It was comical, however, when I accidentally disturbed one among the leaves or hauled him out of the soft earth, where he was resting, to see the little fellow puff himself out to the point of bursting and roll up the whites of his eyes at me with an expression of sleepy reproach. I think they soon became accustomed to my presence, and would only take one or two hops from under my feet and then watch me with stupid gravity.

I had about finished my pipe, when I observed one of my toads coming toward me along the path that led to the garden. He was as usual quite deliberate in his movements. A hop, a long wait and then another hop. As he came near my seat he eyed me solemnly for a while, then hopped between my feet and disappeared under the chair. On turning around a few minutes later I saw him on the graveled walk leading to the front of the house. Without any object I rose and strolled after him. The sun had disappeared, but it was light enough to see even a small object at quite a distance. The toad paid no attention to me as I came up with him. Suddenly he made a leap toward the edge of the path and vanished from sight. I knew he had not reached the grass border, and I was puzzled at his strange disappearance. I took a step forward and stooped over the spot where he had landed. The mystery was solved, although I could scarce believe what I plainly saw. The toad was there, but the fat, chunky body seemed literally pasted to the walk and was scarcely discernible from it. It looked as if he might have been run over by a cart wheel, so perfectly flattened was the body. As I looked, there was a lightning change. Like a flash my toad threw himself at the grass border. I thought I saw a darting tongue, and then he leisurely hopped back to the walk—the same rotund, stupid-looking fellow I knew so well. I opened my eyes very wide and followed him closely. Again and again was that marvelous flattening process repeated, as he caught sight of objects to me utterly invisible; again and again he launched himself like an arrow into the air

or at a tuft of grass, and I do not believe that he once missed his prey. In this manner we traversed the whole length of the walk, when the toad turned and retraced his steps, or rather hops. It was now quite dark and I bade him good night. I had found out my friend of the garden. Instead of being a loggy, slow-moving animal, he was as cunning as a cat and twice as active. I am afraid he is something of a hypocrite in his daily life, but who is not more or less one? Every summer my garden is filled with toads. I treat them with profound respect. I hope my old acquaintance is among them, and I think he is. I have often noticed one sleek-looking fellow hopping after me as I move about, and it seems to me there is a twinkle in his eye I see in none of the others. Probably he is aware that he cannot humbug me again with his pretended clumsy ways. We understand each other.

FRED L. BALLARD.

SPRINGFIELD, MASS., JAN. 16.

A REMARKABLE DEER.

AMONG the mammals made known to us in the course of the last 20 years perhaps none is more remarkable than a deer which has a tail like a bison from the park of the Emperor of China (*Elaphurus davidianus*). This species has been named by naturalists for the Rev. R. P. David the missionary and celebrated traveler, who has made known to us so many new animals from the Celestial empire.

In its conformation this deer is very different from the others of the family *Cervidae*. The head is somewhat short, the hips very heavy, and the feet very deeply split. The tail, which is much longer than in any other kind of deer terminates in a bunch of long hair, being thus like the tail of a bison. But perhaps the most remarkable character of this strange animal is the horns, which seem to be placed on its head backward. All known deer have these frontal prolongations so disposed that the antlers have their points directed forward, but in the present species this is not true, for the points of antlers are directed toward the animal's hips. If these antlers should be put in the hands of the taxidermist, he would be almost sure to direct these points forward, thus exactly reversing the natural position.

This animal is timid, excitable and fierce. A mere nothing suffices to excite it. It moves about but little in the day time, but seems much more active at night.

Until within recent years this animal was unknown to naturalists. The first ones brought to France were obtained from officers of the household of the Emperor of China by M. De Bellouet, the Minister of France to Peking, but before this pair reached the Jardin d'Acclimatation at Paris, the Zoological Gardens of Berlin had already received some.

We do not know whence this deer comes nor of what region it is native. We only know that for centuries the species has lived in freedom in the parks of the Emperor of China, as the fallow deer lives in our European parks.

This animal is a dweller in the forests and fears neither cold nor storm. It has a rough coat, doubled in winter by a warm fur, which it sheds in spring. Its color is a dirty white, or a pale fawn. Every year in the spring, the females in the Jardin d'Acclimatation each gives birth to one young one whose growth is altogether remarkable, for, in the autumn the young, then about six months old, are almost as tall and heavy as the adults.—Abstracted from *Le Chénil*.

THE NEW MEXICO COLLECTION.

EDDY, New Mexico, Jan. 16.—Editor Forest and Stream: The alleged "old frontiersman" has been stuffing your correspondent, "T. A. T." There is, of course, no such thing in existence as a "cactus deer." I heard a good deal of this silly talk about this cactus deer, while it was on exhibition here, and, of course, saw and examined it. It is simply a mule deer, killed while the horns were in the velvet, and they are not at all different, in shape, from any other mule deer's horns, in the same stage of growth. I am surprised that a man who claims to know so much as Mr. Taylor should have allowed himself to be "joshed" in this way.

The elk in this collection, which Mr. Taylor says weighed 700 lbs., never attained more than one-half of that weight. He stands less than 15 hands high, and his horns are not more than half as large as others that are found in various collections. They are not "prodigious," by any means. Mr. Taylor states their probable weight at 100 lbs. They would not weigh more than 50, at the outside.

Mr. Taylor states that the Mexican or mountain lion, as known in Texas, is a much more formidable beast than the mountain lion or cougar found in New Mexico and elsewhere, and that it is "more to be dreaded than any other animal that walks on American soil."

This statement is absurd to any one who is well informed on natural history. It is well known that the mountain lion or cougar, wherever found, is, generally speaking, a coward; that he usually sneaks away at the approach of the hunter, and there are few, if any, well authenticated cases on record where this animal has been known to fight.

Mr. Taylor further states that the collection in question is the best in New Mexico, or probably anywhere outside of the museums. There are, in this collection, some fine skins, but they are mounted in such a way as to make a man of any intelligence extremely tired. They are put up square, with a leg under each corner, and the legs look more like those of a homemade bedstead than of graceful animals like deer, elk, antelope, etc. Mr. Riggs, far from having associated with wild beasts all his life, probably never saw one alive in the woods. He is a good-natured, intelligent farmer, who came here, I think, from Missouri, two or three years ago, and so far as I know, has never killed any large game. To my certain knowledge he bought all these skins from hunters, who brought them in from the mountains and plains. He had them mounted by a man who might possibly be able to mount a horse, if he had a step-ladder handy, but who does not know any more about stuffing and setting up wild animals than I know about what electricity is made of.

I have several times referred to this collection myself, in former communications, and hoped that it would have been gotten up in such a way as to be a credit to New Mexico, but regret to say that it is not. G. O. SHIELDS.

Needs No Apologies.

EAU CLAIRE, WIS.—I never feel ashamed to read FOREST AND STREAM with my wife or children. It needs no apologies, which cannot be said of all our American "sporting papers."

W. J. S.

Musk Ox Specimens.

NEW YORK, Jan. 27.—Editor Forest and Stream: It is surprising that Mr. Webster, since he takes the trouble to point out in FOREST AND STREAM of Jan. 26 that there are only four mounted specimens of the musk ox in this country (one at Harvard, three at Washington), other than the splendid one which he has lately mounted, does not remember that there is a musk ox in his own town, and not more than two miles from his shop in Forty-second street. This specimen, which was prepared by Ward, of Rochester, has been on exhibition in the American Museum of Natural History for the past nine years. Mr. Webster could have seen it there in, I think, November, 1891.

It may be interesting in this connection to note that the animal in the Museum stands 4 ft. high at the shoulder (not including the length of the long hair on the back). As set up, it measures from nose to stern, in a straight line 7 ft. 9 in., or measured along the back, 8 ft. 5 in. The horn is only 9 in. in diameter at base, but is 26 in. long. While perhaps not "the largest in this country or Europe," it is probably about as large as the one figured in FOREST AND STREAM, and is a splendid specimen.

TAPPAN ADNEY.

The "Ocean Sheldrake" a Goosander.

In a note appended to Mr. Fraser's letter in last week's FOREST AND STREAM it was suggested that the rare duck which he called "tweezer" or "ocean sheldrake" might be *Mergus serrator*, which is also called "salt-water sheldrake," "sea bec-scie," "sea robin," etc. To settle the question, however, Mr. Fraser kindly sent the specimen to this office. It proves to be a fine male goosander (*Mergus americanus*). This bird we have found much less abundant in our shooting than the red-breasted merganser (*M. serrator*). Of this latter species Mr. Trumbull, whose experience along the Atlantic coast has been very wide, writes us: "I have shot it at Shinnecock Bay and Moriches (East Bay), and have personally found it pretty thoroughly, though unevenly, distributed from Quebec to Mobile, including the island of Grand Menan, where, as in many other localities, it is practically the only merganser. I have found it far more common on the sea coast than the 'tweezer,' 'weaser' (or wesser) or 'fresh-water sheldrake' (*M. americanus*)."

Game Bag and Gun.

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

BOSTON AND MAINE.

Live Game in Close Time.

Judge W. P. Whitehouse, of the Maine supreme judicial court, has just rendered a decision at Calais, in Washington county, of much importance to the people of the State interested in the taking of game animals alive. The case is the one of State vs. Eben Coffern. Coffern was convicted last November before the municipal court of catching and having in possession a young deer in close time. The case was appealed to the Washington county supreme court. The decision has been much discussed, but it effectually settles the law as to the right of individuals to catch and retain game animals alive in close time. The decision says:

It is admitted that the fawn was caught by the defendant in the month of July, 1892, and kept in possession until Oct. 15, and then sold to some person in Massachusetts. Sec. 11, of Chap. 30, R. S., declares that "whoever has in his possession the carcass of any such animal, or any part thereof, between the first days of January and October shall be deemed to have hunted and killed the same contrary to law. But he shall not be precluded from producing proof in defense." This section was amended in 1891 (Chap. 35, Sec. 3) so as to read, "whoever has in his possession any such animal or part thereof, shall be deemed to have hunted, caught or killed the same contrary to law." The substitution of the word "animal" for "carcass or hide" in the first clause, and the introduction of the word "caught" in the second clause, conclusively show an intention to make the statute applicable not only to the possession of inanimate things, but to the capture of living and moving ones. This is also in harmony with the manifest purpose of the law. It was obviously designed to afford protection to the deer and prevent their extinction by giving them freedom to roam the forests, untrapped by man, during the appropriate season of each year. If construed to permit their capture in close time when more easily effected, and subsequent sale or appropriation in open time, the law would signify fail of its beneficent purpose, and be practically nullified. In the case at bar there is no suggestion in defense that the fawn was captured or temporarily held for any humane or lawful purpose. That inquiry was precluded by the final disposition of the animal. The decision of the court below was correct, and the judgment must be entered for the State.

A Maine Trophy.

Mr. Henry S. Fisher, with Harding, Whitman & Co., 78 Chauncy street, Boston, has received the mounted head of his moose from the taxidermists. Readers of the FOREST AND STREAM will remember the account of the killing of this monster moose published in this paper some weeks since. The head is a fine one, and many of Mr. Fisher's friends, interested in sporting, have been in to see it. It ornaments his office room, and is a grand trophy. They are telling him that it is the very bull moose that was hauled out of the woods by the cow moose, first caught and harnessed by the guide, the story of which was in the FOREST AND STREAM recently.

SPECIAL.

South Carolina Quail and Snow.

MCCONNELLSVILLE, York County, S. C., Jan. 22.—Quail are quite plentiful in this vicinity; we can flush from ten to fifteen coveys in a hunt of four or five hours and not go over two or three miles from where I am located. The weather has been so cold the past ten days that field sports are at a discount. Last Wednesday ushered in a snowstorm which lasted two days. The snow is now 6 in. deep on a level with little prospect of a thaw. E. M.

Wild Life in the Yellowstone.

The telegraph line repairer of the Yellowstone Park, who got into the Hot Springs Jan. 21, reports having seen sixty-three buffalo in the Hayden Valley. On the way back to the Springs he was treed about ten miles down the road, near the Apollinaris spring, by an old mountain lion and two cubs. Lions are not often seen in the Park.

OUR BLUENOSE BUDGET.

FREDERICTON, N. B., Jan. 26.—I note that Mr. Peter Le Royer is delighting the cultured natives of Boston with his justly celebrated live cow moose. Also that Mr. LeRoy "claims that his animal is the only living adult cow moose in captivity." It is to be regretted that Mr. LeRoy should mar his missionary efforts by a claim like this. At Moncton, in this Province, there resides one Philip Selick, who has no less than two cow moose and one bull moose for his constant playmates. Mr. Selick has exhibited the former throughout the Provinces for several years, and Mr. LeRoy's moose would have to "hump itself" to be any homelier than they are. Mr. Selick had been yearning a long time for a bull moose for breeding purposes. Last winter he spent over two months in the wilds of the Renous in order to capture him, and when he emerged from the forest in the spring of the year he had the animal in tow. He floated him down the Miramichi on a raft, and landed him home safe and sound. I have written to Mr. Selick for particulars of the capture and breeding experiment, which I hope soon to supply to *FOREST AND STREAM*.

A wonderfully favorable season for the preservation of moose, deer and caribou was that which closed on the 15th inst. Scarcely any snow fell in any part of the Province until a week after New Year's, and this made the successful pursuit of big game almost impossible. It is probable that not over 100 head of moose, caribou and deer combined were killed in New Brunswick during the open season. Last week Dr. Bliss, of Amherst, and his friend, Leander Allen, had a successful cruise in the woods between Maccan and Athol. Abram Hood acted as guide. The party captured two large moose, the largest of which, when dressed, weighed 690lbs.

Nat Price, of Peniac, the veteran trapper, reports a singular absence of foxes in that region this winter. He thinks the lack of snow during November and December must have had the effect of driving them from their usual haunts. Early in the fall Mr. Price had a strange experience. He was just about starting for a look at his traps, when something thumped against the roof of his house. It sounded like the clatter of a chain, and Mr. Price had a vague conviction that his time had come. He rushed to the door, and just arrived in time to see an immense crane flying over his dooryard with what seemed to be a chain attached to its feet. Mr. Price grabbed his gun and gave chase. The crane flew around in circles and gave evidence of mental derangement. After a while he banged into Mr. Price's favorite apple tree and the chain stuck fast. Mr. Price climbed the tree and reached for the crane. Then the crane reached for Mr. Price and jabbed him with its beak. Then Mr. Price came down and reached for his gun. Then the crane came down and reached the end of his earthly troubles. Attached to his leg was an otter trap and chain that Mr. Price had set with a sliding pole in the creek up the interval.

A similar thing took place right across the river from Mr. Price's place only last week. Spafford Wade shot a large Arctic owl which he had noticed in the locality for several days before, and which had the singular habit of always lighting on the ground. When shot the owl had a mink trap clinging to his leg. The trap belonged to a lad named Goodspeed, and, not being properly secured, had been lugged off by the owl about a fortnight before he was harvested by Mr. Wade.

Speaking of owls, reminds me. A few years ago three of us floated down Cain's River, one of the wildest and least frequented fishing streams in New Brunswick, in a dugout. On the fourth day out we routed a large owl several times during the afternoon. As soon as we poled within rifle shot he would start from the bank and fly a few hundred yards down stream. At last he lit in a tall pine tree in open sight, and when we were about 100yds. away I stepped out of the canoe with a .38cal. rifle and took a standing shot. The owl flew across the river and gave signs of being wounded. When followed he rose from the ground and recrossed the river. There we routed him again and he flew up stream, lighting, as before, upon the ground. We stirred him up once more and he started for the opposite bank, but fell into the water when half-way over. We despatched him with a revolver, and that evening by the light of the camp-fire skinned him for mounting. Now the only injury the owl had sustained from the shot that I fired was the loss of one of his toes. Can any of your readers explain why such a wound should disable the owl? Was it pain, or paralysis, or was the owl simply rattled?

Some years ago a well-known naturalist in Saint John had a domesticated owl. He had also a neighbor who was a young man of strong sportive proclivities. The young man sized up the owl one dull, rainy day and he allowed that his gamecock could do up that particular owl in a period of time which he described as "the shake of a lamb's tail." The rooster was conveyed to the scene, his spurs adjusted and the arena cleared for action. The rooster walked round the owl and the owl followed him with his eyes till the interior works of his neck must have resembled those of a Waterbury watch. The rooster made a lunge at the owl, but the latter dodged the blow and countered so heavily with his larboard claw that the rooster was nearly knocked out of time. By and bye the rooster plucked up courage again and began to spar for an opening while the owl calmly unwound his Waterbury. Then there was a flash, a clash of spurs, a ripping of feathers, a loud despairing squawk and all was over. The owl had scooped in the neck of the rooster with his claw in that momentary scuffle and crushed his life out in a trice. He seemed to be saying as he gazed on the boys with his big, round eyes: "Well now, you wouldn't have thought it, would you? Strictly on the quiet, boys, I'm just a little surprised myself."

It is wonderful how quickly an owl can move when he wants to. One day in October last, while after woodcock,

I saw a large cat owl in a tree. His attention seemed to be taken up with something that was transpiring on the ground below him, and he gave no heed to my approach. His feathers were ruffled up, his neck stretched out, and he was moving his head slowly from side to side. I glanced at the spot to which his gaze was turned, and there, daintily picking his way through the crisp, dead leaves, was a handsome cock grouse. The latter had become alarmed at my approach and was quietly sneaking to cover. Every one of his jaunty little steps brought him closer to the owl. Soon he struck the edge of a little patch of sunlight and cast a backward glance at me before he ran across it. The owl silently poised himself on the branch overhead for the fatal swoop. In another second the grouse would have been safe in the shrubbery beyond, but just then the owl—Oh! he did, did he? Well, perhaps he did, but all I know is that just about the time the owl struck the sun patch a big gray rocket shot up through the treetops with a roar like a mail train, and a moment later the owl, looking very sick indeed, was back again upon the same old limb calmly unwinding his Waterbury. He seemed to be saying as he winked and blinked at the sun patch, "Well now, you wouldn't have thought it, would you? Strictly on the quiet, boys, I'm just a little surprised myself."

Charlie Gallop came into town from Hanwell the other day and announced that a big bear had gone into winter quarters near his place. He asked the boys to come out. John Risteen, Harry Atherton and George Hoegg accordingly went out. They had two express rifles, a Marlin, three sheath-knives, two hatchets and an ax. Harry wanted to take his big revolver along, but the boys were opposed to this as they wanted to give the bear a chance. When they reached Hanwell, Charlie said he couldn't just lay his hand on the bear himself, but he guessed that old Lige Whalen could. Then the boys drove over to old Lige Whalen's place. Old Lige was threshing oats, while his boys turned the tread. He said the bear he told Charlie Gallop about wasn't any particular bear of his'n, but he allowed that old Bill Powers had a chunk of a bear yarded up down somewhere handy to his place. Then the boys drove over to Bill Powers's place, and found Bill splitting wood in his dooryard. Bill said he never known such a shockin' bad season for bears. Fact was a man wouldn't be able bimely to get a bear at all if times didn't mend. Three years ago, six miles back of his place, one of his boys had seen what looked powerful like the track of a bear. He was just remarkin' to old Lige Whalen the other day. Then the boys drove home.

Frank Wright, Herman Bragdon and Asa Bragdon, of Grafton, had better luck. They located a den at South Newburg last Monday, occupied by Mrs. Bruin and two fat cubs. The boys gathered in both of the cubs at the first volley, but while this was going on old Lady Bruin was making the tallest kind of tracks through the timber. They followed her all day, but were obliged to give her up.

The skin of a black bear in very exceptional cases measures 8ft. from the tip of the nose to the tip of the tail. A bear of this caliber will squirm out of a dead-fall every time. The biggest hide received by any of the local dealers this season was trapped by Tom Evans, of Zionville. It length was 7ft. 6in.

Since Sept. 1, Bradford Currier, of Gagetown, claims to have trapped and shot 575 muskrats, 5 foxes, 110 ducks and 3 geese. Bradford is so reasonable in his fox and goose score that it makes a man feel shaky about disputing his record for ducks and muskrats.

PROWLER.

FREDERICTON, N. B., Jan. 26.

SOME NEW BRUNSWICK TRAPS.—V.

Otter or Beaver Trap (Fig. 5).

The trap shown in the illustration was built for otter on the Tobique River, New Brunswick. Similar ones are set for beaver. Such traps as these are not baited, but built across the "slide" of an otter or road of a beaver, and are meant to be sprung as the animal passes through. Built upon the ground, they can be used only in the early winter and in the spring when the snow is going off. The otter is a shy animal and is apt to notice any disturbances in the neighborhood of its haunts, so these traps are built, whenever possible, in the early fall, so as to be old looking and weather worn when the time for trapping arrives. The diagram explains its construction. The upright stakes stand a little over 2ft. high, on opposite sides of the otter "slide." The upper ends are tied together with a withe, and a stick about an inch thick is laid across the top. A short 3in. pole serves as a "bed piece." The "fall"

FIG. 5.—OTTER OR BEAVER TRAP.

is about 8ft. long and 2½in. thick. When ready for work it should be heavily weighted with logs. The "trigger" is a stick about ¼in. thick and 2ft. long. It is placed on top of the "bed piece," and one end is tacked to one of the upright posts, the other end being free. Another stick is cut, called a "crooked stick" (Fig. 6). It is made from the butt of a small sapling, and is about 22in. long. One end of a withe is tied around the large end of the "fall," which has been pushed in between the post above the "bed piece." The butt end of the "crooked stick" is laid across the upper cross stick, and the other end of the withe

is fastened to the projecting end, into the notch cut for it. The other end of the "crooked stick," which is made flat, is pushed downward until it points straight toward the ground. It should fall short by several inches of reaching to the "bed piece." The "fall" should now be suspended about 9in. above the "bed piece." The loose end of the "trigger" is then raised up far enough for the flat end of the "crooked stick" to catch behind it (see Fig. 5). The trap is now set. Then brush should be carefully thrown at either side of the path to insure the passage of the animal, or one or two stakes may be driven around, as shown in Fig. 5. The otter in passing through depresses the "trigger;" the "crooked stick" is released and flies upward, and the "fall" drops upon its back.

TAPPAN ADNEY.

THE USE OF ACCIDENTS.

Editor Forest and Stream:

A few weeks since mention was made in *FOREST AND STREAM* of a turkey hunter having been shot in his blind, and the item was accompanied with a well-timed editorial regarding a prevalent carelessness on the part of such hunters. It is not probable there will be an unnecessary amount of criticism in regard to carelessness in hunting that game. There have been so many accidents in hunting, especially in turkey hunting, that it is improbable the subject will become worn threadbare, the importance of the theme warranting much being written.

It is plainly the duty of the sportsman who has had observation and experience, to bring to the mind of the younger members of the sporting fraternity, yes, as a reminder also to the older members, by precepts and by illustrations drawn from observation and experience, the danger likely to result from carelessness, and through *FOREST AND STREAM* to give such experience as broad an influence as possible.

Education of the young in habits of carefulness in the use of the firearm in the open and in the covert will not end with that special teaching. It is well known to the sportsman who has arrived at middle life that there are few boys who will not listen with intense interest to the recital of sports in the field and forest and of hair-breadth escapes. Such recitals produce a profound impression on the youthful mind, as profound, perhaps, as actual observation in more mature years, remembered and profited by through the whole life when sporting and elsewhere. The narrator should take special pains to impress upon the mind of the youthful reader the result of carelessness by a vivid description of accidents, giving details. Details are powerful aids in fixing the essence of narrations in the memory. Boys like details.

The sportsman as a rule dislikes to arouse unpleasant memories, is more given to the rehearsal of pleasant scenes than to the rehearsal of scenes which harrow up the finer feelings. Our object in writing should be to educate as well as to amuse. However unpleasant such recitals may be to the writer and reader, they should be given in view of the probable benefit resulting therefrom. There can be no well grounded excuse for failing to discharge a moral duty.

Many hunters of large experience are unlettered men, and they dislike to place on paper their experience, fearing their productions may be the subject of ridicule. Such fear is groundless. A homely recital of a fact by such a hunter will be more interesting and produce a greater effect than well turned sentences and rhetorical flourishes of a man who has seen but little of the forest and field, because of the fact that it bears the impress of honesty, truth, noble intent, hiding all imperfection in composition.

I recall to mind a forcible illustration of the result of teaching the young, although not drawn from the field or forest, yet it will answer for an illustration. The parents had a daughter, who when a child was naturally inclined to dress fashionably, inclined to have very tight fitting dresses about the waist, much tighter than nature demanded for physical development. The child of course obeyed, but the parents knew that in a few years the child would be beyond their control in that respect. The father was accustomed to give the daughter instructions in studies suitable to the age of the child. He procured a text-book on physiology suitable to the age of the daughter. The text was well illustrated with cuts, among which were cuts illustrating deformity produced by tight lacing. The father heard the recitals of the child without comment on the result of tight lacing.

The result of the study was, the child became frightened to such an extent the mother had difficulty in placing dresses on the child close fitting enough to look well. The child when having its dresses fitted would cringe, saying the dresses were too tight, they hurt. That teaching held good when the child became a young lady, yes, ever afterward. As effective impressions would be made upon the minds of boys by a vivid and detailed statements of accidents in the use of the firearm.

Many of us can "look backward" and recall to mind having received injuries, or barely escaped receiving them, when, so far as we could then foresee, were exercising great prudence, caution, when, in fact, there was an element of carelessness our mind did not grasp at the time, but which was afterward apparent.

To illustrate. Many years ago, when crossing the plains with a wagon train, two companions and myself decided to take a hunt while the train was in motion. We were well-mounted and armed, because the Indians were troublesome.

I was riding between my companions. A jack rabbit sprang up in front of our ponies, ran a short distance and squatted under a sage brush. I drew my revolver, a navy; taking aim, I found the head of the pony in line of the aim and threw the muzzle of the revolver into the air, bringing the cylinder of the revolver in front of my eyes and a short distance away, as such an act would naturally place it, with finger on the trigger, the revolver being cocked. With my left, or bridle, hand I pulled the rein so as to turn the head of the pony out of the way of a shot, and in so doing my revolver was fired, the gas or fire escaping from between the barrel and cylinder striking me in my eyes. If I had been struck in the face with a sandbag or a fist I think I would not have been more shocked. For a few moments I was stunned, but when senses returned I could not see. I was blind. We returned to the train and bandaged my eyes with clothes wet with cold water. After a few days sight returned. The question is, how did the revolver come to be discharged. My theory was that when my fingers of the left hand in handling the rein clasped, the fingers of my

right hand involuntarily obeyed the will directed to my left hand, clapped and result, the revolver was fired. Some one may say you should have kept the finger from the trigger. True, as result proved, but who would have suspected that involuntary movement of the fingers of the right hand. Of course, I profited by the lesson.

Most turkey hunters, hunting with the aid of a call, resort to the blind. For me the blind is not the best position; is a dangerous one where there are a number of hunters in the same timber. I did, for several years, use the blind, but experience taught me that an open space in the timber where I could have a good range of sight, good view of an approaching turkey, is the best position.

I have called turkeys, old gobblers, up within pistol range when thus situated. Sometimes they would come slowly and at other times rapidly. Old gobblers are the shyest, as a rule, of those birds, but many times they would act stupidly. I am satisfied that the sense of smell is not one of the safeguards of that fowl. Its safeguard aside from its legs and wings is seeing and hearing. Let the hunter when calling be seated on a log or back to a tree, or other comfortable position, keeping motionless, not moving his head, and if manipulating a call with his hand, keep the movement out of sight of the turkey and the gun ready for a snap shot.

I adopted this plan many years since by reason of having been shot with a buckshot by a companion, or rather by reason of a large copper powder flask filled with powder carried in the breast pocket of my hunting coat, having been mortally wounded with a buckshot from the gun of that companion.

H. L.

THE LAST WOODCOCK OF 1892.

LOWVILLE, N. Y.—“Do you want to go for woodcock? If so go home and get ready. Will call for you in half an hour.—F.”

Just as I was stepping into the office with a busy day before me this message was given me. Did I want to go? “Will a duck swim?” Making a hasty disposition of the day’s work I was soon back at the house, and before the half hour had passed I was ready. Right on time F. drove up and we were off for what proved the last shooting of the season. I detest a day’s outing with one who is never on time. It puts me in bad shooting trim to wait beyond the appointed time.

It was a late October day, cloudy, nearly cold enough for snow, and we realized that we must improve our chances. An eight-mile drive brought us to the first ground, a thick belt of alders backed up by a dense tamarack swamp.

Nathan, my friend’s thoroughbred black and white setter, had a “wire edge” on and hated to mind, but was too well trained to make any very bad breaks. We had barely reached the alders, F. taking the inside while I kept on the outer edge, when Nate came to a point, the bird flushing wild, came my way, and a clean miss was scored; but as on the report of my gun a ruffed grouse sprang from a log I retrieved my reputation by bringing him to bag. At the same time F. captured a second one, and almost immediately Nate pointed another woodcock which F., missing with his first barrel, caught with his second, just as he was disappearing in the swamp. The birds were all neatly retrieved by Nate and we were elated with our start, having been in the brush hardly three minutes and bagging three noble birds.

Following the course taken by the first bird found, we failed to again locate him, but put up several more grouse beyond the point where he should have been, all of them giving F. long shots which failed to kill. Retracing our steps, Nate found our first woodcock which was neatly killed by F.

The brush was flooded from the recent rains, and F. found it hard walking. We were back to the place where our first bird was found, and working toward the other end of the alders, Nate soon found and pointed. F. flushed the bird, and his merry whistle, as he made for the swamp was cut short by a simultaneous report from both guns.

“Point,” called F. a minute later, and just inside the bushes, in the thickest of thickets, stood Nate. “Bad place that; ‘twill take a dandy shot for him!” I called. But the “dandy shot” was there; the bird went F.’s way, and fell a victim to his skill; a quick snap shot through the bushes as a second bird rose added one more to my score. Misses were scored on the next two found, and they disappeared in the darkness of the swamp.

Returning to our buggy we each scored a miss on a grouse. We found 7 woodcock on this ground and bagged 5; these with the 2 grouse made a good start, and it was with great complacency that we pulled out for the afternoon’s shooting place, about five miles distant.

Reaching there about noon we stabled and fed the horses in Uncle Y.’s barn. While disposing of our own lunch we discussed the prospects and chatted with Uncle Y. The old man was full of enthusiasm about three deer that were feeding in his pasture, and was very anxious that we should hunt them, but we were not loaded for deer that day.

Fifteen minutes’ walk brought us to our shooting ground, four or five acres of a species of low willows, flanked on the south by an alder bush swamp. The wind had risen and was blowing a gale; Nate had hard work to locate his birds here, and the birds were wild and flushed at incredible distances, so that misses were frequent.

The first point was on a single bird, which disappeared over in the center of the willows and could not be found. Beating back, near the place from which he flushed, Nate again came to a point, and for the next ten minutes pointed in every direction and bird after bird rose wild, six of them in all, three of whom were gathered in, two by F. and one by myself. Then followed a long hunt and no birds; the willows were beaten thoroughly, but not a point. Crossing into the alders, Nate found another bunch. F. had these all to himself, and, while the shooting was not easy, added three more to his bag. While picking my way over the remnants of an old corduroy road, a bird flushed at my feet and fell an easy victim. Two more single birds paid for the hard work in this place, then back to the willows, where F. killed what we judged to be the first bird flushed. As nearly as we could tell, fifteen birds were found on this ground and ten of them killed.

“Let’s take in that little patch of alders, it’s only a quarter of a mile and we have plenty of time before dark,” says F. Down by the edge of the creek that flows just outside of the alders began as pretty a piece of work as one ever sees. Right at the edge Nate stiffened into a point,

then slowly crept on, then stopped again. “Now we have him,” but not yet, Nate is again moving on, and two men are holding their breath in their anxiety, for what will probably be the last shot for the season, and still Nate creeps on and on, even to the end of the alders, and no bird is found. “They are there sure,” says F., “the old dog wouldn’t lie.” Nate is working back now, out nearer the fence, the wind is more in his favor, F. is in the alders, myself on the outside, and “bird” from F. proves his faith in Nate to be well founded. F. shoots and “dead bird” rewards Nate for his good work. “Birds” again, and this time I find my reward, and still Nate is pointing, and this time two birds rise, one for each of us, and there are no “misses” now, and once more “bird” from F. followed by a quick shot, and F. has killed the last bird for 1892.

We go back to Uncle Y.’s now and pockets and bags are emptied. Twenty of the brown longbills, with a ruffed grouse at each end, for our day’s outing, and not these only. Years ago, when boys, F. and I had many pleasant days with our old muzzleloaders, but for fifteen years my home had been in the West, and this was our first hunt together; an old friendship was renewed to-day, old memories awakened. It is good to leave the present, at times, and go back to the old days,

“Back to the place where you had to decide.

By this or that through your life to abide;

Back of the sorrow and back of the care,

Back to the place where the future was fair.”

From the past we may gather strength and courage for the present, and we feel as we reach home that the day has been well spent, and that while our woodcock shooting for 1892 is now like many of our other enjoyments, gone forever, yet we know that the seasons follow one another and the hope for woodcock next year is but typical of the hopes that have been kindled by our day’s outing.

EVERETT.

TWO BACHELORS’ VACATION.

CAIRO, Ill., Jan. 18.—I was eating supper at a restaurant not long ago with my friend, the Chief-with-two-Stomachs. He had ordered a light bit, merely a “New England Dinner,” his favorite dish, consisting, I believe, of corned beef and cabbage, with a few carrots, turnips, etc., thrown in—I can’t be positive about it. The Chief ate this, and when the waiter asked him what he would have for dessert he said he believed he would have ham and eggs, or soup, he didn’t much care which, as he wasn’t feeling very well. From this, one thing led to another, until finally I concluded I wasn’t feeling very well either, and we both concluded we needed a trip South, out of the wretched Northern winter. The Chief suggested that as a certain toothsome contemporary was laying stress upon a future series of articles to be published under the head of “A Bachelor’s Vacation in the South,” it might be well to see that one bachelor, and raise it one, and so keep up the record of FOREST AND STREAM for being always in the lead. This, he explained, would be possible if he and I should go South for our health and say something about the trip under the caption of “Two Bachelors’ Vacation.” To this I demurred a good deal, but he seemed to have so much faith in the idea that at last I consented. Accordingly I started South last night, and the Chief is to follow if he regains his appetite.

Where is the South?

Jackson, Tenn.—Almost anywhere in the South is good enough for a newspaper man, but how was one to know when he struck the South, that was what bothered me. I knew that in the South the affix “sir” was more common than in the North, and I had it figured out that when I struck a country where everybody said “Yes, sah,” and “No, sah,” I would be in the South. I laid a trap for the people. I would ask each certain resident the question, “What is the real line that divides the North from the South?” I sprung this on a man north of Cairo, and he said, “What’s the matter with you?” I asked a man at Cairo, and he replied, “I really couldn’t say.” South of Cairo I asked another man and he said, “Well, now, I never thought it out.” At Holly Springs I sprung it on another stranger, and he said, “Dam if I know.” So I can not tell where lies the line between North and South. I felt no jog if the car ran over it. I am inclined to believe this is a great big country, with no North and no South to it.

So far as the snow is concerned, and the winter, and the shivers, we are not yet in the sunny South. At Holly Springs there is a foot and a half of snow. The station hands have shoveled out a path over to the eating house and the banks are two or three feet high. Still it is not so cold as in Chicago. Indeed, I feel like taking off my shoes and playing in this warm snow. The despatches to-day call this extreme weather for the South. At Huntsville, Ala., they have 18 in. of snow, and at Tuscaloosa they are improvising sleighs for use in their snow, so unusual for that region. At Columbus, Ga., the snow is heavy, and at Savannah the people are wild over the novelty of a snow battle. At Columbus and Coffeeville, Miss., the snow is several inches deep, and at Pine Bluff, Ark., there is 15 in. of it. Helena, Ark., has 7 in. of snow, while at Charleston, S. C., the heaviest snowstorm of forty years is in progress. The sunny South is off color for a few days.

Yesterday I saw an unusual thing. It was above Cairo somewhere that the train started up a bevy of quail, and for some distance two or three of the bunch flew along between the fence to the train and keeping up with us. One was near the window, and instead of passing us, as I supposed a quail naturally would outspeed a railway train, it only drew ahead a little, others fell back as it slackened up to alight. As the bird was opposite the window, and almost stationary, I had a rare opportunity to note its appearance while in flight. It seemed as though the whole figure of the bird was drawn up into very convex shape, the back being “humped up,” and the wings apparently strongly curved up, as if hollow underneath and pulled in, so to speak, at the lower edge. The head was plainly visible, and the curve of the head and neck was in posture easy, confident and indescribably graceful.

Bear and Deer.

They tell me that over in Arkansas, opposite Cairo, there is a great country for bear and deer. Grenada, Miss., is another great point for big game, being on the edge of 50 miles of wilderness. A party of three hunters from New York killed five bear and a number of deer back of

this point last month. This must be a wild country, for in the New Orleans paper I note the following story of two hunters, who are at this present time lost in the swamps: “GREENWOOD, Jan. 17.—H. O. Rollins, W. B. Hoffer, B. C. Hoffer, B. C. Dunn, T. R. Lyfold and Henry Berry, all connected and prominent young business men of Grenada, started out the first of the week on a hunting and fishing expedition in canoes down the Yalabusha River to this city, and on their way down last Saturday. Rollins and Hoffer concluded to leave the rest of the crowd and go out in the overflow, and were to meet the party some fifty miles down the river. The others reached the meeting place in the afternoon, and after waiting until Sunday morning, and their friends not returning, commenced exploring the country, which was very difficult, owing to everything being overflowed. After searching in vain until Tuesday evening they proceeded to this city and telegraphed to Grenada that a relief party be sent out at once. Mr. Rollins is a young married man and a printer by trade.”

The river bottoms of the Mississippi and its tributaries all through this section are good grounds for deer, bear and turkeys, and one understanding the country methods of hunting could have good sport at this big game. Quail and other small game seem abundant. The manager of hotel at Holly Springs told me they had bought over 4,000 quail since Oct. 1, this season.

Mose, the porter on our car, is a great character. He is an ex-prize fighter, was once head bouncer at Stewart’s Twenty-second street place, in New York, has been assistant steward, and about everything else on the lakes and on Eastern boats, and also cook on many special-car hunting excursions. He has odd ideas about bear meat. “Hit so strong,” says he, “‘ut ef yo cook bah meat, ‘thout fust hangin’ it up fer a monf or so, moh’n er thousand little animals, cats ‘n painters ‘n things, sholly gwir. Come roun’ yore camp whah you cookin’! Bah meat is pow’ful sleepy stuff, too, leastways fresh bah meat. Ef pahy gemmen gwine eat fresh bah meat, jes’ afiah it done been kilt, they all sholly gwine fall ersleep, t’reckly afiah dinner, same like as ef they all colormored.”

I can’t vouch for the accuracy of Mose’s statement, as it has been some time since I have eaten fresh bear; but judging from Mose’s other stories, I would take his bear with a little salt. For instance, Mose describes a steamboat disaster which a few years ago took place at the foot of Randolph street, in Chicago. “They was more’n four hundred folks kilt,” says he, “bless yo’ habt. Yes, sah, they was men, ‘n’ legs, ‘n’ jawbones, ‘n’ things hangin’ up on the telgraf wire fer five blocks, any way yo’ could look. Yes, sah, it ceht’n’y was a awful time.” Evidently he means the Tioga disaster, in which he was really caught, but his account was far more vivid than that of any of the reporters who did the story in their faint, fact-fall way. Mose would make a good reporter, if no such a thing as a blue pencil or a hereafter were known.

Not Responsible.

The bill of fare of a certain wayside restaurant on our line has the following legend in printed and written characters: “Not responsible for hats, coats, umbrellas, apple dumplings, etc.” The last part is written in, but ought to stand as a wise warning. I can see how the soda biscuit and the apple dumpling of the Southern hotel may constitute a great natural game protection. You have to surmount the biscuit before you get at the quail. But maybe it isn’t so all the way South. And may be I am not yet South.

New Orleans, La., Jan. 19.—I believe I am South now. There is no mistaking it. The cypress swamps of Maurepas and Pontchartrain leave no doubt of it. There is no snow here, and though the people are complaining of cold, I feel like unbuttoning my vest and sporting a lawn tie.

There is a barber at the St. Charles Hotel who has shaved me in a way I never dreamed possible. No Chicago barber can shave like this. It is not pain, but luxury. Indeed, I don’t know but it would be about as good a way as any to pass a vacation, just to stay right here and be shaved every morning. I will spend the day thinking it over. If I conclude not to stay here I may go over to Galveston (it is 300 or 400 miles, but it doesn’t seem far) and get mixed up with some people who are shooting canvasback over there. Then I may come back to Opelousas and have a quail hunt, if the chief’s appetite improves so he can come on down and meet me there. I want to go to Opelousas because Opelousas is such a pretty name. I don’t see where you could find any better place than Opelousas for a vacation. It sounds like pearls and honey, or spring and Arcadie, or maybe ham and eggs.

E. HOUGH.

Effect of Crude Oil.

CINCINNATI, O., Jan. 25.—Editor Forest and Stream: St. Mary’s Reservoir if fast becoming a ducking resort of the past. The Standard Oil Company’s derricks help to scare the fowl away, while the crude oil does its deadly work with the cripples. The Standard came through that district a few years ago, placing derricks all along the shores of our then famous ducking waters, and not being satisfied with that, even stuck them up in the water, which allows a great quantity of oil to escape on the water.

I have spent fifteen seasons in a shanty-boat on this reservoir (which I believe covers 17,000 acres), consequently I keep pretty well posted as to the game in and around that vicinity. One morning while strolling along the shore for about a mile I found a great many dead ducks and was at a loss to account for their death, knowing that at least half of the cripples take wing the same season. I soon discovered it. Having walked up pretty close to a cripple it dived, but came belly up, and, after struggling for some moments, was unable to upright and was drowned. Upon examination I found the feathers to be saturated with this foreign agency, crude oil, and some had accumulated in large lumps on it during the time the cripple was unable to take wing, consequently it could not control itself upon the water.

The oil spoils the flavor of the fish, but does not affect it otherwise.

Geese rarely, if ever, stop on the reservoir any more.

F. B. MAGILL.

Florida Quail.

MELROSE, Fla.—Quail are not so plentiful here as last year, but by going five or six miles from town a couple of good guns can get a fair bag.

H. W. H.

EIDER SHOOTING ON THE MAINE COAST

BOWERY BEACH, Cape Elizabeth, Me., Jan. 16.—The continuous cold weather of the past month has caused the shooting of sea fowl to be better than for several years. Our winter shooting is almost entirely at eiders and surf duck and some very good bags are being made of the former in this vicinity. On Jan. 9 a party of six gunners of this town secured seventy at Shooting Rock, nearly all eiders, or "sea ducks or drakes," as the local gunners call them.

It is grand sport, for they are large, handsome birds, of great vitality, requiring good holding and hard hitting to stop them.

As a table bird, if well cooked, they are good eating, but few cooks know how to prepare them, so they are rarely seen in our markets, which, perhaps, accounts for their being so plenty, although they are hard to get at ordinarily, as they feed most of the time on shoal rocks miles from the land, and only when they come to the gunning rocks can many be bagged. They are shot over decoys, which they take well in places where they have fed for a few days.

I have shot a good many eiders first and last and always enjoy a morning among them, even though the thermometer ranges below zero, as is often the case. There are only two rocks in this vicinity suitable to shoot from—Watt's Ledge, off Richmond Island, and Shooting Rock, off Prout's Neck. Watt's Ledge is covered at high tide, so the tide must "serve" and the sea be smooth to shoot from it. Half ebb tide at daylight is the proper time, as, if the sea is smooth, one can stay on the rock until noon.

Sometimes shooters spend most of a night on the rock (and in the boat) in order to get it away from others. As a string of decoys holds the rock the first thing on arriving is to drop a few decoys, then land on the rock and wait for daylight, and waiting for daylight is slow, cold business.

To pass the time and keep warm, run, play tag, build stone wall, or anything to "kill time." At the first sign of dawn the dory is shoved off, the rest of the decoys set and the ice pounded off those which have been out; then ashore and hide the dory behind the rock, the guns loaded with 8s and all are ready for business.

Generally, on a cold morning, just before sunrise the first birds come in and by 9 o'clock the shooting is ended, except for a straggling flock or so, as they invariably go off to the outer shoals to feed when shot at from the rocks.

They are safe there, as there are about four fathoms of water on the top of those shoals and they will not decoy from a boat much. They never go into bays that are landlocked, differing in this respect from all other sea ducks, except, perhaps, the harlequin duck (called "lords and ladies" by the old-time gunners), which are very rare nowadays; in fact, a party from Peak's Island shot five on Green Island recently and had to hunt up the oldest gunner to find a name for them.

I have shot six or eight harlequins during the past twenty years, but have never secured one in plumage. King eiders, although rare, are more plenty here. In dressing a great many eiders and surf ducks I have never found a fish of any kind in the crops, although they are called fish-eaters. Mussels seem to be their principal food and as all shoals are covered with small mussels they do not lack for food. W. S. J.

PENNSYLVANIA SEASONS.

WASHINGTON, Pa., Jan. 25.—*Editor Forest and Stream:* At a meeting of the members of the Pennsylvania State Sportsmen's Association and others at Lancaster recently, it was agreed, as reported, to endeavor to secure legislation making the open season on small game, with exception of quail, from Oct. 15 to Dec. 15, and on quail from Nov. 1 to Dec. 15.

Following is a copy of a letter I have mailed to Mr. C. E. H. Brelsford, Harrisburg, Pa., president of the State Association, on the subject, and I desire to call the attention of the sportsmen of Pennsylvania to the matters therein contained, and ask for an expression of opinion thereon. If they agree with us in the belief that the open season should be the same on the game mentioned, we request them to use their influence to get the committees having the matter in charge to adopt that proposition, and then let them make it between such dates as the burden of evidence seems to favor. Following is the letter:

MR. C. E. H. BRELSFORD, President Pennsylvania State Sportsmen's Association, Harrisburg, Pa.—Dear Sir: We respectfully offer the following propositions for your consideration in connection with your efforts to secure the enactment of new game laws.

That the principal small game in Pennsylvania consists of squirrels, rabbits, ruffed grouse or pheasants and quail or partridges, affording pleasure to shooters throughout the State generally, and woodcock affording sport to a few in some sections of the State.

That all of the foregoing need protection, and that in view of the scarcity of all in the greater portion of the State, only a comparatively short open season should be allowed on all.

That an open season from Nov. 1 to Dec. 15 on squirrels, rabbits, grouse and quail would afford reasonable sport to all who delight in the pursuit of the same, and with such an open season such game should increase and multiply if the laws are properly enforced during the close season.

That woodcock are scarce in this State during the latter part of October, so that making the open season on the other small game commence Oct. 15 to accommodate the woodcock shooters is a mistake; and that to make an open season on woodcock earlier than on the other small game would endanger such other game, so that it will be better to sacrifice the interest of the lesser sport to the advantage of the greater and make the open season on woodcock commence on Oct. 1 also. This, of course, will be practically total protection on woodcock, but it is made necessary in order to give the other game needed protection, at least for some years.

That quail afford the greatest sport to the greatest number of sportsmen of any small game common to the State; that the true sportsman—the man who observes the game laws from principle, and who is ever ready to aid by money or otherwise in the propagation and protection of game, derives his greatest pleasure afield from the pursuit of these birds, and that making the open season on quail

commence fifteen days later than on rabbits, etc., is unfair to him, for the reason that he must remain at home while the "great majority" of "hunters" are turned loose to kill anything they can find. For, much as it may be regretted, we all know that the "woods are full" of such, who, from the first day of the open season on any game, go forth to seek and kill all they can find, without regard to game laws.

That an open season commencing on Oct. 15 is perhaps late enough for squirrels and woodcock and early for rabbits and quail; but that the interest of all demands that the open season on all commence and end at the same time, be that Oct. 15 or Nov. 1.

That game laws are one thing and their enforcement another. When not enforced they are of advantage to those who disregard them, and serve only to punish the sportsmen who obey them. So that such legislative provision as will surely secure the enforcement of laws when made is of paramount importance.

The foregoing propositions come from a quartette of sportsmen who are law-abiding and, so far as possible, law-enforcing sportsmen. We congratulate you upon the many good things proposed at your meeting at Lancaster, and make only such criticism as you will find herein indicated, and we ask for such your careful consideration. On the game herein mentioned we are for a uniform open season, whether it be from Oct. 15 to Dec. 15, or whether it commences later. Our wish is that such legislation may be had as will secure the greatest good to the greatest number. Very respectfully yours,

FIREFLY.

ALBANY GAME AND FISH BILLS.

[Special Correspondence Forest and Stream.]

ALBANY, Jan. 31.—The following bills have been submitted:

Senator Floyd-Jones and Assemblyman Higbie introduced an amendment to the charter of the South Side Sportsmen's Club, of Long Island, so that it may hold property to the amount of \$500,000.

Assemblyman Hennessy has a bill amending the game code so as to extend the close season for deer from Aug. 15 to Sept. 1. The season for possession or sale of venison is extended to the same date and possession of the same is further allowed between Sept. 1 and Nov. 15. A bounty of \$10 is allowed for each fox killed. The close season for trout is extended from April 15 to May 1.

Assemblyman Stanton proposes a new section, No. 56, reading thus: "Skunks, minks and coons shall not be hunted, trapped or killed for the purpose of obtaining the skins therefrom to be sold or offered for sale between March 1 and Nov. 1."

Assemblyman Porter's bill allows dogs without owners or unmuzzled to be killed by the owner of premises over which they are caught roaming.

Assemblyman Brown's bill amends Section 73 by adding Otsego to the counties in which quail must not be killed or possessed for five years.

Another bill by the same member amends Section 141 by adding Otsego to the counties in which bullheads, etc., may be caught through the ice by hook and line, and it allows fishing through the ice with tip-ups in that county.

Senator Floyd-Jones's bill amends Section 132 so as to rearrange certain boundaries in Jefferson county that are exempted from the prohibition except by angling.

Assemblyman Lounsbury's bill amends Section 141 so as to add Ulster to the counties in which bullheads, etc., may be caught through the ice.

ALBANY, Jan. 30.—A bill has been introduced by Assemblyman Hilton which legislates out of office the present forestry commission and provides for the appointment of five new forest commissioners for the term of five years. The commission shall complete the location of the lands within the Adirondack Park in five years. The bill also gives the forest commission authority to make contracts with owners of private preserves within the park limits, whereby the State will be able to secure these preserves forever as a part of the Adirondack Park. At the expiration of the five years for which it is to be appointed the commission shall cease to exist and its duties shall be vested in the commissioner of agriculture. It is expected that by sales of matured timber without injury to the forest and the revenue from camp leases the park will in a few years be self-sustaining and ultimately be a source of revenue to the State.

Assemblyman Kinsella has introduced a very long bill for the protection of game in Orange county.

Assemblyman Townsend has a bill relating to fishing in Jamaica Bay. It repeals the clause in the present law which forbids taking striped bass, sea bass or black fish under 6in.

Colorado Game and Vermin.

BERTHOUD, Col., Jan. 24.—Wild geese were never so plenty here as they have been this past fall. Some fine bags have been made in the wheatfields near my place. A Boulder party killed fifteen one morning. Ducks were also quite plenty. I recently returned from my sheep ranch on the Bijou, in Morgan county, Colo., where I spent some three weeks; there are many antelope in the sandhills there, but they are cute fellows and hard to get a good shot at. My son Frank killed one fine fat buck in November. But for black-tail jack rabbits, that country "takes the cake." I do believe that a good shot could kill a wagonload in two or three days. When I left, the sheep herder had about two dozen hanging up at the end of the house and we ate all we wanted; he killed them while herding the sheep. In warm weather rattlesnakes are numerous; we killed from one to half a dozen every day. There are many coyotes and gray wolves. My 11-year-old son was herding 200 Southdown ewes last November, when six big gray fellows came up and tried to get a sheep, but he had the pluck to show fight, and with his club and dog he kept them off until near enough the ranch for Frank to see him. Frank came out with the Winchester, but only succeeded in wounding one. The foreman of the D. T. Cattle Co., Warren House, roped a big fellow last fall; he chased it on horseback, threw his rope over its head while on the full run, turned his horse and dragged it to death.

A number of hunting parties have went from here to the mountains this winter, but only a few have brought home any deer. Griff Smith killed three in Estes Park. A. A. KNOTT.

A REMINISCENCE OF "NESSMUK."

CAPT. L. A. BEARDSLEE, U. S. Navy, our long-time contributor "Piseco," sending us his remittance for the memorial fund, thus recalls his first meeting with "Nessmuk":

It was at the Forge House, at foot of the Fulton Chain, in the Adirondacks. As I dismounted from the woods nag—that had brought me to the door—I did not hurry in, although I was hungry and dinner was ready, for on the stoop lay the very prettiest little boat I ever saw. I will not describe her, for who of you all would fail to recognize at sight the canoe Sairy Gamp. While I was inspecting her a little grizzly old fellow came up and kindly answered my questions about her. We introduced ourselves, and when "Nessmuk" and "Piseco" were the names announced there was an exhibition of fraternizing that astonished the natives.

That afternoon he took me with him for a spin up the lake; and I was glad for once in my life that I was somewhat bald-headed, for it reduced my anxiety about capsize. I knew that it made no difference, so far as I was concerned or the stability of the boat, whether my hair was parted in the middle or not.

In the evening he came to my room, and although for a few moments he occupied the chair I offered him he very soon, as we engaged ourselves in the pleasing amusement of comparing and overhauling gear, slid off to the floor and spent the rest of the evening sitting Jap-fashion on his heels.

I had a fancy that I was tolerably well fitted out, that is, I had no more traps ("duffle," he called them) than would cost a single carry; but he did not seem to think so. Nor did I, when he brought in his, no great task. He had a light rifle with just five bullets, and a small vial of powder.

"Why so little ammunition?" I asked.

"I've got enough," he answered, "at the most I shall not depend on my gun for my meat more than six weeks on this outing—very probably less. A venison a week will be more than I or any other man ought to kill; three will do me; and I may want a couple of extras for a bear."

"But," I said, "suppose you miss a shot?"

"When I miss I'll go without and live on crackers."

He had with him the famed little hatchet, the little sack, and a quart of fly poison—tar and oil (with which, he informed me, he bathed), and such a little tent.

That evening he took me to catch trout by moonlight, and arranged that we should camp out, for the moon was old and would be late; said he would take his tent (which I had not yet seen). When he set it up that night, well, I was very glad when he politely took to a bush outside and his blanket, leaving me what room there was, for I'm sure two of us never could have squeezed into it. We did not catch any trout, but it was a night to be remembered. The wood nymphs touched him with their charms and the store of prose and poetry with which he entertained me made of it a bit of dreamland.

Let us give him due honor.

PISECO.

GAME AND FISH PROTECTION NOTES.

New York Association.

THE FOREST AND STREAM's report of the proceedings of the annual convention of the New York State Association for the Protection of Fish and Game, in Syracuse, last March, has been republished in an eight-page pamphlet, and will be sent free to any address by Secretary John B. Sage, Buffalo. Clubs and associations should apply for sufficient numbers to put one into the hands of every member.

The Colorado Game Bill.

Our Denver correspondent "Teseby" sends us the following encouraging report: The Colorado Game and Fish Protective Association met in Denver, Jan. 24. The proposed game law, which was presented at the last meeting, was thoroughly discussed, and Senator Felker and Representative Roth kindly consented to look after the bill in the Assembly. It was decided to ask for an appropriation of \$12,200 for 1893 and \$13,000 for 1894 for the payment of game wardens, etc. It is probable that the bill will be passed without opposition, as representative men like Judge France, W. N. Byers, Dr. Bancroft, and many others are working hard for it. The bill fixes open seasons as follows: Pheasant, prairie chickens, mountain quail, ptarmigan, Sept. 1-Nov. 15; sage hens, Aug. 15-Nov. 15; quail, or partridge, Nov. 1-Dec. 1; ducks, geese, swans, Sept. 1-April 15; deer, elk and antelope, Aug. 1-Nov. 1 (only those with horns may be killed and for "reasonable necessity" only.) Bison or buffalo and mountain sheep protected at all times. Use of dogs for deer or elk forbidden. Sale of game—meat, hides, heads or horns—prohibited.

A Quebec Law Commission.

A deputation of sportsmen representing fish and game clubs interviewed Hon. E. J. Flynn, the Commissioner of Crown Lands, at Ottawa, last week, and presented their objection to the Augé bill. They urged that the present law be retained for this year at least. The Commissioner expressed his pleasure at meeting the members of the deputation, with whose views he was entirely in accord. He was willing to assume all responsibility for necessary legislation affecting the fish and game laws, and thought Mr. Augé's bill would not be pressed this session. He said he was going to move for the appointment of a special committee of the House to study the fish and game question, and hoped that sportsmen would appear before it and give it the benefit of their knowledge and advice. The deputation left thoroughly satisfied with the result of the interview.

An American at the Antipodes.

DARR RIVER DOWNS, Queensland, Australia, Nov. 21.—*Editor Forest and Stream:* Dear old FOREST AND STREAM to hand with its spicy pages of good things. How I long once more to get among the wary grouse and quail. There is nothing here but the kangaroo and emu, with the turkey bustard, all of which must be hunted either on horseback or in a trap or our American buckboard, which by the way is handy for that purpose. There is some very good duck shooting in various parts of Australia, but not where I am at present located. The turkey bustards (or plain turkeys, as they are called here) are very plentiful; and when nothing else is to be had afford fairly good sport, the only successful way to hunt them being as before stated with buckboard. J. B.

The Alton Gun Club.
ALTON, Ill., Jan. 12.—Many who remember the old Alton Gun Club will be pleased to learn of the reorganization of that merry band of local nimrods. Prof. Wm. McAdams has been chosen president of the club, with Dr. D. C. White treasurer and Mr. J. G. Melling, secretary. The new organization has a membership of twenty-seven. The club has for its motto "the protection of game and fish," and its efforts will be directed toward securing the proper regulation and observance of the game and fish laws. It is also the intention to take at least one grand camping and hunting trip per year and to hold a shooting tournament at the same appointed time. The Marais Temps Clair Gun Club, of St. Charles county, Mo., has purchased a quantity of wild rice seed to sow on the hunting grounds for the duck season.

Michigan Small Game.
HOLLAND, Mich., Jan. 28.—The game prospects for the next year are not bright for this locality. With snow 2 ft. deep on the level the quail do not stand much show. The shooting, except for rabbits, was poor the last season; the duck and snipe shooting a failure. Woodcock were more plentiful than for years. Quail not so abundant as expected, although the wet spring had a great deal to do with this. I lost my field spaniel in September, so did not get as many birds as I would otherwise. Am successfully training my Lord Graphic pointer pup by Hammond's method. Have made some fair bags over him, although he was but 6½ months old when the season opened. Could have shot more, but I paid more attention to training the dog than to making a large bag. A. G. B.

Cheat Mountain Association.
AT a meeting in Pittsburg Jan. 16, the following ticket was elected for 1893 by the Sportsman's Association of Cheat Mountain: President, W. M. Kennedy; Vice-Presidents, W. K. Shiras, D. McK. Lloyd, W. S. Edwards, Utlies Baird, Nathaniel Ewing; Secretary, Theophilus Sproull; Treasurer, D. P. Corwin; Naturalist and Surgeon, Dr. J. W. Riggs; Board of Directors (seven to elect), W. G. Brown, A. P. Tallman, C. C. Scaife, Dr. Jos. N. Dickson, S. B. Elkins, Geo. Shiras, III., H. P. Pears.

Spencer Stream Moose.
A MAINE correspondent tells us that Messrs. Henry Pierce, of Farmington, A. S. Douglass and Joe Stober, after a month (December) of hunting at the Spencer Stream, returned with three bull moose and five deer. One of the moose, shot by Mr. Pierce, was the largest ever known in that region.

Colt's Hammerless Shotgun,
which is advertised elsewhere in our columns, is one of the finest field or trap guns on the market to-day, and is unexcelled for strength, beauty of finish and shooting qualities. Great penetration and uniform pattern are insured in this gun by the manner of boring, the respective gauges being of minimum size and permitting no waste of the propelling gasses. Every shooter who is not already familiar with this gun should send his name on a postal and receive descriptive catalogue.—*Adv.*

Camp-Fire Flickerings.
"That Reminds Me."
FOUR MILE RUN, Va.—This place is not only a much frequented resort for Washington anglers, but boasts of two club houses, the clubs being composed of well known theatrical gentlemen. Not long since while woodcock were in season, Captain Kidd, a member of one of the clubs, had several guests with him, and at the solicitation of Tom the official of the place, Captain Kidd and his friends accompanied Tom and his noted dogs on a hunt for these wary birds. Two of the guests, Mac and Pete, were not very well acquainted with field lore; Mac, however, is never at a loss to interpret what he hears, even if he does go wrong some time. Tom and his dogs went into the marsh and stationed the gunners outside; Mac and Pete being together and some distance from the others. A bird was started and Tom cried out, Mark! when down to mother earth Mac went, at the same time urging his friend Pete to do likewise. Some one fired and killed the bird. In the meantime one of the party a "knowing one," moved nearer to Mac and Pete, and Tom again called, Mark! This time both Mac and Pete without any more ado went to grass and the bird came out of the marsh directly over them, and the aforesaid "knowing one" got the shot, at the same time asking Mac why he did not shoot. "Shoot?" Mac replies, "Shoot? Why, didn't you hallow Mark! and doesn't mark mean 'Get down, I am going to shoot?'" The "knowing one" at that came near having a spasm from laughter. The whole party were called together and the story as I have told it related. But when the company of which Mac and Pete and Captain Kidd are members, are now on the road, let some one poke his head in the car door and scream Mark! Then see what will happen. SPOTTY.

Ideal Handbook Number Four.
This handbook contains much new matter of interest to shooters, as well as important changes in the price list of implements. The matter in regard to express and split bullets is of particular interest. Sportsmen sending for this catalogue should specify "No. 4" and inclose stamps to the IDEAL MFG CO., New Haven, Conn.—*Adv.*

A Lost Letter.
"THE largest catfish ever captured on the Mississippi was caught about three years ago, two miles from Cairo, by a negro fisherman," said J. G. Harvey, of Murphysboro, Ill., at the Lindell yesterday. "He was a monster, sure enough, and more resembled a whale than a catfish. The negroes had been talking for a long time about having seen a big fish in the waters. They had shot at him repeatedly and had set all kinds of trot lines to catch him without success. Finally there came a rise in the river, and when the waters receded from the swamp back of the river the fish was grounded and captured. He weighed 32 lbs., and when cut open they found in his stomach two fishhooks and a line, a tennypenny nail, a gold ring, and the most curious thing of all, a registered letter addressed to the Hon. Walter Merrivewelder, of Richmond, Va., which had been lost for two weeks, and which had given the postal authorities abundant trouble. The question was and is, how did that letter ever find its way from the postal car to the fish's mouth?"—*St. Louis Republic.*

Sea and River Fishing.
The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

WITH A FLY-ROD.
A Sentiment to Go With a Gift.
I.
ACCEPT, oh friend, this magic wand,
And as it bends above the stream,
Waved in the sunshine by thy hand,
May thy contentment be supreme!
II.
I cannot wish thee less than this,
Nor give thee what invokes thee more
Delight in life—more earthly bliss—
By rippling lake or river shore.
III.
Then use it oft—'twill bring thee peace
And pleasureance in the wild-wood ways
And bounding health—from care release,
A "douryunge aegle" and length of days.
J. HARRINGTON KEENE.

INDIAN OCEAN SHARK SHOOTING.
PROBABLY there has been less written concerning sport on the Island of Mauritius than almost any other spot on the face of the globe; but that is not because there is no sport to be had there, for this little palm-shaded, fern-clad cluster of mountains that rises abruptly out of the almost always placid bosom of the southern Indian Ocean abounds with fish and game. The soft, balmy, tropical climate is so mild and even that when a species of bird or animal is once introduced here there is little to hinder it from multiplying. The island has two of the most beautiful and complete public gardens in the world, where every known kind of plant and tree thrives, oranges, lemons and mangoes grow almost in the shade of apple, peach and pear trees, huge cocoanut palms overshadow spice trees, and every variety of fern and vine thrive in this half wild profusion as is only to be found in the tropics, where the heat is continuous and rain plentiful. The lakes in these gardens are well stocked with German carp and golden ide from the Danube, but up to the time of my visit the introduction of Salmonidæ had not been attempted. While part of the island is almost one vast sugar plantation, and nearly all the valleys are cut up into small farms, it abounds with deer and feathered game, which is always to be found in the mountains, where the country is too broken and rough for agriculture.

Just at the close of the Zulu war in South Africa, a party of five, including the writer, took a small steamer from D'Urban, Natal, to Port Louis, the principal Mauritius seaport, and at the end of a short and uneventful voyage landed on the stone quay in front of the custom house, where, after the usual inspection of health certificates and baggage, we were permitted to proceed to the Hotel Maas and enjoy a good breakfast, cooked and served in such a manner that had it not been for the dusky Malabar coast servants, we would have thought ourselves in the South of France, for although Mauritius is an English crown colony, it is as French as France herself in everything but government.

We presented our letters of introduction from the Natal government during the second day of our visit, and suddenly found the doors of the whole island open to us, for it is one of the most hospitable places on earth. The steamship agents informed us that we would be obliged to wait two weeks for the French steamer to Bombay; and we settled down to enjoy a rest, pull ourselves together and recover from the effects of an African campaign. We took long walks, delightful rides and charming little picnic cruises in the peculiar lateen sail rigged boats of the Hindoo and Malay fishermen, and climbed the mountain back of the city to inspect the signal station, which is a genuine curiosity.

The house occupied by the signal service squad is built of stone and ironed down to the top of the cliff by huge rods of steel that pass over the roof and fasten into the solid rock on either side. Near this house is a large cave or cellar that is kept provisioned and supplied with water enough to last five men a week; this is a hurricane refuge, as Mauritius is in the center of the southern hurricane belt, and is sometimes, although not frequently, visited by storms that destroy whole villages and lay waste hundreds of plantations. The signal house that formerly occupied the peak on which the present one is built was swept away during a hurricane, and the occupants were blown off the face of the cliff into the ocean—it is supposed—as no trace of them was ever found. So severe are these storms that every house on the island is prepared for them by being provisioned and having a well dug in the cellar, as the battle of the elements frequently will last for five or six days. The windows are all guarded by solid heavy wooden shutters, and when the rapidly falling weather glass and the guns of the citadel give warning, all the members of the household shut themselves up to await the storm. The citadel is an old-fashioned stone fort built on a hill near the city. It is garrisoned by a company of English artillerymen, who, when they get the signal from the mountain-top, fire a 12-pound gun as a warning; if the storm is a certainty a second gun is fired, and if the indications are that it will be very severe a third shot booms out over the quaint old city, warning all shipmasters in the harbor to put to sea or lose their insurance, as the bay affords little shelter, and vessels are frequently blown on shore and battered to pieces on the rocks.

After we had inspected all this and were beginning to wish our steamer would arrive, the harbor-master came to us one evening with a proposition that threw us into a state of wild excitement, as the event suggested was nothing less than a shark hunt in the outer harbor. We hailed the sturdy old East Indian officer as our preserver, and unanimously accepted his invitation. All the next day was spent in getting rifles and ammunition. The American Consul had a 2,000yds. Winchester and plenty

of cartridges, while I had a couple of 73 model .44cal. Winchesters but no ammunition. We got some cartridges for these at the officers' quarters, however, and with a double-barreled express, the property of the major (the harbor-master) and two Martini-Henry falling-block model military rifles that would kick you over and kick at you after you were down, as they fired a .500 bore (English) long bottle cartridge, we were ready and went on board a small tug belonging to the harbor department, and steamed out to the lightship on the evening of the day following our invitation.

Our arrival was hailed with delight by the crew of the lightship, who placed the cabin at our disposal, and we turned in early. I say we (I believe the doctor spent some time that night teaching the major our national game), and was informed that he had a pupil so apt that what few rupees he had brought out with him went ashore with the major. We slept well, and were up in time to see old Sol get out of his bed in the Indian Ocean and lick the heavy dew off our decks. After a plate of fruit, some fine fish and fresh eggs, with a cup of fragrant coffee, we got out our battery and watched the movements of a clumsy lugger that the outgoing tide and the gentle morning breeze had brought down from the city with the very odoriferous carcass of a horse, which, the major explained, was the decoy we were to shoot over. The dead horse was hoisted overboard and anchored about eighty yards below the lightship, and the lugger stood about for home.

One of the sailors went aloft and kept a lookout from the lantern cage, while we ranged ourselves along the breast-high bulwarks, rifle in hand ready for the first flight. We had not waited long when the major said: "Now, boys, don't shoot the decoys," and the doctor observed something about its being his blind; this irrelevant conversation was interrupted by a "There is one!" from the lookout; and we saw a sword-bladed fin shooting toward our bait at a ten-knot speed, cutting a ripple on the smooth surface of the water, and leaving a wake that flashed in the morning sunlight. We knew the game was there, but how to hit it? In a moment we saw another fin, and then another, until there were fully a dozen in sight. The great fish first circled around the horse as if to make sure that he could not resist their attack, when we saw one turn in the water and a portion of his white belly show above the surface as his saw-like teeth tugged at a great chunk of horseflesh. Crack went the major's express, and a bright red circle where the shark sank testified to the accuracy of his aim. The other fish did not notice the shot but attacked the horse like a pack of ravenous wolves, while we shot at every spot of shark that showed above the water, until we had converted the turquoise blue of the southern sea into a sanguinary red. While the sharks paid no attention to the shooting, they seemed infuriated with the blood, and battled around the dead horse until the water was lashed almost into a foam. They soon became so numerous that it was almost impossible to get a shot at any particular one, and we stopped firing and watched the fighting, seething, bleeding mass. The justice of the title, "Tiger of the Deep," was apparent to all now, as no more ferocious and blood-thirsty creature inhabits either land or water than the shark of the South Seas. The little tugboat that had brought us down the harbor lay alongside the lightship, tugging at her lines, throbbing and panting as if anxious to participate in the fray. When the battle was at its height the major led us to the foredeck of the little steamer, when we cast off from the larger one and were soon among the fighting leviathans, who apparently took no heed of our arrival, but continued to battle as viciously as before. We steamed around and around the horse, shooting every fish that appeared; some of them would go down when hit, while others would continue the fight. It is doubtful if a single shot killed any one of them. The crew brought up some small harpoons and fastened to three large sharks, which were towed out of the battle and hauled away up to the town to be skinned. The fish seemed to have exhausted their fury after an hour's struggle, and we steamed back to the wharf after stopping a few moments to thank the officers of the lightship for our entertainment, and to leave what cigars and glassware we had with us for their consumption.

On the way up the harbor, shark stories were in order, and many were the wonderful tales we listened to. The major told us that the sharks were so plentiful in the outer harbor that many people were eaten by them every year, while dogs and cattle were often killed in the edges of the water. Bathing in the surf is never thought of in the vicinity of the island, but may be indulged in freely in the inner harbor, as the sharks never come up there. The captain of the tug was an old South Sea navigator and told many stories of adventures with sharks that were evidently true but most marvelous.

He had seen sharks caught from the deck of a sailing vessel with a hook and line and hoisted on the deck, disemboweled and thrown back into the water, when the fish, regardless of the gaping wound, would swim around the ship and take the bait on another hook. He had seen a school of sharks fight until one was seriously wounded, when all the others would set upon the injured one like a pack of wolves. He said a shark would seize anything bright, and that for that reason food cans thrown overboard in those waters seldom reached the bottom.

The major told us of an adventure on the coast of New South Wales. While enjoying a swim in a small bay near Sydney harbor he saw a great shark swimming slowly abreast of him not over one hundred feet away; he knew that should he pause for an instant that shark would dart at and seize him, and he kept his stroke until in shallow water, when a companion, seeing his pursuer, seized an oar, and by beating the water and shouting drove the fish away. Then we were told how the Malays fight sharks in the water by diving below and ripping them open with a keen knife as they come up under their foes.

When we reached the landing, we were so pleased with our experience that we thanked the major for his efforts to make our stay on the island a pleasant one, and insisted on his accompanying us on a visit to the tomb of Paul and Virginia and an *al fresco* luncheon in the Gardens of Curpepe.

Mr. Battelle's Notion of an Exacting Citizen.
He would be a very exacting and impracticable citizen who would not be charmed with the FOREST AND STREAM in its new suit and new head. It is plain, however, that the latter, to reverse the old maxim, is obviously a new head on old shoulders, since the rejuvenated paper has all the grace and attractiveness of its former "incarnation."
J. B. BATTELLE.

WEIGHTS AND SIZES OF FISH.

"Piseco" sends us a copy of a letter written by him from Lake Pleasant in the Adirondacks and published in the FOREST AND STREAM in 1876:

In your issue of June 1 the letter on "Weight of Fish by Measurement" attracted considerable attention, and several gentlemen present volunteered, or rather promised to comply with my request to weigh and measure, that we might prove or disprove the rule. In the following table, No. 1, which was caught by Mr. Luther, of Ballston Spa, trolling, excited no little comment, as with a tremendous head he shaded off like a tadpole, and instead of weighing, as everybody said he ought to, 25lbs., he could barely trim 16lbs. A big healed wound in his jaw showed that at some previous time he had been badly hooked, and stunted. Taking No. 10 as a standard, whose length was 10in. and weight 6oz., or any other you choose, for they were all weighed and measured carefully, any of your readers fond of mathematics can work out the "triplicate ratio of their homologous sides" to suit themselves. I'm not here to "do sums," but to get clear of them.

Dimensions and weight of an average of 600lbs. of lake and brook trout taken June 1 to 7, 1876, from Piseco Lake.

No.	Brook or Lake.	Dimensions.		Weight.		Caught by, and how.
		Length, inches.	Depth, inches.	Und's'd lbs. oz.	Dress'd lbs. oz.	
1	Laker..	37	8½	16	John J. Luther, spoon.
2	Laker..	32¾	6½	11 12	Mrs. John J. Luther, gang line bait.
3	Laker..	25¼	4½	5 04	4 10	Piseco, spoon.

Editor Forest and Stream:

It is desirable at times, when a scale is not at hand, to form a close estimate of the weight of a fish. This may be done by measurement and a short calculation.

Find the extreme length and girth of the fish, then multiply the length by the square of the girth and divide by a constant number, determined by previous experiment and the result will be the weight in ounces.

If we represent the weight by W, the length by L, the girth by G, and the constant by C, the rule may be expressed by the formula:

$$W = \frac{L \times G^2}{C}$$

To obtain the constant C for a given variety it is necessary to measure and weigh a number of fish and find the value of C for each by multiplying the length by the square of the girth and dividing by the weight. The average of these results will be the value of C.

For example, if by carefully weighing and measuring at least a half dozen trout of various sizes C has been determined at, say, 45, and a fish has been caught 12½in. in length and 6½in. in girth, then the weight in ounces equals 12½ multiplied by 6½ squared, divided by 45, or 11¼oz. Expressed mathematically:

$$W = \frac{L \times G^2}{C} = \frac{12\frac{1}{2} \times 6\frac{1}{2} \times 6\frac{1}{2}}{45} = 11\frac{1}{4}\text{oz.}$$

By making note of the length, girth, and weight of a number of specimens of various fishes the constant can be figured for each and recorded with the rule in the fly or tackle book, to be employed as occasion demands.

T. H. GRANT.

RED BANE, N. J.

THE SCHOHARIE CREEK SALMON.

AMSTERDAM, N. Y., Jan. 22.—*Editor Forest and Stream:* In regard to the salmon seen by Rev. Chas. G. Adams, of New York city, while fishing in the Schoharie Creek, near the village of Prattsville, Greene county, there is much doubt to my mind, first, as to its being a salmon. Is there not a chance of Mr. Adams being mistaken in the identity of the fish? Second, there are so many obstructions to such a fish passing from the Hudson to the Mohawk River, up over the Cohoes Falls, the Schenectady Dam. At the mouth of the Schoharie Creek is the State Dam. From here up the creek, at Mill Point and Wells-ville, are small dams. At Burtonville a large one, and at Esperance a still larger one, about 6½ft. high, with several between this point and Prattsville, how many and how large I do not know. No fishways are on the Schoharie Creek except the so-called one at Fort Hunter, over which salmon and other fish cannot pass. It was supposed that when the fishway was built at Fort Hunter pike would readily pass through it, and so up the creek, making good fishing. But such was not the case. Not a pike, I believe, has been caught above the dam since the fishway was built, showing very plainly that it is not a success by any means.

Judge Yates does not believe it necessary for fish to try the Cohoes Falls and the dam at Schenectady when they can readily come up the Erie Canal. It is a well-known fact that many small black bass and perch come down the canal from the lakes; but I have never heard the theory advanced before that they come up as well. It has always been said that our black bass came to the Mohawk River and Schoharie Creek through the canal from the western lakes. I can easily see that fish may be locked through the canal, and if Mr. Adams was correct in identifying his fish I would sooner believe this theory than the one of swimming the obstructions in the Mohawk and Schoharie.

However, I believe Mr. Adams is mistaken in his fish being a salmon.

ROBT. M. HARTLEY.

ON THE NORTH SHORE.—IV.

The Trip Up.—IV.

[Continued from page 76.]

BEING so exceedingly eager the next morning to try the main shore, Ned rose unusually early and routed out the boatmen for an immediate breakfast. The boys, always willing to accommodate, hustled around quite lively and soon had the meal ready. The dawn had opened with a sultry sun, soon obscured with leaden clouds, which in a short time discharged some tinkling drops of rain, and then a suggestion of postponement for the present came from the discouraged boatmen. The proposition of adjournment was not entertained at all, but an immediate start for the main shore ordered. Our hearts were set on trout, and rain or shine would indulge in it. We all started, however, in good humor, and before reaching the grounds there were indications of a general clear-up. Ned being quite familiar with the shore suggested a commencement from a jutting point immediately opposite the islands, as the waters here and for a mile above, as stated, abound in the dandies with the "crimson stars." Arriving at the spot indicated, I made the first cast, which at once received a savage response, and which, I am sorry to relate, was cleverly missed. Immediately lifting the flies from the surface with a dogged determination to capture that snapping trout if he again sought the lakes, I sent them within a fraction of the same spot, and once more aroused the hungry fish, who this time was as dogged as I was to catch something, and am pleased to state did, but not the tid-bit he expected, which he fully realized when he went frantically racing around with the cruel steel embedded in his jaw. I had delightful play of a few minutes with the struggling trout, which resorted to every trick he was master of to rid himself of that feathery deceit, a Henshall. Displaying a truce in turning his spangled sides to the surface after a gallant battle, I carefully drew him to the boat, where Peter adroitly netted him. He was my first large trophy of the season, a three-pounder, and as symmetrical a beauty as ever poised or sprang for the dancing fly.

Ned soon aroused one, which he secured at the second rise and killed like a professional. It was a fraction smaller than mine, but handsomer in its rainbow hues. This being all we could capture here, we moved along the rugged shore under the purplish shadows of gray clouds, sending our flies into every available place we thought harbored one or more of the handsomely mottled beauties that so oft dart at the illusive fly, "as swift as the shaft from the banded bow." Reaching a granite pile of perpendicular shore line, where the cold water was trickling down its hoary face, we captured two more—one apiece—that made the reels send forth that delicious music which steepens the soul of the ardent angler in unalloyed bliss. Ned said the Wagnerian witchery of weird school of classical melody would bear no favorable comparison at all with the delightful rhythm a wild and stricken trout can interpret from a revolving reel. It is like unrolling the hidden soul of harmony. Having reached the limit of the rocks which ran into a sandy beach, and where a ribbon-like stream flows over the white sands into the great icy lake, we commenced the return fishing with as much ardor as ever. We went some distance ere we awoke another savage warrior of the mottled armor, who sprang so fiercely and greedily as to overshoot the tempting fly. It was proffered him a second time by Ned with such dainty allurements that he started this time with a true aim to rend and devour, but the manipulator of that little piece of feathery conceit astonished him to an extent that caused him to throw his entire strength into an effort to let go of that which but a moment ago he so selfishly coveted. He nevertheless held fast to the brilliant colored feast of the feathers until he was repenting in the bottom of the boat his hasty and greedy tactics. Satisfied for the present with the trout we had caught, which ran from 2 to 3lbs., we concluded to return to camp for dinner, it being near that hour, and try it again toward evening. Having somewhat worked the feather edge of our ardor off, we could now take the sport in a considerate and conservative manner, being satisfied that we were "where the trout hide," and could capture very readily more than could well be disposed of.

After dinner the sun shone out brilliantly and the opal clouds gathered around the horizon, forming a lovely framing to the dome of blue which magnificently arched a picture of rippling water, receding hills and forest primeval. Waiting for the waning hours with long shadows ere we took to boat and trout we indulged in the usual game of cards and then went deep down in our books, now revealing the development of character with a tense dramatic vividness, presenting at the same time pictures of emotional interest and matchless beauty. Ned was so really absorbed in his "Sandal Wood Trader" he had been perusing after completing "Ben Hur" that he was loath to put it down when the hour came for sport. Seeing me start for the boat with my rod when turning a page, his enthusiasm for the gentle art at once reasserted itself, and then the book, with its fascinating pages of life in the Pacific, was immediately consigned to the tent and oblivion, and snatching his rod, which had been carefully placed against a small tree that overshadowed our tent, he quickly joined me.

This time we took a different route, going along a shore that ran at right angles with the main coast into a little bay that seemed to sleep and dream, so quietly did it rest in fancied security behind a high, ragged bluff that silently and solemnly stood as a sentinel o'er its unruffled waters. It was suggestive of the place—

"Where the boy shaped his arrows and where the shy maid Wove her many-hued baskets and bright wampum braid."

On my way over I changed my stretcher, substituting a gray-hackle for the silver-doctor, while Ned followed suit with a fly of his own creation, the component parts being deep red and snowy white. It was, however, nameless, and rather than see it go courting the radiant waters so luminously arrayed and so poverty-stricken in title I suggested to apply a blue feather and call it the "red, white and blue." The fancy tickled him so amazingly he said he would modify it one-third and call it the "red and white," and so it sailed on its piratical mission under that distinctive name.

"Here we go," said Ned, on reaching the grounds, and away went the red and white to its christening with a royal-coachman for its companion. It struck the water lightly, danced awhile, and then was quickly lifted from the flashing surface, and again it went curving through

air to once more kiss and dance over the sparkling wave-lets. This sportive exercise, with a heart of deep expectancy, he kept up till he finally struck a goodly trout, which made his eyes sparkle, his nerves tingle with excitement, and his reel sweetly sing. It was a gallant battle between the twain, wherein the crafty skill of the rodster proudly triumphed over the dashing vigor and subtle strategy of the spangled rover of the reef. In the meantime my rod had been quite busy, and but a moment after Ned had slain his shapely trout I also succeeded in capturing one that overmatched his by half a pound, it weighing 2½lbs. Two more were caught at the next two successive catches, and that satisfying our aspirations for the day we returned to camp, with the lake in a golden sparkle, and the sinking sun that spread a mantle of royal purple and blushing red o'er the distant hills.

We are now having a surfeit of trout in camp and the question arises as to their cure. Emery suggests smoking them, and as we acquiesced he soon had them all cleaned and placed on some crotches five feet or thereabouts above the fire. The camp began to look like the abode of native Alaskans, which, in season, is liberally ornamented with drying fish. This was simply an introductory, for it was not long before the racks assumed a commercial appearance, so numerous were the mottled warriors dangling over clouds of smoke.

We were very tired that evening when we sought our downy beds so fragrant with balsam, and it was not long, I assure you, before we wandered into the El Dorado of golden dreams.

Ned, when he stepped from the tent in the early morn, reported a southeast wind and gentle rain, which confined us almost exclusively within the flapping canvas. This gave us considerable time for reading, as well as cards, they alternating the entire morning. Ned saw the concluding page of his "Sandal Wood Trader" during this imprisonment and then took to "Lucie's Mistake," while I waded into "Den Hur" with avidity. It clearing up some before noon we took our rods, and, calling to the boys, started for the main shore in hopes of decoying a trout or two. Succeeding to the extent of a couple we returned to camp quite satisfied with the sportive change.

In the afternoon the heavy southeast wind and a dense fog prevented us from pursuing the ever-beautiful fish, and so we remained on the island and explored its plant life. We discovered vari-colored masses of the most delicate texture, a very few ferns, cranberries which had perished from the great drought, a few juniper berries and some bushes of strawberries with the diminutive fruit as dry as dust. As to the geological formation of the island it was entirely composed of granite and trap-rock, much of which presented an exceedingly smooth surface, with here and there a few depressions formed into miniature lakes. In the muddy margin of one we saw a large bullfrog, speckled and spotted, which was croaking his doleful music as if attempting the basso notes of the weird Wagner. Ned, on spying him, said, "What a bait for a monster trout," and at once laid plans for his capture, but the dweller of that muddy marge had his larboard eye on the stealthy approach of his would-be capturer, and as he came within grasping distance winked his watchful eye as much as to say, "See you later," and then quickly sank beneath the miry muck.

On returning to camp Ned commenced overhauling his tackle with a view to repairs, while I took my rod and thrashed around the shores without as much as receiving a single rise. We concluded that evening to break camp in the morning and go to "Jackson's Cove," provided the weather and the report of the Signal Service officer were all o.k.

The dawn came in gorgeous splendor, with the golden arrows of Aurora painting the quivering surface of the lake in one broad blaze of radiant glow.

"It is right precious to behold
The first long surf of climbing light
Flood all the thirsty east with red."

Being eager for the change that morning, we all lent a willing hand after breakfast and soon had the boat ready for the trip. A light breeze kisses the lake as our bark emerges from the narrow channel into the broadened waters that are lost in light; and as the sail is flung to the zephyrs we slide along, only sensible of the balmy, caressing atmosphere and of the gentle swelling of the waves. It was delicious sailing by the picturesque shore in the pomp of purple and gold, the woods in "banners bright with every martial hue."

Ned was melodiously inspired with the dreamy waves of beauty, and though he did not exactly give the lifting airs the glorious scenes demanded, for such choruses as "Whack, for all, for addy i day, and with my rorum, kinkarum, kinkoren, whack, fol de riddle, diddle di, for addy i day," and so on, were sent in harmony with pearly couples, silver lakes, crimson woods and zephyr breezes, but for a that laughter long and loud went echoing o'er the waters to their response.

Singing, talking and dreaming in the bright sunshine, with a balsamic incense in the gentle breeze, becoming somewhat monotonous, Ned suggested for a change, as we had reached Aquawa Harbor—the islands—that the troll be put over as a decoy for some foolish fish. Acting on the advice, I dropped the polished silver into the rippling lake and then waited for a scaly denizen of the deep to toy with the rapidly revolving spoon. On reaching waters where the Mackinac trout are usually found, I had a most terrific yank at the deceit, and then a floundering fish was endeavoring to rid himself of the cruel steel; but as I kept the Mackinac—which I supposed it to be—so swiftly coming to the boat with my hand-over-hand work he found it impossible to get either the desired curve in his tail or the bend at his shoulders wherewith to attempt a shake out of the fatal spoon. I allowed him the acrobatic features when he was safely in the boat and where he got in a twinkle or two. Releasing the capering captive, I again threw the deceptive troll overboard in hopes of soon securing a companion for the initial prize.

Emery not having brought his profound prophecies to our notice for some days, now vouchsafed one which was to give him some toil, and that was an expiring breeze. It came, as he foretold, in a very brief time, and then the antediluvian canvas of patchwork was taken down and the ashen blades substituted. The lake soon became motionless and glittered like a plate of polished steel, while the sun shone from a violet sky with a warmth that made us lay aside our heavy coats. In the distance the hills rose one above another and spread out as luminous and as soft as clouds, while the great granite walls of the islands,

with their gray, weather-beaten faces, cast their shadows o'er the trackway of shimmering gold. On we go, with the swarthy boatmen dripping beads of perspiration at every dip of the oars—a track of silver in our wake and a line of sea gulls in the distance soaring along the lapping waters of the shore in hopes of a feast.

Passing the storm-beaten islands we came to a ragged piece of shore land where Ned said he had never failed to catch a "Mackinac." Hardly had the remark died upon the weathery waters before I felt the same vicious snap and struggle as before, and as quick as thought the line which I had held firmly in hand was set in motion at a 2:40 pace, and when the propitious moment came to elevate that frantic fish from his element, I lifted him with a true aim, but a force that sent him on to Peter's head, which somewhat confused his ideas, and led him to believe that it was either of dire intent or of simple awkwardness. I plastered his bruised head with an ample apology that was decidedly curative. Being satisfied with the slaughter of the scaly innocents, I discontinued the troll, and then in luxurious ease watched the slow moving masses of clouds flash out those heavenly dyes which have never been transferred to the artist's canvas, but which have been better idealized with the poet's pencil.

About noon we arrived at "Jackson's Cove," our favorite place last summer, with the boatmen wearied by the long and steady pull at the oars. After a breathing spell they went to work and pitched the tents, carefully stored the provisions, and then prepared dinner. That appetizing meal being duly dispatched we spent an hour of dreamy idleness in the shade, and then I took an icy bath on the sandy beach which ran from the shore to the island, and with an entire change of underwear, etc., felt as if I had partaken of the coveted water which Ponce de Leon ambitiously sought, but never found.

The deep water in front of the declivitous rock where I had caught several large trout last year, was a great temptation just then with the happy and healthy glow that was upon me, so taking my rod I crossed over to the place, but a few steps, and sent my flies in search of some peerless prince of the spotted robe. He was deep down under shelving rocks that ran from the gigantic boulder, and when he saw the flies dancing along the surface as if endowed with life, and doubtless thinking it a rare delicacy that would just then suit his fastidious appetite, darted out and sprang upon one with a savagery that made the water fairly boil and rapidly race into curving ripples. Alas, for the overweening confidence of that epicurean trout, he tasted not of an aesthetic morsel, but of a cold piece of barbed steel that filled him with a thousand terrors. With his eyes in anger fierce, he raced with the speed of a gazelle for the open water, and then in many desperate dashes and frantic maneuvers, including a somersault or two, endeavored to escape from the patient angler on the rock. He finally surrendered, but not before his vigor had entirely departed, for these lordly warriors of the reef are as gallant in battle as they are proud of their shapely forms and their radiant adornments. I returned with my trophy to the camp, and was astonished to ascertain that he only weighed 3lbs., for he looked near a pound heavier, and also battled as if he were.

Ned, who was enjoying the fragrance of a choice *regalia* and "Lucie's Mistake" at one and the same time, with a bottle of fly-repellant at his side—the *brulots* and mosquitoes being in abundance—challenged me for a rubber of crib. I of course accepted, and, as my mascot went back on me, lost.

Being determined to win something, if nothing more than a quivering fin, I again took my rod and net and stepped over to the spot where I had slain the three-pounder, and commenced the pleasurable work of enticement. On my third cast I made a double catch, and the twain being more than I could well net on the rounded rock, halloed for Peter, who at once came racing over the uneven granite to my assistance. They were not more than 1½lbs. each in weight, and were landed by the boatmen in a very handsome manner. This satisfying my angling propensities for the day, I again sought the shade, and deeply enjoyed the weird shadows so sharply limned in the bright sunshine, the rippling melody of the curving waves as they beat against the massive bulwarks, and the gentle zephyrs—

"Stealing through the forests
Among the leaves that palpitate forever."

After supper I insisted on Ned taking his rod and casting in the lucky waters which had afforded me such agreeable sport. Assenting, he took his rod while I accompanied him with the net as his man Friday. It was not long before he caught two very nice trout, which ran over 2lbs. each, and then discontinued the pastime, satisfied that the immediate waters would yield us more than we could well care for. Returning to camp, we applied a liberal dose of the repellent to our faces and hands, and then taking our chairs to the beach indulged in talk of the trip for the morrow.

The evening prognostications for favorable weather were not very flattering, as the clouds were deeply shaded and flying very low, indications assuredly of rain at an early period. With a smile curling around his expressive face, Ned said that we had better send for the Aerial Emery and confer with him as to the "probabilities" for the next twenty-four hours. By way of pleasantry, we called the prophet; who was a few steps away, and consulted him. He stated, after a brief survey of the cloudy sky, that "it may rain, may blow; but wait a bit, then we see sure."

"That's what I call an exceedingly cloudy observation," said Ned with mirthful glee, as the weather oracle proudly bore himself to the quarters from whence he came as if he had settled some great State question.

"An observation with a reservation," I rejoined. Humor aside, Emery was an exceedingly faithful boatman, and did everything in his power to please us; but he would ring in the changes on the weather at all times, and was ever ready, when we went on a long trip, to seriously foreshadow the arising of a storm before we reached our destination. If it was warm and the lake smooth, it was a weather-breeder; if the scuds dotted the horizon, it was a signal for a blow; if a heavy swell came rolling along, it was the advance of a gale; if the clouds changed to a sly hue, rain; if a "mare's tail" showed itself, high wind; and so on to the end of a long list of indications which sailors pin their faith to. True, many of these signs realize, but with Emery they were always realizing. We, however, put very little faith in his predictions and acted accordingly.

That evening as we all sat around the camp-fire, Peter sang for us one of his French songs, but as his voice was

too mournful, as is the case with all the half-breeds, it did not throw us into spasms of delicious ecstasy. Ned, to obliterate the sad effects of Peter's vocalism, gave us one of the rollicking airs, which highly pleased the entire audience, and therefore he had to repeat with another of the same character. His voice is exceedingly melodious, but age is fast telling on it, as it has already lost much of its vocal strength, and some of its warmth and color. The concert ending, we sought our warm and comfortable beds, and were soon wrapt in refreshing sleep.

ALEX. STARBURCK.

BOSTON AND MAINE.

Pickeral Fishing.

THE recent remarkably cold weather, so long continued, has been too much for the pickeral fishermen in the vicinity of Boston, and they have generally staid at home. One or two cases are mentioned of parties on the Plymouth ponds, but they got cold fingers and very few fish. The trouble was that the lines would freeze solid in the holes faster than the fishermen could cut them out, if any number of lines were attempted. The Maine pickeral fishermen have also been doing but very little. Milder weather will set the boys going again, however, for the quantity of bait in store is unusually large, and it will all be used between this time and the first of April.

Sale of Cultivated Trout in Close Time.

MASSACHUSETTS trout fishermen, and in fact everybody who has an interest in trout in the Old Bay State, are interested in what the present Legislature may do in regard to the laws for trout protection. It is generally understood in the circle of fishermen that Mr. Gilbert, failing in getting his bill passed last winter to allow him to sell cultivated trout in close time, has by no manner of means given up his idea. A hearing is announced for Wednesday of this week, before the committee on Fisheries and Game at the State House, on the question of making the open season on trout in Massachusetts begin on the 15th of January. It is pretty well known that Mr. Gilbert himself is behind this measure with a good deal of force. It is also admitted by those bitterly opposed to taking away so big a slice from the protection of trout that a majority of the committee may be in favor of Mr. Gilbert and his measure and that a bill is likely to be reported. But it is devoutly hoped that a measure so decidedly bad may be smothered either in the House or the Senate; or failing there, that it will never receive the signature of the Governor. Governor Russell is himself so much of a sportsman as to fully appreciate the magnitude of harm in such a measure, and then he is a man of too much sound sense to permit almost the whole volume of protection to be removed from trout in his own State, simply to gratify one man's desire to sell trout in the winter time.

Such a measure would simply open up ice-fishing for trout from the middle of January till the ice was gone, and the few trout there are left in the streams and ponds in the State would soon be destroyed by the men and boys who cut holes in the ice and fish with live bait. Such fishing in Maine was some years ago terribly destructive of the trout supply in lakes and ponds where now there is good summer fishing with the fly; the little prevention to ice-fishing offered in that State having again restored the trout in part. Few men are better aware of this fact than Governor Russell. His name is—the Maine papers say—on a petition to the Legislature of that State, asking that all fishing, except with the fly, be prohibited by law on B. Pond, in Oxford county. He has been to that pond several times, in company with Messrs. John and Bayard Thayer, where one or both of these gentlemen have, within a year or two, built a beautiful camp. Now, it is within my recollection when ice-fishing had run the trout fishing in B. Pond down to a very low ebb. Early in the winter parties with an abundance of live bait would go and camp at the pond till they had caught enormous strings of the most beautiful trout in the world. This had its natural and only effect; trout fishing became even too poor there for the ice-fishermen. Then, later, the law against ice-fishing till the 1st of February was better enforced, and from that time till the Messrs. Thayer, with their friends, became acquainted with the pond—only three or four years ago—the trout had been gaining in size and numbers. Indeed, there is also every reason for believing that these gentlemen have not injured the trout supply of B. Pond. Under fly-fishing only it doubtless would continue to improve.

Maine Ice Fishing for Trout.

But the Maine resident fishermen are getting their lines ready, and many of the holes will be cut previous to the morning of the first day of February, when they can legally fish for trout in most of the ponds and lakes of the State. Some of the lakes and ponds, however, are protected from this ice-fishing by special legislative enactments. About the only virtue there is in this law is that it gives farmers and farmers' boys a chance to fish at a season, as they say, "When we can afford the time." Nature favors the trout to some extent in that the weather in February is not usually very favorable to fishing on the ice, and besides some of the more remote ponds are generally difficult of access by reason of the great body of snow on the ground. But if everybody in Maine could realize the actual wealth there is in her trout ponds and streams, they would at once conclude to let the trout alone in the winter season. Special legislation is, however, likely to do much in this direction the present winter. The Legislature is beset with numerous bills, and petitions for bills, asking and commanding that trout and landlocked salmon in numerous lakes and ponds, as well as streams, be protected during the winter season, and some of them be perpetually closed as trout nurseries for the larger waters below.

SPECIAL.

Col. Dickey's Plea was Nonsensical.

NEWBURGH, N. Y., Jan. 19.—At the Goshen Circuit Court term Dr. Willett Kidd, game protector of this district, has just won his suit against Henry C. Brunner to recover a penalty for illegal fishing. George Pan and James Howell, residing at Highland Mills, on Sept. 21 last, went to Cromwell Lake to seine for bait fish. There they met Brunner, and while two held the seine the other thrashed the water and drove in the fish. Thirteen bass were caught and divided among the three; the largest bass weighed 3½lbs. Brunner claimed he put his bass in a bait-

can until he saw Mr. Cromwell, who told him it was illegal to take bass, and he then put them back in the lake. In presenting the case of the defendant to the jury Col. Dickey said the law was getting so rigid that one dare not go fishing unless he took numerous law books and a pair of scales; that the law would soon regulate the size of a man's bottle and compel them to wear velvetene or corduroy suits. This he said was class legislation and it should be stopped. Ex-District Attorney Heady summed up for the people. The judge charged the jury to bring in a verdict of guilty, which they did, imposing the full penalty of \$100.

"JUST ONE MORE."

GRAND RAPIDS, Mich.—While neither admitting nor denying that fly-fishing is on general principles the most artistic and popular method for capturing fresh-water fish, yet I rise to maintain that "circumstances alter cases," and that no one lure is always the best in all waters, no matter how skillfully made or deftly handled.

On Lake Macatawa, Mich., if one wishes to fish for fun or to practice fly-casting, there is plenty of room, with no ordinance or enactment, legislative or local, in the way. But if you want fish, something for the frying-pan, or to show and brag about at the hotel, don't waste your precious time with a fly. Take a minnow, a live frog or a good-sized casting spoon hook. Then, with a good long stiff rod, a strong-line, a minnow or spoon hook, by casting close up to the rushes with either of these or with a live frog just inside (the latter will not foul as bad as either of the others) one is not likely to go home with a "water haul."

The party I am thinking about had been fishing all the afternoon, had exhausted their supply of frogs, and had fallen back on the casting hook. They had a fair string; it was time to quit, and they would have done so but for that undefined, overpowering hankering inherent in all who go a-fishing for "just one more."

It was growing dark, in fact, was so dark one could not see clearly 50ft. from the boat. B., who was standing up in the bow, heard a splashing in the water among the rushes close to the shore, and could see a slight ripple on the water. Thinking it was a big bass and just the "one more," he unwound about 6ft. of line from his reel, made a hurried calculation as to distance and spot, gave his 18ft. rod a good swing, sent the glittering fraud flying to the point, and struck as soon as his hook touched.

There was a commotion in the water, and at the same time a large water spaniel scratched up the bank, yelping and howling, *ki hy, ki hy, twarnt hi twarnt hi*, and away he went yowling and howling, running all the line from the reel, and as it had not been well tied he made off home with the whole business.

The "blood curdling," "hair lifting" scream of the panther is bad enough, but for a downright nerve-destroying, nail-starting racket that dog could have beaten any panther or pack of panthers or wolves that ever howled.

A. W.

St. Lawrence Anglers' Association.

THE Anglers Association of the St. Lawrence River is a live, active and public-spirited organization, whose members have accomplished splendid results by holding up the hands of the State Protectors and aiding and abetting them in the enforcement of the laws against netting. At the November meeting of the New York State Association for the Protection of Fish and Game, Mr. G. M. Skinner, of Clayton, a member of the St. Lawrence organization, reported that a decided change in public sentiment had come to the support of the anglers. In the published report of his remarks Mr. Skinner was quoted as saying that in his district too much attention had been given to the protection of fish. This, as he himself says, is a preposterous sentiment to attribute to him and would require no correction among those who know his interest in the work of the Anglers' Association.

Fishculture.

CURIOSITIES OF TROUT SPAWNING.

WE have published from time to time notices of unusually late spawning of the brook trout. On June 23 and 30, 1892, such observations were made public in these columns by Mr. Cheney, and similar statements have appeared earlier. Seth Green found brook trout spawning at Caledonia as late as March 1. Vinal N. Edwards records the taking of ripe females in April on Cape Cod. M. Calverley, in the letters quoted below, tells of trout spawning in Moorehouse Lake, New York, in June. Col. E. B. Hodge, Fish Commissioner, had ripe female trout in the middle of July.

We have obtained permission from Dr. Goode and Mr. Calverley to publish the following letter:

BARNEGAT, N. J., Sept. 23, 1892.—Prof. G. Brown Goode: I was asking Prof. Hooper, of Brooklyn Institute, if he has ever heard of speckled trout spawning in June. He said he did not know, but told me to write to you. Some years ago I was at Moorehouse Lake, in the north part of Fulton county, N. Y. My guide told me the trout in the lake were spawning. I told him he must be mistaken. He said he would show me but we left the lake the day about June 8 or 10 I caught a speckled trout about 2½lbs. and laid it in the bottom of the boat; in a few minutes he called my attention to it and asked me what I called that, the bottom of the boat being covered with loose ripe spawn. We caught, I think, three that had ripe spawn in them, but the other fish had young spawn in them. If you know anything about trout spawning in the spring I wish you would let me know. The lake is now owned by a club in Herkimer county. * * *

WM. CALVERLEY.

Reply was made to Mr. Calverley's communication, and on Jan. 20 he wrote again to Mr. F. W. True, of the National Museum, giving him the following additional information:

BARNEGAT, N. J., Jan. 20.—Mr. F. W. True: If you want any more information in regard to this, I think I can get it for you by writing to Joseph Lane, of Moorehouseville, Herkimer county, N. Y., the guide who was with me and first told me about the trout spawning in June. Moorehouse Lake is in Fulton county, near the south line of Hamilton county, about five miles from Moorehouseville and about the same distance from Pisco Lake. I caught two or three trout with ripe spawn in them, but no ripe male fish. The first fish I caught weighed about 2½lbs., the spawn was about the size of No. 1 shot. Others have caught them. I have fished in a great many lakes and streams in the Adirondack Mountains in the last forty years, but it is the only case of finding spawn except in the fall, and I never heard of it before. I think it was about 1876 that I caught them.

WM. CALVERLEY.

Trout are full of surprises. Laws based upon their reproductive habits need occasional revision, in order to keep step with the variability of these habits. Rainbow trout are usually spring spawners in their native waters; but in their new home in the East they approach the brook trout in their spawning season. The U. S. Fish Commission collected many thousands of eggs of this trout at Wytheville, Va., in December, and has already 300,000 at Neosho, Mo., far in advance of the California season and equally in advance of all expectations.

MASSACHUSETTS FISHCULTURE.

WE have received from Commissioner E. A. Brackett a copy of the report of the Massachusetts Commissioners on inland fisheries and game for the year 1892. Eighty-four salmon were seen passing through the Lawrence fishway during June and July, but there was no fall run up the Merrimack, owing to the low stage of water.

Fish appeared in the fishway in the following order: Lampreys, salmon, silver eels, black bass, suckers, alewife, chubs. The largest salmon mentioned weighed 20lbs. One salmon was taken by fly-fishing below the Lawrence dam, and several between Lowell and Concord. A number of these fish were killed by some explosive six miles above Nashua, and many were reported to have been caught in weirs. The penalty of not less than fifty nor more than two hundred dollars for taking salmon by any means except hook and line will probably prevent illegal fishing in the future.

Alewives continue plentiful in the State; but shad have almost disappeared.

Massachusetts distributed about a half million of brook trout in the counties of Barnstable, Bristol, Plymouth, Norfolk, Essex, Suffolk, Middlesex, Worcester, Hampden, Hampshire, Franklin and Berkshire. A new hatchery has been established at Wilkesonville for raising brook trout, and it is already well supplied with adult fish.

Efforts are being made to protect lobsters by preventing the capture of egg-bearing individuals and of lobsters under 10½ in. long. The action of the State against the owners and crews of menhaden steamers fishing in Buzzard's Bay has already been published in this journal. Returns from weirs and gill nets show a diminution in shad, alewives, menhaden, scup, squeteage and bluefish, while mackerel and herring were taken in increased numbers.

At the conference of the New England Commissioners of fish and game, held in Boston, Nov. 16, 1892, Commissioner McDonald was present by invitation, and explained the policy and plans of the U. S. Fish Commission. He stated that he had come rather to listen than to present his views. He believed it was desirable that the State Commissioners should understand clearly the policy of the U. S. Commission, and its desire to co-operate with the State Commissions; and pointed out the need of collecting such data as would enable the Commission to supply material upon which to base rational legislation.

"The great question to-day is how to regulate the fisheries so as to afford the protection needed without harsh restraint in taking fish for market. The policy of the Commission has always been to improve and maintain a supply of fish for the market, and for this we cannot depend upon the hook and line alone—we must use the net. The question of how to regulate the net fisheries is an important one. If the natural supply fails, recourse must be made to restocking artificially, wherever it is feasible, as with shad and salmon.

"He alluded to the importance of fuller knowledge of the spawning habits of fish, and referred to the need of such information last winter, when the Lapham bill was before Congress. Considerable attention has been given by the Commission during the past summer, to the spawning habits of the menhaden. The information so far obtained points to the conclusion that they spawn all along our coast. Further investigations will be made during next year. Requests for observations on this subject have been made to all connected with the menhaden fisheries. The supply may depend upon the protection of the fish during their spawning season, the same as shad and herring."

A discussion of the Gilbert trout bill was entered upon, but this has already been fully treated in FOREST AND STREAM.

IN REPLY TO GAME PROTECTOR BARBER.

GLENS FALLS, N. Y.—*Editor Forest and Stream:* I have been somewhat delayed in replying to Mr. Barber's statement in FOREST AND STREAM of Jan. 12, but the delay was unavoidable. The statement bears the ear-marks of having been drawn by a lawyer, and a lawyer should have known that I made no charge, against Mr. Barber, as he asserts. But as Mr. Barber admits that he is the man who was at Mechanicville at the time my correspondent refers to, the matter is simplified materially, for I did not think he would ever be identified.

First, I will reply to that part of Mr. Barber's statement which refers to me personally. He desires to know how long my information has been "most reliable," so as to be "a matter of course." I suppose he means the information I furnish to FOREST AND STREAM. If so it is a period of over 17 years, during which time no one has successfully questioned any information that I have furnished to this journal. If that is arrogance, make the most of it. As to my "assumptions," my correspondent will dispose of that matter later, over his own name. My information was most reliable, as I stated it was, and my correspondent authorized me to print the letter from which I quoted, over his own name. I felt as I wrote, that an imposter had been masquerading at Mechanicville, and if the man was ever found it would be time enough to give my informant's name. Mr. Barber need give himself no concern whatever about the safety of my skin, as I am competent to take care of that myself. If he wishes to exercise himself about any part of any man's anatomy, I would advise him to guard his own official head.

Mr. Barber does not seem to understand the case at all when he says he will not be dictated to by me. When I attempt to dictate to him it will be a proper time for him to declare his sentiments on the subject. Certainly I have not attempted to dictate to him up to this time. As a State Game Protector Mr. Barber is a public servant, and as such I shall most certainly exercise my right to criticise his official actions, or lack of action. Now to the main point; but before I give the letter from Mr. Johnson, which follows, I will refer to one point which he does not mention. Mr. Barber says that his report to the Commissioners is, perhaps, one of the causes for animus—meaning that his report as to dye stuff and line running into the river from the Mechanicville paper mill. How are the paper mill people to know what he reported? Has his report been made public, and if so where can it be found? He says he visited the fishway at Northumberland and reported upon it in June, and I would very much like to know what he reported. I wrote to the New York Fish Commission in May that the fishway at Northumberland was closed—closed at a time when it should be open. In August Mr. John A. Dix, of Thomson & Dix, whose mill draws water from the dam in which the fishway is situated, told me that the fishway was still closed; filled with drift and useless, as it had been all summer, for the purpose for which it was built. This is the reply that my correspondent makes to Mr. Barber:

MECHANICVILLE, N. Y., Jan. 23, 1893.—Yours of the 17th received containing a request that I make a full statement covering the Barber case. I showed the statement made by Barber in FOREST AND STREAM Jan. 12 to a number of the paper mill men who saw and talked with him at the time of his visit here, about June 23. In the "dozen or so" of men that he refers to there was one blacksmith, one mason, three machinists, five millwrights and one mill owner. I am now informed that Mr. Barber stated distinctly to three or more of these men that he was a fish commissioner. The men all knew Mr. Henry Burden, one of the old fish commissioners, as he often visited the mill, and they say that they were given to understand by Barber that he had taken Mr. Burden's place. Mr. Barber was pointed out to me by one of the men who had been talking with him as "the man who had Burden's place." I talked with Mr. Barber, but he did not tell me that he was a commissioner. He simply told me what he had done in enforcing the game laws and what he was going to do at our place. He was a stranger to me, but from his appearance and actions I thought he might be one of the new game protectors and I asked him if he was Nat Barber, the new game protector of Greenwich, and he said he was. But afterward, when I heard the men tell their story, I did not believe that he had

any business here, either as a game protector or fish commissioner. I am informed that he did say in the presence of five men that he had been notified by the Fish Commissioners to get one of the salmon and send it to them. I did not hear him ask for a gun, but three or more men, one of them a constable, did hear him ask for a gun, but there was none to be had. I remember that the men, in talking the matter over at the time, said that if they could have procured a gun for him when he asked for it and he had shot a salmon they would have fired him down where the fish were, for they were convinced of one or two things—that he was either a fraud or he was trying to put up a job on somebody. I arrived at the mill before the whistle blew and know that no one was prevented from getting a gun on that account. I saw Wheeler, the watchman, this evening, and while he did not wish to talk about the matter, he admits that the man supposed to have been Barber did call upon him about 5:30 P. M. and talked to him about spearing salmon. Wheeler says Barber asked if he had a spear and tried to put up a job on him to spear a salmon.

I do not see that Mr. Barber has proven his innocence to all the charges. He may bluster and call other men liars, but that does not prove that he is not a liar himself. All the men I have mentioned will swear positively that this statement is true at any time that they are subpoenaed. A dozen men stand ready to prove that Mr. Barber's "plain and unvarnished statement" so far as it relates to what took place while among them is a lie, that does not contain a particle of truth. Barber inquired of me and of others if the fishway was all right, but I did not see him go straight to it and find out, for himself, as he often does. As a fact the fishway is filling up so no fish can pass through it. I went with Barber to show him where there should be a fishway sign board, the old one having been covered up by the contractor when the new mill was built. There has never been any dye stuff used in our mill to this date, for we do not make colored paper. So how could he see dye stuff in the water. Yours "most reliably," A. C. JOHNSON.

This letter shows conclusively that I assumed nothing, and that my correspondent bears out everything I said. According to this letter Mr. Barber assumed to be a Fish Commissioner, and also said that he was a game protector, which disposes of his reasoning in his fourth paragraph, which leaves nothing more in his reply to be disposed of. A. N. CHENEY.

UNITED STATES AND CANADA.

OTTAWA, Ont., Jan. 26.—The report of the Department of Marine and Fisheries states that the following basis, proposed by J. W. Foster, United States Secretary of State, for an agreement to be reached by a diplomatic exchange of notes, has been accepted by Canada, the Governments of the United States of America and of her Majesty, the Queen of the United Kingdom of Great Britain and Ireland:

A commission of two experts shall be appointed, one on behalf of each Government, to consider and report to their respective Governments either jointly or severally, or jointly to both Governments, in regard to matters in which they may be in accord and severally to their respective Governments with regard to matters of non-concurrence concerning the regulations, practice and restrictions proper to be adopted in concert on the following subjects:

(a) The limitation or prevention of exhaustive or destructive methods of taking fish and shellfish in the territorial and contiguous waters of the United States and her Majesty's possessions in North America respectively, and also in the waters of the open seas outside of the territorial limits of either country to which the inhabitants of the respective countries may habitually resort for the purpose of such fishing.

(b) The prevention of the polluting or obstructing of such contiguous centers to the detriment of the fisheries or of navigation.

(c) The close seasons expedient to be enforced and observed in such contiguous waters by the inhabitants of both countries as respects the taking of the several kinds of fish and shellfish.

(d) The adoption of practical methods of restocking and replenishing such contiguous territorial waters with fish and shellfish and the means by which such fish life may be there preserved and increased.

(2) The commissioners to be appointed shall meet at the City of Washington within three months of the date of the agreement and shall complete their investigation and submit their final reports thereof, to the two governments as herein provided, within two years from the date of their first meeting.

(3) The contracting governments agree to place at the services of the said commissioners all information and material pertinent to the subject of their investigation which may be of record respectively in the offices of the United States Commission of Fish and Fisheries, and in the Department of Marine and Fisheries of the Dominion of Canada, and further to place at the disposal of said commissioners acting jointly any vessel or vessels of either of said Fish Commissioners of the United States and of Canada, as may be convenient and proper to aid in the prosecution of their investigation in the contiguous or adjacent waters aforesaid.

It is further agreed that, if required by either or both of the said Commissioners, a competent employee of either or both of the said Fish Commissions of the United States and of Canada shall be detailed to assist the said Commissioners in the preparation of their report.

(4) Each Government shall defray the expenses of its Commissioner, and of such employe as may be detailed to assist him, as provided in the preceding section.

(5) The two Governments agree that, as soon as the reports of the Commissioners shall be laid before them, as aforesaid, they will consider the same and exchange views thereon, to the end of reaching, if expedient and practicable, such conventional or other understanding as may suffice to carry out the recommendation of the Commissioners by treaty or concurrent legislation on the part of the respective Governments or the Legislatures of the several States and Provinces, or both, as may be found most advisable, but nothing herein contained shall be deemed to commit either Government to the results of the investigation hereby instituted.

The Mississquoi Bay Nets.

Bearing on the above, Vermont's last experience with nets in Lake Champlain is interesting and instructive. In their last annual report the Vermont Commissioners said:

"When similar conditions and seasons prevail in neighboring States the operations of the laws for the protection of the fish and game which shall inhabit such States should be uniform. Many departures from this rule occur in the operation of the laws as between Vermont and the States and provinces contiguous thereto."

"As an illustration, the close season for black bass in Vermont ends fifteen days earlier than in New Hampshire, and the citizens of the former State can take bass from the Connecticut when it is unlawful to do the same thing from the New Hampshire side of the same waters. In fact it is a question whether it is illegal in Vermont to take bass from the Connecticut at any season, as Sec. 8373, R. S., relates to the protection of black bass "in the waters of the State," but the west bank of the Connecticut river is the east line of Vermont."

"While the above mentioned defects have been the subject of remonstrances from the Fish Commissioners of New Hampshire, they are lost sight of when the condition of affairs in the waters of Lake Champlain bordering on the Dominion waters of the same lake is brought to the attention of the Commissioners by the lack of uniformity of existing laws for the protection of fish in these contiguous waters, resulting in a serious injustice to the citizens of Vermont."

"Reference is made to the Canadian custom of licensing fishermen to catch fish by the means of seines in the Dominion waters of Lake Champlain, generally known as Mississquoi Bay. While only a small portion of Lake Champlain is in Canada, the Canadian portion appears to be the spawning ground for nearly all the wall-eyed pike of the entire lake.

"While tons of these fish are taken in seines on their way to and from the spawning grounds in Dominion waters, it is not lawful to take them in any manner in Vermont waters or to have them in possession.

"With this condition of things, our laws are not sustained by public opinion, and consequently it is impossible to enforce the laws against netting in waters contiguous to Canada without great and unwarranted expense.

"The Commissioners do not intimate that the laws of Vermont for the protection of fish in Lake Champlain are defective or perfect, but that the Canadian laws should be in unison with them. Much correspondence on this subject has been carried on between the Commissioners and the Canadian authorities. Finally a full statement of the case was communicated to the Hon. John W. Foster, Department of State, Washington, D. C., and the United States Government is now considering the question with the government of Canada. The Commissioners entertain hopes that this correspondence will result in necessary measures being taken for the protection of fish in the waters contiguous to the two countries."

Commenting on the new law empowering the Commissioners to license nets in Mississquoi Bay the *Argus and Patriot* said: "The object of this move is to place the Commissioners on a basis of equality with the Minister of Fisheries in Canada. By being empowered to grant licenses to Vermonters to place their seines across the channel named, the bulk of the fish which the Canadian fishermen usually capture on the Dominion side of the bay, will be cut off, and the fishing interests thereabout would suffer heavily. Heretofore these Canadian fishermen have been such a powerful constituency that they have dictated the course of the Dominion officials, the result being that it was useless to attempt negotiations looking to prohibitive legislation on their part of the same nature as that in force in Vermont. Of course, if the business is practically ruined and the Canadians see our people taking the fish away from them they will be anxious to effect some compromise which will be equally beneficial to people on both sides of the line. If such an arrangement, as is equitable, can be made, then the Vermont Commissioners can revoke any licenses they may have given, and the situation will be just as it has been heretofore, as far as Vermonters are concerned, while the power to reissue the licenses will stand as a menace to our Canadian neighbors, that if they do not live up to their agreement then the seines will be again stretched across the entrance to the bay."

Wisconsin Rainbow Trout.

THE fish commissioners of this State have decided to plant 10,000 rainbow trout fry in the Fox River just below the lower dam in this city in February or March. The proposition to construct fishways from Lake Winnebago to Green Bay should be carried to a successful termination. This will make it possible for fish to pass from Green Bay to the lake, up or down; now they are prevented by the dams.—*Appleton (Wis.) Crescent.*

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 7 to 10.—Chicago Kennel Club, Chicago. G. H. Goodrich, Sec'y.
Feb. 21 to 24.—Westminster Kennel Club, New York city. James Mortimer, Sec'y. Entries close Feb. 6.
Feb. 28 to March 3.—Keystone Kennel Club, at Philadelphia, Pa. James Watson, Sec'y. Entries close Feb. 17.
March 7 to 10.—Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderfer, Sec'y. Entries close Feb. 25.
March 14 to 17.—Washington, D. C. F. S. Webster, Sec'y.
March 21 to 24.—City of the Straits Kennel Club, at Detroit, Mich. Guy D. Weston, Sec'y.
March 22 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 7 to 10.—Hamilton, Ont. A. D. Stewart, Sec'y.

FIELD TRIALS.

Feb. 6.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y.
Feb. 13.—United States F. T. Club Trials, New Albany, Ind. P. T. Madison, Sec'y-Treas., Indianapolis, Ind.

Remember, the entries for New York show close Monday next, Feb. 6, with James Mortimer, 44 Broadway, New York.

FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—Some time ago I wrote that the collie dog Finsbury Dude had been purchased by a Canadian breeder. His owners, Messrs. Saunders & Mighton, Harrison, Ont., advise me that he has arrived and is in good shape. His winnings in Europe are two firsts and two specials, Halifax; second, third and two specials, Bradford; second, Bradford Canine Association and two seconds, Amsterdam. His breeding is of the best—Edgbaston Excelsior out of Highland Annie, going back on the sire's side to champion Christopher, champion Metchley Wonder, champion Peggie II., etc., and on the dam's to champion Eclipse, champion Charlemagne and champion Carlyle.

Mr. W. P. Fraser, Toronto, received off the Allan boat this week a good little Scottish terrier dog from Mr. Ludlow.

The Bowmanville St. Bernard Kennels are sending the smooth-coated bitch Celtic Lassie, by Celtic Rector out of Countess, to Mr. J. H. Dobson, Albuquerque, New Mexico.

A meeting of the committee in charge of the details in connection with the selection of dogs for the World's Fair, was held on Jan. 26; the members present being Messrs. A. D. Stewart, Hamilton; C. A. Stone and W. Brodie, Toronto, and Mr. Stewart acted as secretary. It was deemed imperative that all dogs sent to Chicago must compete at the selection to be held in Toronto next April. Messrs. Donovan and Mitchener are to act as a committee to select a building and see after all printing, and Messrs. Stone and Brodie to look after the benching and feeding. It was recommended that Mr. Stewart's expenses be paid to New York during the show, to interview Mr. Mortimer with regard to final arrangements. The C. K. C. will be asked to appoint one outside all-round judge to act in conjunction with the judging committee already appointed. The catalogue is to be in Mr. Stone's hands. H. B. DOXOVAN.

OHIO FIELD TRIAL CLUB'S MEETING.

Editor Forest and Stream:
On Friday evening, Jan. 27, the O. F. T. C. held a meeting at the office of G. V. L. Mellinger. The object of meeting was to incorporate the association under the laws of the State of Ohio. The membership was opened to brother sportsmen throughout the country. Any wishing to avail themselves of the opportunity, can correspond with the secretary and receive necessary information. ARTHUR H. SMITH, Sec'y.
CANTON, Ohio.

PACIFIC COAST FIELD TRIALS.

BAKERSFIELD, Jan. 17.—This morning, to the delight of all, broke clear, an ideal California winter morning, chilly, but giving promise of the ideal day that followed. The trials were held to-day on new ground, about a mile beyond the grounds upon which the Derby was run last year, and although seventeen miles from town the move proved a good one, as birds were found much more plentiful. No less than 600 birds were flushed by handlers, judges and spectators during the day. The recent rains had washed the alkali from the sage brush and chapparel and settled the dust, making the scent lie well. All in all everything promised good work. But, alas, for the fond hopes of man! The work of the dogs was, on the whole, poor, though a few showed up in sharp contrast by working splendidly. The ground upon which the trials were run and its surroundings are hard for your Eastern readers to imagine. Fancy, if you can, a party of seventy-five ladies and gentlemen following the dogs throughout the day in our sunny clime, those about going without their overcoats and none heavily wrapped. A level plain as far as the eye can reach covered with low brush and occasional patches of timber. To the east the mighty Sierras, with the snow-capped peaks towering above the clouds; to the west the east range nearly as lofty; to the north and south an endless plain.

Derby.

First Series.—Continued.

BROWN BETTY AND JAVELIN.—The first heat of the day was between Brown Betty and Javelin, the undecided of the previous evening. Betty found a single almost immediately after being put down and pointed staunchly. Trainer fired and killed; both dogs steady to shot. Moved on a little, Betty located and pointed a covey and worked well on the scattered birds. Javelin pointed a single and dropped to wing when the bird flushed, Betty backing. Javelin soon after pointed a jack rabbit. Betty followed with three staunch points in rapid succession on singles and small beys. Brown Betty won the heat after being down about 30m.

TOMMY TICKLER AND JIM P.—J. M. Bassford's liver and white pointer dog Tommy Tickler (Bismarck—Beulah), handled by Wm. De Motte, and Jas. E. Watson's black pointer Jim P. (Old Black Joe II.—Black Bess), handled by Walters, were put down at 10:18 on scattered birds. Tommy had a little the best range and pace. Jim was the first to locate, pointing staunchly, and Tom backed well. Walters shot and killed; Jim broke shot, but obeyed the voice of his handler instantly. Then Tom pointed fur. Jim soon after established a point, but no bird could be found. When sent on, he moved a rod or so and again drew to point. Walters flushed the bird, shot and killed; Tommy then pointed a single and De Motte shot and killed.

Jim P. was given the heat after being down 1h.

HONEST JOHN AND GEORGE P.—C. A. Haight's lemon and white pointer dog Honest John (Dick H.—Lady Max), handled by Allender, and Jas. E. Watson's black pointer dog George P. (Old Black Joe II.—Black Bess), handled by Walters, were put down immediately after lunch. George found a bevy and pointed staunchly; the birds ran. On a second point the birds flushed and he broke to wing. After receiving a sound thrashing from his handler, he shook himself and went about his business as though nothing had happened, and in less than a minute he had another point to his credit. George is the best in range and pace, and shows considerable bird sense. Honest John has neither of the above qualities, and when called up to back once rushed in ahead of the black and flushed the bird. Down 30m. George P. won.

BOOTH B. AND FRANCISCA.—L. Thibault's black pointer dog Booth B. (Old Black Joe II.—Black Bess), handled by Allender, and Wm. Schreiber's lemon and white pointer bitch Francisca (Rip Rap—Sal), handled by Chas. Studarus, were put down in the timber at about 1 o'clock after a long hunt without finding anything. Booth got two points, Francisca chasing and otherwise misbehaving herself in the mean time. Booth won after being down 54m. Like all of this strain of black pointers he is a wide ranger, fast, but not stylish, and possesses a good nose.

PAPADEROS AND VAN.—Mr. E. G. Schmidell's white and liver pointer bitch Papaderos (Duke of Vernon—Patti Croxteth), handled by Allender, and Frank Lane's Gordon setter dog Van (Dan—Jess), handled by Walters, were put down at 1:55. Van ranged fairly well and showed considerable style, hunts carefully, but seemed to be off his nose. He got a couple of points on singles, while Papaderos failed to do anything, apparently not knowing what a quail was. Van won the heat in less than the time limit (30 minutes), the pointer having practically quit.

MERCHANT OF VENICE AND MERCURY.—Wakeman and Handley's English setter dog Merchant of Venice (Monk of Furness—Knight's Belle), handled by Allender, and California Kennels' English setter dog Mercury (Dick Bondhu—Sunlit), handled by Dodge, were put down at 2:40 P. M. Mercury started in by flushing a bevy; Merchant pointed a single and Mercury a single and a small covey. Both ranged well and are merry workers, showing considerable bird sense. Mercury won. Down 1h. 3m.

Second Series.

JOHANNA AND COUNTESS NOBLE.—The first brace of the second series was put down at 3:55. Both dogs ranged splendidly, the best of the trials up to date. Countess had a little the advantage in pace and range. Both dogs quartered their ground well. Before leaving the timber Countess, who was going like a whirlwind, snaped a point as quick as lightning, and Johanna, just behind her, backed beautifully. Moved on a little, Countess pointed a small covey. Countess won. Down 35m.

TRAMP AND BROWN BETTY.—The next brace was put down at 4:30 P. M. Betty was the best in range, style, pace, bird sense and nose. Tramp did not do anything. After running 40m. Brown Betty located a single and pointed staunchly.

WEDNESDAY.

The trials were started to-day one and a half miles south of the old field trial ground, where the Members' Stake was run off in 1892, and finished on the old ground. Birds were very scarce, not more than 100 being found all day. After returning in the evening the annual meeting of the club was held at the Southern Hotel, President J. G. Edwards in the chair. The following new members were elected: C. A. Miller, Raymond, Cal.; Chas. Swisler, Placerville; C. A. Haight, San Francisco; DeF. W. Skaffe, San Francisco; P. L. Thibault, Butte, Mont.; Collin Stewart, Pasadena; Jas. E. Watson, San Francisco, and Walter J. Mathews. The following officers were elected: President, J. G. Edwards; First Vice-President, W. E. Houghton; Second Vice-President, H. T. Payne; Secretary and Treasurer, J. M. Kilgarriff; Executive Committee, J. Bassford, P. D. Linville, C. W. Post, W. G. Kerckhoff and Wm. Schreiber.

The first brace put down were the two black pointers

JIM P. AND BOOTH B.—Jim P. pointed a single bird and Booth B. backed. Moved on a mile or so, Jim P. pointed and Booth backed again. Jim is the best bird finder and shows the most bird sense. After running one hour Jim P. won.

GEORGE P. AND MERCURY were put down at 10:35. They are pretty equal in range, but Mercury is the most stylish, though George P. is the most stylish black pointer we have seen. The strain we have here is mostly an ungainly-looking lot. George P. was the first to establish a point. Mercury then pointed a single, and George P., when called up to back, broke the back and drawing too near flushed the birds. He then pointed a small bevy and won the heat. Down 35m.

The Gordon setter Van had a bye, but was withdrawn by his owner.

Third Series.

The first heat in the third series was won by Countess Noble by default.

JIM P. AND BROWN BETTY.—Jim P. pointed and dropped to wing as soon as put down. The birds were in pea vine cover, undoubtedly the worst cover in California for a dog to find birds in. The vines were full of birds, but neither dog could locate them, the birds flushing all around them. Jim P. pointed scent and fur several times. Brown Betty pointed a single on the edge of the vines and then pointed a jack rabbit. On moving out of the vines, Betty pointed a rabbit and Jim backed nicely. Soon after Jim pointed a couple of singles, and won the heat after being down 30m. Betty is without question the most thoroughly trained dog in the trials. She was most decidedly off her nose to-day, her work, like that of Countess Noble, not being a subject for comparison with her work of yesterday.

COUNTESS NOBLE AND GEORGE P.—Down at 11:40. Both dogs got right to work. George roaded a single but it flushed before he drew to a point. Countess is much the fastest and widest ranger but was out of form yesterday; a great many had her placed as winner. George P. did some excellent work, showing a superb nose and good judgment. George pointed a single in short sage. Moving on a few rods he pointed again and Countess backed, but no birds were found. Both quartered well but Countess seemed lazy. Both under good control with the advantage in favor of George. He secured two more points before they were ordered up at 1:18. George P. won the heat.

Finals.

JIM P. AND GEORGE P. were put down after lunch at 1:17, in short cover. No birds could be found for nearly an hour. George is the best in style, pace and range. Jim is a bit of a potterer. A small covey was found by both at the same time. Each secured a point but Jim broke to shot. After a long and rather tedious beat of an hour and a half George P. was awarded the heat and first money—\$315.

MERCURY AND COUNTESS NOBLE were put down at 3:05 to see which should run against Jim P. for second money. Mercury started in by chasing a jack rabbit. Countess pointed by sight and was handsomely backed by Mercury, who then pointed a pair in a ditch, Countess backing stylishly. When moved on Countess pointed a single and followed it by another staunch point. Both steady to shot. Just as they were called up Countess pointed again and Mercury backed at 50yds., both dogs remaining in position while a camera fiend took four shots at them. Countess won. Down 50m. She is the best of the brace in style, range and pace.

COUNTESS NOBLE AND JIM P. were put down at 4:10 for second money. Countess went to work at once but could not locate. Jim P. was pottering around picking up singles and scoring a lot of points that came near beating the little bitch. Jim hunted the bushy places and showed excellent judgment and bird sense. His nose is also of the right sort. Jim established three points to Countess's none, when she located a single and Payne shot and winged the bird. Jim, who was backing, saw the wounded bird fall and broke for it. Soon after Countess pointed a single, following it by a covey point. Then Jim scored a point on a single and Countess backed. Ordered up at 4:52, Countess Noble winning the heat and second money. Countess is superior in pace, range and style to any dog in the trials, but fell down sadly in her work to-day.

Third money was divided between Johanna, Jim P. and Doctor P. without running. Black pointers are strictly in it this year.

SUMMARY.

J. E. Watson's black pointer dog George P. (Old Black Joe II.—Black Bess) won first prize.

H. T. Payne's English setter bitch Countess Noble (Stanford—Lilly C.) won second prize.

J. E. Watson's Jim P. and Doctor P. (Old Black Joe II.—Black Bess) and California Kennels' Johanna (Gladstone II.—Janet) divided third prize.

THURSDAY.

All-Age Stake.

The entries in the All-Age Stake numbered nine against eight last year. The first few braces were put down on the old grounds, six miles from Bakersfield; the birds proved so few and far between on Thursday that the club decided to try new grounds. Friday morning they started in about eight miles from Bakersfield, near Rosedale. After running two heats the birds were found to be still among the missing and after lunch the dogs were put down on the grounds that the Derby was run on last year, sixteen miles from town, where the work proved more satisfactory. It must not be understood that birds were very scarce. A party of four could go on any of these grounds and shoot from 100 to 200 birds in a day, but with the method of running trials here a very large number of birds is required. In my estimation the trials are poorly managed in respect to hunting for birds and working the birds after they are found. The handlers and judges are both to blame. When a covey has been located, in place of working out the covey, the dogs, handlers and judges make a bee line right through the scattered birds. Consequently the birds are soon lost and new coveys must be found.

First Series.

PELHAM AND SAM K.—California Kennels' English setter dog Pelham, by Harold—Sunlit, was handled by Dodge, and W. G. Kerckhoff's English setter dog Sam K. Gladstone, by Gladstone's Boy—Ruby D., last year's Derby winner, handled by Walters, were put down on the old grounds at 8:52. Both dogs ranged very well, Sam the best in range and pace. Pelham stopped when going at a very fast pace and pointed a covey, making a very stylish point, Sam K. refused to honor it. Sam when moved on a little pointed foot scent. Pelham refused to back. Sam soon after pointed a single, Walters shot and wounded, and Sam could not find, the bird doubtless being one of our California runners. Sam then flushed a pair but dropped to wing. Pelham then roaded and pointed a covey staunchly. Sam when called up to back refused and pointed, but drew too close and the birds flushed. Pelham pointed false and Sam dropped to order of handler. Sam then pointed single and Pelham flushed; when called to back, Walters shot and killed and Sam retrieved neatly. Pelham then got a point and Dodge shot and killed. Pelham retrieved well. The dogs were ordered up at 10:30, after being down 1h. 38m. Pelham won. Pelham is under remarkable control, considering the fact that he is as deaf as a post. Sam K. drops to point.

DORA O'MORE AND CLAY.—John H. Yoell's Irish setter bitch Dora O'More, by Pat O'More—Fawn, handled by Allender, and Mr. Flood's pointer dog Clay, by Bergez's Tom—Queen Croxteth, handled by Studarus, were put down at 10:57 on new ground in high cover and pea vines. Clay ranged well and is the most stylish pointer in the trials; though blind in one eye, his pace is good and he ranges fairly well. Dora is a merry worker but does not range out much. Dora started in well, pointing a covey that flushed an instant after Allender shot and killed one, which she was not asked to retrieve. Clay roaded for quite a distance and pointed a single that flushed to the judge's horse. Moving on a few rods he pointed another single and Studarus flushed. Within a few rods Clay pointed twice to the second point and Studarus shot and killed. Both dogs steady. Ordered up at 11:30 and heat given to Clay.

OLD BLACK JOE II. AND QUEEN CROXTETH.—James E. Watson's black pointer Old Black Joe II., winner of third last year, handled by Allender, and B. N. Dow's pointer bitch Queen Croxteth, by Rush T.—Patti Croxteth, handled by Studarus, were put down on scattered birds. After a short run on open ground to test their range and speed at 11:37 Queen Croxteth ranged out the widest, but Old Joe was hunting, while Queen was running about having a great time. When brought to the birds Joe pointed a single and Queen backed. Moved on a few rods Joe pointed again and was well backed by Queen. Queen dropped to a single. Some ten minutes later one pointed and the other backed, but neither judges nor your reporter could tell which was which. After being held up for water they were again put down, but no birds could be found. They were ordered up for lunch at 12:30. After a substantial lunch and the usual ladies' day photographs, the party moved to other grounds about a mile and a half away. About twenty ladies and gentlemen on horseback joined the party just before lunch and followed the dogs for the balance of the day. The dogs were put down again at 2:04. Birds were found almost immediately. Queen pointed a single and dropped to wing; then Joe pointed running birds, but broke point and roaded them full 200 yards and drew again to a staunch point. Queen dropped to a small covey soon after. Studarus fired and missed and Queen broke to shot. Down 18m. Old Black Joe II. won the heat.

SALLY BRASS II. AND LADY FANE.—Henry Huber's pointer bitch Sally Brass II., by Graphic—Meally, handled by Allender, and George Crocker's English setter bitch Lady Fane, by Toledo Blade—Sulu C., handled by Walters, were put down at 2:52. Lady pointed foot scent and was honored by Sally. Then Lady pointed a single and Walters missed it. Then Sally pointed a single and Allender missed. Lady, then working about the same locality for some time, pointed two singles in rapid succession. Walters shot and killed and Lady retrieved well. They were ordered up after being down 46m., Lady Fane winning the heat. Lady had a little the best of it in pace and range.

Second Series.

STARLIGHT AND PELHAM.—T. J. Watson's English setter dog Starlight (Dan Gladstone—Miss Alice), handled by De Motte, was the bye dog, and was put down next with Pelham, the first brace of the second series at 3:15, in a willow patch. Pelham was the first to find, pointing staunchly. Star backed. Both very stylish in action and on point. Both dogs scored false points. Then Pelham drew again, and the judges flushed a small bevy. Pelham then pointed another single and Star backed. Dodge's gun not being cocked DeMotte shot and missed. Starlight then found a single, but Pelham would not back, crossing in front of Star. Pelham drew to point, but broke it; bird flushed by Dodge; DeMotte shot and killed. Star retrieved well. Both dogs then made game, but the birds were flushed by handlers before the dogs located them. Pelham when moved on a short distance pointed a single staunchly. Star pointed, no birds found, following this with a single, which DeMotte missed. The dogs were ordered up after being down 1h. 5m. Starlight winning the heat. Neither are extra rangers, though both are good.

FRIDAY.

OLD BLACK JOE AND CLAY were put down in brush cover near Rosedale at 9:37. A covey of birds was located by a professional hunter engaged for the purpose, and the dogs made game very quickly. The morning was very foggy, and consequently very disagreeable. The first birds found flushed wild. Joe was the first to score, pinning two singles in rapid succession. Clay when called up to back refused, and crowding in front and across Joe's nose, flushed the birds. In making a wide cast a few minutes later Clay flushed a big covey. Joe a little unsteady to wing. The birds dropped near a large clump of willows. Then Clay pointed false and Joe refused to back. After roading some distance Clay pointed and Studarus shot at the birds on the ground, killing five at one shot. Joe pointed immediately after and Clay dropped to back, birds running. Then Clay pointed, broke point, roaded and pointed again staunchly. Joe ran in wild and flushed in place of backing. Soon after Joe pointed and Allender shot and missed. In being moved on the dogs got out of the birds, as often happens at these trials. The handlers press the dogs too close; the judges press the handlers, and the crowd press the judges. In consequence, when a covey is located it is not properly worked. Joe was the next to score a point, but Clay stole the point. Studarus shot and missed. Immediately after Joe pointed again and Clay rushed in and flushed. Old Black Joe II. won the heat in 1h. 23m. Clay is very stylish, carries his head high and is full the equal of Old Black Joe II. in speed and range. At times he works splendidly, showing an excellent nose, but is young, inexperienced and unsteady.

STARLIGHT AND LADY FANE.—Put down at 11:05 to see which should run with Old Black Joe II. for first money, Lady was the first to make game, the bird flushing just as she drew to a point. After being down 20m. without finding any birds the dogs were ordered up and were not put down again until after lunch at 1:08 on the grounds used last year for the Derby, some six miles beyond Rosedale. No birds could be found for nearly a half hour, when the party were brought to a standstill by a wire fence. Judges and reporters dismounted and the balance of the heat was run out with the entire party on foot. On reaching the timber Lady Fane pointed staunchly, but no birds could be found. Starlight then pointed a single, and DeMotte shot and killed; Starlight retrieved in good style. Starlight soon after pointed another single, but Lady, when called to back, stole the point. DeMotte fired and missed. Lady then pointed, and Starlight backed three times in succession. After being down 2h. 9m. Starlight was awarded the heat. He is much the best in style, pace and range.

Third Series.

OLD BLACK JOE II. AND STARLIGHT, after running a thirty minute bye and taking a short rest, was put down with Starlight at 3:55. Starlight was the first to make game, drawing to a staunch point; Joe refused to back and ran in and flushed. Birds could not be found again for some time. Hearing considerable shooting in the distance the party moved in that direction and found a scattered covey in heavy timber. Joe pointed and Starlight backed twice in rapid succession, then Joe pointed another; Allender shot and killed; the bird dropped within a few yards from Starlight, who broke in and retrieved. Starlight then scored a couple of points, the birds being flushed by the judges. Joe then pointed a single, which Allender shot and killed, and Joe retrieved. Joe then pointed again, birds flushed by Allender. Starlight pointed a single, flushed by DeMotte. Starlight was awarded the heat and first money, \$152.50, after being down 50m.

At the adjourned annual meeting of the club this evening President J. G. Edwards in the chair, Mr. C. A. Schmiedt was elected to membership, after which the location of the trials for 1894 was discussed for over an hour. It was generally conceded that the trials had been very unsatisfactory this year on account of the scarcity of birds. As the trials have been run this year the wide ranger and the covey finder had no chance with the potterer, the element of luck showing itself too prominently in the placing of the dogs. The coveys were located by professional hunters. Had they not been the trials would have lasted another week. Mr. H. T. Payne spoke in very favorable terms of Ontario as being the most likely spot in California. The birds do not have the habit of running a half mile before flushing or lying close, as they do in the San Joaquin Valley, and the cover is much superior,

Messrs. J. N. Harper, of Suisun; D. M. Pyle, of Bakersfield, and R. T. Vandervoort, of Pasadena, were appointed as a committee of investigation, to report on the advisability of holding the next trials at that place.

SATURDAY.

This morning broke with the promise of an ideal California day. The fog cleared away during the night; a warm, light breeze sprang up with the sun and the party made an early start for the old school house grounds six miles south of town, and the move proved a good one. Plenty of birds were found, and the crowd not being so great the birds were properly worked. The scent lay well, and the dogs did the best work of the trials.

Finals

LADY FANE AND PELHAM were put down in low cover at 9:03. Lady pointed immediately. A single flushed. Lady pointed again a few rods further on and Pelham backed. Moved on, Lady pointed again. Walters shot and winged. On shooting the running bird Lady retrieved indifferently. Then Pelham a single and Lady three times. Then Lady pointed a single and Pelham honoring; he is usually an indifferent backer. The judge then ordered the handlers to move on to a certain point together. Dodge, however, paid no attention but followed his dog, who soon pointed and the bird flushed wild. Moving on again about two yards he drew to a point. When Dodge shot and killed Pelham retrieved handsomely. Lady then thought she had been doing brilliant work long enough and chased a single quail, and was having lots of fun when Walters shot her at about 90 yds. She gave a yelp, stopped chasing and got down to work again immediately. Pelham, when brought up with his opponent, did some very brilliant work. He is a great bird finder, a good ranger, and though stone deaf is very obedient. He next roared and pointed staunchly in a clump of willows and was well backed by Lady. Walters claimed the point for Lady but I cannot agree with him. Lady then pointed and Pelham backed. Walters shot and killed and Pelham broke shot slightly. Lady then pointed again and Pelham refused to back. Moved on a couple of hundred yards Pelham pointed a couple of singles and ended the closest, prettiest race of the trials. Pelham won after being down 47m.

OLD BLACK JOE II. AND PELHAM.—Joe, after running another 30-minute bye, was put down at 10:20 to run with Pelham for second money. Joe was the first to find, pointing staunchly. Pelham started in by chasing fur. Joe then pointed a couple of single birds. Moved into the timber, Joe pointed and Pelham ran in front of him and flushed. Moved on to a pea vine patch, Joe pointed again and Pelham backed. Pelham then pointed a single, flushed by Dodge. Pelham then began roading and made a very snappy point, pointing running bird; Joe made an indifferent back. The dogs were watered, and when put down again Pelham pointed a single, and Joe, when called to back, stole the point. Old Black Joe won the heat and second money, \$91.50, after being down 40m.

CLAY AND PELHAM.—Put down after lunch on new ground at 12:44. Birds were found immediately. Pelham pointed a single and then both dogs located a big covey. Clay then pointed some running birds by sight, and Studarus shot and missed, Clay a little unsteady to shot. After roading them across the open, both scored singles. Then Clay pointed unsteadily twice on singles. After watering, Clay was first down and pointed a single within a few yards of the group, before Pelham reached him. Pelham would not back, but located another bird, which he snapped at as it got up within 6in. of his nose. Pelham immediately pointed another within a few rods off the first. Clay backed, but broke back and went to hunting. Pelham moved on a few rods and pointed another, proving conclusively to all present that he had the best nose. Clay, working the same ground, could not find anything. After being down 33m. Pelham was awarded the heat and third money, \$61.

Pelham's excellent work proves by ocular demonstration that the noise made by some handlers in whistling and yelling is entirely unnecessary. Pelham was born deaf, and yet is one of the best bird finders run this year, as well as being under absolute control. When Dodge wants him to retrieve he touches his forehead lightly with the tip of his finger. All other orders are given with a motion of the hand.

The last heat was peculiarly interesting, as it was between a deaf dog and a dog blind in one eye.

SUMMARY.

T. J. Watson's English setter Starlight (Dan Gladstone—Miss Alice), first prize.

J. E. Watson's black pointer Old Black Joe II., second prize.

California Kennels' English setter Pelham (Harold—Sunlit), third prize. NAMQUOIT.

CLASSIFICATION OF POINTERS BY WEIGHT.

Editor Forest and Stream:

Permit me to apologize, through your columns, to Mr. Munson, of whose *statu quo* in pointers I am perfectly aware. I confess that it is carelessness on my part not to scrutinize the names over, but from my point of view it seemed almost impossible for any practical breeder or owner of pointers to be guilty of such a rule.

I do not doubt but that Mr. Munson has full and good reasons for his idea, and do hope that Mr. Waters (to whom my thanks are due for his correction in regard to Mr. Munson), will influence Mr. Munson to give his reasons to the pointer men and also his—Mr. Waters's—own reasons for abolishment.

It will become us to give our reasons before you have advanced yours, at least would be a queer precedence, and looks to me about like the waylaying party demanding reasons from those attacked why they should be attacked. No, no, Mr. Waters, you will define your stand yourself, as is proper, and I know you to be the man who will do it, and this is one good reason why I don't want to accept the proposition now to give reasons "why not," but want to hear your and Mr. Munson's defense of why it should be so.

In the meantime, I assert again that pointer men at large will express themselves plainly with a not at Chicago; local owners perhaps excepted. If I am wrong you will be soon able to prove it to me; but in the meantime I am very anxious to hear your views, knowing full well they will be worth reading. G. MUSS-ARNOLT.

TUCKAHOE, N. Y., Jan. 28.

ST. BERNARD CLUB SPECIALS.

Editor Forest and Stream:

The St. Bernard Club will offer during the coming season about forty of its handsome sterling silver medals to be competed for at the various shows. At Chicago we have offered six—one for the best St. Bernard dog, one for the best bitch, and one each for the best American-bred dog and bitch, smooth and rough.

We offer nine at New York, six at Boston, four at Philadelphia, two at Detroit, four at Pittsburgh, four at Washington and four at Baltimore.

As our specials are offered to dogs belonging to the members of the club exclusively, and as they have in a number of cases been returned to us simply for lack of competition, we take this opportunity of inviting those interested to join us. The club is doing excellent work and should have the support of every one. The initiation fee is \$10, which includes dues for the current year, and after that only \$5 per year. Application forms for membership and further particulars can be had from me. W. H. JOECKEL, JR., President.

BLOOMFIELD, N. J.

POINTS AND FLUSHES.

The Permanency of Dog Matters.

CHICAGO, Jan. 21.—In this country in the past ten years doggy matters have had a most wonderful growth in every desirable particular, such as influential ownership, general distribution over the whole country, public interest, bench and field trial competition, increased monetary value of the best specimens, large kennels devoted to the interest of the different breeds, etc.

Ten years ago, concerning dogs in this country, there were but a few specimens of some breeds, while of some others there were none. A few breeds then were practically unknown. The ownership, compared with that of the present, was limited and sectional. All this in reference to well-bred dogs of recognized breeds.

There was no dearth of dogs, considering them merely as dogs. Curs innumerable abounded and cross-bred dogs were not scarce. In fact, almost every home had its dog, the exceptional instance being when such dog resembled any other dog or anything in the earth beneath.

General ignorance as to what constituted the qualities or characteristics of the most common breeds prevailed. Large prizes given for dogs were considered then by the average good citizen as being not so much an evidence of the true value of the dogs as they were of the mental weakness of the purchaser, yet the largest price paid then would not be above ordinary now.

In the early '80s it was a most difficult matter to hold a bench show, great or small, outside of New York, Boston, Chicago or St. Louis, with any prospect of financial success, or success in attracting the attention of the public to the merits of the dogs. Even the large cities sometimes held shows which resulted in loss. Under such circumstances the premium lists were necessarily small. The local dog, whose chief merit was his master's faith in his dog's unbounded superiority, was in the majority at bench shows. The latter, however, gradually educated the public up to a knowledge of doggy matters, which reacted in favor of the dog's advancement. By sure stages of evolution from being run many times by private individuals as a monetary speculation, shows are now permanently established and held under the auspices of regular organizations composed of the best sportsmen. They are in several places a society fact.

Field trials, too, in the early '80s were in an embryo state. Their growth was slow. Their future seemed most unpromising and uncertain from many causes, not the least of which were the impediments of sectional prejudices, factional disagreements and crude rules. To these were added the scarcity of material, namely, the small number of well-bred dogs owned by men who would compete, from which to draw support for the trials. For some years it required the united forces of the East and the West to hold one good field trial.

Nevertheless, at that time every one seemed to think that doggy matters were pretty well established, besides being of large magnitude. Really, they were merely in their infancy. The importation of a single dog at an ordinary price compared to the prices of the present, was then a sensational event in the sporting world.

At the present time every breed is firmly established by ownership, monetary value, reputation, usefulness and companionship. The home of the dog in the domestic life of the people is only limited by the boundary of civilization. The growth has been rapid, constant and uniform. With the steady growth have come anxious purchasers, and values have therefore constantly increased, not always wisely. With the steady growth came a better literature. Educated writers exploded venerable fallacies, corrected the teachings which were the outcome of ignorance, refined the crudities and extended the sphere of knowledge. The works now devoted to dog diseases, field sports, descriptive matter, the different breeds and "kindred subjects" will compare favorably with the literature of any sport. If it does not excel it.

The press has been largely instrumental in developing a healthy and intelligent growth. It furnishes a medium for the views of correspondents; it teaches correct knowledge and exposes error or imposition. In all that goes to make up healthy instruction and good literature, FOREST AND STREAM will be found well in the lead in the present as in the past.

Invertebrates.

While all the different features, which have been briefly enumerated, and many more which have not been touched upon for want of space, have had a regular and permanent growth, which constantly improves, there is one feature, a disagreeable one it is, too, which remains about the same month after month and year after year; that is, the utter inefficiency of club officers, generally speaking, to deal with offenders.

However able a man may be in his private business in dealing with undesirable people in the most effective manner, as an officer of a club he generally becomes inactive, forceless or evasive. He shirks his official duties to such an extent as to avoid, even under pressure, going on record either for or against any offender, be his offense or the evidence against him what it may. Whenever there is the slightest opportunity to administer a coat of whitewash, the whitewash is triumphant. The case, if it involves a misdemeanor, is rarely pushed on its merits.

Probably the worst case of club cowardice was that which occurred at Great Bend, Kan., at the meeting in which D. C. Luse was tried for violating the club's rules, and incidentally violating all principles of fairness by entering a puppy which was over age. The guilt of the offender had already been proven before the executive committee, but in the club meeting the members were timorous and voiceless. Mr. Luse's dog was disqualified, but when it came to an issue where it was necessary to say yes or no as to the guilt of the man, the members were weak, waning and windy.

Of course, this event is greater in its pitiful weakness than any other, but modifications of it in different forms are not uncommon elsewhere.

The American Coursing Club still, in happy unconsciousness of its own disgrace, holds to a constitution, by-laws and rules which it cannot or dare not enforce when an offense is in question. It is the mere mockery of a club. As individuals, they are good men. As an organized body, they are forceless and inoperative. The whole history of the club shows it. It has been full of petty, personal wrangles. Ruffianism on the grounds by outsiders was unpunished. Protests were evaded or permitted to lie without action.

Yet this club published to the world, through its constitution, by-laws and rules, that it was an energetic, fearless body, capable of acting, protecting and governing within its powers. It had rules defining offenses and their punishment. When an offense was committed which violated their rules, every member was evasive and non-committal, either because he had no moral or physical courage, or because his selfish or sordid preference for his own personal interests outweighed his pledges as a club member or officer. A lot of country schoolboys could not be more abashed and timorous in the presence of a dreaded bully than were most of the nerveless gentlemen, club members, who attended the meeting at Great Bend last October. There were a few honorable exceptions.

Yet these same forceless characters are fearless talkers when action is not possible or when all opposition is absent. Not infrequently they publish brave letters. Remove but the two conditions of official action and the presence of the offender, and there is left the brave ranter, the garrulous fellow who will do prodigies of action when action is unnecessary or impossible, and nothing when called upon to say yes or no. The cowardice of this club as a club is probably the most contemptibly weak in the history of dog matters in this

country. Yet it is only an exaggeration of a condition which prevails in almost every club in this country. The effort is rarely directed toward settling the issue energetically and justly on its merits. The idea is to fix it up some way; to smooth it over; to avoid offending some one; in short, to whitewash.

Every reporter on a sportsman's journal knows with what confidence the public looks to him to expose and denounce anything which is not right. Very little confidence is placed in the action of club committees. It is time that a public sentiment was created in favor of clubs and club officers doing their duty fully and right.

The slipshod manner in which officers are elected by many clubs is a prolific source of inaction and incompetency. In many instances the offices are filled without any reference to the performance of the duties which they entail. Men are, in a manner, over-persuaded to accept an office, the club aiming thereby to secure the prestige and good reputation which goes with respected names. The incumbent is assured that there is no work to do; they want him because he is a good man and his name alone will be of great value to the interests of the club. Secretaries are often elected in the face of their vigorous and sincere protests. All goes well till positive and onerous action is necessary. The president then becomes dormant. The vice-presidents are silent. While they permitted their names to be used under the false pretense to the public that they were presidents in fact as well as in name, yet when the occasion arises for them to act they are silent. The principle is wrong. There is no question as to the propriety of securing officers whose names are synonymous with respectability, integrity and wealth. It should not end there, however. With all these should be aptness for the office, an interest in its welfare and a willingness to fully assume all its duties and responsibilities.

Let public opinion demand just and speedy action on the part of the clubs.

The public looks too much to the press for the action which should be a matter of course with the clubs. The press can only expose and denounce; it cannot render material individual justice. The public has the remedy in its own hands to correct this serious, growing evil. If a club is too cowardly, or its members too mercenary to put their club pledges, the public can correct the evil by refusing to support such a club.

Fits of Abstraction.

CHICAGO, Jan. 28.—Some of the people of Chicago, presumably some of the visitors, have made most unpleasant experiences in a canine way for some of the Chicago sportsmen. They seem to have inaugurated a systematic crusade of robbery in respect to valuable dogs. Mr. E. Thomas, the well known gun expert, has recently had two stolen. Mr. Jeffrey, who is with the sporting goods firm of A. G. Spalding & Bros., has had a valuable trained setter stolen, and there are rumors of other losses of good dogs by theft. Sportsmen will do well to keep a sharp lookout for dog thieves. If the dog is stolen the chances of recovery are very small. Shipments to other cities places stolen dogs beyond any danger of identification and recovery, and this is the course commonly pursued by the dog thieves.

The Division of Pointers by Weight.

I notice that the action of the managers of the Chicago Kennel Club in regard to pointer classification meets the disapproval of owners. It does seem hard, after all these years of double money to the pointer classes, which comes with the division by weight, that the pointers should be required to compete on even terms without any weight distinction.

The only justification advanced is that it is harder to breed a good big dog than it is to breed a good little one.

Is it so? Do the records prove it? Granting that it is, is it of sufficient importance to demand that bench show clubs shall put up double money all around the bench show circuit for this one fallacious plea?

The records will show that the really good big dogs, when it came to the special for best pointer dog in the show, held their own well.

Unfortunately, the classification by weight protects the bad big dogs as well as the good ones—dogs which in general competition would deservedly fail to win. By skillful coaching in the way of selecting easy shows, a poor big dog can reap all the benefits of the protection intended for the much-talked-of good big dog, which needs protection from competition—protection from the very principle which underlies all bench shows.

Again, the pointer is a working dog. At least, it is commonly supposed that he is. Is there such a thing as better heavy-weight work than light-weight work? Is the 250-pound bookkeeper better than the 100-pound bookkeeper because he is larger?

If the weight classification is sound why not have other classes—middle-weight, welter-weight, light-weight, bantam-weight, etc.? The money would be just so many times multiplied.

The same reasons for weight classification of pointers hold equally good with English setters, Irish setters and Gordon setters. If it is fair for one breed it is fair for the others.

I am glad to see one club which has had the nerve to explode a fallacy, although, for the reason that managers are so lacking in self-assertion, I have no idea that it will meet with general adoption at present. It will in time or else the other breeds will want equal consideration in the way of prize money, and there is no method so easy and direct as weight classification. It has the further advantage that some dogs will be able to win this week as a light-weight, next week as a heavy-weight.

This has led to the necessity of weighing the dog at any time demanded by the person in charge before the judging, and is so governed by A. K. C. ruling. The dog actually may be a heavy-weight in a light-weight class at the time of the judging, but after the weighing the actual fact is not permitted to be officially recognized. It is simply a protection to men who starve their dogs to weight and who know that one or two meals will make their dogs overweight.

Fallacies.

Speaking of fallacies, there is none more absurd than one which prevails at field trials and is held by field trial supporters, namely, that a dog in competition should have a trial on birds to determine his merits. It is often cited as proof of unfair treatment if contrary to this idea.

A dog may be so inferior as to be unable to find birds; so palpably inferior that if he found birds and worked well on them, he was so inferior to other dogs that he would not have the slightest chance.

It is time that some of the old time whims should be superceded by something which will bear analysis and argument.

Improvement in Trials.

The following is from that sterling gentleman and trainer, Capt. C. E. McMurdo, and is a most gratifying communication. The genial writer says:

"Although it is no doubt the intention and the desire of the managers and judges of field trials that the question of luck should be entirely eliminated from field trials, this never can be done till the grounds are much better preserved than they are at present.

"Sometimes good dogs are spotted out because they fail to find birds, or else got among ones that have been so frequently worried that they do not give them a fair chance of getting in any good work. Weather, too, has an immense deal to do with the form in which a dog works. Put a high class dog down with an ordinary one at a time when the scent

is bad, and other things unfavorable, and the difference between them may not be very apparent, but put the same brace down again when the scent is good, and things generally satisfactory, and the former will be sure to beat the latter handsomely. The fact is, the best performers cannot do brilliant work under unfavorable circumstances.

"I am satisfied that the plan of leaving the judges to manage the running entirely, without hampering them with rules, is the surest way of having the best dogs brought to the front; but it is unfair to blame them for making mistakes so long as they have not the means of thoroughly testing each dog. So far as I have had the opportunity of forming an opinion, I am sure that the judging is better than it was a few years ago; but still some good qualities in dogs are not sufficiently valued, and some faults are too leniently dealt with—false pointing in particular is a most aggravating fault; and a dog that is in the habit of making false points must be wanting in courage or else has been badly broken. Flushing, unless it proceeds from carelessness, bad style of hunting or want of nose, is comparatively a very small fault. As I have heard Mr. John Davidson say, 'He might get a shot over a flush, but he certainly could not do so over a false point.' The dog that never false-points, but occasionally flushes is far ahead of the one that never flushes, but very frequently false-points."

B. WATERS.

BOSTON TERRIERS.

Editor Forest and Stream:

The admirers of the Boston terrier seem to be imbued with the idea that they must treat the aspersions cast upon the breed as the dog itself does the impudence of the ordinary street cur. Owners of the Boston terrier claim it is no fighting dog, but a "gentleman's dog." That is all very nice and commendable, but the dog cannot defend itself, and this is all the more reason why some of the more enthusiastic owners should compare notes and strive to utterly annihilate the absurd prejudice that seems to exist against this dog. The unkind cut that the breed is a "local fad" should stir up all the cultured energies of the owners and breeders of these smart little dogs. Mr. Leland came gallantly to the rescue last week, but instead of waiting to be asked the why and wherefore he should, if he is able, tell us some facts as to the origin of the breed, where it came from, what strains there are, and whether the terrier has been produced from constant inbreeding from the original importations or not, and whether the type would stand, without being materially altered, one way or the other, a crossing with other strains. I have seen it stated that the origin of this terrier dates back some twenty-five years, when Mr. R. C. Hooper, a member of the Somerset Club, imported a dog called Judge from England. The dog weighed about 32 lbs., and from him, it is claimed, all the other strains have originated. He was the sire of Wells's Eph, who in turn begot Tom, the first screw-tail then known.

It is said the best specimens nowadays trace their pedigree back to this dog or a litter brother of his, Toby, owned by Mr. Atkinson, but a straight-tailed dog. This constant inbreeding produced a small dog 12 to 20 lbs. in weight. Then an outcross was sought in the "Perry" dog, which had been brought over from Scotland and sold to a druggist of Boston called Perry. Then there was another dog used called the "little Red dog," about 14 lbs. in weight, and he was the sire of Follis's Kate that weighed about 15 lbs. Of course the constant inbreeding with the other dogs and this new blood did much to fix the type and weight of the dogs of to-day. Now the question to me is this: can the dog of to-day stand any breeding to a pure bulldog or a pure bull-terrier and keep its type identity intact, in any of the litter resulting from such a "cross"? I do not claim to know the methods of the breeders of the present day, but I am sure it would be interesting at this point to find out what sort of dogs Judge and Tom and the Perry dog were. The suspicion is, of course, that they were bull and terriers, for if they had been bulldogs or bull-terriers they would have been designated as such one way or the other. Were they mongrels or what were they? The Boston Terrier Club has its Stud Book, and if this is any good it should solve some of the questions in regard to the methods that have been used to evolve the tight little bully terrier of to-day. Are there any pictures of those earlier dogs? If the typical specimens of to-day can be produced by a cross of judiciously selected bulldogs and bull-terriers or white English terriers at the first or the second or the third time of asking, then I think the breed is by no means a distinct one, but, on the other hand, if it cannot be so evolved, then I think the claim of the Boston terrier for recognition should be at least treated with deference if not allowed.

I have studied the picture you published in *FOREST AND STREAM* of Jan. 26, and I must say that there is a preponderance, to my mind, of "bull" attributes over the terrier. There is the bull tail. The skull, stop, short square muzzle, and ear are of the bull, and the legs and shoulders partake of "refined" bull attributes. The first glance at the picture by a bulldog man would intimate to him that it was a mixed bulldog. Mr. Leland says: "My experience has shown me that to-day these dogs, intelligently mated, will produce offspring like themselves with as much certainty as the average recognized breed." Is this so, and do they never show an undue preponderance of bull or terrier in some of the litter which are destroyed by the careful breeder? Like begets like, I know, but have the breeders so set the "like" that it reproduces itself approximately every time? The answer to this question, with its different ramifications, should form interesting reading. Let the Boston terrier man come to the rescue. Where is Mr. Hughes, the secretary of the club? And where are the fifty other members who will find that an exposé of the breed is the only way to down prejudice and have the door of the A. K. C. either opened or effectually closed to their aspirations. This hanging on the fence will do no good.

J. T. P.

PROVIDENCE, R. I., Jan. 28.

GUN-SHY DOGS.

Editor Forest and Stream:

In your issue of 19th inst., "Hornet" expresses the opinion that a dog "should never be tied, for the moment you put a cord on him and confine him he thinks there is something wrong, and you at once abuse any confidence the dog has in you." This has not been my experience. Of course the dog would rather be free at all times; but why should he lose confidence in his master more from being temporarily chained than for being sent from the warm parlor to his cold kennel? He cannot discriminate as regards his master's motives in either case. Of course it is not necessary to tie the dog in curing him of gun-shyness, and I would not advise it, perhaps, unless the dog was accustomed to the cord, in which case it could do no harm and might do good, for if the dog, at firing of the gun, should run away, the habit of flight might become more established, whereas if he was kept in his place by the cord and saw no harm resulting from the reports he would doubtless sooner become quiet and fearless. I think every dog should be more or less accustomed to the chain, as its use is sometimes required.

N. D. ELTING.

English Lady Sold.

Dr. H. T. Foote has sold champion English Lady, the black and tan, to Mr. J. C. Mahler, Pittsburgh, Pa. Parties are negotiating for some of the others, including Sultan and Maiden, also Monarch, and these may be shown at New York under another name. The advertisement of these dogs appeared in *FOREST AND STREAM* a week since. *Verb. sup.*

DOG CHAT.

Stag Hunting at Hollywood.

Some time since we spoke of the organization of the new Monmouth County Hunt Club and the sending of Jimmie Blute to England in search of foxhounds. Last Thursday the new club purchased a farm of 160 acres near Hollywood, in Monmouth county, and a contract was given out for kennels and necessary stabling. Mr. Blute, who will be the huntsman of the new club, returned with fifteen couple of foxhounds and three trained deer—two stags and one doe—so that stag hunting will be one of the principal sports to amuse the Hollywood "resorters." The deer have been regularly hunted by the Ward Union, of Dublin, Ireland. The way the thing will be managed at first is this. The deer will be walked slowly across country for a few miles, stopping every now and then so that it can acquaint itself with the topography of the country. When brought to the place of meeting, the members of the hunt and the pack will be ready to start; the deer will be unharmed and given so many minutes' law, when the hounds will be laid on and follow by scent. The deer with its homing instinct is expected to flee to its kennel and so afford a swift and exciting run. It may or it may not, but will probably afford more fun than the inanimate animal. The country to be hunted over, we are told, is pretty still abounding in stone walls and high rail fences, many of which are five-barred, with a drain on each side. The deer is not expected to be touched by the dogs and will be protected by watchers at the kennels; but it will be safer to lead the deer several times before trusting him to the free run home, and make the surrounding farmers fully acquainted with his deer's purpose or a load of buckshot may end his career. Hollywood may be English,

"BIRDS HERE, SURE!"

Mr. J. L. Adams' Zula M., All-Age Setter Stake, Central Field Trials, 1892.

you know, but it is lacking in English traditions, which call it heresy to shoot a fox for instance. This sport is on all fours with that indulged in by the Royal Stag-hounds, about which a good deal of outcry has been made in England lately. The hounds are from the Pychley Hunt, and will be used on fox as well, three times a week. The three F's—Foxhall Keene, Fred Gebhard and Fred Hoey, who owned the fox-terrier Valet, are at the head of the club. The first hunt will be about next March.

Wash. A. Coster.

In speaking of the good time he had down South this fall, that popular sportsman, "Wash" Coster writes to a friend that though he had only two days' shooting "being so busy judging at the trials" he "had a great time. Saw many familiar faces, met a great number of old acquaintances and added many new ones thereto. I also saw a number of good dogs and more than a few—poor ones, though the owners couldn't see it. I judged in three field trial events, namely: the New England, the Eastern, and the Philadelphia field trials. I was in the saddle for over two weeks, steadily every day from eight o'clock in the morning until evening. I enjoyed two drag hunts, after the celebrated Avenet pack of hounds. The country is too poor to raise foxes, hence the great plentitude of quail, rabbits, etc. Once more in my old home, I can look back upon my southern experiences with delight, especially as I feel ten years younger, and am strong in the faith that I have gained an unlimited supply of the best of health.—Buck." We are glad our friend feels so well and we can hardly imagine how Mr. Waters could make the unkind remarks he did, about Mr. Coster's energy as a field trial judge.

Sale of Pug Sprake.

Mr. Harry L. Goodman hinted some time since that the sale of Sprake was not improbable, and at the time promised to write more fully should the sale be effected. This has now been accomplished, and Sprake returns to his former owner, Mrs. Sarah E. Davis, of Waukegan, Ill. Mrs. Davis has never been quite content since she first parted with him, for aside from his being a great show and stud dog, he was always her favorite and inseparable companion. "So long," writes Mr. Goodman, "as he remained at Auburn Park, where she could pay him frequent visits and often take him home with her for a short stay, she did not miss him so much. After his removal to Nashville, however, things were quite different, so much so that she at last induced me to sell him back to her, which I have done, but in parting with him I still retain his services at any and all times; further, we have a half-brother as well as a son of his in our kennels, so that we are not without the same blood. I consider Sprake the greatest living show dog of the day, and in my humble opinion he was never justifiably beaten by any dog. I wish his fair owner the success her pluck and money deserve."

Mrs. Davis was an exhibitor at the late Nashville show, where her Toadie and Sprake Pattie took prizes.

Southern Field Trials.

Mr. H. D. Ellis, ticket agent of the Birmingham R.R. (that runs to New Albany, Miss.), has informed Mr. P. H. Bryson that this road and the Kansas City & Memphis R.R., owners of the first named, will sell round trip tickets from any station on either road to New Albany at one fare. Tickets can be purchased from Feb. 3 and are good to Feb. 21. Mr. Ellis has made application to other lines for reduced rates but has not heard from them on the subject. He adds: "These roads are the most liberal of any I know of in their treatment of sportsmen. Those having dogs will have no trouble about rates over their lines." This will be welcome news to sportsmen visiting the trials, which are sure to be well attended.

Crack Field Dogs Sick.

We hear that Mr. Chas. Tucker's long run of good luck this year has received a check, temporary only, we trust. Dot Rogers, Rod's Sue, Maiden Mine and Lora, too, are all sick at Mr. Tucker's kennels at Middleton, Tenn., where he was preparing Mr. Lorillard's dogs for the Southern and U. S. trials this next week. It would be too bad to end such a brilliant season with sickness, and we hope that Mr. Tucker may still be able to put down these good dogs in good working order. Since writing the above we hear that Maiden Mine is dead.

A Kennel Club for Saratoga.

The list of kennel clubs is increasing every day almost. Fanciers in Saratoga have organized the Saratoga Poultry and Kennel Club. A meeting was held Jan. 25 and Col. Albert B. Hilton elected president. Meetings are to be held the first Tuesday in every month. Their first show will be held Jan. 10 to 13, 1894. One of the prime movers in this affair was Mr. F. W. Gaylor, manager of the Woodlawn Stock and Poultry Yards, and Mr. "Ripon Stormer" Clarke probably had a hand in it, too.

Mainspring's Death.

Capt. C. E. McMurdo in speaking of the death of Mainspring, wrote Jan. 11, some interesting facts concerning the noted dog: "Poor old Mainspring died this morning. I believe he hastened his end by over-exerting himself in attempting to go out for his usual run with the other dogs, but as it was very cold, I thought it best to keep him in and he died shortly after—game to the last! He was the property of Mr. J. T. Perkins, of Brooklyn, and was bred in England by Dr. J. H. Salter (the celebrated bench and field trial judge). His litter sister Hops also passed away a few weeks ago. I have no hesitation in saying that this brace by Mike—Romp have done more to improve the pointer breed as field trialers than any other that have been imported. They possessed the rare quality that makes dogs "go out and stay out" as one of our most popular judges describes it. They were active, wiry, high-couraged dogs, with perfect tempers and lots of bird sense. Mainspring was specially remarkable for his speed and the gracefulness of his movements. As Mr. C. B. Whitford remarked: 'It is no trouble to him to move,' and a field trial judge said to me once, 'He was the poetry of motion.' I am glad to say that between the two of them, they have left behind among their descendants a good supply of their excellent qualities, so that we may hope to reproduce other specimens equal, if not better than themselves. "We are having a regular hard winter here, I found snow on the ground on my return from Lexington, and we have had nothing but cold since."

Ohio Dogs.

Should a bill, now pending passage in the Ohio Legislature, become a law, candidates for the office of assessor will be hard to find. The bill proposes that the assessor, shall be furnished with a list of dog owners who did not pay their tax on the canines the year before, and whenever a man refuses to pay the amount due on his dog to the assessor that official is not only empowered, but will be required by law to send the canine to the happy hunting grounds at once. A most iniquitous enactment—why not try the remedy on the owners? Such a highwaymanlike order of things should certainly not exist. If the assessors can shoot no better than the average policeman, we fancy the next census will not show any marked increase in Ohio's population.

A New Book on Dogs.

Mr. Raydon Lee, the well-known kennel editor of the London *Field*, writes us that Part I, the sporting division of his new book, "Modern Dogs of Great Britain and Ireland," will be issued early this month. It will contain nearly 600 pages and be illustrated by Arthur Wardle in good style. The letter press will be fuller and more concise than any other book of the kennel, and, of course, the whole will be fully up to date. In *British Fancier*, Jan. 13, an interesting article appeared on Mr. Raydon B. Lee, accompanied by a very inferior picture of this well-known sportsman. This week we are pleased to find that the above journal makes amends by issuing his portrait as a supplement, which is as excellent as the other was bad.

Doc.

The trotting dog Doc that was killed in the wreck at New Brunswick, N. J., last week, brief mention of which we made in our last issue, was probably as well known to the public as any dog living. The dog was a veritable gold mine to his owner, Willie Ketchum, of Brighton, Ont., who developed the dog's natural trotting gait until his speed was something phenomenal in its way, and he generally more than held his own with the trotters and ponies pitted against him at the different tracks throughout the country. He was harnessed to a pneumatic-tired sulky, and always driven by his owner, who, though nearly 20 years old, was but a boy in size. Doc won stakes, at last accounts, something like \$17,000. He had no lack of imitators, and the pointer Joe is said to be a no mean rival.

The Philadelphia Show.

Premium lists are coming in upon us fast, the Keystone and Maryland clubs now being in the mail. There is a disposition this year, and a commendable one too, to split up the judging and not depend so much on one judge. It has its good and bad features, but it is the only plan to increase our list of judges, which in the way our shows are arranged at present, makes the selection of judges, so as not to have too much sameness, a difficult one. The Philadelphia list of judges is as follows: Pointers, Jas. L. Anthony, New York; English setters, Maj. J. M. Taylor, New York; Gordon setters, H. F. Smith, Philadelphia; Irish setters, Max Wenzel, Hoboken N. J.; spaniels, A. C. Wilmerding, New York; mastiffs, great Danes, fox-terriers, Jas. Mortimer, Hempstead, L. I.; collies, E. B. Elliott, Chicago; beagles, H. W. Lacy, New York; St. Bernards, Newfoundlanders, bloodhounds, deerhounds, wolf-hounds, greyhounds, foxhounds, harriers, bulldogs, all terriers (except fox-terriers), dachshunds, toy dogs and miscellaneous, C. H. Mason, New York. Veterinary surgeon, S. J. J. Harger, Professor of Anatomy and Zootechnics, Veterinary Department, University of Pennsylvania.

This seems to be a good working list. Those who will make their debut in the ring as judges are Messrs. Anthony and Smith, both well known in their breeds. Mr. Elliott judged at the Wilmington, Del., show 'in 1891. On 1st Mr. Mason will fall the brunt of the battle. The "premium" list

quite liberal. Mastiffs and St. Bernards are treated the best, with \$10 in challenge, \$15, \$7 and \$3 in open, and \$7 and \$3 in puppy and local classes. Pointers, setters, collies and fox-terriers get \$10 for challenge and \$10, \$7 and \$3 in open, and same as the others in the other classes. Beagles, spaniels (Classification No. 2), Irish terriers and pugs have \$7 for challenge classes and \$7, \$5 and \$3 in the open. Bull-terriers get \$10, \$5 and \$3 in open classes. Russians, greyhounds and deerhounds get \$7 for challenge, sexes together, and \$10 and \$5 in open. Bulldogs and black and tans the same in challenge, but \$7 and \$3 in open, while the following breeds get \$7 and \$3 in open, without challenge classes—foxhounds, harriers and Yorkshire terriers. Those with sexes together and having \$7 and \$3 are Newfoundland, Clumbers, Irish water spaniels, Skye, Scottish, Dandie Dinmont and toy terriers and toy spaniels. Great Danes get \$10, \$5 and \$3; bloodhounds the same, without a third prize. The specialty clubs have responded well, the Mastiff, National Greyhound, Spaniel, Pointer, Beagle and Collie clubs being prominent. The St. Bernard Club also gives medals, but it is not so stated in the list. Kennel prizes of \$15 will be given in mastiffs, St. Bernards, pointers, English and Irish setters, spaniels, fox-terriers, bull-terriers, pugs and beagles. Local classes are also given for dogs residing within the city limits not having won a cash prize at any of the A. K. C. shows. Entries close Feb. 17 with Jas. Watson, secretary, Box 770, Philadelphia, Pa. The Philadelphia Tattersall's is a building well adapted for a show, lots of room and any amount of stall room for keeping dogs between shows.

Baltimore Dog Show.

In the list of prizes we find an increase over the last show in '91. Mastiffs, St. Bernards, pointers, setters, collies and fox-terriers get the cream, challenge \$10 each, and open classes \$15, \$10 and \$5. We are pleased to see the club wastes no money on puppy classes—there are none, and for this the club deserves praise. Breeds which have \$10 for challenge classes and \$10 and \$5 in open are bulldogs, bull-terriers, beagles and pugs. Great Danes, field and cocker spaniels have sexes together in challenge with \$10, and \$10 and \$5 in open, sexes divided. Russians, foxhounds, deerhounds, greyhounds, field and cocker spaniels, dachshunds and black and tans have \$10 and \$5 with no challenge classes. This we think a mistake, as there are some of these breeds which surely should have a challenge class. In all other breeds the sexes compete together and have \$10 and \$5. There are just 100 classes provided.

The judges' list is as follows: Great Danes, foxhounds (American and English), dachshunds and basset hounds, Mr. G. Muss-Arnolt, Tuckahoe, N. Y.; bulldogs, Mr. Charles D. Cagle, Baltimore, Md.; pointers, English, Irish and Gordon setters, Mr. Wm. Tallman, New York; collies and spaniels (field, cocker, Clumber and Irish water), Mr. James Watson, Philadelphia, Pa.; mastiffs, bloodhounds, Chesapeake Bay dogs, fox-terriers (smooth and wire-haired), bull-terriers, pugs, King Charles spaniels, Blenheim spaniels, Prince Charles and Ruby spaniels, Japanese spaniels, Italian greyhounds, Mexican hairless and miscellaneous classes, Mr. Jas. Mortimer, Hempstead, L. I.; St. Bernards (rough and smooth-coated), Newfoundland, Russian wolfhounds, greyhounds, deerhounds, poodles, beagles, Irish terriers, Dandie Dinmont terriers, Skye terriers, black and tan terriers, Clydesdale terriers, Yorkshire terriers and toy terriers, Mr. H. W. Lacy, New York; superintendent, Mr. John Read, of New York; veterinarian, Wm. H. Martenet, D.V.S., of Baltimore.

All these judges will have officiated before. Mr. Muss-Arnolt taking almost the same classes as at New York. The specialties are not yet announced, but kennel prizes of \$15 are given in most of the breeds. The entries close Feb. 25 with W. Stewart Diffenderfer, Central Savings Bank Building, Baltimore, Md., checks to be made payable to the treasurer, C. R. Diffenderfer. This club has so far held losing shows, and it is to be hoped that exhibitors will give them a good entry, as unless this show pays for itself this year, there will be little inducement to hold another. The entry fee is \$3. Spratts Co. will bench and feed and "Sanitas" disinfect.

A New Scottish Terrier.

While at Mr. H. Brooks's charming place last week he told us that he had caught for a crack terrier that came out at Dumfries where she won second open, first novice, and at Paisley another second in the open. She has just arrived on the s.s. Siberian at Boston. This is Princess Alexander from Mr. A. G. Dippie's kennels. She is by Whinstone out of Ashley Lady and whelped April 1st. Color black brindle. Said to have a grand head, ears and eye, perfectly straight legs, correct coat, a little on the large size being her only noticeable fault. She is in whelp to Prince Alexander. This bitch, with Cullbean, Wankie Diana and Wankie Daisy, will make a team of "Scotch lassies" that will make a stir at New York. We spent a day at these kennels last week, "but that is another story." By the way, this kennel is ready to board and condition and handle at the coming shows any dogs for those who cannot afford the time to attend to this themselves. Mr. Green, the manager, is well known as a thoroughly responsible man in this respect.

Field Trials in California.

There is a movement on foot to establish another field trial club on the Pacific coast, with an initiation fee of \$20. They propose to preserve a large tract of ground near San Francisco and stock it for field trial purposes. Should the Pacific Coast Club hold their next trials at Ontario, Cal., as seems probable, it is quite likely that there will be two trials held in that State next year.

Some time since we had occasion to refer to Mr. E. O. Damon's young setter, The Lagard, which was confidently spoken of by good judges of field form. Like Major Murren, P. H. Bryson, etc., as a coming crack. Now he is gone—Mr. Damon advising us of his death by distemper. He was of the same litter as Rod's Chaff, Rod's Sue and Dot Rogers. Only two weeks ago in a run with Maiden Mine, this dog outworked the bitch. Mr. Bryson, who is known as a thorough judge of field work, in a letter to Mr. Damon, writes: "I regret his loss, he was the best youngster I know of and one of the best I ever saw, he had fewer faults than almost any dog I ever saw trained and would have made a brilliant dog." Distemper was brought into Mr. Gilliam's kennels by Mr. Bedford's dogs, but we cannot but imagine there must have been some carelessness somewhere, and owners and trainers should be more careful in admitting to their training kennels strange dogs suffering from cold. The death of this dog is more unfortunate as he would probably have been the only representative from New England in the Southern trials. Mr. Damon has our sympathy.

We called on Dr. Perry last Saturday and had an opportunity to see his new book, in the rough. The publication now only awaits the completion of a few illustrations, and will be ready Feb. 18, and be on sale at the New York show Feb. 21. The first glance through the book will show it is just what the novice requires to guide him in dog keeping and breeding, for among other things it commences with the bitch in season, and accompanies her through all the trials of maternity and then follows the pups to doghood. The illustrations are particularly fine, there being in all about 96 pages of them. These alone will be educational to the beginner as well as some of the older hands. Take Irish terriers, for instance, on one page will be Messrs. Comstock's Dunmurry, Ed. Wiener's Brickbat, Dr. J. H. Marost's Bredenhill, and H. Benner's Stennfield Vic. In bloodhounds there will be Mr. Brough's Burgundy. In pointers E. C. Norrish's

Saddleback and J. E. L. Lloyd's Ilma are seen, Mrs. E. M. Wilkin's Skyes Silver Queen, Carlo III. and Burgundy, who fill a page. Then the Scotch terriers W. W. Stillman's Teazer and W. E. Adcock's Three are given. The fox-terrier pages will be very interesting to lovers of the breed, where Old Spice, Belgrave Joe (15 years old), Trap, Vesuvienne, Venio and Vini are all illustrated with capital pictures; America being represented by Starden's King, Beverwyck Punster and Ripon Stormer. The Irish water spaniels' page has Sam Darbey's Tiverton Victor and Henry Hepworth's Black Gypsy. In pugs, King of Diamonds, Mayor of Leeds, Lord Clover and Bonsor are seen on one page. A particularly charming picture is Mr. E. H. Adcock's great Danes Ivanhoe and Dorothy, and another page is devoted to the crack dog Hannibal. A head of the collie Wellesbourne Charley is also a fine piece of work, and a study of mastiff heads can be found in the picture of Orlando and Beaufort heads. In fact, the very best dogs on both sides of the water are represented and placed with a due appreciation of relative size, so that the learner can see for himself the different types and sizes of dogs. The head pieces are also peculiarly applicable to the chapters that follow, many of them being scenes taken from life at Dr. Perry's country home. "Ashmont" intends to bring out three volumes. "Kennel Secrets" will be the first, and will be on management principally; the next on "Diseases," and Vol. III. on "Training," and this will combine most of Mr. Waters's book. Thus "Ashmont" expects to cover the whole ground, and rest on his labors. The price of "Kennel Secrets" will be \$3; which is cheap enough.

It has been subject for comment that the National Beagle Club has not donated a special at the W. K. C. show. The N. B. C. was notified by the bench show committee a week before they held their last meeting that unless they, the W. K. C., were advised at once of the specialties they intended to give they could not be accepted. For this reason it was too late to do anything in the matter at the N. B. C. meeting held Jan. 16. We can but think, however, that there was some misunderstanding, as specials are continually being received since the premium list was published.

A few members of the Duquesne Kennel Club met at the Hotel Schlosser Jan. 20, but no business of importance was transacted. It was agreed to continue the same club officers. There will be another meeting called to decide about holding a show this year.

There seems to be no limit to the artistic endeavors of some of our breeders in getting up their catalogues. Mr. Jamieson is now preparing one which will contain ten half-tone pictures of his noted beagles. His dogs are all in good shape, not an ailing one among the twenty-five beagles now in his kennel. Recently a rather peculiar accident happened to one of his beagles. The dog seemed to have a bad cough, and developing all the signs of pneumonia was at once removed from the others. He was given all available remedies for the supposed malady and nourished with every dainty to tickle his waning appetite. He did not improve, however, and wasted to a mere shadow, and after an illness of five days went to happier hunting grounds. His kennelman insisted on having the dog opened, and the autopsy revealed a piece of a tenpenny nail about 1½ in. long lodged in the esophagus where it enters the stomach, or in medical terms, the cardiac orifice. The nail was crosswise, and having worked down, the membrane was considerably lacerated. He evidently starved to death, and the extreme irritation occasioned the violent coughing with which he was at times afflicted. Though probably no one could have saved the dog it is always well in such cases to call in the services of an experienced vet., who may at least be able to alleviate the dog's sufferings even if he did not divine the immediate cause.

Our only German is tasting the bitter these days. On Monday he lost the fox-terrier bitch Warren Sparkle while whelping to their Grove Tipster (Blentom Rasper—Blentom Verity). Two or three puppies came, then one got crossed and the effort to dislodge this one proved too much for the bitch, she dying a few minutes after; several more pups were found in her dead.

Mr. E. M. Oldham will not thank the donor of the special for the best-moving spaniel in the show. Judging the ordinary classes at New York is quite enough, without putting such a movement on foot.

Mr. Green, manager of the Waukie Kennels, and Mr. H. Brooks, the proprietor, are dabbling a little in spaniels, having purchased from Mr. Bell two spaniels by Pekoe out of Rose Palmer. They were bred by J. W. Spracklin, of Woodstock, Ont. One will go as a field, the other as a cocker in the puppy classes at New York.

First boy—Is that a good watch dog? Second boy—No. "Good bird dog?" "Nope." "Good for rabbits?" "Nope." "Knows some tricks, maybe?" "Nixie." "What is he good for?" "Nathin," only to take prizes at dog shows."—*Good News*. A pretty good fault, some people think.

We do not think that there will be a very large entry of Eastern dogs at Chicago, though, of course, some of the regular handlers, such as Ben Lewis, will take on a string. The Duchess Kennels will also, probably, be on hand and Frank F. Dole is, we hear, going out with a few crates full. Mr. W. C. Reick has donated a silver medal, valued at \$25, for the best kennel of rough-coated St. Bernards entered and owned by one exhibitor.

We should have acknowledged the receipt last week of Mr. Rathbone's photographs of "Beverwyck Samples." There are samples and samples, but to the lover of a terrier we think those that Mr. Rathbone sets up will take the "Spratts," "Giving His Feet a Rest," "Work," "A Little Scrap," "Rats" and "Is This Bone Enough?" are all scenes familiar to the terrier man, and wonderfully well done.

There was a poultry and dog show held at Lansing, Mich., Jan. 17 to 20, but although the stock exhibited was good, especially the poultry, the attendance was poor and the show was a financial failure.

Mr. D. E. Gurney, of Kansas City, Mo., owns a good cocker in Man in Black, a son of Obo II. ex Mystery, a daughter of Darkie. Mr. Gurney's dog came from Geo. Bell's kennels. By the way, the latter blossomed out as a game fowl judge at Gloversville, and was put up to decide the special for best gamecock in the show. Mr. Bell showed us a new cocker at Gloversville that he kept at the hotel. This one is Realization, and the blue ribbons our Canadian friend expects to take with it at the W. K. C., where it will make its debut, are only limited by the number of prizes it will go for.

Mr. Phil Daly's Brookside Kennel of English setters and pointers contains something like seventy dogs. Mr. Daly is becoming quite a frequent exhibitor at shows, but with, so far, indifferent success.

A "pedigreed bulldog" we are told, was matched Jan. 25, at Laramie, Wyo., to kill a full-grown wildcat. This would seem a pretty large undertaking for the dog, but the latter succeeded in sending pussy "up a tree" in three minutes. Another wildcat has been secured for another battle, but in this one the police may take a hand.

The English papers seem much amused at the tale of the

dog and wolf fight in a Texas village as related by a correspondent to the *Daily Graphic*. The wolf owner challenged any dog in the town to mortal combat, on the part of the wolf. With the usual fixings the story winds up with the ferocious bull-dog, after "tasting" the very mild wolf, slinking off and having no more to do with the fun, some mixture having been put on the wolf's coat by its astute owner. This must have occurred in a very new Texas town, if it occurred at all, which is doubtful, as the very average owner of a "business" dog in a Texas town would know his business better than to be taken in by any such "rank" fraud.

The following specials given by the Bulldog Club at New York were donated too late for the W. K. C. premium list: A silver medal, value \$10, presented by a member of the Bulldog Club for the best bulldog or bitch owned by a member of the club resident in the Middle States; a silver medal, value \$10, presented by Mr. William Mariner, of Milwaukee, Wis., for the best bulldog or bitch owned by a member of the club resident in the New England or Southern States; the Bulldog Club of England offer one of their silver medals for the second best bulldog in the show of the same sex as the winner of the grand trophy and owned by a member of the American Bulldog Club; the Bulldog Club of America offer a silver medal for best bulldog or bitch owned by an exhibitor, a non-resident of the United States. This makes 25 specials in all offered by this go-ahead specialty club.

"Segusian," in *Scottish Fancier*, is generally local in his writings or we would have more to say of him. Sometimes he gets off a tid-bit, and here is the latest: "Why is Millais like a dog that chases its tail? Because he never reaches his conclusion."

New Fox-terriers.

Mr. H. W. Smith, who it is well known, has developed a liking for fox-terriers, wires in particular, has received his Daylesford Broom from England, also a young bitch of the old Cleveland breeding and winner of two firsts at Nottingham when first shown. He has also bought the crack wire hair bitch in England. She is now in the challenge class, but we can only guess at her name. Particulars are to follow. He wanted something "wonderfully good," but the best judges said the young stock was not up to the mark, so he had to get the older one. He also bought a young dog 10 months old, winner only time shown before sailing, of three firsts, and all specials. He also went to headquarters and got from Mr. "Carlisle" Carriack a "dark" bitch, one of his breeding, and said to be a cracker. With this assortment Mr. Smith should be able to repeat some of his old-time victories when he dabbled in greyhounds. He is also after a real stunner as a stud dog, in England, and if he succeeds in getting it, we are told to look out. This is all *sub rosa* at present, but we shall be able to give full particulars in due season. There is no doubt that the wire-hairs are coming along finely, and with importations like these the public will soon be able to form an idea of what the good ones are like.

Mr. John Ferguson, late of Philadelphia, Pa., who owned the Dandie Dinmont terrier Sir Robert, has gone to England with no intention of returning. Before he went he sold Sir Robert to Mr. Ed Brooks. Thus Mr. Brooks is prepared for Geo. Raper in whatever mood the latter may be. It will be remembered that Mr. Raper last year put Sir Robert over King of the Heather at New York, Philadelphia and Pittsburg. Mr. Brooks has also sent over to Mr. James Clarke, of Dumfries, for two brood bitches to improve his stock. Otterhounds may also be found among his team of dogs before long, as three otters have been marked near his place and Mr. Brooks's sporting instincts are aroused. Mr. Wipser, of Philadelphia, Pa., now owns Laird of the Heather, that Mr. Brooks imported this last summer, the latter having presented the Dandie to him, and Mr. Wipser is so pleased with the dog that he has become a Dandie man and wants a bitch or two now. There is an old scriptural text about casting your "bread upon the waters" that fits very applicably in some of the new breeds in this country.

We understand that in Mr. Austin Corbin's Park, in New Hampshire, the wild boars are multiplying, and to keep them down Mr. Corbin intends to have some boar hunting. To this end he has imported about a dozen young boarhounds from Germany and is anxious to have some gentlemen take part in the hunt with him, so we were told while in Boston. Wild boar hunting is pretty risky business, but it must be great sport, as each have an equal chance. Who knows but pig-sticking may become a fashionable sport in this country.

Mr. W. E. Iselin, of the Westchester County Club, has established a pack of beagles and promises to show some sport. The country round is being stocked with jack rabbits and English hares. There is said to be much impatience for the opening of the season. We don't know how jack rabbits and beagles will mix. For our own part we fancy they will keep far apart, and afford plenty of exercise for those who follow.

Among the new business in our Kennel columns we find that Meadow City Kennels offer English setter stock for sale; A. Armstrong, trained Irish setter; J. H. Lyke, Kingston Regent puppies; H. Benton, young spaniel; H. G. Thompson, pug pups; Silas Decker, Irish setters and collies; 24 East Twelfth street, English setters; Thasmo Kennels, fox-terrier pups; Rochelle Kennels, fox-terriers and Newfoundland. In the stud—Meadow City Kennels' English setters The Corsair and Rod's Chaff; Charlottesville Kennels' pointer Exile; Thasmo Kennels' fox-terrier Hillside Tarquin. New York St. Bernard Kennels want foster mothers. We also draw attention to the new publication, "Kennel Secrets," by "Ashmont," which will be issued shortly. Also the advertisement of the Keystone and Maryland kennel clubs' show. In this issue will also be found the merits of Buchanan's Soap and Wash fully set forth.

At the Somerset Club we met several of the New England Field Trial Club members and the prospects for the next trials were talked over. The trials will probably be held much earlier this year; Oct. 15 is spoken of. The idea at present is to hire one of the farmhouses on the preserve and fit up rooms where judges, members of the press and officers of the club, etc., will have quarters, and the catering be properly attended to on the hotel or club principle. Spectators and the crowd can make such arrangements as they require. This is to avoid the Town Hall nuisance and the necessity for those barges and their grasping proprietors. The stakes will be materially increased and probably pointer and setter stakes made, as at the Central trials. There seems to be a feeling that if the new Beagle Field Trial Club formed last week will agree to it, the New England Field Trial Club would like them to join issues and the trials be given by the latter club. There is a good deal in this. Better prizes, for instance, and such a move would, we think, benefit beagle interests in New England.

New England Beagle Trial Club.

The preliminary steps towards forming this club were taken on Thursday evening, June 20, at Young's Hotel. There were present Messrs. F. W. Chapman, B. S. Turpin, W. S. Clarke, H. S. Brown and the FOREST AND STREAM representative. After deciding upon the name, the constitution and by-laws were adopted, in some respects differing from those of the National Beagle Club. No permanent officers were elected, but this will be done in due season by mail.

vote at the next meeting on Fast Day. It was decided to place the initiation fee at \$2, annual dues \$3. This is scarcely sufficient, as it affords little money for the trials. The following gentlemen are down as members: J. C. Dawes, Kingston, Mass.; E. B. Hayden, Plymouth, Mass.; H. S. Joslin, Oxford, Mass.; H. H. Brown, Melrose, Mass., who was elected veterinarian to the club; W. S. Clarke, Linden, Mass.; H. V. Jamieson, Melrose, Mass.; B. S. Turpin, Dorchester, Mass.; W. J. Scharf, Washington, D. C.; P. C. F. Hoffman, Rockville, Conn.; N. Rowe, Chicago, Ill.; H. W. Lacy, New York; Henry Hansen, Fall River, Mass.; Geo. F. Reed, Barton, Vt., and A. Parry, Franklin, Mass. Mr. Chapman, who has been working the thing up, has had a number of letters from beagle men who will support the trials.

A meeting of the N. E. K. C. was held on Thursday evening last and the prospects for the coming show were talked over. The premiums in many of the classes will be advanced, and nearly every breed will have four prizes. The judging question will be the next to decide and there may be some new faces seen in the ring.

Little Johnny—Dogs don't need to talk, 'cause any one can understand their bark. Visitor—Can you? Little Johnny—Easy as rollin' off a log. When my dog is at the door and barks, that means he wants to get in; if he's inside the door and barks, that means he wants to get out. Visitor—Humph! Suppose he is half inside and half outside and barks, what does that mean? Little Johnny—That means that there's a bigger dog than him in our yard.—*Good News.*

For Sale—A bull-terrier dog, two years old. Will eat anything; very fond of children. Apply at this office.—*Advertisement in English Paper.*

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Frank B. By J. M. Brown, Newport, R. I., for blue and tan ticked English setter dog, whelped Sept. 22, 1892, by Joe Brown (Gus Gladstone—Fairy Blonde) out of Lillian Russell (Don—Tinnie B.).
Co. B. By J. M. Brown, Newport, R. I., for blue belton, black ears, English setter dog, whelped Sept. 22, 1892, by Joe Brown (Gus Gladstone—Fairy Blonde) out of Lillian Russell (Don—Tinnie B.).
Lillian B. By J. M. Brown, Newport, R. I., for blue belton English setter bitch, whelped Sept. 22, 1892, by Joe Brown (Gus Gladstone—Fairy Blonde) out of Lillian Russell (Don—Tinnie B.).
Ella B. By J. M. Brown, Newport, R. I., for orange and white English setter bitch, whelped Sept. 22, 1892, by Joe Brown (Gus Gladstone—Fairy Blonde) out of Lillian Russell (Don—Tinnie B.).
Ned Brown, Roland B. and Jennie B. By J. M. Brown, Newport, R. I., for black, white and tan English setters, two dogs and one bitch, whelped Sept. 22, 1892, by Joe Brown (Gus Gladstone—Fairy Blonde) out of Lillian Russell (Don—Tinnie B.).
Alice B. and Sallie B. By J. M. Brown, Newport, R. I., for black and white English setter bitches, whelped Sept. 22, 1892, by Joe Brown (Gus Gladstone—Fairy Blonde) out of Lillian Russell (Don—Tinnie B.).
Reginald's Boy, Rajah, Raven, Robin and Roy. By W. H. Worth, Chicago, Ill., for five black and tan Gordon setter dogs, whelped Dec. 29, 1892, by Reginald H. (Leatherstockings—Smith's Rhoda) out of Nan (Champion Argus—Laura).
Daisy, Nougat and Nery. By W. H. Worth, Chicago, Ill., for four black and tan Gordon setter bitches, whelped Dec. 29, 1892, by Reginald H. (Leatherstockings—Smith's Rhoda) out of Nan (Champion Argus—Laura).

BRED.

Prepared Blanks sent free on application.

Jessie—Jake. Multinomial Kennels (Portland, Ore.) Chesapeake Bay bitch Jessie (Doc—Jess) to E. O. Mase's Jake (Drake—Kate), Jan. 5.
Countess Addie—Kent II. A. D. Fiske's (Worcester, Mass.) English setter bitch Countess Addie (Count Noble's Boy—Clip Rodgero) to Cohannet Kennels' Kent II. (Count Howard—Lady Westmoreland), Dec. 11.
Lalla Rookh II.—Hiawatha. C. K. Farmer's (Hartman, Mich.) Irish setter bitch Lalla Rookh II. (Paddy Sarsfield—Irene D.) to his Hiawatha (Tammany—Frances), Jan. 15.

WHELPS.

Prepared Blanks sent free on application.

Lillian Russell. J. M. Brown's (Newport, R. I.) English setter bitch Lillian Russell (Don—Tinnie B.), Sept. 22, nine (four dogs), by E. W. Openshaw's Joe Brown (Gus Gladstone—Fairy Blonde).

SALES.

Prepared Blanks sent free on application.

Carl. Black, white and tan rabbit hound dog, by F. H. Hayes, Dexter, Me., to L. C. Williams, New Britain, Conn.
Carl. Black, white and tan rabbit hound dog, by F. H. Hayes, Dexter, Me., to W. P. Barker, Naples, Me.
— Black, white and tan foxhound bitch, by F. H. Hayes, Dexter, Me., to Frank Clune, Saco, Me.
— Black, white and tan coon hound dog, by F. H. Hayes, Dexter, Me., to J. L. Dexter, Edgarton, Mass.
— Black, white and tan foxhound bitch, by F. H. Hayes, Dexter, Me., to J. S. Jeffers, Westfield, Mass.
Ranger. Black, white and tan rabbit hound dog, by F. H. Hayes, Dexter, Me., to A. C. Deney, Batavia, N. Y.
— Black, white and tan foxhound, by F. H. Hayes, Dexter, Me., to E. N. Cummings, Fitchburg, Mass.
Bell. Black, white and tan coon hound bitch, by F. H. Hayes, Dexter, Me., to W. Barnes, Bristol, Conn.
Bell. Black, white and tan rabbit hound bitch, by F. H. Hayes, Dexter, Me., to Dr. H. Allers, Harrison, N. J.
Hunter. Black, white and tan rabbit hound dog, by F. H. Hayes, Dexter, Me., to J. W. Finley, Brockton, Mass.
Hunter. Black, white and tan coon hound dog, by F. H. Hayes, Dexter, Me., to W. C. Capron, Chapinville, Mass.
Doyle. Black and white coon hound dog, by F. H. Hayes, Dexter, Me., to F. W. Uttings, Plattsburgh, N. Y.
Trailer. Black and white rabbit hound dog, by F. H. Hayes, Dexter, Me., to Jas. Marra, Florence, Mass.
— Black and white rabbit hound dog, by F. H. Hayes, Dexter, Me., to W. P. Barker, Naples, Me.
— Black, white and tan foxhound dog, by F. H. Hayes, Dexter, Me., to C. M. Palmer, New Britain, Conn.
— Black, white and tan coon hound, by F. H. Hayes, Dexter, Me., to F. K. Denning, Lisbon, N. H.
Hinder Mark II. and Ouida F. Black, white and tan English setter dog and bitch, whelped June 1, 1892, by Gath's Mark out of Ruby's Girl, by Blue Ridge Kennels, Sperryville, Va., to Oak Grove Kennels, Moodus, Conn.
Belle F. Black, white and tan English setter bitch, whelped March 5, 1892, by Dan Gladstone out of Belle of Piedmont, Jr., by Blue Ridge Kennels, Sperryville, Va., to Oak Grove Kennels, Moodus, Conn.
Piedmont and Blue Belle. Black, white and tan English setter dog and bitch, whelped May 23, 1892, by Antonio out of Belle of Piedmont, Jr., by Blue Ridge Kennels, Sperryville, Va., to Oak Grove Kennels, Moodus, Conn.
King Antonio and Dixie F. Black, white and tan English setter dog and bitch, whelped Oct. 23, 1892, by Antonio out of Princess Joy, by Blue Ridge Kennels, Sperryville, Va., to Oak Grove Kennels, Moodus, Conn.
Nellie F. Black, white and tan English setter bitch, whelped July 17, 1891, by Gath's Mark out of Molly Belton, by Blue Ridge Kennels, Sperryville, Va., to Oak Grove Kennels, Moodus, Conn.
Forster's Mark II. and Gypsy Mark. Black, white and tan English setter dog and bitch, whelped Aug. 1, 1892, by Gath's Mark out of Ollie T., by Blue Ridge Kennels, Sperryville, Va., to Oak Grove Kennels, Moodus, Conn.
Count Antonio and Huntress. Black, white and tan English setter dog and bitch, whelped Oct. 2, 1892, by Antonio out of Miss Nellie Y., by Blue Ridge Kennels, Sperryville, Va., to Oak Grove Kennels, Moodus, Conn.
Monk's Nun and Furness Maid. Black, white and tan English setter bitches, whelped Aug. 22, 1892, by Monk of Furness out of Bloom Mur, by Paul H. Gotzian, St. Paul, Minn., to Oak Grove Kennels, Moodus, Conn.
Beulah Furness and Daisy Furness. Black, white and tan English setter bitches, whelped Aug. 23, 1892, by Monk of Furness out of Susan, by Paul H. Gotzian, St. Paul, Minn., to Oak Grove Kennels, Moodus, Conn.
Nym Rod. Blue belton English setter dog, whelped May 21, 1892, by

Rowdy Rod out of Spectre, by Wm. Bryce, Jr., New York, to C. L. Wright, same place.

Jennie Z. Black, white and tan English setter bitch, whelped Sept. 22, 1892, by Joe Brown out of Lillian Russell, by J. M. Brown, Newport, R. I., to H. L. Hassbrook, Poughkeepsie, N. Y.
Ned Brown. Black, white and tan English setter dog, whelped Sept. 22, 1892, by Joe Brown out of Lillian Russell, by J. M. Brown, Newport, R. I., to R. A. Bromhead, Staatsburgh, N. Y.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

C. W. L. Sag Harbor, L. I.—A. C. Wilmerding, 63 Broadway, New York. Watch our advertising columns.

D. M. Fatesville, Pa.—Consult our advertising columns for the foxhound kennels. In them are some of the best strains.

C. R. K. Apollo, Pa.—Can you give me the breeding of the pointer Jetsam, imported 1885? Ans. Jetsam (E. K. C. S. B. 16,345), by Sambo out of Diana.

E. W. T., New York.—What do you consider a good treatment for distemper? Ans. Keep dog warm and allow no exercise, vary the diet as much as possible, give plenty of milk and one grain of quinine three times a day.

W. S., San Francisco.—If a man raises, trains himself and runs a dog in a public field trial, like the English Foxhound trials, for moneyed consideration, is he considered a professional trainer? Ans. Certainly not. A professional trainer is generally understood to be one who trains dogs for a living or is paid by other owners to train dogs.

C. C. C., St. Anthony Park, Minn.—I have two pointers that I would like to teach what I can at home, and as I do not know how to break bird dogs will you kindly tell which of the books you advertise would give me the most practical information on training, etc.? Ans. Hammond's "Training vs. Breaking," price \$1, would probably suit your purpose, while Waters's "Modern Training" treats of the subject exhaustively; price \$2.50.

Wm. Kramer, Parkersburg, W. Va.—What can you prescribe in the case of my setter bitch whose hair is falling out. She had the mange last summer, and in places where the hair was off a new growth grew; now, the skin in these is covered with dandruff and it causes the new hair to fall out. I keep her in a warm, clean kennel and can not understand what caused the sickness. She is about in heat, can that be the cause of it? Would you advise breeding her? Ans. Do not keep in too warm a place; treatment see Ans. to J. P.

J. H. Harrison, Schuylers Lake, Otsego County, N. J.—I have an English setter pup about eleven months old; he has had chills for two days, will not eat anything, his hair is coming off very fast, his eyes are very red and skin will partly cover his eyes sometimes; his eyes have been so since he was three months old. I have doctored him for worms with area nut and with santoline, but have not got any from him; his coat looks dead, he is generally smart, but very poor at present; please tell me what you think is the matter with him and prescribe. Ans. Again treat for worms. Give the following mixture:

Ferri phosph. 3 iss
Tr. nucis vom. 3 i
Liq. arsenicalis mxxvii
Aq. ad. 3 vi

Wash the dog twice a week for a few weeks in a solution of creolin, one part of creolin to forty parts of water. Tablespoonful three times a day. Give some raw meat daily in addition to the usual diet.

C. W. F., Cleveland.—Will you kindly give me information how to treat my pointer dog for cancer in the ears? It is not the common cancer, but seems to have a sort of an eczema connected with it. The flaps of the ears and the front of face and around the eyes being affected. The lower outside opening of the ear under the earlaps is very sore, and his hearing is bad, sometimes cannot hear at all, unless I use the whistle. Appetite is good. Feed him on stale bread and very little meat and bones. Ans. Pour a little of the following lotion into the ears twice a day and to the sore places apply frequently during the day:

Liq. plumbi sub-acet. 3 iv
Liq. opii 3 ii
Aq. ad. 3 viii

Mix. Lotion. Apply as directed; also give the following powder:
Mag. sulph. 3 i
Mag. carb. 3 ii
Pot. bi-carb. 3 i
Mix and make twelve powders, give one twice a day mixed with the food.

Loup, Broken Bow, Neb.—My bitch (English setter) four years old has been bred twice, the last time in August, 1892. For the past two months she has acted like a bitch in heat and would allow any dog to cover her. Once, I am sure she has been fast. Am obliged to keep her separate from the males in my kennel. The vagina is of normal size but seems hard and slightly inflamed. Can you suggest a remedy? Ans. Sprinkle out the vagina twice daily with a solution of bi-chloride of mercury (one part of bi-chloride to 5000 parts of water). Do not use a stronger, as bi-chloride is very poisonous. If after this there is no improvement take the dog to a veterinarian and have a thorough examination of the parts made.

J. P., Grand Crossing, Ill.—Treat for worms. Give the following mixture:

Mag. sulph. 3 i
Ferri sulph. 3 i
Acid sulph. dil. 3 i
Aq. ad. 3 viii

Mix. Give one tablespoonful twice a day.
Mix the following together and well rub all over the dog every other day:

Sulphur sub. 2 lbs.
Kerosene 30 "
Oil of tar 10 "
Sperm oil 1 gal.

J. T. C.—Will you kindly inform me through your columns as to the essential points in a fox-terrier, the most reliable kennels where one may be procured, and anything else that would help to make an intelligent purchaser. Ans. You would do well to read up on the breed in Rawdon Lee's "Fox-Terrier," sold by us, \$1.50. The breeders who advertise in our columns can supply you with good dogs.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, information concerning their local waters' drawings or descriptions of boats and fittings, and all items relating to the sport.

CANOE NEWS NOTES.

Ex-Commodore Winne has recently had made by Dominick & Haff of New York, a large and very handsome cigarette case of sterling silver lined with gold, the front bearing the following inscription: "To Wm. R. Huntington, Chairman Site Committee, American Canoe Association, 1892." With the sincerest appreciation of his efforts, which in no small degree contributed to the success of the meet, by Charles V. Winne, Commodore. Last week Messrs. Winne and Wackerhagen visited Rome, and presented the case to Mr. Huntington.

The Knickerbocker C. C. will hold another smoker on Feb. 4, at the club house, One Hundred and Fifty-second street, at 8 P. M.

Mr. Poultny Bigelow's cruise down the Danube is being in part republished in German in the *Wassersport*.

To Florida in a Cape Catboat.

THE Cape catboat *Reine* has lately reached Florida after a long cruise, following in part the route of the *Coot* in 1885. She is 25 ft. long, and was built for Capt. Arthur Hayh, an English yachtsman who has been for some time about Boston, being a member of the South Boston Y. C. Captain Hayh has made the entire trip, from City Point, Boston, to Florida, with one companion. After rounding Cape Cod a stop was made at Osterville to repair the water tanks, and further delay followed at Vineyard Haven and Newport through bad weather. Leaving Newport with a fair wind, which only lasted about an hour before it hauled ahead with heavy rain, we had to put into Block Island harbor; and from there to New York, with the exception of half a day, we had constant head winds, and in spite of very early starts made very slow progress.

On reaching Throgg's Neck, with both head wind and tide, we were halted by a tugboat, which, after some bargaining, agreed to take us to Bay Ridge for \$7, which, when I found how far it was—about twelve miles—I did not think excessive.

We stayed in New York two weeks, lying at South Brooklyn, and left there on Thursday, Oct. 27, at midday, anchoring at Perth Amboy. Next day, with a fair tide but a head wind, we beat up the Raritan River, reaching the first lock at New Brunswick about 2 o'clock, and as I was anxious to be getting on at once, I took a team of four mules at six cents a mile to take the boat up the river.

The canal is forty-four miles long from New Brunswick to Bordentown, and we got through the first ten miles by dark. Next day we were fortunate in getting an obliging driver who, in consideration of a promise of occasional liquid refreshment, was very careful, and in starting out of the locks pulled the tow himself till we got started, and got us to Bordentown in time to be locked out that night; otherwise we should have had to remain over Sunday. I should advise any one taking a boat through the canal to have a mattress or something of the kind, as if you have to stop and get alongside the bank it is almost impossible to avoid some friction until you get headway. We left a good deal of paint in the first two locks in spite of three fenders, but after that we got on all right.

The scenery is uninteresting and Trenton is the only town you pass. We spent an hour there while the mules were fed; it seemed all mills and dust, the latter filling the boat. I went ashore, where I was charged thirty-five cents for 2½ lbs. of beefsteak and found it all right I came to the conclusion that the place had at least the advantage of being cheap.

On Sunday we started down the Delaware, of course with a strong headwind, and reached Philadelphia that night. Starting early next morning, we went on in the evening a few miles the other side of Wilmington, and next day, the wind being light, we did not reach the Delaware and Chesapeake Canal till evening.

We came through next morning, it is only thirteen miles, with three locks, and in some parts is quite pretty. It takes in some small lakes, which, judging from the number we saw fishing, are full of fish. When we got to Chesapeake City there was no wind and the tide was rising, so we waited until the tugboat came up in the evening and were towed down.

Next day we beat down, and as the weather looked very threatening, decided to make a harbor, which we did in a small creek on the east side of the bay, which forms an excellent harbor, as it is completely landlocked. Once in, a N.W. gale made it impossible to get out, even if we had wanted to, as the channel is crooked and narrow. After the gale subsided we continued our cruise without special event to Annapolis and back to Washington.

The weather was quite rough, and our best run was from the Rappahannock River to Norfolk, about fifty miles, where we arrived early in the afternoon of Nov. 12. We stayed until the 5th, when having made arrangements with the towboat people, they sent a tug for us in the afternoon and we started about 3 o'clock. It happened that this was the only boat going through that day, so we had the tug all to ourselves and it stroked us a little after dark.

It was a miserable evening and very dark. I had thought they would decide to lie over till morning, but as the storm cleared off they kept on and we reached North Landing River about 4 A. M. I should advise any one to wait and go through by day, even if it delays them a day or two. The canal is narrow, and we had to pass several rafts of lumber. It is difficult to avoid striking them.

Currents in the North River are full of snags. Probably when you are following a tow of schooners or barges, they go fast enough to take any damage, but when in North Landing River, near where the tug dropped us, we struck a sunken log which knocked a hole through one of the planks. We did not find it out until we anchored, and then as it was above the waterline, we were able to nail a piece of canvas over it. The towing is cheap, for they only charge \$2 towage and canal dues for 60 miles.

Next day we had a stroke of luck: the captain of a tugboat with a tow of barges going down the sound hailed us and said, "Thru on ahead," and he towed us along through Albemarle Sound free of charge for 90 miles. The weather was warm, but the wind was very light and it helped us along considerably. He dropped us in the evening of the day following about 8 miles from Core Sound, and as it was quite calm we got as near the land as we could and anchored for the night. About midnight a blow began to blow hard and in the morning we put in five reefs and ran behind a small point, getting our anchor down, and in time, as for about three hours we had almost a hurricane. We had to trust to our anchors, which fortunately held. We could not carry any sail and the sea got up very quickly, the wind went round several points and the land did not afford much protection. About the middle of the day the wind freed a good deal and we got into Core Sound all right.

Next day we had a fair wind through the sound. The latter is very shoal and the channel is crooked, but fairly wide and well buoyed out. We reached Beaufort Inlet, N. C., at dark, but did not go up to the town until next day. There we were detained some days for repairs. It was only half a day's job, but the first two days the workman was doing something else, and then was so slow that it took nearly a week altogether.

I intended to take a pilot there for Charleston and got one named Youmans, who was recommended to me and who said himself that he was really the only one who was acquainted with all the inlets. We took Boyne Sound as far as Beaufort, and he showed his knowledge of that by running us aground several times. The first time he jibed with very little sheet out and broke the boom, it took us all we could do for half an hour to get aloft, then considerably longer to patch up the broken boom again with our own poles. The second time we reached Boyne Inlet he complained of being unwell and said he was not fit to go any further, but promised to find a good pilot in Swansborough, a small place close to.

Next morning, as no one turned up and the wind was fair, we started off alone and made New Topsail Inlet that afternoon. Next day we came to Wrightsville Inlet and the day after to Corneale Inlet, which leads behind Cape Fear to Southport. We did not feel very comfortable at first, as the inlets constantly change and for them charts are no good. There being but two of us we were short-handed for sailing at night and made short time.

Between Beaufort, N. C., and Charleston there are lots of good inlets all the way, with plenty of water for light draft boats at any tide, so one can make easy runs. At Southport, N. C., we took a pilot for Charleston and he was much more satisfactory than the first. He was one of the regular pilots there, but did not propose to take us much about the coast except around home. However, he was an extra hand and was quite willing to make himself generally useful.

We left Southport in the afternoon and reached Wingham Bay next day; there we were becalmed two days. It is an out of the way place, with plenty of ducks and other game. I went out gunning in the afternoon and succeeded in shooting a wild pig, which provided us with some excellent pork. From there we proceeded to Charleston, where we remained for some days to have a boom made.

Here we met a yacht bound for Biscayne Bay, Florida, so we both waited for a good chance to go outside; when the chance came we found, on reaching the mouth of the harbor, that it was thick outside and blowing fresh inside, so we let the other go on and took inside route. It is a good deal further, but it is certainly more interesting, and we came along very well on the whole. About 10 o'clock, instead of reaching Port Royal Sound as we intended, we struck on mud flat (not on the chart), going high and dry till evening. The other boats seem to have had trouble with their pilots from Beaufort, N. C. If any members of the club sail South they had better be careful, as they are supposed to know the way out of the different inlets you may have to make; but if one has a full crew he can just as well alone. I hope now, if we do not get on many more mud flats to reach Florida in ten days. It is really longer in a small boat than one can imagine, though, of course, if there is a full crew who can relieve each other one can make much better time.

DETAILS OF CHOCK AND RUNNER.

A Cheap Ice Yacht.

The excitement of ice-yachting is only equalled by its uncertainty, and even such severe cold weather as that recently experienced about New York gives no guarantee of good sailing; in fact the deep snows have stopped the sailing and racing which began so early this winter. Except in specially favored localities, an ice yacht, when wanted at all, is wanted in a very great hurry, and being a cumbersome and unwieldy thing to house and care for, it is likely to suffer neglect and abuse in the long intervals of disuse. The accompanying drawing, for which we are indebted to a correspondent, shows an ice-yacht of very simple and inexpensive construction, which is very satisfactory as a sailer, and yet can be taken apart or put together in a few minutes. The boat is the seventh built by her owner, and is decidedly superior to the earlier ones.

There are many localities where a small ice-yacht of this sort kept always ready to be put together would furnish a great deal of sport, the construction being little more difficult or expensive than the many crude makeshifts which are thrown together in a hurry wherever a clear field of ice presents itself; and which, when the sailing is done with, are left to fall to pieces on the shore. The dimensions of the craft are:

Runner plank.	10ft.
Keel.	17ft. 4in.
Main plank.	12ft. 3 1/2 in.
Mast, heel to bounds.	12ft. 9 1/2 in.
Diameter at heel.	3 1/2 in.
Boom.	14ft. 9 in.
Gaff.	8ft. 8 in.
Mainmast hoist.	5ft. 7 in.
Loch.	30ft.
Jib luff.	13ft. 3 in.
Hoist.	12ft.
Foot.	4ft. 6 in.
Area.	27sq. ft.
Total area.	163sq. ft.
Total weight.	300lbs.

The keel is a stick of dry white pine 6x3in., tapered to 4x4in. at the after end; and from the mast forward chamfered and then rounded to a diameter of 2in. at the band. The runner plank is also of white pine, 4in. wide, 7in. deep at the middle and tapering to 3 1/2 in. at each end. One bolt of 1/2 in. diameter, connects it with the keel. At each end is a casting of iron with a socket on top into which the end of the plank fits, being secured by two bolts, one an eye bolt and one a plain machine bolt, 3/8 in., tapped into the casting. On top of the keel is a plank of white pine 15in. wide and 1in. thick, stiffened beneath by chocks of 1 1/2 in. The plank is bolted through the keel, as shown. The rudder stock is a composition of iron casting, or oak may be used, being cheaper. It is slotted for the runner, which is held by a 3/8 in. bolt, the hole in the runner being 1/2 in. All of the runners are of cast iron 2 1/2 in. thick and 4 1/2 in. wide the two main runners being 2ft. 6in. long and the rudder 1ft. 8in. long. The boom is 1 1/2 in. diameter and the gaff 1 1/2 in. The sails are of 6 1/2 oz. single blighted, costing \$12. The jib stay, shrouds and side stays are of 1/4 in. galvanized iron wire rope, all set up with turnbuckles and shackles. The plank will hold three persons, the weight being so distributed that there is little strain on the boat. The cost of the whole construction, including sails and rigging is under \$45, the castings for runners, chocks and rudder stock with the necessary fittings costing about \$12.

Ranee.

MESSRS. READ BROS., at Fall River, are at work on a 30ft. keel yawl for H. W. Eaton, of the Seavanhaka and Larchmont clubs, to replace the yawl Rajah, recently sold to Mr. Walter C. Hubbard. The new yacht was designed by Mr. John Hyslop, in collaboration with Mr. Eaton, to carry the same yawl rig which the latter put on Rajah last season, the end in view being a cruiser fast enough to be raced at times. As the sail plan is quite moderate, the displacement has been kept down, the model being of the semi-in type of the Southampton boats of two or three years since, and like the Gardner boat Pyxie. The dimensions are: Stem head to taffrail, 42ft., l.w.l. 30ft., beam 10ft. 3in., draft 6ft. 6in., displacement 12 tons. The accommodation will be quite extensive, including a main cabin 7ft. 6in. long, forward of which is a stateroom, separated by half bulkheads and curtains 6ft. 6in. long, with w.c. and pantry forward, and then a good forecabin.

The height under a low trunk is 6ft., with nearly 5ft. in forecabin. The cockpit is 6ft. long and 3ft. wide. The rudder will be of the balanced spade pattern. The yacht will be named Ranee, the feminine of Rajah. Messrs. Read Bros. just completed a cat sloop for A. H. Shaver, of Fall River, from their own design, 38ft. over all, 24ft. l.w., 11ft. 6in. beam, 3ft. draft, the mast being but 4ft. 6in. abaft the end of waterline. She has a cabin, with very good head room for the draft, and a roomy cockpit.

The Bouncer Type.

Editor Forest and Stream:

THERE seems to be a general misconception as to what is the Bouncer type of boat. Most of my correspondents evidently assume that a yacht designed on the Bouncer principle must of necessity have a draft of water not exceeding a few inches, while as a matter of fact the same method can be successfully used in modeling boats of any depth of draft, and the only reason why all the Bouncers have been designed to date are shoal boats is that my experience teaches me that better speed can be attained with great beam and light displacement than with a narrow wedge-like section.

The Bouncer system of designing may be defined as follows: The use only of curves approximating as nearly as possible to segments of circles for all longitudinal lines below the water's surface. If this rule is strictly adhered to it is impossible to produce a slow boat, provided the proper proportions of beam and immersed body are selected. That is to say, the deeper the immersed body the narrower it should be and vice versa. It is, however, possible to design a fast boat with both narrow beam and light displacement if outside weight be hung at the bottom of a centerboard, either fixed or movable, as shown by the performance of several flyers that have appeared within a year or two. But I have always thought that such use of outside weight is just as unfair in racing as the shifting sandbag, or the weather plank with men on it, in vogue sometimes on sharpies and canoes.

It is not my purpose here to give the best proportions of length, beam and depth, as such action on my part would be treating unfairly persons in various parts of the country who have procured models from me and are building on their lines; but I will with pleasure indicate how any one with a knack for such matter can design for himself a fast and handy boat.

The first thing is to have an implement with which circular segments can be quickly struck, and I have found nothing better for this purpose than a thin batten of straight-grained white pine with a piece of string stretched from end to end in such manner that by tautening the string a short radius is obtained, and by slacking it the radius is lengthened. The batten should be, say, 30in. long, 1/4 in. diameter at center and tapered to about 3/8 in. diameter at the ends. The way to use the batten is as follows:

First—Mark a straight base line (A) and, having decided on the length of waterline, freeboard at stem and stern, and draft of water desired, bend the batten until the curve obtained will strike the points (C) (B) and (D), then mark the curve with a pencil.

Second—Mark the straight line (E) and at center of same measure down and up to get the amount of sheer you wish. Again bend the batten to the curve (F) which gives you this sheer, and mark the curve as before.

Third—Bend the batten until the curve strikes points (D) (D); mark this line and you have the longitudinal curve of the bilge.

Having fixed these curves, and, assuming that your boat is to have vertical sides above the bilge, it is apparent that any amateur builder

can from the lines so laid down take off the shape of the boat when her breadth of beam has also been established. It being understood that the horizontal curve of the outer edge of her deck is the segment of a circle, and that she is sharp at both ends, like a canoe.

This is the simplest form of the Bouncer type. It is easy to build, yet if given plenty of beam will outlast any other kind of boat (not a Bouncer), either with or without shifting ballast. Some persons have objected to the angular bilge, but while Bouncers can be, and are, built with a round turned bilge, I have as yet been able to find no improvement in speed by the change, though the cost of construction is greatly increased. Speaking of the fact that boats designed on this principle can never get out of trim fore and aft no matter how fast you drive them, I will add that in a regatta of the Indian Harbor Yacht Club, with wind blowing half a gale abeam, the Chippewa (length on waterline 24ft.) frequently had her stern somewhat below the level of the water, yet at the same time was skating right away from the 85 and 40-footers; she standing up and going, while the big fellows were rooting, laboring and carrying away their topmasts in a manner that must have been discouraging to the believers in "lead hung low, you know."

THOMAS CLAPHAM.

ROSLYN, L. I., Jan. 21.

Speed Records of American Yachts.

[Continued from Page 83.]

The accompanying table gives the speed records of the 21ft. class, those of the classes from 30ft. upward having been given last week. The 25ft. class and the records of the Lake Y. R. A. fleet will be given next week.

Yachts at Chicago.

The following letter appears in the Chicago Tribune apropos of the recent article in the Forest and Stream, a portion of which is quoted by the writer:

CHICAGO, Jan. 23.—Editor of the Tribune: Eastern yachtsmen have been formally invited by the World's Fair authorities to visit the Exposition next summer with their boats. The intention of many to do so and the widespread interest in the subject is evidenced by the desire for information regarding the details of the water route hither and harbor facilities on the arrival. In reply to many inquiries from its subscribers, FOREST AND STREAM of Jan. 19 publishes an interesting article on the subject. As a postscript the author makes the following discouraging statement of facts: * * *

Is Chicago willing to let such information as this be circulated among so large a number of her invited guests? Must she allow it to be truly said that if yachtsmen value their boats, not to mention their own reputations, safety and comfort, they are warned not to come within fifty-five miles of her inhospitable next summer? Or will she recognize the humiliating fact that in all the twenty miles of her water front there is not one fit place for a yacht either to lie in safety or to land its passengers, and with her characteristic energy set about with vigor to provide some suitable shelter for pleasure craft and make the lake accessible for both her guests and her own citizens? C. D. IRWIN.

Greenville Y. C.

SATURDAY night, Jan. 21, was ladies' night at the Greenville Y. C. and the historic old club house on the Jersey shore of New York Bay, once the homestead of the Vreelands, and in revolutionary times a receiving station for slaves, was made to ring with merry laughter and joyous music. The old house is one of those few remaining to mark the more generous and hospitable life of better if not so wise people; a wide hall runs through, and on either side are large rooms with antique fireplaces, broad and high, four of which were filled with fires of logs that sent merry sparks flying into the night as a sort of welcome as we approached in a large old-fashioned sleigh.

The guests were entertained with dancing, interspersed with music and recitations. The daughter of the commodore, Miss Simmons, recited "Fannie McNeill's Ride." W. T. Markham, purser of the Jersey City C. C., rendered the text scene from Julius Caesar and a humorous selection entitled "The Ghost," which were both well received and applauded, and Jas. F. Lane discoursed sweet music upon the centoharp and guitar. A generous feast and more merry dancing followed, and everyone went home declaring they had had the best time of the season. May the Greenville Y. C. live long and prosper.

Conway called upon Mr. Trenholm and telling him he thought he had a purchaser, obtained an order placing the vessel at his disposal for purposes of inspection. Mr. Trenholm was greatly surprised when his Norwegian skipper called upon him on Jan. 12 and told him that as the boat had been sold he would look for other work. Mr. Trenholm told him the boat had not been sold, but the sailing master assured him she had been, for Mr. Conway, after bringing several persons to see her, had come alongside with a steam lighter on Dec. 27 and told the skipper the yacht was sold. Conway had then taken away all the pig lead ballast, the skipper said. Mr. Trenholm found Conway was not known in Charlestown, and meeting him in the street yesterday induced him to accompany him to his office at No. 11 Wall street. There he was arrested by Detectives Madden and Oates, of the Old slip police station. Conway claimed in court that the permit given to him gave him a right to dispose of the lead. He sold the metal to the New York Refining and Smelting Company for \$60 a ton.—New York Herald.

GENERAL PLAN OF BOUNCER BOATS

YACHT NEWS NOTES.

The Providence Cor. Y. C. has elected the following officers: Com., C. H. Herrmann; Vice-Com., G. E. Winslow; Pres., C. H. Such; Sec., John M. Gammell; Treas., Albert D. White; Measurers, Paul B. Warren and Joshua Payton; Trustees, John D. Peck, James Wright and Thomas Smith; Membership Committee, Henry A. Strater, John H. Lynch and William O'Donnell.

The Knickerbocker Y. C. has elected the following officers: Com., A. N. Holden; Vice-Com., H. Stephenson; Rear Com., Dr. Charles L. Browne; Treas., Charles Condit; Sec., O. H. Chellberg; Meas., E. P. Mowton; Fleet Surgeon, E. Ringer, M. D.; Board of Directors, E. M. Macdonald, Charles R. Smith, Jr., G. K. Rosenquist, George A. Gage and William H. Ward.

J. Beaver Webb, the well-known yacht designer, has received from Messrs. D. & J. Henderson, shipbuilders of Glasgow, a model of J. Pierpont Morgan's new steam yacht *Corsair*, that is one of the most elaborate and complete things of its kind ever made. The model is about six feet long and will be exhibited at the World's Fair. It is in a glass case and rests on a mahogany stand, elaborately carved. The model and stand weigh 1,500 pounds. The model was made from the original drawings prepared by Mr. Webb, and as much more care has been taken in details, scales, proportions, and the like as would be exercised in building a yacht. Every detail of rig was carried out from the drawings, and the iron and brass work of the yacht above the deck is as natural and perfect as on the real *Corsair* herself. To show what care was taken in detail, it may be said that Mr. Webb even sent drawings of the naphtha-launch engine to the Hendersons, with explanations, and every cog in every wheel outside the boiler, and therefore visible, is as perfect as on the launch built to the full scale. The small boats are made from the original drawings also, and the interior of the hull is as perfect as the exterior. The model is so imagined, it is evident that great pains were taken and skilled workmen employed to make the model, and in the general form of the work and harmony of design are many lessons for naval architects.—*Times*.

The Excelsior I. Y. C., of Burlington, Vt., has elected the following officers: Com., John W. Johnson; Vice-Com., John A. Benson; Sec. and Treas., T. P. Daley; Reg. Com., Charles Crosby; Oliver Dupuy, Walter O. Lane, W. B. Craven, H. J. Johnson. The club has this season built a movable club house that will serve as a judges' stand for racing purposes. The following yachts comprise the fleet, with their sail spread in square feet: Cyclone, Daley Bros., 641; Gossoon, John A. Benson, 373; Blizzard, Crosby Bros., 619; Volunteer, Crosby Bros., 350; Jack Frost, Johnson Bros., 606; Vixen, Alex. Croto, 259; Brownie, Walter O. Lane, 505; Now Then, Edgar Chitt, 350; Lulu, C. N. Laplat, 416; Calamity, Charles Chitt, 157; Gloriana, Herndon, 416; Hotshot, James Wakefield, 147; Lizzie, Stephen Lovejoy, 330.

The New York Y. C. has been robbed of about \$1,000 by a dishonest employee, Charles E. Quinn, a former bookkeeper for the club.

Mr. W. K. Vanderbilt sailed last week for England, partly to look after his new yacht.

The *Bath (Me.) Times* offered to contribute \$1,000 toward a syndicate defender to be designed and built by C. B. Harrington, the yacht builder of that city.

James O. Conway, a yacht broker, who says he hails from Charlestown, Mass., was held in \$1,000 bonds in the Tombs Police Court yesterday on a charge of stealing 10,300 lbs. of lead ballast from the 70-foot schooner yacht *Romance*, now lying at Wintingham's basin, South Brooklyn. The complaint was made by William Trenholm, a public accountant at No. 11 Wall street, who lives at the San Remo Hotel. Mr. Trenholm holds the vessel, he says, under a charter from Arthur L. C. McCounell, the owner.

On Jan. 17, Wm. H. Gordon and Henry Nixon, of Newport, were convicted of stealing 3,000 lbs. of ballast from Max Agassiz's yacht *Zigeuner*.

The steam yacht *Sagmore* has reached Hampton Roads after a very hard trip from Bermuda, which port she left on Jan. 4. On Jan. 5, she encountered a very severe gale, being lashed for 24 hours, finally running back to Bermuda, arriving on Jan. 9. She sailed on Jan. 15, after coaling, and again struck bad weather to Cape Hatteras, lying for two days off the Cape before making Hampton Roads, where she lost her rudder the 4th. Her captain, Mr. and Mrs. E. M. Fulton, Jr., and Miss Fulton, Miss Wickham, David A. Tod, W. J. Duane and Robert Howard Russell, returned by rail to New York.

Conqueror, steam yacht, sailed on Jan. 28 for Brunswick, Ga., where Mr. Vanderbilt and a party will join her. On Jan. 26 James Murray, a seaman, was badly burned by an explosion of naphtha and was removed to the hospital. The yacht was not injured.

The question of whether or not Boston is to be represented by a boat in the trial races for the selection of a Cup defender, is still an unsettled one. The chances of a favorable answer are, however, brightening in a wholly unexpected direction, and although the facts upon which such a statement is based cannot be made public, yet there is reason for saying that Boston is as near to representation as the making of lines and a model and the procuring of estimates of cost. The boat now in mind may not be built, but the chances that she will be ordered are at least even, and the matter is likely to be decided one way or the other within a week or ten days. And the boat, if built, will not be a syndicate one, for so far as a syndicate boat is concerned, the situation is practically the same as it was three weeks ago.—*Boston Globe*.

There is no plant better fitted for building a boat in secret than the Bristol Company's boat shops, and aside from their own rights in the construction, it is a question of business prudence to keep the present construction from the outside world until such time as the details may be given with safety. In view of these facts the company has established a day watch, who patrols the front of the building and is perfectly able to protect the interests of the concern from prying eyes.—*Providence Journal*.

The new 40-rater designed by Arthur E. Payne for Admiral Montague will be named *Vendetta*.

At the annual meeting of the Boston Y. C. the following officers were elected: Com., John A. Stetson; Vice-Com., J. W. Abbott; Rear-Com., Edin B. Roberts; Sec'y, Thos. Dean; Treas., Dudley A. Dorr; Measurers, Geo. F. Lawley, of Boston; Jefferson Borden, of Fall River; Trustees, Benjamin Dean, Thos. Manning, Eben Denton, Regatta Committee, J. P. Phinney, G. R. Howe, W. L. Dean, A. C. Fernald, W. H. Wilkinson. Membership Committee, L. S. Jordan, E. H. Tarbell, J. A. Mitchell. The report of the treasurer showed receipts of \$3,407.98, expenditures of \$3,116.13, and a balance of \$291.85. The club has recovered 85 per cent. of its deposit in the Maverick Bank, and there is \$156.90 still due.

The Seawanhaka Cor. Y. C. has started a navigation class under the instruction of Capt. Howard Patterson, which promises to be well attended, and to be as successful as the classes in the previous years. The weekly mess dinners of the club have been well patronized this winter, and serve to keep the members together during the dull season. The annual regatta of the club will be sailed on Saturday, July 1.

Rifle Range and Gallery.

Port Chester Riflemen.

New York Revolver and Pistol Club.

NEW YORK, Jan. 30.—*Editor Forest and Stream*: The following scores were made at the first prize shoot of the New York Revolver and Pistol Club, which was held at its gallery, 12 St. Mark's place, on the 26th, 27th and 28th inst.

Conditions: 5 shots on standard American target, distance 20 yds., best two scores to count, any arm, open sights, any pull, any weight. T. E. Beck, 47 46—93 B. Walther, 46 45—91 H. Oehl, 46 46—92 G. E. Jantzer, 45 44—89 E. Walz, 46 45—91 G. L. Hoffman, 42 41—83 Mr. Beck also won the premium for the best five scores made during the shoot, which were 47, 46, 44, 44, 44.—227. F. HECKING, Sec'y.

Beideman Rifle Club.

BEIDEMAN, N. J., Jan. 28.—The following completes the weekly scores of the Beideman Rifle Club week ending Jan. 28, conditions being 25 yds., strictly off-hand, open air range, ring targets, 1/2 in. bull, 1/2 in. centre, possible 250: A J Yerger, 246 J L Woods, 238 E L Gardiner, 240 W Gilbert, 229 WALT GILBERT, Sec'y.

A New French Revolver.

THE French Government have adopted a new revolver for the army and it is about to be issued. The bore is 8 millimeters (.313 cal.). Further details have not been made known, but the accuracy as compared with the Colt and Smith & Wesson will be well tested if the French team which are coming to Bisley this year use them.

The Ideal Armory Mold.

THE accompanying illustration is of a strong, heavy, well-made bench mold cut for six of the largest military and sporting bullets. Length of mold complete 13 in., weight about 4 lbs. It is made to supply a demand from military companies and clubs which use large

quantities of ammunition which they load themselves. It will prove to be a great economizer of both time and money, and it will be made for all calibers of grooved and round bullets (regular or special). They will not be kept in stock, but made on order only. For further information address the IDEAL MANUFACTURING CO., New Haven, Conn. Ad.

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

February.—Live bird tournament on Erb's grounds, Bloomfield avenue, Newark, N. J.
Feb. 2.—Zwirlein's tournament, Yardville, N. J.
Feb. 9.—Newark Gun Club shoot, Erb's grounds, Newark, N. J.
Feb. 14-16.—Reading Shooting Association, second spring tournament, at Shillington, Pa. Two days at targets, third day at live birds. Address H. W. Metz, Three-Mile House, Shillington, Pa.
Feb. 14-16.—Forester Gun Club tournament, Davenport, Iowa.
Feb. 16.—Essex Gun Club shoot, on Heritage's grounds, Marion, N. J.
Feb. 21-23.—Highland Gun Club tournament, Des Moines, Ia. Live birds and bluecock targets.
Feb. 21-23.—Oneida County Sportsmen's Association tournament, at Utica, N. Y. Live birds and targets.
Feb. 22.—Live bird tournament, on Erb's grounds, Newark, N. J.
Feb. 22.—Syracuse Gun Club, "jack rabbit" tournament, at Syracuse, N. Y.
Feb. 22.—J. L. Brewer vs. E. D. Fulford, 100 live birds each, for \$100 a side.
March 10.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.
May 2-3.—Independence (Ind.) Gun Club tournament. Added money.
May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.
May 23-25.—Knoxville Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.
May 30.—Eastern New York Trap League tournament, at Canajoharie, N. Y.
May 30-June 1.—Iowa State Sportsmen's Association, Clear Lake, Ia.
June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.
June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.
Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh.

On the "Old Stone House" Grounds.

THERE was live bird shooting galore on John Erb's "Old Stone House" grounds in Newark last week. On Tuesday there was a four-handed race at 100 birds per man; Wednesday saw a hotly contested 400 bird match, while on Thursday there was a 50 bird race and a series of open sweeps, all of which were closely contested.

THE SHOOT ON TUESDAY

was between Frederic G. Moore, W. F. Simpson, Richard Sunderman and Harry E. Smith, the former three of the New Jersey Shooting Club and the latter of the Essex and Newark gun clubs. The race was a friendly one, shot on birds as good as have been trapped in this vicinity for a long time. The weather was favorable to the birds. Each man was to shoot at 100 birds, 20 yds. rise. Sunderman retired on the 30th round. Moore shot in splendid form, killing a total of 94 and making a straight run of 42. The scores follow:
Moore.....10222322112321212110021—23
121212222212121212121212120—23

WEDNESDAY'S CONTEST

was at 100 live birds each for \$250 a side, shot from "H. & T." traps, 25 yds. rise, the principals being L. V. Tobin and H. P. Toler, both of Short Hills, N. J. Tobin allowed Toler 14 dead birds, the latter having thus to shoot at only 84 birds to Tobin's 100. The handicap was a little too heavy for Tobin, as the result shows:

THE WILLEY-GASPER MATCH

and the open sweepstakes announced for Thursday drew a big crowd of spectators to the grounds, although the shooters did not turn out as strong as was hoped for. The day was a delightful one in its mildness, the sun shining with sufficient force to keep everybody comfortable and make heavy ulsters slightly burdensome. The fun was supposed to begin at 10:30 A. M., but it was nearly noon before a shot was

fired. The early comers to the grounds had simply to sit down and wait for their more slothful brethren.

When we boarded a car to go to the "Old Stone House" as traveling companions Allen Willey and Business Manager of the Hartford (Conn.) *Globe*, the former all cocked and prepared for his first shot with Howard Gasper and the latter with the veteran Newark shot. Arriving at the hotel the first face upon which we cast our optics was that of William G. Clark, of the Red Lion Hotel, Altoona, Pa., and of Wopsononock shooting grounds fame. Mr. Clark, who looked the picture of health despite the hard weather he has encountered this season on the heights of "Wopsey," said he had been in Philadelphia on business and could not resist the temptation of running over to Newark and trying his luck with the veteran of whose fame he had often read. As a shot, either in the field or before a live bird or target trap, Mr. Clark ranks among the best, while as a hale fellow well met under any circumstances he is a hard one to beat.

After the compliments of the season had been exchanged the party repaired to the shooting house and shot a series of "Jersey" sweeps as "warmers," these being at 4 birds each, \$3 entry, two moneys. The scores:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Castle.....	1101—3	2012—3	2110—3	1101—3	1111—4
Willey.....	1211—4	0111—3	2110—3	1201—3	1222—4
Clark.....	2221—4	2102—2	1110—3	2112—4	2122—4
Hollis.....	0111—3	1112—4	1122—4	1130—3	0122—4

In the fifth event Willey's third bird struck against the fence and fell dead, while Clark's first did on the top rail.

No. 6 event was at 6 birds, \$5 entry, two moneys:

Castle.....	10121—5	Hollis.....	001011—3
Breintail.....	120121—5	Clark.....	110111—4

At this stage Mr. Gasper had appeared on the scene and it was decided to shoot off the 30-bird match. The crowd of spectators had greatly increased, among them being Neaf Apgar, of Henry C. Squires & Co.; Thomas Peacock, the old-time pigeon and target shot, of Lyons, N. Y.; Milton F. Lindsey, American Wood Powder Co.; Fred Underhill, the well-known dog fancier of Irvington, N. J.; John Cocke-fair, Bloomfield, N. J.; John Kiggott, Rockaway, N. J.; C. M. Heiden, Wm. Clacker, R. H. Brantall, Gustav L. Freche, Wm. S. Canon, Mr. Littell, Thomas Francisco, R. Walters, J. Cottrell and John Smith, of Newark; George Raynor, of Orange; Thomas W. Morley, of Paterson; Wm. S. Pierson, of Plainfield; and Capt. Wm. Cramer, of Jersey City.

It was 1:35 P. M. when the match began, Jacob Pentz, of *Shooting and Fishing*, being referee, O. H. Townsend, of *Forest and Stream*, and W. R. Hobart, of the *American Field*, scorers. The conditions of the match were 50 live birds per man, for a purse of \$200, winner to pay for birds. Both shot from the 30-yard mark. Willey lost the toss and was sent to the score, his first bird being a fast left-quarterer, which he grassed in elegant shape. Gasper got an incomer to the left, and a bad twister at that, which he let go beyond both charges. He killed his next two, both fast birds, then lost two, killed one and lost three, killed one and lost four more, which practically put him out of the race, as Willey up to this time had lost only one bird and was shooting in phenomenal form. His last bird was an incomer, which caught both barrels and fell within a couple of yards of the line. Lem made a dash for it, but just as he was about to seize it his feet slipped and he merely poked it with his nose, causing it to flutter over the boundary. His 25th bird also fell dead just over the line. Gasper's 4th bird was a very fast right-quarterer, fell dead as a mackerel just over the fence. On the 15th round Samuel Castle started coaching Gasper, the result being a little improvement in the latter's work. His race had been lost on the 11th round, however, as Willey finished up with 44 kills. The birds, which had been specially selected by Mr. Erb, were a cracking lot, old and strong, with plenty ability as lead-carriers. Willey's superior birds were his 1st, 6th, 9th, 11th, 14th (a corker), 17th (a do), 23d, 26th, 27th, 31st (another corker) and his 47th. Gasper's were his 2d, 30th, 31st, 33d, 41st, 42d and 50th. The score follows:

Trap score type—Copyright 1892, by Forest and Stream Publishing Co.

The next event was at 10 birds, \$10 entry, four moneys. In this the ties for first and second moneys were shot off at 3 birds per man. Hollis drawing his pro rata of first. On the end of the shoot-off all had killed straight except Gasper, and the rest then divided. No. 8, the final event, was at 4 birds, \$3 entry, two moneys, the ties for first being shot off, miss and out, and divided by Castle, Walters and Peacock:

THE BIG RIVER.

IN a wide plain at the meeting of the three waters, Gallatin, Madison and Jefferson, is the beginning of the Big River. Around this plain on every side rises a rim of mountains, sometimes in sharp walls of cold gray rock, or again in gently sloping foothills, clad lower down with aspen and above with dark pine, but ending always in the same gray verdureless pinnacles. This rim seems to cut the valley off from the rest of the world, but there are openings in the walls, and to reach the real head of the mighty stream we must go further back, back to the fields of snow and ice that lie in the gorges of the main divide, back to the boiling springs and geysers of the Yellowstone Park, back to the gray lichen-covered rocks which form the crest of the continental backbone. At the head of the Gallatin, the Firehole, the Beaver Head and Trapper's Creek, the Big River starts.

Its drops trickle from the edge of snowbanks, or from the crevices of the rocks, and at first hide among the slide rock or creep away beneath the grass and moss of some Alpine ravine, but as they come together and see how many they are, they take courage and seek the light, cutting out for themselves tiny channels in the hillside, bounding down cliff faces and forcing their way among the stems of the short grasses and the bushes that grow high up on the slopes.

At first the waters of the Big River are clear as crystal and in them the trout play, while even yet deer and elk and mountain sheep plunge their slender noses into the limpid current. But as it goes further and further, leaving the pine trees and aspens, the rocks which gave it birth and the narrow valleys through which it first hurried, as its current broadens and its course becomes less swift, as it parts from the mountains and journeys out on to the plain, it loses this crystal clearness, the freshness of its youth.

Never tiring, it hurries along on its way to the southern sea, passing through many lands and by many peoples.

From the flat bottom land gray with the silvery frondage of the sage rose once the homes of the possessors of the land. Some of these homes were conical skin lodges, others larger dwellings built of poles and sod, or others still of grass and reeds. About them the children played and the women performed their daily tasks. Hither the men returned from the successful hunt or the war journey; here children were born and old people died. These walls compassed laughter and tears, joy and grief, triumph and downheartedness as do our own homes to-day. Here went on the daily life of a simple people who were contented and free.

The Blackfeet call the stream the Big River; the Cheyennes the River of Monsters; the Rees called it Life; the Pawnees and many others the Medicine water; by all it was revered and feared, to it all offered sacrifice. For beneath its muddy surface lived strange people and animals, who, if angered by neglect, could bring bad luck, and seize and pull down the swimmer who might try to cross it. Or if the presents due had not been made to it, the Underwater

People might upset the bull boat which was ferrying a family across, and all might die.

To-day no one makes presents to the Big River. The old beliefs and customs have fallen into disuse and are being forgotten. Once a master of the savage, it has become the servant of the white man, and from far above the junction of the Three Forks it pays him tribute, yielding its waters to freshen and fertilize the crops that he has sown in the ground.

INTERNATIONAL FISHERIES COMMISSION.

THE agreement referred to in our last issue between the Governments of the United States and the United Kingdom of Great Britain and Ireland to appoint a commission of experts to consider and report upon the regulations, practice and restrictions proper to be adopted for the promotion of the fishery interests and the preservation of food fishes was completed Dec. 6, 1892.

Following out the plan of agreement the representative of the United States Government, Mr. Richard Rathbun, has invited Dr. Wakeham to begin the inquiry in Washington, in order to utilize, as far as available, the information collected by the U. S. Fish Commission through its extensive investigations, conducted for a number of years by direction of Congress.

Similar investigations have been pursued in the Dominion of Canada, with the result of massing equally valuable data for the prosecution of a scientific inquiry like the present undertaking.

The resources in men and means of the Fish Commissions of the two countries will be applied as far as practicable to the purposes of the joint commission.

The nature of the inquiries to be entered into by the Commissioners was announced in our columns. Their reports will be laid before their respective governments, and after consideration will, if practicable, be made the basis of an understanding which may lead to a treaty or concurrent legislation on the part of the governments, reinforced and given full effect by legislation of the States and Provinces concerned.

It is greatly to be desired that the various interests included in the scope of this agreement will unite upon such measures as may be shown necessary to the ends sought—the promotion of fishing industries and the preservation of food fish. We hope to see also, as one of the early results of the inquiry, an adequate account of the aquatic animals of the Dominion of Canada with suitable illustrations. There is not in existence even a complete list of the fishes of the country.

THE SEA OTTER AND THE ALEUTS.

THE Treasury Department circular in regard to the seal fisheries of Alaska provides, among other things, that the use of rifles, shotguns or other firearms by the natives in killing sea otters or the use of nets in taking them is hereby prohibited.

The effect upon the natives of the enforcement of this clause of the regulations was the subject of an address by Mr. Charles H. Townsend before the Biological Society of Washington at its last meeting.

Mr. Townsend stated that nine-tenths of the native and white population along nearly 2,000 miles of coast line are directly supported by the otter fishery. The sea otter hunters have no other trade. "White hunters," he said, "can usually take care of themselves, but it is a serious matter for all these people, so long accustomed to the ordinary clothing and staples of civilization, to be deprived of everything, and, without warning, thrown back on the almost forgotten methods of procuring food practiced by their wild ancestors; and that, also, on remote and inhospitable shores from which the abundant game of early times has vanished. Esquimaux and other mainland natives always have the resources of the great interior of Alaska to draw upon, and live in close contact with nature; but the civilized and docile Aleuts of this stormy, sea-beat archipelago live, move and have their being by hunting the sea otter.

Therefore, if the welfare of the native people of Alaska is taken into consideration, the preservation of the sea otter is a more important matter than the preservation of the fur seal, for the accomplishment of which our Government is sparing no expense. We have purchased from Russia not only the seal and sea otter fisheries, but also the native races themselves, which are worthy of consideration as well as the marine mammals."

Through the seizure of guns and outfits by the York

town last year, sixteen natives lost all they possessed and were left destitute. (Only two otters were secured on the Aleutian Islands in 1892.) The loss of his gun deprives the native of the power to get sea lions, which are essential as a source of food and clothing. Many of the families of Belkovsky and Morzhovoi are without the necessities of life unless they have become the objects of charity.

Mr. Townsend was informed that not more than 1,000 sea otters were taken in Alaska in 1891. The catch of 1892 is not yet known. A new engine of destruction of recent introduction in the otter fishery is the steam launch. By this means, in 1892, the schooner Herman secured 78, the St. Paul 51 and the Pearl 68 sea otters.

Mr. Townsend's remarks were based upon his personal experience gained during seven voyages to different parts of Alaska. He does not consider the use of guns and nets by the natives likely to cause the extermination or further reduction of the animal. It is caught in considerable numbers annually with nets about the Commander Islands; fifty-six were netted in a single night in May, 1892, just prior to the arrival of the steamer Albatross at the islands. When taken in nets the females are always spared and none are wounded or frightened away from the coast.

In order to preserve the otter and aid the impoverished natives, Mr. Townsend made the following recommendations:

- (1) "Let natives be exempted from all restrictions that may be placed on the otter fishery by Government, as their guns and nets are actual necessities in gaining a livelihood and they should be allowed free use of them.
- (2) "Reserve Sannak Island with its surrounding rocks and other sections of the otter's habitat if necessary.
- (3) "Introduce domestic cattle among all natives of the Aleutian chain of islands, or remove the natives to favorable places on the mainland."

SNAP SHOTS.

THAT is an engaging subject upon which "George Kennedy" writes this week—engaging because of its wildness. Of all the shy woods creatures whose hidden lives and mysterious ways pique our curiosity and allure to study, the shyest and most fascinating is the human being, who, withdrawing from his fellows, "goes off to hide," and, dwelling in solitude, shuns the approach of man. Since the followers of the rod and the gun are all the time journeying into such out of the way places and into the by-paths of the world, in search of other hidden and hiding creatures, our correspondent suggests they are peculiarly fitted to tell about the hermit, because to them he has revealed himself, shyly and unwillingly and tantalizingly, it may be; and we gladly second Mr. Kennedy's call for further notes on this shrinking woods dweller.

Perhaps if the proposal to introduce the pestiferous jack rabbit into Maine were sifted, it would be found that some individual, personal interest was at the bottom of it. As a matter of fact, in Maine, as in most other portions of the continent, the supply of vermin is now more generous than is desirable; and the projectors of additions to the native stock should be compelled to show cause why their schemes should not be squelched for the public good. We reproduce a photograph showing the result of one Sunday's jack rabbit drive in California. This picture of the clubs, the clubbers and the clubbed is full of suggestion and warning for those who propose the State farming of jack rabbits.

At a hearing by the Albany Committee on Game and Fish last Tuesday, it was wisely determined to defer action on bills under consideration, pending the receipt of a brief from the State Fisheries Commission and Chief Protector Pond, which will be prepared at the next meeting of the Commission on Feb. 15. We believe that President Huntington and the other members of the Commission share the views expressed by the State Association in the Syracuse convention, that the present law should be retained substantially as it is, and that provision for further protection should be left to county supervisors.

Dr. Sweeney's report on Minnesota game should have careful reading. He pictures a desperate condition of things, but that the situation is so clearly understood and that the remedy is being sought by such capable men as Dr. Sweeney and Mr. Andrus and their associates affords ample promise that the evils will be corrected.

One of the signs of the times; a growing tendency to criticise large bags of game,

The Sportsman Tourist.

ON THE PAMPAS OF ENTRE RIOS.—V.

AS I HAVE said before the pampas are one vast rolling sea of grass, much of it being as high as a horse's shoulders, and it is very easy to get lost on them, especially at night. During fogs, which generally occur at night, it is impossible to go away from the estancia, and if caught out in one there is nothing to do but make yourself as comfortable as possible and wait until it lifts. I as well as many others on the estancia were frequently lost, but the fact of being lost had no terrors for us, as we simply tethered out our horses, rolled ourselves up in our blankets, and slept soundly until morning.

One very hot day I went with one of my men to inspect the mojones, or boundary posts of the estancia. We knew it would not take us all day, and as we would not reach any drinking water until late in the afternoon we took two quart bottles of water, each with a little vinegar and sugar in it, this being the best beverage to take on a long journey. The sun beat down upon us with fearful force, and as we had such a distance to go we would not stop for a siesta. We drank freely from our bottles, feeling that we would soon be by a good water hole where we could drink all we wanted, and refill our bottles. It was getting quite late in the afternoon when we espied the hollow where our water hole was, and being very thirsty, and the horses really suffering for a drink, we broke into a gallop and made for it. Alas, on arriving at the brink of the pond we found nothing but mud, into which we dug holes, and tried in other ways to get enough water to drink, but it was no use, it was all dried up. We then began to realize how thirsty we were. We had to go nineteen miles to the estancia and there was not a drop of water nearer than that, that we knew of.

We immediately started for home, but had not gone far before it began to grow dark. This did not worry us, as both of us were familiar with the manner of riding in a straight line at night, and had no fear of going astray as long as stars shone. But we had scarcely gone half the distance toward home before a fog set in, and we were as completely lost as if we had been in the middle of the Atlantic Ocean without a compass. Our terrible thirst was increasing on us all the time, and our horses were nearly done up. I was apparently suffering much more than my companion, who had been accustomed from infancy to use very little water. My tongue became swollen, my throat ached, I could hardly speak, and felt as though I would go crazy if I did not find water. In sheer desperation I spurred my horse into a gallop and let him go his own way, any way to get from that terrible thirst. I motioned my companion to follow me, which he did, but in a few minutes I felt him clutch me, and call to me to stop. He said he had caught a glimpse of a light through the fog which he was sure was caused by spirits, as there was no habitation within ten miles of us. These gauchos are very superstitious and dreadfully afraid of ghosts, in which they firmly believe. I could not see any light, but insisted in riding in the direction in which he saw it. I told him I did not care whether it was an "espiritu malo" or an "espiritu santo," if it only had water to drink. This shocked him terribly, and he crossed himself devoutly, muttered a prayer, and disappeared.

As the fog lifted again I distinctly saw a gleam of light, which did look rather ghostly, and appeared to dance and flicker in the air, but I kept towards it, and soon had the satisfaction of riding up to a camp of some gauchos, who were moving, and had stopped on account of the fog. They had no water, however, except what was in their tea kettle on the fire, but they made a fresh mate, which slaked my terrible thirst, and enabled me to keep on toward home. They told me if I would follow the arroyo on which they were camped it would take me to my place, and that I would find water for myself and horse not more than two miles off. I reached home about 12 o'clock, and after copious draughts of water, and a good cup of coffee, I felt as well as ever. The gaucho who left me wandered about the pampa all night, stumbling, however, on some water, and did not show up until late the next morning.

Another time I was returning home from a long trip and was overtaken by a fog at night when I had reached quite near home. I immediately tethered out my horse, rolled myself up in my blanket and went to sleep. At daylight the next morning the fog was still very thick, but I saddled, and mounting my horse, trotted slowly along waiting for the sun to get up and dissipate the fog. Presently I heard the faint crow of a rooster, and immediately turned toward it, and following up the sound soon had the satisfaction of seeing a building loom up out of the fog. Imagine my chagrin when I found it was my own house, and that I had passed the night on the ground when my comfortable bed was within a mile of me.

One very dark night, while riding alone, I became bewildered, and was soon completely lost. Just as I was making preparations to pass the night as comfortably as possible, my nose was greeted by a very disagreeable but at the same time a very familiar odor. We had been visited by a severe storm a short time before, and had lost many sheep; these had been skinned and their carcasses hauled away from the estancia and put into a pile. I imagined that what I smelled were these dead sheep, and followed up the trail, until sure enough I came upon them, which gave me my whereabouts, and I was soon at home.

In riding up to a house in Entre Rios no man dare get off his horse without first going through the usual form of greeting, and being invited to dismount. When one rides up to the house he halts at the hitching rack, and calls out, "Ave Maria purissima" (Hail pure Mary). This he repeats until some one inside the inclosure answers, "Nacido sin pecado" (Born without sin), then invites him to get off his horse and come in. To ride up to a man's house and get off your horse without going through with this formality is a declaration that you come as an enemy, and you would be treated as such.

On one occasion when I was shepherding a flock of sheep several miles from the main house, and lived alone in a small straw hut, I was considerably startled. It was late in the night, and something very unusual for me, I was lying awake, when my dogs began to growl and growl uneasy. I told them to be quiet, and got up to investigate, thinking some one was meddling with my sheep. I took my gun and walked out toward the corral. Presently I heard voices and crouched down, bidding the dogs to

lie low. Two men rode up to my house, and one of them dismounted without the usual greeting, and walked up to the door and tried it. I kept perfectly still and heard one of them say in English, "It is too bad that we should be lost out here when I know we are not many miles from my house." I then rose up and spoke to them, and they were very much surprised to see me coming toward them with a gun. I explained to them the great risk they had run in coming up to my house and dismounting as they did without greeting, and I advised them strongly never to do so again. I found one of the men was the owner of the estancia, and I had to get up my horse and pilot him to the house.

One dark night when passing through a dense swamp of tall canes and bushes, riding in a path just wide enough for my horse, I was considerably startled by something hovering over me and shutting out what little light the stars gave me. Several times this pall seemed to come over me. I heard no noise, but could only feel as it were a dark shadow passing over my head. I was much relieved when the swamp abruptly ended, and I rode out on to the open plain. I stopped to investigate the cause of the shadow and saw it was made by an immense bird, probably an owl, sailing backward and forward over the path, and feeding on the beetles and moths I stirred up in passing.

EDWARD A. ROBINSON.

HUNTING IN GREENLAND.—III.

With the Peary Relief Expedition.

BY WM. E. MEEHAN (BONIFACIUS),
Member of the Expedition.

WHILE on the voyage back to McCormick Bay from Smith's Sound, we had stopped for a short time in Robertson's Bay, the northern shores of which are about fifteen miles above the former body of water. While there we had noticed numerous traces of reindeer, and we longed for more fresh venison, that killed in Herbert Island being about devoured. As there were yet several days before Mr. Peary and Mr. Astrup could be expected back, permission was readily given five of us to go hither on a three days' hunt. The Kite was therefore ordered to take us there and leave us to make our way back to McCormick Bay in a rowboat when our three days had expired.

We pitched our tent on a beautiful and grassy meadow, in front of a large and picturesque valley, across which half a dozen or more ancient terminal moraines stretched at almost regular intervals like huge ramparts. The site of our camp, which we named at the expiration of our stay "Tuctu Namee," because we got no reindeer, was near an Eskimo settlement called Igloo Tahomony, the most northern human settlement at the present time on the face of the globe. One family comprised this settlement, the head of which rejoices in the name of Kiuna. He was a stuttering Eskimo, and possessed a good-looking *gunna* (wife) and three children. Before our tent was fully pitched he was on hand, not exactly to boss the job, but to finger curiously and with many *nan-nan-nays* of admiration our belongings.

With him was Kiopedo, an Eskimo Angekok or medicine man, dwelling in the settlement about "Red Cliff House," but at the time on a visit to Igloo Tahomony until such period as his wife, who had run away from him on account of ill treatment, should put in an appearance, on which occasion he promised everybody with a grin he would *senepa* (kill) her. These two worthies, Kiuna and the Angekok, attached themselves to us and our food until we took our departure, and acted as our guides over the rough valleys and hills in fruitless hunts for reindeer, each mournfully saying to the other on return at meal-time, "Tuctu namee" (no reindeer).

As soon as the tent was pitched Dr. Mills and I crossed a little stream, the icy cold waters of which we will both ever hold in execration, and made our way to a huge conical mountain not far off to shoot little auks for supper. Unlike most of the hills and mountains hereabouts, this one was free from ice and snow as far as we could see. In their place, however, was a thick covering of bright green moss from the base to the summit, save for a few spots where patches of boulders cropped out. Up this moss-covered mountain we started to clamber on all fours, for the way was so steep that we could not walk upright. I was in advance. All at once I felt the moss beneath me give way and I began slipping backward, and striking the Doctor we both slid downward with some velocity, the moss flying from under us in some quantity, until we brought up against a large boulder. Then we made a startling discovery. Underneath this bed of beautiful moss, so thick that the surface was warm and dry, was hard blue ice, many feet in thickness and of unknown area, for afterward, wherever on this mountain we made examination, we came across the same phenomenon. We were, in fact, on what geologists term a fossil glacier, once active but now buried, through climatic changes, under luxuriant vegetation. We later came upon many such glaciers, but none as interesting as this one.

By hard work we finally managed to secure a goodly number of little auks. On our way back to camp we shot our first Arctic hare. We were walking slowly along the beach when we saw something white moving a few hundred yards away on the side of a precipitous slope. Creeping closer, we discovered it to be an Arctic hare, and near-by were several others. Crawling from boulder to boulder, the Doctor stealthily approached well within range of the nearest, when he showed himself. Startled, the hare sprang away for a dozen or 15 yds. and then, rising on his hindfeet, with ears erect and forepaws hanging, he surveyed the strange intruder curiously. And standing thus, at a distance of fully 70 yds., the Doctor shot him. He was a magnificent specimen, and his hide now adorns the collection of the Academy of Natural Sciences. Ten minutes later I also secured one, and when we got back to camp we found that every man there had also one of the huge rabbits of the north. Even Daniel gloated exultingly over one he had blown the head from at 10 paces with a heavy charge of buckshot.

It soon became evident that the reindeer had migrated to other valleys, and therefore much of our time, except on the part of Daniel, was devoted to hare hunting, and we had not only no difficulty in keeping our own larder abundantly supplied with this species of game, but were enabled to take a quantity of it back with us to the Kite. I think I never saw so many hares in my life. Look where we would at any time, in the valleys and on the rocky hills about Robertson's Bay, we could see them moving about. On one occasion I counted 16 within a

comparatively restricted area, and I doubt not that there were many more within the same space hidden behind boulders.

While we indulged in this sport, Daniel employed himself in hunting white whales, which were abundant in the waters of the bay, as the hares were on the shores. In order that he might indulge in this exciting pastime, he borrowed without leave, after the manner of his northern brother Eskimos, the Angekok's kayak and harpoon, somewhat to the latter's dismay. With wonderful persistency, Daniel followed school after school, and that he did not secure one was due to the dullness of the Angekok's harpoon and not to a want of skill.

On one occasion we thought he had succeeded and we nearly went wild with excitement. He had been doggedly following a large school for an hour or more, when at last he came within striking range. Leaning well back in his frail skin bark, with one hand grasping his harpoon, poised for the blow, and the other holding his paddle so as to keep steady, Daniel made a magnificent picture. But he remained this not for long. The harpoon whizzed through the air and struck the whale fairly. In the twinkling of an eye, the huge cetacean had lashed the water into a foam, and darted away at a furious pace, dragging the kayak after until the bladder float could be thrown overboard. But the harpoon was dull, and did not penetrate far enough into the whale's body to hold, and after a short struggle the latter freed itself and with its companions disappeared from view, leaving Daniel to gather up his traps and return disconsolately to the shore, where to the chaffing he received he replied, "Yes, Daniel no good, Angekok harpoon plenty no good, much dull. Wi wale no good; hide much thick, Daniel, like American man call plenty chump."

Daniel had his revenge a few days later, however, when we returned to McCormick Bay. On this occasion he had his own hunting tackle, and when he threw his harpoon the keen barb buried itself deeply into the blubber and vainly the wounded whale sought to free itself. It made rushes, beating the water into foam, but all to no purpose, and Daniel followed it up relentlessly, pouring lead into its side with frequency and precision by means of a rifle which he had borrowed, as usual, without the knowledge of the owner, until the poor brute gave up the ghost and floated a huge white corpse on the crest of the waves. Then Daniel towed him to the ship in triumph, singing in Danish, "Kind Words Will Never Die," a song he had learned at Godhavn.

Then there was a gathering of the clans on the shore and every Eskimo revelled in the fullness of rich food for a day or two, and Daniel was looked upon as a mighty hunter by the men and with the eyes of affection by Magipso, a dusky matron, and who, for a too open exhibition of her partiality, received a severe thrashing at the hands of her jealous husband.

A few days after these incidents Mr. Peary and Mr. Astrup returned from their wonderful journey over the great and mysterious ice cap, during which they planted the American flag further north on the east coast of Greenland than any other white human being had before been, and it was our good fortune to unexpectedly meet these Arctic heroes on the inland ice some miles from shore and escort them to the ship. One week later Mr. Verhoeff went on a mineral hunting expedition, from which, on his not returning on the date promised, we became alarmed and made a search, which was continued uninterruptedly for seven days and nights, and only discontinued when we found what seemed to us all indisputable evidences of his death.

During this search Mr. Entriokin killed two reindeer, the only ones slain by members of our party. Several of us were clambering up a steep valley about 11 o'clock one night, when the deer were seen not more than 500 yds. away, quietly browsing on the luxuriant moss and grass. Close as they were, however, it is possible they might have escaped notice had not one of them stepped suddenly from the shadow of a rock into the brilliant sunlight. Mr. Entriokin was the only one of the party carrying a rifle, and he therefore carefully stalked them; and when near enough shot one through the heart. The others, terrified by the death of their comrade, made a mad dash up the valley, passing close to Mr. Entriokin, concealed by a huge boulder. As they bounded by he fired at the rear one, and the ball struck a vital spot, for the animal made a convulsive leap and fell dead.

A day or two after we met Mr. Gibson, who, with a party of Eskimos, had been searching for Mr. Verhoeff in the Five Glacier Valley, where that unfortunate man had been last seen, and Mr. Gibson had a curious story to relate.

It seems that a day or two before, while alone, he heard a strange noise behind him, and turning to ascertain the cause, to his amazement he saw a huge bull reindeer following him, and from appearances the animal was in a belligerent mood. His nostrils were dilated with rage, he was stamping furiously, and at frequent intervals tearing up loose earth and stones with his huge horns. As soon as the deer saw that he was discovered he let out a bel-low, gave a final toss of stones and dirt with his horns, and lowering his head made for Mr. Gibson at a gallop.

Now, it happened that Mr. Gibson had used all his rifle cartridges but one, and this he hastily thrust into the barrel of his gun, and when the animal got within thirty or forty paces started to take aim; but unfortunately the rifle discharged itself prematurely and the ball struck the ground in front of the deer and ricocheted harmlessly to the left. It had, however, the effect of stopping the infuriated beast suddenly in his charge, and apparently feeling that the locality was dangerous he turned tail and galloped away in the direction from whence he came. His speed was greatly accelerated by the shouts of the Eskimos, who hurried up at the report of the rifle.

While engaged in the search for Mr. Verhoeff, also, a narwhal was come upon in the upper end of McCormick Bay. We had during our voyage kept a sharp lookout for this curious species of whale; but, though quite common in the Arctic waters, we had not chanced upon any until this time, and this specimen was not killed by us, or in fact by a human being at all, but by some other marine animal more active and deadly than himself. It was found on the shore by Mr. Bryant and four Eskimos where it had been washed but a few hours before, and it had been dead but a short time. It was twelve or fifteen feet long and its ivory tusk fully six feet. Its finding gave great joy to the Eskimos, who esteem the skin of the narwhal as the greatest delicacy that nature provides.

On the 24th of August, feeling assured that further

search for the missing Mr. Verhoeff was useless, and a longer stay in that region was perilous on account of the rapid approach of winter and the fast forming young ice, we took Mr. Peary's party on board, together with their effects, bade good-bye to the honest, good-natured Eskimos of North Greenland, who wept at the parting, and began our homeward journey. In time we entered once more the dangerous Melville Bay, but with none of the trepidation we had felt on the first occasion. Indeed, our progress through the icy waste of waters was altogether too great too please most of us.

For this condition of affairs Second Mate Dunphy was the cause. Within an hour after the Kite had passed Cape York, the northern abutment of Melville Bay, his sharp eyes detected polar bear tracks on the vast broken fields of mushy ice and pointed them out. As the vessel worked her way across the bay these tracks became more and more frequent, but strain our eyes as we might we could see nothing more tangible than these tracks, and we began to fear lest we should, after all, not have an opportunity of shooting one of the great animals. However, fortune was with us. On the evening of the second day in the bay, just one hour before getting through, while we were at supper, one of the sailors rushed down into our little saloon with eyes distended and shouted: "Mr. Dunphy says, sirs, bear on pan o' ice ahead, sirs."

Every man bounded to his feet as though shot, and seizing handy rifles rushed on deck, all except the Professor and Mr. Peary, who armed themselves with their harmless Kodaks. On deck we found great excitement. Capt. Pike was on the bridge issuing orders in a suppressed voice, and the men were running silently to and fro executing them. Under the direction of Mr. Dunphy we posted ourselves in the bow, rifles cocked and ready, and looked for the bear. It was not hard to see him. He was not more than 500 yds. away, sitting on his hams on a small ice floe looking curiously at the great vessel approaching him slowly and without noise. He could easily have made his escape had he taken to his heels when he first saw the Kite, but it is a characteristic of the polar, or more properly speaking, water bear, that he possesses an overpowering curiosity—in this case fatal. He sat there looking wonderingly at our approach, his long nose working up and down as though endeavoring to smell the approaching object.

At length we got so close that we could see his small twinkling eyes, and our excitement was at fever height and we impatiently awaited the word to fire. Still the bear sat apparently without fear of harm, but when within fifty or sixty feet the vessel's bow struck a sunken piece of the ice on which he was. That settled the bear's curiosity. He was suddenly aroused to a sense of danger, and dropping on all fours he started to make off. On the instant Mr. Dunphy gave the command to fire and eight rifles rang out. The animal gave a loud cry, almost human in its pathos, and fell on the ice, pierced by several balls. But such was his vitality that he scrambled to his feet and tried once more to reach the water, but with a cheer some of the boys sprang over the side of the vessel and gave chase, while others remained on deck and delivered another volley which resulted in the poor brute tumbled over, when, after throwing his head about a moment or two convulsively, and a few tremors of his limbs, he died.

It seems now almost like murder when we look back on the mean advantage we took of this innocent cub, for he was only two years old. His ghost doubtless has the satisfaction of knowing that the skin of his material body now adorns the Museum of the Academy of Natural Sciences in Philadelphia, where it is admired by thousands.

Half an hour after this exciting incident we came upon a hood seal, the only fierce member of the seal tribe, asleep on a floating cake of ice, and with the characteristic greediness of the hunter and naturalist, we gathered him in, his carcass for eating and his skin for scientific purposes.

These two were our last hunts in Arctic waters, fitting ending to a glorious and successful expedition, in which we not only accomplished the humane mission on which we had been sent by the Academy of Natural Sciences, but had the most splendid hunting experiences that man could want, and been to a land which few have seen, a land the most wonderful in this grand world.

In less than four weeks from the day on which we killed this water bear, the gallant but dirty little Kite carried us up the Delaware, after three months' absence from home, and we were locked once more in the embraces of our loved ones, whose joy at our safe return was the greater because of the falsity of stories of disaster to us, which some miserable scoundrel of a skipper had invented, to gain for himself a little cheap notoriety.

THE "NESSMUK" MEMORIAL.

AMONG the many contributors to *FOREST AND STREAM* "Nessmuk" held a unique place.

In him were combined the practical woodsman and the poet, and in his writings are found mingled the simple wisdom of the one with the sensitiveness of the other to the beauties and subtle influences of nature. These qualities extended his sympathetic audience and endeared him to widely different personalities by which he is not likely to be forgotten.

His was an example that the novice who aspires to become a sportsman in the best sense of the term may well follow.

Possessing that complete mastery of weapons and knowledge of the habits and habitation of game that enabled him to make large scores wherever any one might do so, he never abused those powers. Game that he did not need was never slain for the mere sake of killing; it was worth more to him alive than dead. He even spared the outlaws of the woods when he had no use for their hide or carcass.

Ever alert to the business of the hunter and the craft of the woodsman, he still had as quick an eye for nature's beauties, a soul sensitive to her subtle charms. As keen as a hound on the trail of game, as wise as an Indian in woodcraft, yet he had a childlike love for the humblest wild flower that bloomed beside his unmarked pathway in the primeval woods.

To the young sportsman of like tendencies he will, through his writings, become as dear as he is to us older ones, who have been privileged with closer intimacy, and in whose memories he already has an assured place.

Though no monument built by hands marks the burial-place of the body which he held in such light esteem, if it might moulder to dust where he desired, there could be no

fitter one than nature has reared for him in his beloved hemlocks, nor would he wish a costlier nor a more appropriate tribute laid upon his grave than such wild flowers as he crept forth to gather in the April sunshine of his last days.

But as this cannot be, it is eminently befitting that the admirers of "Nessmuk" should mark his final resting-place with a suitable memorial. It is not proposed to make it costly or imposing; such an one would be inappropriate to the simple life whose memory it is not so much desired to perpetuate as to memorialize our loving regard for him.

I am sure that the response to the call of *FOREST AND STREAM* will be such as might be expected from those whose love of wild nature found such apt expression in the life and words of "Nessmuk."

AWAHOOSE.

From "Tarpon" comes this note of "Nessmuk's" Florida camp ground: I took a long walk to-day. Saw several flocks of quail and one bunch of well grown turkeys. I came home past the old camp grounds of "Nessmuk," Oak Point, and the Oak and Pine. I stopped at the latter for a smoke on our old council log. There is a something about an old camp ground that attracts and repels at the same time—a pleasure in contemplation, but the pleasure is a painful one. Who has not experienced that complex feeling as they approached the spot where they had spent happy hours with congenial company? And when the one who shared those happy hours with us has gone on the long trail, then pleasure becomes pain and we are lost in a sea of regretful memories.

Genial old "Nessmuk!" As I sat on the old familiar seat what visions rose in the blue smoke from my pipe—

GEO. W. SEARS ("NESSMUK").

scene after scene, story after story; and I soon find myself confronting the fact that I too am growing old. Soon my old companions will be recalling memories of me. Well, if they will only remember me as kindly as we all remember "Nessmuk," I shall be content.

TARPON.

I have been very much interested in all of "Nessmuk's" writings, and especially his contributions to *FOREST AND STREAM*; also his "Woodcraft" and "Forest Runes." His originality and matter-of-fact descriptions won my admiration at once and always. I had a correspondence with "Nessmuk," and have several of his letters, written during the two or three last years of his life, which I keep as mementos of the most remarkable man I have had any knowledge of. The news of his death was not unexpected, as I was kept informed of his failing health by his occasional letters. His last note on a postal card ran thus:

WELLSBORO, Pa., March 10, 1890.—Friend Stratton: Your letter is before me, and should have been answered sooner; but I must write when and as I can. It is not every day I can write even my name. A constant cough, heart failure and great weakness are telling on me, and I shall probably never get a mile from home. I have not been beyond the front yard since last October. I should like to see the birds and apple blossoms once more, if it may be, but am quite resigned to what fate may have in store for me.

GEORGE W. SEARS.

I am glad to send you something toward the memorial fund.

ANTLER.

I am very much pleased to see by your paper that a memorial to "Nessmuk" is in contemplation. And why not? He was a remarkable man, of a type scarce possible outside of the United States; and we shall not see his like again. If those who have found pleasure and profit in his discourse would each contribute but a very few shillings for this memorial, it would assume marvelous proportions.

Was it not pathetic, when having mended the fire, the old woodsman surveyed the slumbering forms of the tenderfeet in his camp, and wondering if they would do as he had done, hoping the while that they would not resign the advantages of civilized life for the seductions of the forest. Yet in what walk of life could "Nessmuk" have done more to benefit his fellows than that he chose?

If I might offer a suggestion it would be that the memorial, when completed, should be placed in full view, in the busiest street of the busiest city of our land, that

"Haply, in some full of life.

Some trace of God which breaks its strife,
The worldling's eyes shall gather dew,
Dreaming in thorough city ways
Of winter joys his boyhood knew,"

of the leap of the trout, the fragrance of the freshly strewn couch of hemlock tips, and the roar of the forests on the mountain side.

KELPIE.

I noted your inquiry for those especially interested in the writings of Mr. Geo. H. Sears, "Nessmuk." You can put me down as one. The subject of a memorial to him must have frequently occupied the thoughts of many of his admirers.

L. I. FLOWER.

THE HERMIT IN HIS HOME.

WHEN I was a little boy my parents allowed me to make a long visit at the home of an old friend, a Mr. Nevin, who had two or three farms adjoining or nearly adjoining each other, about five miles from town. He lived in a commodious brick farm-house, with his unmarried children, and a married son lived up the road in a smaller house. Besides numerous outbuildings of other sorts, he had a barn that was the delight of a small boy, with its high hay mows, its mysterious "granary" that I did not know it contained until one day when they were going to mill and the men opened a door, and there, spreading back from the barn floor was a vista of bins filled with wheat, oats, rye, clover seed, and perhaps something else that I have forgotten. In the lower part of this barn there were a good many horses, one of which was named Laumix. He was a very awkward horse, but a good puller. Also a mule, named Jeff Davis. It was just after the war, and feeling ran high in that latitude, and I suppose the reason they called him that was because he could throw almost anybody who was partisan enough to try to ride him. They had a spring-house, and the spring ran into the stone trough in the spring-house by way of a stone trough outside that had been sculptured out into a basin—a wash-basin always full of clean water. And I heard Mr. Nevin say that he had washed his face and hands in that basin every morning, winter and summer, for twenty or thirty years, unless away from home. It was so cold that it was all I could do to go to it in summer. There were over 600 sheep on the various farms, divided into small flocks, known as the wethers, the old ewes, the ewes, the lambs, the scallwags and so on; each name being descriptive, even to me, except one small bunch, that seemed to be always kept in a more or less isolated place, called the rams. They had very big horns and fought nearly all the time. Their field was across a meadow from the house, and I have often heard them fighting from the front porch, after dark. As I staid on there I came to know more about them. I innocently entered their inclosure, by way of a stake and rider fence. They didn't catch me, but I knew why they were called rams after that.

On the way to the upper farm, just beyond the farm-house of a small intervening farm, but on the land of Mr. Nevin, and situated in a partial hickory clearing, was a little log cabin, daubed with mud, having one very small window, and a stick and mud chimney. There were some grape vines and an old cherry tree or so in front of it, as nearly as I can recollect, which obscured it from a very close inspection; hence the hazy impression I have of it.

It was the home of a hermit.

Here and there, in my small journeyings about the country in the many years that have elapsed since then, I have run across, or heard of, or caught a rare glimpse of one of these hermits. I believe the hermit numerous enough to have a distinct typical feature made out of him, if any one knows what that means—I don't. The many traveled and observant readers, nay, writers of *FOREST AND STREAM* must have seen him time and again. This silent being, once a boy baby, then a youth, then—a hermit. A man without a country, without a human tie, perhaps without any human attributes, or with abnormal human attributes. Perhaps without any human affection, or with too much. Perhaps a fugitive from justice, or a fugitive from injustice.

These two old men, one a man of prominence in the community, respected for his sterling qualities, not a man who watched and prayed, but a man who worked and prayed, as Dr. Eggleston says, a Jesuit; the other as I have described him, seemed to understand each other, at least to the extent that on certain set days they met at the fence in front of the cabin and a few words were exchanged of inquiry about each other's health. Then the hermit turned about into his solitude, carrying the chip basket that I cannot help feeling grateful to for standing out so finely in my memory, filled, as I had a foreknowledge of, by dear old Mrs. Nevin, with doughnuts, pies, butter and things that one of God's women knows how to remember and no one else does. These days were Thanksgiving, Christmas and the Fourth of July.

This is all I know about him. I search my memory in vain to know if he had a name, an occupation or a story.

Many of the men who are busiest in this country with the most important work, rest themselves on a Saturday night with the *FOREST AND STREAM* in their hands. Sometimes they are moved somehow to take their pens and write about what they have seen. If those men of work and thought and accomplishment would but tell us about the hermit I feel sure that we younger and less observant readers would be delighted with almost a complete literature on an almost unexploited subject.

GEORGE KENNEDY.

From the Side Not Often Heard.

We are quite accustomed to having good words spoken by sportsmen of their friends in the country who entertain them; but it is not often that the sentiments of their hosts are so happily expressed as in a note from a Searsburg, N. Y., correspondent, who writes:

Editor *Forest and Stream*: Past seasons have been made pleasant to the writer (city bred, but living in the country), by the annual visit of "the boys" from the city, who always are out for a hunt, and appreciate the efforts of their country host to entertain them, and who, if few birds are found where many were expected, accept the inevitable with a smile and some allusion to the tricks of that "king of game birds," the lordly ruffed grouse.

How pleasant to the wife, who is so afraid that the beef will not be just right, to hear the common pancakes praised to the echo. And when their stay is over, and the dull life that has been broken by their presence settles down once more, we read in the *STREAM* how "Dr. So and So and his companion had a most enjoyable time hunting on a recent trip, thanks to the efforts of mine host Y."

I think it is about time to let the boys who come to hunt with us know that the pleasure has not been all theirs.

Let us hope that the seed left over will survive the rigors of winter and bring forth an abundance of good strong flying grouse.

HECTOR.

A man in Hazleton, Pa., has just received \$75 damages for the killing of his bird dog by another man. This is a healthy sign of the times.

A TRAMP THROUGH THE MOUNTAINS.

II.—The Indians of North Carolina.

On Aug. 7 we tramped from the foot of Clingman's Dome into what the mountaineers euphonicly call Yaller Hill, the capital of the Indian Reservation in North Carolina. As we drew near our destination we met an Indian of whom we asked the distance to Yellow Hill. "Bout two mile an' half." We thanked him and started on. Just then he asked, "Where live?" My companion replied, "Nashville." I said, "Tennessee." He took a long, steady look at our full haversacks, rough clothing and worn shoes, and with an expressive grunt ejaculated, "Too fur!" and walked away. An hour later and we had reached the Government School for the Indians.

My first question was, "How did they happen to be left here?" Several responsible parties gave me the following account: In 1838-9 the Indians in Georgia became troublesome, and it was finally decided to move them west of the Mississippi. The Indians of North Carolina were on friendly terms with the whites, who helped them to hide when Gen. Scott and his soldiers attempted to remove them. Their removal proved quite a task. As captured they were sent away in small squads prior to their final removal. An old Indian named Charley, and his family had been captured, and under the escort of a body of soldiers were being removed to the temporary headquarters just across the Tennessee line. Becoming offended at their treatment Charley and his relatives massacred several of the soldiers and made their escape. This was near the Tennessee line, between Rocky Point and Four Mile Creek. Search was made for the murderers, but to no effect. Among the Indians was a Col. Thomas, who had been reared among them, and had been virtually adopted by the chief, Yonaguski. Thomas was known as the White Chief, and his influence with the Indians was exceedingly great. He proposed to Scott that the Indians be allowed to stay and buy lands, on condition that they surrender the murderers. Such an arrangement was entered into, and Charley, his son and his son-in-law were surrendered by the Indians. Scott insisted that the Indians should punish the culprits, and they were accordingly shot to death. The Cherokees are still in their old homes in North Carolina, in Swain, Jackson, Graham and Cherokee counties. The reservation proper is known as the Qualla Boundary, and lies in Swain and Jackson counties. They have 21,000 acres in Swain and 29,000 in Jackson. In addition to this they have 20,000 or 30,000 acres in Graham and Cherokee. Most of this area is public land, owned by the Indians in common. This land cannot be sold to any one. No Indian can settle within half a mile of another. Of course this applies only to the common lands. About 800 acres in the Qualla Reservation are individual property. Occasionally squatters, whites and negroes, take out State grants and settle on the common land of the Indians. Just here arises a conflict between the State and General Governments, and the question of jurisdiction is still in doubt. These Cherokees number 1,320, and are said to be increasing in numbers. Without exception they are farmers, and good ones, too. Their places present an appearance of thrift and comfort not to be found among the whites. They raise corn and cattle. In former years they exported some tobacco.

Their exact civil status is unsettled. They are citizens of North Carolina, but are under the general supervision of the U. S. Government, which sees after their land titles, provides for the maintenance of their schools, etc. As I said, they are citizens of North Carolina, and nowhere have I seen party feeling more intense than among these Cherokees. The majority of them are Republicans.

They have a chief and a council. The chief's authority is of a vague character, and is derived from the constitution. He is elected by the males over sixteen years of age and holds office for four years. Prior to 1875 the term was for life. He convenes the council (consisting of one representative for every fifty souls) and lays before them questions concerning the general welfare. This council meets annually or when convened by the chief. The present chief, Stillwell Sounooka, is a portly, stolid-looking man. The ex-chief, John Smith, or Tsalatihu, is a tall, handsome fellow, with long, black hair, and is a Chesterfield in manners. His erect, military bearing is suggestive of his four years of service as a Confederate officer. He is also a Mason and is much interested in the order.

The Indians have four schools, three of them day schools. These latter are supported by the interest of funds belonging to the Indians and in the hands of the Commissioner of Indian Claims. The fund is the money originally intended for the transportation of the Indians to the Indian Territory and for their subsistence en route. The other is a boarding school and is supported by a direct appropriation of the General Government. Provision is made for the board, clothing and education of eighty Indians. Both sexes are represented. The curriculum comprises the ordinary public school course, and for the boys, training in farming, blacksmithing, shoemaking and carpenter's work, while the girls are taught housework in all its branches. They are also given instruction on the piano and the guitar. The boys have a brass band of seventeen pieces. Each sex does its own housework. The boys and girls sleep in houses at some distance from each other, but eat at the same house. We ate two meals with them, and can testify that their table manners are fully up to the mark attained by the average American boy or girl. In fact, they are just like other boys and girls. Some are stolid, some serious, some full of fun, some intent on their food and some full of curiosity. The fare was appetizing and abundant.

I am sorry to say just now the affairs of this, the most important school, are in a sad tangle. For several years past Mr. Spray has had charge of this school and has been superintendent of the Indians.

Many of their traditions bear a striking resemblance to the folk lore of Uncle Remus as well as the mythology of classic times. Here is their story of Br'er Terrapin and Br'er Deer. At a meeting of the animals a dispute arose as to which of all the animals was the fastest runner. All save the terrapin yielded the palm to the deer, but Br'er Terrapin challenged Br'er Deer to a race. Br'er Deer accepted and the time was set. The course was over four hills and terminated at a water-course. The one first reaching the hill was to indicate it by shouting. So, in the interval of seven days which preceded the race, Br'er Terrapin made his preparations. He stationed his wife on the first hill,

his brothers on two other hills, a friend on the last hill and his father at the goal. He and Br'er Deer started together. Away went the deer at a rapid gait, while the terrapin crawled into the bushes and hid. As the deer approached the top of the first hill the terrapin stationed there called out, "You a-runnin' mighty well, Br'er Deer, but you'll have to run faster than that to beat me." The deer pricked up his ears and ran faster than before. Soon he reached the second hill, only to hear the terrapin say, "You a-runnin' mighty well, Br'er Deer, but you'll have to run faster than that to beat me." At each hill this was repeated and each time the deer made a desperate spurt, but in vain, for as he came in sight of the water-course, there sat Br'er Terrapin and saluted him with, "Br'er Deer, you a mighty good runner, but I can't be beat."

In Indian lore the terrapin is the personification of cunning and wisdom. This is how he decided a case. There had been an old feud between Br'er Rabbit and Br'er Wolf. One day Br'er Rabbit found Br'er Wolf about to be crushed to death by a large stone which had fallen on him. Br'er Wolf begged him to help him out, but Br'er Rabbit refused, fearing that the wolf would kill him when released. The wolf solemnly assured him that he would not molest him and the rabbit pushed the stone off and released him. The wolf at once seized him and prepared to kill him. The rabbit begged for mercy, but in vain. Finally, he induced the wolf to agree to lay the case before Br'er Terrapin and to abide by his decision. Br'er Wolf stated that Br'er Rabbit had once done him an injury and that he had sworn to kill him for it. Br'er Rabbit pleaded his saving of Br'er Wolf's life. Br'er Terrapin had the circumstance of the stone repeated again and again, but said he was so dull that he couldn't understand it and asked the wolf to get in the same place again, that he might see what service Br'er Rabbit had rendered him. The wolf agreed, and when he was once more under the stone Br'er Terrapin and Br'er Rabbit walked off and left him.

So much, for the present, touching their legends. A few weeks ago an Indian was found making some pipes and gravely explained that he was "making old Injun relics." Another, on trial for stealing, declined to plead until he "had heard the evidence in the case."

We, that is Smith and I, left Yellow Hill on the morning of the 9th, bound for Whittier, a little station on the Richmond & Danville R. R., six miles from Yellow Hill. Myer decided to spend another day among the Indians and then take the train for Asheville, there to await our coming. Landon Smith rode back to Bryson City, to take the train for Texas. We two tramps forded the Lufkie and set out at a brisk pace for Whittier. Meeting a mountain lad, Smith asked him if we "followed the straight road to Whittier." "No, it's a crooked one," was the reply. Smith grinned and walked on. Our plan was to take the train to Balsam Gap and then strike into the mountains once more, devoting the last two days of our tramp to the Balsam Mountains. We reached Whittier two hours before the train did. Smith wrote, while I loafed. I met Sam Owl, a noted Indian guide, who proved less taciturn than most of his race. I also heard a mountain maiden speaking of a dress pattern which she was about to buy, say, "Doggone if that aint the one for me." On the train were Mr. and Mrs. Smathey, of Waynesville, whom we had met at Yellow Hill, and Mr. Smathey kindly mapped out for us a route for our two days in the Balsams, and also carried our surplus baggage on to Waynesville. Landon Smith and the Erdmans were on board, and to our gratification, Mr. Geo. Erdman, Princeton '93, decided to join us. At Balsam Gap we got a good dinner, and then started up Mt. Junaluska (Plott Balsam), height 6,235ft. Mr. Connor, an old gentleman of 75, was our guide. He is a firm believer in the curative properties of balsam, and says it will heal anything, from a scared conscience to a case of small-pox. He gathers it and sells it at \$2 per pin.

Nowhere on the trip had we a steeper climb than up Junaluska. It was as bad as the ascent of Clingman, but longer. The view was poor, owing to the timber, but on the divide we had a glorious prospect. Onco more we got wet, this time to the bone. A tramp of twelve miles brought us to the famous Haywood White Sulphur Springs, on the outskirts of Waynesville. As we passed the sleek, well-dressed fellows who are stopping here, we received many glances of curiosity and possibly one or two of pity. Our kind landlady gave us an excellent supper and pretended to be indifferent to our prodigious appetites. After supper we tried to secure a guide for the next day but failed. We slept soundly and got an early start the next morning. This was to be our last day, so our packs were lighter than heretofore. We took the road leading to the Caney Fork Bald and Great Divide. Three or four miles from Waynesville we met a group of men, one of whom, McClure, agreed to guide us. We found him equal to even Massey for this trip. He pointed out to us the spot where Grant Massey, Pat's brother, had a month before shot to death a mountain Paris who had invaded his home. Grant is now hiding out in the inaccessible Smokies, but, it is thought, will return to stand his trial. Half an hour later we saw the faithless wife, a pretty, buxom mountain girl, evidently careless of and indifferent to the tragedy in which she plays so prominent a part. The climb up Caney Fork was not a difficult one, but from here to the top of the Great Divide, 6,425ft. high, we had rough work, fully as bad as the ascent of Junaluska. At 1:15 we reached the highest point, after being wet to the skin once more. The clouds and fog prevented a view, so on we pushed to Luckstone Mountain.

Following the divide we were at one time in sight of four streams—Caney Fork, Tuckasee, Pigeon and Richland. Just across Pigeon River were Cold Mountain and Pisgah. An easy climb carried us up Luckstone, where we emerged into an oak grove where the Druids might have worshipped. A half mile walk through this grove led us, by a gradual ascent, to the summit of Luckstone, a circle about twenty feet in diameter. Here the fates were propitious and as the clouds lifted we had the most glorious view of the whole trip. It was a fitting close to the scene. But no man can describe such a picture. You must see it to appreciate it. Leaving Luckstone and the luscious huckleberries which abound thereon we started for Waynesville, which was only seven miles away, as we had been traveling in almost a circle. On the way in Erdman sang us his college songs and at 7 P. M. we reached Waynesville, having accomplished twenty-six miles on this, our last day. As we entered the town we passed some little girls, one of whom said: "Ain't you dirty?" I guess we were. After we reached our board-

ing house I went out into the yard and began to scrape the mud from my trousers. A bright little six-year-old came up and took a seat near me. "Mister, is you all tramps?" "Yes." "When you go to houses do they give you cold victuals?" "Yes, sometimes." "Well, you don't git as much as the others, do you?"

There were many ludicrous incidents on this tramp, and the lack of a camera deprived us of some sights we would gladly preserve. Tramping along a mountain road, we saw a young fellow and his girl sitting in the door of a smokehouse, about three rods from the cabin. There they sat, hand in hand, and the old, old story was evidently falling on willing ears. "Courting," was the comment of one of our party. "Human nature's a queer thing," said our guide. And, just here, let me say that if you ever take this tramp or one like it, be sure to secure a good guide. Otherwise, you will certainly get lost, and wander around for hours, half-starved for lack of food, and half-perished for water. Many of my friends have asked me about game in these mountains. Turkey and pheasants are plentiful, some wolves, a few bears and an occasional deer may be found. Of snakes we saw none. On the highest peaks we found thousands of blackberry bushes; the berries were plentiful, but green, but there was not a brier to be seen on any of these bushes. Why? Mica is abundant and can be picked up almost anywhere. Now, if you wish to avoid what Holmes calls the parenthesis about the mouth when you smile, and the other sign manuals by which the probate court recognizes old age, try a tramp through the mountains, covering 119 miles in six consecutive days as did Smith and I.

At Waynesville I met a judge of the Supreme Court of N. C. At Asheville the next day, after I had gotten out of my tramping clothes and into the ordinary garments of civilization, I met him once more. "It seems to me that I know you," said he. "Yes, judge, you remember my face but not my clothes." Our tramp closed at Waynesville as stated above. The next morning we went into Asheville on the train and spent a day in sight-seeing. This town is correctly termed the "Land of the Skies." It abounds in good hotels, and the view from the Battery Park is particularly fine. But I was writing of the mountains and of our tramp, so will simply close by saying that after a quick and pleasant run by rail I reached Franklin on Aug. 12, bringing with me a wonderful appetite.

Natural History.

RABBITS AND FERRETS.

SOUTH MONTROSE, Pa.—Editor *Forest and Stream*: I notice a personal reply in your paper to my letter about rabbits and ferrets. It was written by a gentleman of Auburn, who signs himself "Bon Ami." The word cat was a mistake, but what material difference is it whether the male eats the young or digs a hole and buries them. "Bon Ami" tells us that he (a true sportsman) with his gun and dog killed ten rabbits in one-half day. It is easy to see that if he had hunted the rest of the day there would have been twenty dead rabbits.

This gentleman notes that rabbits are scarcer than before ferrets were used. But the fact is there are ten hunters now to the occasional one of a few years ago.

A man living only two miles from "Bon Ami" told me he had killed 200 rabbits last fall, and not much of a fall for rabbits either. I say we have plenty of rabbits in Susquehanna county, and plenty of hunters, too.

I still claim that the home of the ruffed grouse in summer is in the woods on top of our hills. Any boy will tell you that the grouse come out for the berries which grow in the open places, and when disturbed make straight for the woods. They also rear their young on high and dry ground, and not till cold weather do they go down to the hemlock swamps. And even then every warm day they may be found on higher ground feeding.

I have talked with several gentlemen who say I am right. But "Bon Ami" doubted every word of my letter of Nov. 17. I have a communication from a stranger who saw "Bon Ami's" letter of Dec. 1, and I now have the liberty of sending for publication. It is as follows:

WEST HOOSICK, N. Y.—In *FOREST AND STREAM* Dec. 1 I saw some remarks signed "Bon Ami." He does not take any stock in the male rabbit's killing the young. You are right, Mr. Decker. The buck will kill every young rabbit he can find. I have had as much experience with rabbits as any man on this green earth, and know just what I am talking about, and if "Bon Ami" wants some pointers on rabbits I can give them with 40 years' experience in breeding wild and tame rabbits. Also, I had a bush of two acres fenced in and stocked with wild rabbits. I have seen the bucks hunt out the young and kill them; I had to keep the bucks in very small numbers in order to make a success in breeding. And again, if "Bon Ami" will get a pair of rabbits and breed them one year he will find two-thirds of their offspring to be females.

STILES DECKER.

A Snail on the Snow.

LOCKPORT, N. Y., Feb. 3.—While my son and I were tramping in the woods last Saturday he found a small snail shell on top of the snow, which was at least 15in. deep. Wondering how it came there he stooped to pick it up, when he saw it was about 1 1/2 in. from an oblong-shaped hole, a little over 1in. in length by 3/4 in. across, and running nearly perpendicular to the ground. Digging down on one side of it he found that it extended under a dead limb lying just above the ground. There is a snail in the shell but it is dead, probably frozen to death while on the top of the snow. How did it get there? J. L. DAVISON.

An Indian's Testimony.

PEDRO, a Molalla Indian living on the Klamath Reservation, Oregon, says: "I was hunting in the mountains near Crater Lake (Oregon), when perhaps 75yds. away. I saw a cougar standing with its head well up, looking at me; I aimed at its breast and fired, the animal gave a very loud scream and sprang straight up 6 or 8ft. and fell dead. The bullet struck where I had aimed; I was not afraid when I saw the cougar but the cry scared me."

"SYLVAN," Witness.

PEDRO, his mark.

Queer Game for Hawks.

AVOCA, N. C., Feb. 1.—Yesterday in a ravine I suddenly came on a large hawk, and so startled him that he

dropped his prey. I saw it drop and the water splash when it dropped. Going a few yards further I flushed a large covey of quail. Thinking that it must be a quail I had seen drop I retraced my steps and went to the point. I carefully scanned every bunch of grass and pool for my bird. Not a feather even could I find. Looking into a little pool at about the point I had seen the bird drop, I discovered a small terrapin making slight efforts to move. Thinking that the past few sunny days had removed his torpidity I got a stick and drew it from the water. Taking it in my hand I saw blood dropping from the region of the head. Upon examination I found that the head and most of the neck had been bitten off, leaving the ragged skin hanging and bleeding. The tail and legs continued to move with the peculiar aimless movements we have all noticed in a beheaded turtle. We knowing that a turtle when caught always withdraws his head, and it is with difficulty his captor can induce him to extend his neck or exhibit his head, why should the hawk have snapped off the turtle's head and neck instead of his leg or tail that are visible and in active motion? Was it instinct or experience?

ALBEMARLE.

The Dreaming Kitten.

THE other day, when kitty lay sound asleep in the cushioned chair she uses for a bed, I put a small piece of fresh beef on the end of a toothpick and held it within half an inch of her nose. After a few seconds the muscles of the throat twitched slightly, the mouth opened, the jaws began to work and every detail of chewing and swallowing followed, after which she licked her lips, but she slept right on, and she did not awake for some time afterward.

O. H. HAMPTON.

Pine Grosbeaks.

The following letter explains itself and we hope that it may draw out responses from some of our ornithological readers:

No. 145 BRATTLE STREET, Cambridge, Mass.

DEAR SIR: During the early part of the present winter Cambridge, Massachusetts, was visited by an unusual number of pine grosbeaks (*Pinicola enucleator*), which, after exhausting the food supply, departed very suddenly. I wish to trace, if possible, the routes which they followed and the total area covered by their migration. You can aid me in this by kindly answering the following questions:

1. Have any pine grosbeaks appeared in your neighborhood this winter? (Reports of their apparent absence will be quite as useful as records of their occurrence.)
2. When were the first seen and at what date were they most numerous? (Approximate dates will be much better than none.)
3. What was the greatest number of birds seen in one day?
4. Did they occur in large or small flocks as a rule and what was the greatest number seen in any one flock?
5. About what was the proportion of red (i.e., full-plumaged males) to the females and young (i.e., plain brown or gray birds)?
6. What was their principal food when with you?
7. If they have disappeared or materially decreased in numbers about when did this occur?

The following brief description of the pine grosbeak may enable those unacquainted with the bird to recognize it. In size a little smaller than a robin, plump, well feathered, with short, stout bill. Old males with most of the plumage rosy red. Females and young males ashy brown, with more or less yellowish suffusion or dull red on the rump and top of head. Both sexes have two conspicuous white bars on the wings. Yours truly,

WILLIAM BREWSTER.

THE BIG TURKEY.

THIRTY years have flown since when, on a visit to an elder brother in western Iowa, very soon after my arrival I was requested to take my brother's shotgun and kill the turkey which for several evenings past had been heard gobbling in the timber along the Nishnabotna River about a mile distant.

Wild turkeys were even then becoming quite scarce, though a few wary birds still remained in the timber along the streams.

I was informed that the bird usually began gobbling about an hour before sunset, and an occasional call would be heard from him until dark. No one had interfered with him, as the hunting fever never burned in the veins of my sedate brother, who, however, was very well aware that few words of urging were ever required to start a certain half-wild young enthusiast off on the wildest of wild goose chases after anything that looked like game.

I knew from experience that I had a full-sized contract on my hands, for a fine gobbler, whose former fellows had nearly or quite all fallen to the rifle of the Western hunter, was quite apt to prove able to take good care of himself, and the chance of surprising him seemed like that of "catching a weasel asleep."

However, as I had then much rather hunt than eat or sleep, I improved the early hours of the afternoon in giving the old single-barrel muzzleloader a thorough cleaning and careful loading in the manner which experience had proven best for the old fuzee, than which I question very much if a better "shooting iron" exists to-day among all the dudes of America.

It wasn't "treble-cross-bolted," nor "top snap," nor "pistol grip," nor "modified choke;" it wasn't loaded with "E. C.," nor "Schultze," nor "S. S.," nor even with Mr. Elliott's favorite "wood powder;" and no "pink edge" wads or "chilled shot" ever scoured the smooth inside of its long barrel. Yet all the same when the declining sun was but a hand breadth above the horizon, and I shouldered the old blunderbuss and started for the grove of timber in the first big bend of the river below the house, out of which now came, clear and distinct, the first subdued call of the wary old sentry, it was with the confident assurance that the big load of plain Western ammunition, deep hidden in the cavernous stomach of the old "stand-by," would give a good account of itself, and that should I succeed in catching sight of the turkey at forty or fifty yards distance it would prove a cold day, indeed, if the old gun didn't elevate the temperature for him.

There were no settlements on the river below for a number of miles, and there was no fear of interruption by others on the same quest, that greatest of all annoyances which can befall the hunter. The gun was loaded with No. 4 shot, the largest obtainable. At intervals of several minutes each came the clear call of the turkey, borne on the wings of the gentle breeze, which, fortunately for me,

proved him to be to windward. Choosing the dry bed of an old bayou which circled through the bottom land toward the river, I succeeded in gaining the edge of the grove without being seen, and here made quite a pause until repeated calls of the turkey proved that my game was at the further side of the body of timber that filled the whole bend of the crooked stream, which at this point made a great half circle beyond the timber to the edge of prairie land beyond the further bank. I could move in silence over the sandy soil, and it appeared now to be only a question of which, the game or the hunter, had the sharpest eyes. Picking my way slowly along, all eyes, all ears, with thumb on hammer and finger on trigger, I reached the further edge of the timber, only to find that the crooked river, with its steep, muddy banks and deep, sluggish current lay just beyond, while a low call from the gobbler just then announced to me the unwelcome fact that the object of my careful search was still beyond the apparently impassable stream.

But just as the unpleasant truth forced itself upon me my boyish heart leaped with exultation as I saw that right in front of me and almost in line with the last call of the gobbler, lay the stem of a gigantic cottonwood which, long ago undermined by the encroaching stream, had in its fall completely spanned the river, affording me a safe and convenient bridge.

Another low call of the turkey, fainter than any yet heard, warned me that he was becoming suspicious, though I knew that he had not yet seen, heard or scented me. This proved the last call I was to hear from him, but which gave me his direction exactly. Did a premonition of impending doom visit him as he kept vigil in his lonely thicket, warning him to silence?

Creeping out on the big cottonwood beyond the fringe of bushes lining the shore, I saw at a glance the hiding place of the wary old bird. About 40 yds. from the shore of the stream, above which on the top of the log I at length stood, grew a dense thicket of wild plum bushes about 20 yds. in length up and down the stream and about 10 yds. wide, while just beyond rose a slight elevation of prairie land, and about 10 ft. higher than that on which grew the bushes, crowned with short grass too low to conceal the turkey, and nothing above or below save a dense growth of tangled vines too low to hide him and too densely tangled for suitable cover. His hiding place was well chosen, and as I stood upon the log I pondered long upon the question of what to do next, for a glance at the ground between the log and the thicket showed the hopelessness of the task of attempting to pick my way through the tangled vines with anything like the silence necessary in approaching my watchful game, and no other avenue of approach was visible.

Finally I decided upon the only course really left for me. That was to get in perfect readiness for action, take a full breath, and with no further regard whatever for silence to run with all possible speed from the log to the opposite side of the thicket, through a partial opening near its center, and take chances on being able to get there before the fleet-footed old racer could place himself beyond range.

There was but this one thing to do; and first scanning carefully every step of my short but tangled course from the point of vantage high up on the big log, I glanced at the gun to assure myself that it was in perfect order, drew a deep breath, and with a long leap down among the tangled and rustling vines, tore my noisy way through the vegetation with racket enough for the charge of a bull buffalo. Nearing the thicket, I ducked my head and with half-closed eyes dashed through the hindering network of thorn-fringed boughs, and gaining the open slope beyond, rose up, glancing quickly from right to left in search of the absconding turkey.

Wary and cunning old rascal!

Nothing save the Nancy Hanks gait of my swift approach ever brought to my view the roast turkey dinner of the succeeding day. Squarely to the left he had turned, where only a narrow point of the higher land, projecting toward the river, remained to be crossed before placing himself beyond sight entirely. Forty yards distant, on the very crest of the point, within five jumps of safety, with neck outstretched and drooping head, and with the foot-long beard pendant from his breast sweeping the short grass in front, sped the biggest turkey I ever bagged at a pace that seemed a guarantee of safety.

There remained but the work of a moment, for seconds were priceless!

Stooping the instant the faithful old gun spoke, for a glance beneath the belching smoke cloud, I had the happiness of seeing the great bird collapse like a folding umbrella, while the long roar of the miniature cannon, followed by the Pawnee yell of the half crazy enthusiast, sounded a fitting requiem, and announced to distant friends the welcome news that the chase was done. A glorious chase it had been, too! The very tornado of my swift approach had probably confused him into those few seconds of fatal delay. And although a number of turkeys have at other times fallen to my rifle, and in fact this was the only one which I ever killed with a shotgun, still this little adventure, with its tumultuously pleasant ending, proved the most enjoyable hunt I ever knew.

And how fortunate, by the way, is the hunter, in comparison with the fisherman!

For if, in conclusion, I tell of my bird weighing 2 lbs. more than the biggest turkey of any other hunter, and of his beard measuring 3 in. longer than any other similar trophy, of course all well instructed readers of "Our Paper" will understand that (unlike the amateur fisherman who rashly volunteers the first fish story, and, in consequence, stands no show at all thereafter), I can rest calmly in the assurance that my brother hunters, guileless and innocent as Boone himself (for who ever heard of a hunter "yarning?") will make no envious clutch at my well earned laurels.

I wonder, if "O. O. S." had told us of killing the biggest tarpon on record with a hand-spike instead of the great cat of the Columbia, how long it would have been before we heard of a much larger Florida specimen having been killed with a bootjack? Sage contributor.

When he gets ready to give us one of the very best of the long list of good stories yet chronicled by the only sportsman's paper on this green earth to-day (don't blush, Mr. Editor, and please keep your blue pencil off that line, for I mean every word of it), he wisely drops the fisherman, together with the old lancewood out of sight in the bushes, and emerges triumphantly therefrom the champion pedestrian-hunter of America. I trust the hair of

his wig has since settled smoothly into place, and when next he visits the great forests of the Pacific coast to try his speed with the "big kitties," "may I be there to see."

ORIN BELKNAP.

VALLEY, Stevens County, Washington.

PATTERN AND PENETRATION.

Editor Forest and Stream:

THE issue of FOREST AND STREAM of Dec. 1 contains a communication from Mr. O. H. Hampton, in which the writer presents the theory that the cause why nitro-powders give a closer pattern than black powder is chiefly due to the fact that the gas pressure at and near the muzzle of the gun is greater from a charge of black powder than from a charge of nitro powder.

Mr. Hampton's premises are incorrect, and consequently his conclusion must be wrong. I have made extensive experiments on the line pointed out by Mr. Hampton and the results of these tests are not in accordance with the views advanced by him.

If Mr. Hampton would have fired a series of shots from a larger number of guns with both kinds of explosives he undoubtedly had arrived at a different conclusion, for as a matter of fact one gun will shoot nitro powder better than black powder, while another gun will give the best and the most effective patterns with black powder.

The distribution of the gas pressure in a gun barrel of a charge of black powder does not differ greatly from that of a charge of nitro powder.

Since Mr. Hampton evidently has not the requisite instruments for determining the question at issue at his command, I will give here the gas pressure produced by the various gunpowders in the barrel.

The gas pressures were in all instances measured first in the cartridge chamber, second 1 ft. further toward the muzzle, and third 2 ft. from the chamber. The figures thus obtained were as follows:

1. Standard charge of fine-grained black powder: Point 1—average pressure 445.4 atmospheres; point 2—138.8 atm.; point 3—47.4 atm.

2. Standard charge of coarse-grained black powder: Point 1—414.6 atm.; point 2—138.8 atm.; point 3—51.8 atm.

3. Standard charge of Schultze powder: Point 1—510.6 atm.; point 2—86.4 atm.; point 3—47.8 atm.

4. Standard charge of E. C. powder: Point 1—496.8 atm.; point 2—72.3 atm.; point 3—41.2 atm.

5. Standard charge of Walsrode smokeless powder: Point 1—482 atm.; point 2—59.2 atm.; point 3—6.8 atm.

The initial velocities were in all cases about the same.

Now if Mr. Hampton's theory would be correct the patterns of the Walsrode powder, which produces the lowest pressure near the muzzle should have been the best. This, however, has not been the case, they were not superior to those obtained from the coarse-grained black powder, although very satisfactory and unsurpassed by any explosive. The merits of a gunpowder must, to a great extent, be judged from the uniformity of the gas pressure, since evenness of pattern is governed by a regularity of the gas pressure. No nitro powder can in this respect be compared with a good quality of black powder, and the Walsrode powder shows in this regard the nearest approach to black powder among the nitro explosives. This fact, however, may be mainly due to its great indifference to try heat or the effect of moisture in the atmospheric air, less to the distribution of pressure in the gun barrel.

I cannot agree again with Mr. Hampton when he asserts or believes that the pellets fired from a chokebore barrel will cross in their flight through the air.

In order to ascertain which portion of a charge of shot would as a rule constitute the main body of the center of the killing circle, hundreds of shots were fired from chokebore and cylindrical barrels and the pellets were marked. It was found that those pellets forming the outer layers in the shell, and naturally subjected to the most friction in their passage through the barrel, would in their majority be found among the scattering shot and give the least penetration, while those pellets near or more close to the center of the charge in the shell will furnish the highest per centage of the pellets found in the middle of the shooting circle. This rule applies to both kinds of barrels.

PENNSYLVANIA GAME LAWS.

Editor Forest and Stream:

REVISING the game laws of Pennsylvania and making them uniform is all well enough in certain limits. But making the open season on woodcock commence in November, as some propose, isn't all well enough, unless we resolve to quit shooting such game entirely. It simply amounts to that practically. In northern Pennsylvania the woodcock are all gone by Nov. 1. Sept. 1 is the proper time for woodcock and grouse shooting to begin. Now we commence on woodcock July 4. If we surrender two months we certainly ought to have two months where we now have at least four. If we can't get this we had better oppose any change, and keep the law as it is now, and working fairly well.

Woodcock are migratory birds. They come early, breed early, and go south with the first frosts. It makes no odds how little or how much we shoot them in any one year; the same supply comes back to the same feeding grounds for the next year. They are not like native birds, which may run out by extensive killing. By all means give us at least two months for this sport. It will simply spoil this shooting by having only half a month for it. September is the best fall month, and we should by all means have that, with October and what of November may be available, and some of it is, in the southern part of the State, but not in the northern part of the State and further north.

And some reasonable provision should be made about squirrels. It will be hard to convince the old farmer and his half a dozen boys that squirrels should not be destroyed when they begin to destroy the corn.

A reasonable change may go through. But an unreasonable one will make the law less valuable than it is now.

PENN.

The American Dairymen gives elaborate directions for curing buffalo skins. A recipe for cooking moa eggs or making feather beds from great auks would be about as useful and timely and practical.

A VERACIOUS NARRATION.

"LOOKS as though the storm is about over and I guess it's going to be colder," were Charley Steele's words of salutation and prophecy when he dropped in one afternoon in autumn after a driving rain that lasted several days. The words were not hastily spoken, and their manner of utterance would not remind one of the impetuous school boy bubbling over with animal spirits and over-elated at the prospect of soon enjoying a day on the ice with his skates. No! there is nothing impetuous about Charley and his going out and coming in, his easy, swinging gait and drawing intonation, suggests that he was not born in a hurry and that he has not made war upon his inheritance.

Be the fates propitious or otherwise, his equanimity is not disturbed and his ability, patience, perseverance and untiring industry combined with droll humor and apt rejoinder, make him a prized companion for an outing. Are there any trout brooks accessible, Charley carries a mental map of the topography of the country for miles around, each rippling brook clearly defined from source to confluence as if graven on metal, and each bend and pool that furnishes home and hiding place for piscatorial beauty yields abundant tribute to his tempting lure.

Birds! Well the boys say that they don't dare mate in the spring until he gives consent and designates their nesting places.

I agreed with him that we were likely to get colder weather, and now that the leaves had been beaten from the trees, it would be a good time to take a day off and pay our respects to the birds. The suggestion proved an exact fit, and the next morning, keen and frosty, two gunners well bundled up with all necessary impedimenta, drove out to the northern covers. Buoyant at the prospect, we were at peace with ourselves and all the world, the smoke from the fragrant Havanna lending added comfort and perfuming the air for yards around.

An hour's drive lands us several miles out where a small cover fills in one corner and a swale with scrub growth the opposite where the turnpike crosses at right angles.

"Guess we had better hitch here and try this little patch. You go into the open pasture on the other side of the road and I'll take Pete and go down the road and beat the cover back to you. If a bird boils out he will come right into your face as he cuts across the corner for the swale, and you know he don't count if you don't drop him."

"All right, Charley. You put him up and he is our bird. I feel just like it this clear, frosty morning."

I am not long in my place before I hear the tinkle, tinkle of Pete's bell as he carefully quarters the narrow cover, and soon I get an occasional glimpse of Charley's head as he works his way toward me. Coming within speaking distance he says:

"I guess there ain't any birds here this morning, but somehow Pete don't seem to want to give it up. He's been challenging and trailing, but I guess it must be a rabbit that's run into the wall in front of you."

Pete meanwhile has worked up under an apple tree in a jungle of undergrowth by the stone wall on the roadside and stiffens out rigid.

"Pete has a point, Doc!"

"Whirr-r-r, bang!" and a plump grouse falls within two yards of my feet.

"Didn't I tell you, Charley, that I felt just like it! Why, I feel that it is just the easiest thing in the world to down anything that flies to-day."

We smooth the ruffled plumage and carefully fold the wings of the noble bird that but a moment ago was instinct with life and deposit it in our game pocket. We drive along to the farmhouse beyond the hill, where we receive a cordial welcome and an invitation to put our team in the barn. We are soon in the apple tree run west of the house.

"Doc, you go up around and take your stand by that big chestnut in the open up there about 200yds. I can take care of any that may be about here, but when I get into that tangled grapevine mess up there I can't shoot, and you know that they cut right across the opening to the cover beyond."

"All right, Charley, and I'll cut them down before they cut across."

Charley works the covert out faithfully and well, but starts no bird until he gets into the grapevine thicket, where Pete makes a staunch point, which Charley duly announces.

"All right here, Charley; send her along."

At command Pete flushes, and I see Mrs. Grouse making a bee line for my head. I have ample time to put my gun to my shoulder and take deliberate aim, as I might with a rifle, and when I judged the bird to be at a proper distance, pulled the trigger, feeling absolutely certain that that bird would fall dead at my feet, she was coming at such speed; but like a flash by me she went to the cover beyond, and so surprised and astounded was I that it never occurred to me to use the second charge on her!

Talk about the heights of expectation and the depths of disappointment, talk about the dead certainties of life and find yourself clinging only to the baseless fabric of a dream!

"That's our bird, too, I suppose," said Charley when he appeared all too soon upon the scene.

"Yes, our bird to get. Charley, do you suppose I could get a job from some of these farmers to pile up stones?"

"Why, what do you mean? Didn't you get that bird?"

"Get that bird? No. I think I had better break my gun over that stone wall and go home."

"Oh, come now, don't get rattled. I thought you were feeling a little too fine when we started in, but the day is before us and we will do something yet. She was coming quicker than you thought and you didn't shoot quick enough. You let her get too near and your shot went by her like a bullet. Where did she go?"

"Right on up the run."

"She is probably hid up in the scrub pine up in that alder run. You get right up to the chestnuts by that big boulder and I will soon have her going again."

I had not long to wait before I heard Charley's "mark" as she left a pine tree-top when he was just where he couldn't shoot. Just as soon as she broke cover bang! bang! went my gun and on went the bird by me up the run.

Rattled? Please don't mention it. I began to think that I hadn't lost any partridge, and it wouldn't make much difference if I didn't capture the one belonging to some one else.

Charley emerged from the cover before she was lost to

view, and seeing that I had again missed her clean, and doubtless appreciating my frame of mind, only said:

"I've marked her down in that brier patch under the sumacs up there and we'll get her now."

We soon surround her and Peter is ordered in. She is running and soon takes wing at a long distance, but both send salutation and unheeded orders to halt.

She ceases not in her flight until after reaching the dense pine woods beyond the old road to Malden, where it would be useless and unwise to pursue her.

But why recount the adventures of that day in detail? We had journeyed some miles from the team and we agreed to go back around Malden Hill in the hope that fate would be more propitious. But bird after bird Charley sent uncomplainingly over my head, to the right and to the left, until I had used nineteen shells and only had one bird to show for them, and this without a word of criticism or fault finding from him!

We reach the summit of the hill, in sight of the farmhouse, a little after midday, when Charley says: "You stand out there in the opening and I will go down this narrow strip of cover. There's usually some birds down at the lower end, where mast is plenty, and they will fly right over this open spot to the big woods. If you don't kill any of them I think we had better go home."

I was not in a talkative mood just then and answer made I none. Charley worked down through the almost impenetrable scrub growth, and when nearing the lower end up boiled three birds, and veering around they gave him no shot, and from my point of vantage on the summit I could see all as they swiftly scaled the scrub tops directly toward me. Two more shells were wasted, and crest-fallen and disheartened I started for the barn. Charley did not wait for my tardy steps and he was seated on a log near the barn in the warm sunlight eating his lunch on my arrival.

Not a word passed between us. I watered and fed the horse and sat down and ate my lunch. Pete wagged his tail in recognition for the morsel thrown to him, but to me it seemed clear that disdain was pictured on his countenance. Charley's lunch was disposed of long before I finished mine, and I could not but observe that he held the stem of his meerschaum more firmly between his teeth and sent forth greater volumes of the fragrant smoke than usual.

Luncheon ended, we proceed to hitch up the team. As Charley was tucking the blanket around Pete under the seat, he breaks the silence with the brief question:

"Going home?"

"I don't know but what we might as well, but I hate to give it up so."

"Well, perhaps luck might turn. Suppose we go on to the old red house cover. It gets dark early, but it's not far over there, and perhaps we might do something."

We are driving out of the yard now, and the horse's head is not turned homeward. We reach our destination and Charley says:

"Now, you go down by the big chestnuts by the bars and I will go up to the apple trees in the run above. If I start any birds I am bound to kill some and the rest will come right down in easy gunshot of you, and I don't want you to waste any more ammunition either. I will stay here on this knoll until I see you in your position."

On I go, carelessly carrying my gun over my shoulder, thinking of nothing but getting down to the bars. I had covered about half the distance, when out from under a scrub pine by the side of a thorn apple tree jumped five partridges so unexpectedly and the thunder of whose pinions so disconcerted me that I forgot that I had a gun, so I "didn't waste any more ammunition."

I thought I heard Charley say h-ll, but of this I would not want to affirm positively, as those who know him best would hardly believe he could commit such a breach of propriety, and besides, if woodcock whistle with their wings why may not partridge, who are more highly developed, say cuss words with theirs?

Time is too precious to be frittered away indulging in vain regrets, and so I am soon in the place assigned me under the chestnuts. Soon I hear, "Point! mark!" Bang, bang—bang, bang!

The gunners have done their work, but it is Pete's hour of triumph. Promptly and delicately he retrieves three plump birds, two of which fell to Charley's gun. We mark down the balance, and in less than 10 minutes two more are in our pockets, one to each gun. We turn and see the covey that I blundered upon, and have no difficulty in locating them in a nice open growth of chestnuts, where we can work together. Pete points a single that gives me a shot on the right when flushed. I make a nice clean kill and add the sixth bird to our score. A seventh is soon flushed that makes straight away, but falls to the report of two guns at the same instant. The day is fast going, and we make a detour toward our team, and on the way we kill another bird apiece, successfully ending a day with the biggest hole in it that it has ever been our lot to spend together.

GEORGE MCALPHEE.

WORCESTER, MASS.

Trajectory of Hunting Rifles.

INFLUENCED by the discussion in FOREST AND STREAM, I recently changed my .38-40 repeater for a .45-90 Winchester, S. S. rifle (no wonder, by the way, that game is disappearing when such arms can be sold as cheaply as at present). As I only have killed two deer with it so far and one of them was crippled, I have but little new to say on the killing power of the cartridge. The hollow-pointed ball does terrible work.

But that which surprised and impressed me was the trajectory of the cartridge. I missed two deer, each at about 200yds., because I couldn't get over my old habit of aiming high. Afterward I found, in shooting jack rabbits, that there was no perceptible difference in the Lyman sights between correct aim at 50yds. and at 200. This is a striking advantage over the .38-40 or .44-40 cartridge, though I do not remember that it has been mentioned. I may say that there is no perceptible recoil when shooting my new gun at game, though it weighs only 8½lbs. At the target one feels a slight jar.

AZTEC.

The Ontario Duck Law.

SIMCOE, Ont., Jan. 20.—We have a law here that only 300 ducks can be killed by any one individual in one season, and it works admirably, as a few persons cannot kill all the ducks in the marsh.

S. M. S.

CHICAGO AND THE-SOUTH.

[From a Staff Correspondent.]

STEPHENSON'S LAKE, Gulf Coast, Texas, Jan. 24.—So far as I can see there is going to be more West than Chicago in my copy this week, and a good deal more South than West, for all of which, in view of the present state of unbridled license of the thermometer in Chicago, the West and the South in general, I am truly thankful. At present I do not know exactly where I am, but I think it must be heaven. The blue water and the blue sky meet in front of the gallery where I sit. Below me, and at the left, is an orange grove in full fruitage, the big yellow globes showing finely against the dark-green leaves. I have gathered an armful of oranges as aid to one producing copy for a newspaper so far away that one might justly question its existence. At every comma in this copy the printer man may know that the copy man took a bite of orange, and at every period the proof-reader may reflect, with jealousy in his soul, that the copy man has sent another whole orange to its last abiding-place. Probably the editor man will feel bad when he reads this, too. Probably the printer, the proof-reader and the editor are all wearing oversleeves and chest-protectors. The copy man isn't. He is in his shirt sleeves, on the outside of a house whose doors are all open, and whose fireplace only in the night time has the tiniest fire. They don't wear overshoes down here. The children are playing in the yard below me, and they are barefooted, bareheaded and happy. The copy man is happy also. He sneezeth not, neither hath any cold at all.

This, I presume, is heaven, or a grade of it. It is an out-of-door country, and nature has been very kind to her children here. In the bay in front of the house here we go out and get oysters and shrimps and flounders and crabs and many other things that are good to eat. Three of us have bagged 343 jacksnipe in three days, or rather half days, and we didn't try very hard, either. Nobody tries very hard at anything down here. You don't even have to try to be happy, but you get there just the same. If there comes up a good wind we will go out within a quarter of a mile of the house and kill 30 or 40 canvas-back ducks, and we will do that easy, too. The lake is full of wild celery, and it runs up to within 500yds. of the house. Last night I could hear the great rafts of canvas-backs feeding, tearing up the celery and splashing around in a perfect paradise for canvasbacks. The first thing we do of a morning is to go out on the gallery with a field glass and take a look at the canvasbacks. They are here in unestimated numbers, and we can see a body of them a quarter of a mile long out in the lake. There may be 100,000 of them, or perhaps twice that. They are undisturbed in fair weather, as no good shooting can then be had. In windy, rough weather only can they be worked, and not even then so well at this date as early in the winter or late fall, when they first come in from the north. Bags have been made here this season of 140 to over 200. This is beyond doubt the finest canvasback ground left in America. It is not open to the public, but is controlled by two parties of market-shooters, as I shall later explain.

It is here that Billy Griggs, the most successful, most widely traveled and best posted market-hunter in America, has been shooting the past few winter seasons. It is as a friend of Billy Griggs's that I am permitted to come here, to study the present methods of shooting the canvasback and to make some report of it for FOREST AND STREAM. This I shall do, as time offers, later on. At present the days are so full of oranges, oysters and jacksnipe that I do not find much opportunity for writing. Moreover, the post-office can only be reached when our schooner goes down to Galveston, 25 miles southwest of us, and the schooner only goes once or twice a week in its most exuberant moments, and often not oftener than half that often; so there you are. When Billy Griggs goes anywhere he doesn't tell anybody where it is, or how to find him, and I am where Billy Griggs is. We both get our mail at Galveston, when we feel like it, and we both send our mail down there, when the schooner feels like it, but you might go to Galveston and never be able to find either of us, unless you blundered on that able seaman Billy Young, the way I did, and get his fast catboat, the Wren, to transport you. If Billy Young didn't like your looks he might only take you to Smith's Point, or Morgan's Point, or Key West, or Cuba, and so you never would get here. Under these circumstances the copy man has a great advantage over the editor man, which is the only time I ever knew that to happen. The editor can't call for more copy, or less copy, or better copy. He just has to take what he can get, and he ought to be glad if he gets any, in view of the aforesaid oranges and oysters. No one can come in my office here and talk to me when I don't want to be talked to. No one can send me any mail to answer. No one can ask me to contribute to the building of a new church, or touch me for five, or ask for the loan of my dress suit. Moreover, I don't have to wear any overcoat, or any other coat, unless I want to, and when I want to go anywhere I don't have to hang on to the strap of a street car, but can get aboard the deck of a genuine Texas pony, that goes without stopping in the middle of the long blocks. I can likewise gather up shells on the seashore, and moreover, swat sand snipe and dowitches in the same locality. Or I could go two miles up the bay shore and shoot Canada geese, or on almost any decent ducking day could fire two or three hundred shots at "puzzle ducks" as they call them here (marsh ducks), on almost any of the lakes three or four miles back of the house. As for snipe, I have already said. As for canvasback, I hope yet to have much to say.

Evidently this is paradise. But did ever any one hear of one in paradise writing about paradise? By no means. When one is in paradise his most sensible act is to hold still and enjoy it, and not waste golden time in the vain effort to convey to white paper for the benefit of a cynical editor man, a shadow of the keen delights that be. I have a vague schoolboy remembrance of a Latin gentleman who said something about *Dum vivimus*. We will *dum vivimus* a while first before we do anything else. Then I will tell you about Billy Griggs, and about things more germane to sport than oranges and oysters. Meantime, I think I will eat about four oranges right away.

Lafayette, La., Jan. 31.—In an earlier communication I made mention of the fact that the sunny South was not sunny but cloudy at that time. The climate has redeemed itself, and to-day, as indeed for the past ten days, the air is soft and balmy. House heating is an unknown art in Louisiana, more thanks for it. It is perpetual spring here, and the rare days when the thermometer forgets itself are

not dreamed of in the philosophy of the inhabitants. They meet such days only with surprise, and not with preparations. Bad weather and discomfort are unpredictable in this land of ease. No country lies under the sun where man may make a living so easily as here. I do not think he lives upon the earth, by sweat of his brow, for I see no labor as we know it in the North. The population, I am half persuaded to believe, lives upon this balmy air, as does the drapery of moss upon these magnificent live oaks. Most people believe the Spanish moss is a parasite of the tree, but it is not. It is merely a dependent of the air. It lives by breathing. So does the Louisianian, I believe, and so does the Cajun I am sure. Acadia, we have read of that. It is here. I have seen Evangeline under a dozen bonnets to-day. Moreover, if we be more modern, I have seen the bridge and the bayou where Mr. Cable and Bonaventure held converse before the public knew Bonaventure or others of the Cable Cajun characters. Alas! my Cajun of to-day is turned market-hunter, is a dead shot on the wing too often, and so uneducated that a dollar and a half a dozen for quail seems wealth to him. More about the Cajun later as we shall find time.

The cold snap of the middle of this month drove the woodcock back into this country and some good shooting was had. Granted a film of ice and the cock shooters here look out. When the temperature rises, the birds move again as far north as they dare. They do not winter on a given section as do the snipe along the Gulf coast country. Yet, yesterday a native hunter had a string of over a dozen woodcock for sale, and the day before that a gentleman got a dozen and a half near here. If the shooter of this section goes shooting it is for a certainty, and not for hard work and a chance, as we do North. Therefore hard hunting is unknown, and you cannot tell, when you hear a discouraging report, whether to be discouraged from a Southern or a Northern standpoint. A sportsman here is used to so much better sport than we have in the North country that he would hardly care for shooting which to a Northern man would seem very fine. I suppose that conscientious, hard work would get me a good bag of woodcock here, but I do not want to work. I would rather just breathe. This soft and pleasant country, how hard it will be to leave it for the blizzard and the 30° below zero of which I read in the despatches of the day.

I can not tarry to speak at this place of the visit at Stephenson's Lake, on Galveston Bay, where I lay weather-bound, or held rather by the lack of weather, for three days. The bay was like glass and the 25 miles of distance might have been 1,000, for never does one go to Galveston from that point except by sailboat.

C. E. Willard, the Colts Company's Western representative, was to have met me at Stephenson's the middle of the week and, indeed, got down to Galveston on his way over, but the boatmen brought him not when we expected. The captain of the schooner told us that when Mr. Willard looked out over the bay a little sea was on and it looked as though there might be more. Mr. Willard suddenly remembered that he had business at Houston and so would not embark. I therefore missed meeting him in the South. I do not doubt he met magnificent snipe shooting at Wimberly, or near Houston. We killed, or rather the house of hunters at Stephenson's killed, nearly 1,000 snipe in the week I was there. I shot snipe three days and would not go out any more. We hunted only half the day and I found it only too easy to bag three or four dozen in that time each day.

The wind which frightened Mr. Willard away gave us the only good day for duck shooting, although it was not enough to make the canvasback work. The weather ruled calm and warm. We wished for a "norther," but I had to leave before we got it. Every day we could see the pretty picture of the vast masses of canvasbacks feeding, or rising into the air and making out into the bay to rest in the sun. The long lines of the flight would wave and dip, soar and drop, as the birds apparently in mere exuberance of spirits, sportively saluted the bay as they made their daily journey in and out. Meantime the hunters bided their time and did not disturb the lake, waiting till a storm should make the bay too rough for a resting place, and until the seeming need of daily exercise should drive the birds to scurrying trips around the shores of the lake and near the islands and cane points where the blinds are. The hunters were impatient but the birds were happy, and on the morning when I left they were pitching and tumbling about in the air, and showing us all of the wonderful possibilities of the canvasback on the wing. It was a grand picture, and one probably not to be seen anywhere else in the country in such perfection as here.

Here at Lafayette, by courtesy of Mr. B. B. Myles, of New Orleans, I met Dr. William Clegg, a resident sportsman. I only wish time were longer in this world, so that I could do some of the things Dr. Clegg proposes. For one thing, we drove out to Sunset Lodge, the shooting box of Gen. F. F. Myles, and looked at the place, whose hospitalities my friend and I were invited to accept. Gen. Myles is also of New Orleans, but spends a little time occasionally at his box here, where he formerly had kennels and kept a number of his dogs. The lodge is delightfully located about a mile and a half out of Lafayette, and to reach it you must pass through some of the quaintest scenes in the world, into a long lane of moss-draped live oaks. The door yard is a beautiful spot, impossible to reproduce in perspective, so much do the oaks, the big pecans and the fig trees stand in each other's way. The interior of the lodge is fitted up luxuriously, and contains every luxury an active or leisurely shooter could ask. Sellers, the colored servant in charge, keen with the ardor of the true servant, was fairly as anxious as his master that we should stay a week at least. I could only regret we could not spend time for a night or even a meal. The Northern man carries too much of his hurry with him. No one in the North knows anything of the pleasure of life. As comment on the Southern life and Southern hospitality, let me say that I have never met Gen. Myles at all, and only met his brother, Mr. Beverly Myles, for the first time at New Orleans, and that by accident in a measure. Yet here we were, privileged to enter into all the comforts of the cosiest shooting lodge in the world, and to kill the last bird on the grounds if we wished and were able. We do not know-how to do these things in the North.

Dr. Clegg and I, in lieu of a hunt, went over to the residence of the village priest, Père Forges, of whom Dr. Clegg is a great favorite, though of a different religion. Père Forges is of French birth, is wealthy, and is a traveled and cultured man. His hobby is flowers, and he has one of the most remarkable gardens in this country,

in all probability. All Louisiana is a vast conservatory, and the gardener can do here without glass things which the hot-house man dare not attempt. The old père has over 500 varieties of roses in his garden, and in one bed he showed us all the new varieties which came out in 1892. A new rose to him is as a new bird to the naturalist, or a new tulip to the tulip fancier of old. Here you may see every rose you ever heard of and many of which you never heard, from the Madame Carnot down to the wild Cherokee rose, which is used here for hedges, and grows so luxuriantly that the State lately passed legislation to suppress it. If Louisiana ever dies, it will be of a smothering in roses. In the good père's garden also you may see nearly every plant native to China or Japan, and he says the plants of those countries nearly all do well in Louisiana. The bamboo, the tea plant, the camelia, and many other natives of the Orient, he showed us, flourishing even as the green bay tree which grows by the little wicket. The camphor tree he also has, and by crushing the leaves you can elicit the odor of that drug. The cinchona tree also was there, and the bitter quinine taste was readily apparent in the leaf. The pepper tree was also in evidence, and many other plants, herbs and flowers of interest and beauty. Through all these we wandered till we came to a shed, where lives Jakie, the pet baboon, which Père Forges declares is the master of his establishment. To Jakie we administered a banana, in return for which he made as if to swallow one of Dr. Clegg's coat-tails. This part of the morning was worth more than a day spent shooting. After we had left I returned from some distance to make a picture of the little white church and of the great live oak, said to be the finest in the parish, which stands in front of the church, and the old priest's garden.

My friend from Chicago wires me that he has gone on up to Opelousas. There I shall meet him this evening, and we may do some shooting if we find we would rather do that than just breathe. About the shooting at Galveston I shall also have much to say later. It is becoming evident to me that the South is the shooting country *par excellence*. It is the best of what we now have left of shooting in America.

E. HOUGH.

THE MAINE JACK RABBIT SCHEME.

FORT BIDWELL, Cal., Jan. 2.—*Editor Forest and Stream*: In your issue of Jan. 12 I read with amazement the recommendation of the Game Commissioners of Maine to introduce into that State the jack rabbit of the Western plains.

As a native of that good old State, where my first love for the gun was nurtured, and as one of the vast army of sportsmen of this great country, I rise to sound a note of warning to these estimable gentlemen, whose efficient work is known from "Maine to California and from the British Possessions to the Gulf of Mexico."

Could they see the havoc wrought by these pests in

protruding as large as robin's eggs, which is not appetizing to a sensitive stomach.

Are the good people of Maine prepared to fence their gardens, orchards and grain fields with woven wire fencing to keep this voracious brute from their vegetables, trees and cereals? If not, make thorough inquiry on the Pacific Coast before taking him to your bosom. Remember the experience of Australia with the English rabbit, our own country with the English sparrow and California with the German carp.

Introduce the smallpox or cholera bacillus and the spectres of the departed victims might rise up and call you blessed, for you would have ended their miseries at once, but bring in the jack rabbit and your troubles will be unending.

Let these gentlemen invest fifty cents in a photograph of a rabbit drive in Fresno, Kern or Tulare counties of this State, show it to each member of the Maine Legislature, and, my word for it, there would not be ten votes cast for such a measure.

A. C. LOWELL.

Editor Forest and Stream:

Indeed this is a great country of ours. It seems destined not to be outdone by any other country on the globe. Mines of precious metals, of glittering, costly gems, of whose existence it was thought only other nations could with greatest propriety boast, have become, or soon will become, matters of ordinary interest. And New York! Some one has had the audacity, if not envy, to call it a "counterfeit wall flower" in comparison with some other European cities. Such do not stop to think that New York, Brooklyn and Jersey City are really as much one city as London divided by the Thames. Wait! What and if the bill should pass and the vote of the people be cast to consolidate those suburbs into the city of New York, won't our inquisitive neighbors across the blue sea take a squint through their telescopes and say that New York in area and population is a fair-sized village? Hold on! Haven't I digressed a little? Let's see. What was I going to talk about? Oh, yes, so it is—rabbits, jack rabbits! I was thinking about Australia. She has rabbits, a big heap of 'em. The question is, will she of *Lepus* fame escape an overflow of bile with the information that 10,000 jack rabbits were corralled and slain as the result of a single battue in California? That number lay stretched upon the leporine *Aceldama*, a photograph of which I saw several days ago, which my fellow townsman, Col. Emmons, brought with him from the Golden State. At a distance I took the photo to be a representation of an ice gorge, but on approaching it what met my astonished gaze but a sea of dead rabbits, thousands in number, covering a great area so thickly that a man could not apparently touch them in walking through them. I resolved then to send a photo of this Bunker—no, Bunny battlefield for the benefit of the readers of the *FOREST AND STREAM*, when, lo! the appalling

A JACK RABBIT ROUND-UP, NEAR BAKERSFIELD, CAL., SHOWING 1,946 RABBITS.

California they would as soon try to acclimate an army of locusts, grasshoppers or ground squirrels. Modoc county, where my home is, somewhat resembles Maine in this, that snow sometimes gets to be two or three feet deep in winter and the mercury occasionally goes down into the 20s below zero.

I have seen hundreds of acres of grain not worth the harvesting—completely ruined by these vermin.

In July or August of 1886 *FOREST AND STREAM* contained an article written by me entitled the "Modoc Rabbit Curse." I take the following quotation from it:

"Three months ago the supervisors of Modoc county offered a bounty of three cents per scalp for rabbits. At the last meeting of the board the sum of \$826.77 was allowed on this account, representing 27,559 scalps. One of the supervisors told me that about 25,000 of these were killed on a tract of land six by eight miles in extent. A Mr. Nelson brought water by ditches from the river six miles distant and reclaimed 2,000 acres of sage brush land, on which he sowed grain and alfalfa. The rabbits liked the change of diet and took the crop. Upon this representation to the board of supervisors they offered the above reward and Mr. M. hired Indians, paying them five cents per scalp and furnishing them with ammunition at one-half cost price, one installment of which, it is said, cost him upward of \$280."

It need hardly be said that this law was repealed within two months of the time that letter was written, as fears were entertained that if kept long in force it would bankrupt the county.

In this country bunnies is the Finches' pork barrel, and constant demands are made on it, but with no appreciable diminution of supply.

His eating qualities are not regarded with favor by the "Yanks" in any section of California I have visited, though some of the foreign population regard him as a delicacy. He is given to a parasite, a grub similar to those found in the backs of old and poor cattle in the springtime. I have killed them with these big bunches

word "copyrighted" stared at me from one corner of the picture; and so I dared not risk the pleasure of imparting pleasure, as I am sure it would be to those who might have seen it but for that warning protest.

More than the number I have stated have been driven in at a single hunt. From two to three hundred men enter upon the chase, some on foot and some on horseback. No firearms are used. Within the corral clubs are used to effect the massacre. A few are eaten, the most being buried or used as fertilizer. They are slain because of their destructiveness to vegetation.

WEST VIRGINIAN.

Is There a Limit?

WARNER, Tenn.—*Editor Forest and Stream*: On first page of *FOREST AND STREAM* of Jan. 26 you say: "The Florida tourist shooting crank has as much idea of sport as a kicking mule." This was good, but too brief. It will now be of interest to hear from some of the shooters (with a conscience) as to whether there is a limit to the number of birds a man may kill without forfeiting the title of "a true sportsman." Isn't the so-called "sportsman" who kills his sixty birds in a day a greater bird-destroyer than any trapper or netter of birds? J. T. P.

North Carolina Quail.

AVOCA, N. C., Feb. 1.—Although we have had the coolest weather in nearly a century, and the longest spell known, yet the quail have suffered but a very little. I have been out working some young dogs for the past few days, and find them as numerous as ever, and do not miss a bird by the cold or snow. I think during the month of February and March that as good shooting as can be found in the State will be found here. The turkeys are also numerous. We also expect a flight of woodcock soon that will last a month or more.

S. W. EVERITT.

THE MINNESOTA GAME SITUATION.

The following portion of the report of President Robert Ormsby Sweeney, Jr., of the Minnesota Game and Fish Commission, sets forth in illuminative light the game situation of the State, and the call for unity of action in protective legislation by Minnesota and her neighbors:

The work performed by the State game warden, Stetson, and his numerous and valued assistant special county wardens, is set forth at length in his report to the board, which is appended together with those of the county specials also. The general tenor of these reports seems to be that the enforcement of the game law is salutary, and is so recognized more than at first, and the violations are fewer than last year. In many localities none at all are reported, and the people are putting more confidence in its efficacy and beneficent results. Many of the wardens say very emphatically there is a very perceptible increase of game, owing to the law's enforcement. Others, fewer in number, I am glad to say, can see no difference; while others report game very abundant—more so than for years.

There is one uncontrovertible fact set forth by these reports coming from every part of our beautiful domain, and that is that our State of Minnesota is still wondrously endowed with a heritage of the choicest game, both small and large, so lavishly bestowed that the wealth of the world could not reproduce it were it once to vanish. Only a few years ago one might safely say, from the southern tier of counties, where the sparkling trout streams like silver ribbons thread their way across the verdure of the prairies; from the midlands, northward, where the lakes are spread to mirror the azure depths of the pure ether above us, and the rivers that rush and dash among the rocks and oak trees; and further north where the pine trees, the streams laugh, leap and tumble with their crystal affluents finally into the bosom of the great lake. In all and every stream and lake were to be found food fishes; not here and there one, but by myriads. The little brooks where leaped the speckled trout; the countless lakelets, where sport the perch, the croppie, bass, walleye pike, muskalonge and pickerel, and in the blue, cold depths of the fjord-like northern waters, the luscious Tullibee, and in the "great shining big sea water," Gitchee Gamme—Lake Superior. The giant brook trout, the herring, the cisco, the three colossal lake trouts, the wall-eye perch, the siscowett, and the whitefish and sturgeon, like the untold wealth hidden within its rocky shores, were waiting in all their glittering beauty for man's needs.

As the waters were teeming, so were the lands filled with game life. The marshes, with their wild rice and cranberries, supported innumerable aquatic birds and fowls; in the stubble, and in the wild, broad prairies where the great cranes dance and swing, were feeding grounds for others. The chickens, grouse and pheasant, whirled and drummed from one end of the State to the other; the deer, elk, caribou and moose undisputed, trampled our northland marais and forest; the mink, marten, fisher and otter peopled the banks of the forest streams. The approach and contact of civilization has greatly changed all this, yet, even to-day, far away in the quiet depths of their scented silence, the beaver is yet building his dams and constructing his houses as of old. Only a few years ago Minnesota was really a hunter's paradise. It seemed as if the game and fish would never, could never be exhausted; but civilization's mills, with their refuse and sawdust, seines, gill and trap nets, and dynamite for the fishes; breechloaders for the birds, and magazine rifles for the noble deer family, are with their relentless and deadly energy rapidly dissipating with shameful waste our heaven-given bounty.

Let us call a halt; it is time. Let us make the effort, every man of us, to save this wonderful heritage from destruction, remembering there are others to come after us, perhaps our own descendants with our very tastes and enjoyment of fishing and hunting. Let us spare something for the coming generations. We can do it, by wholesome and salutary restraints upon the killing of game and fish. First let better laws be enacted, laws for the purpose intended, and let us obey them; impartially enforce them, whenever and wherever violated; forbid selling and shipping game killed in Minnesota out of the State; forbid the selling and shipping of all fish caught in Minnesota waters out of the State, except those caught in Lake Superior. Restrict the use of dogs in hunting, for either birds or deer. This would prevent the terrible and deadly slaughter which now threatens extermination. A few years without dogs would demonstrate the value of their absence, by the greater abundance of game both large and small.

This rapid destruction and dissipation of our game and fish is the result in larger part of the demand for such luxuries from the thickly peopled countries, where all native game has long since been exterminated. The buyers and sellers, or perhaps more properly the dealers in game, direct, induce, employ, hire and pay men to locate good fishing and hunting grounds; kill and ship to their agents, in season and out of season, all and every kind of fish and game obtainable.

The game killers' methods are so pernicious and destructive that in a very short time they will have, by netting and by dynamiting, like a pestilence, killed all the fish from a large water area, then sneak off, leaving it denuded and bereft of piscine life, and even that which sustained it, to recover slowly, if ever, as best it may.

These game killers are a guild of themselves, they are "nomansland" people. They acknowledge no law, they know no mercy, their only desire is to kill something for hire. They are the thugs of the lakes, woods and prairies, and as the thugs of the Orient had to be suppressed so must the game thugs of the West retire from their unholy calling. They pay no taxes, contribute nothing to the support of the State they plunder, as a rule. They have no local interest in their habitat beyond the booty the looting of its woods, waters and prairies may afford to their insatiate greed. They pass their ill-gotten spoils from county to county and from State to State, from jurisdiction to jurisdiction, escaping through the meshes of the law's defects with impunity. To remedy these evasions and bring about a legal uniformity of times and seasons, close and open, and also as to the duties, powers and appointments of game and fish wardens; a convention of the Game and Fish Commissioners and wardens of our neighboring States most in touch with us, namely, Iowa, Wisconsin, North and South Dakota and Michigan, was called in the name of the Minnesota Game and Fish Commission by Mr. W. P. Andrus, chairman of the committee on revision

of the game laws, to consult and agree if possible upon such plan of legislation as would put a wholesome control upon, and proper legal restraint upon the destructive if not exterminating traffic in game as now carried on.

The result of the call was a very enthusiastic and interesting conference of gentlemen who are the representatives of the game and fish protective interests of the two Dakotas, Iowa, Wisconsin and Minnesota, on Dec. 14 and 15, at Minneapolis, over which Hon. James J. Hogen, of Lacrosse, presided.

At this conference the draft of a game law, the result of the labors of the committee on revision, was submitted, discussed and passed upon section by section, amended and modified so as to harmonize as much as possible its effects in the different States therein interested. The measures proposed are intended to bring about uniform seasons for hunting; reciprocal arrangements toward tracing game illegally killed and shipped; mutual encouragement, help and aid in protecting the game and enforcing the laws for that purpose strictly and impartially.

Under the present regime it is possible for a "game thug" to kill for a couple of weeks in Iowa, then a week or two each in South Dakota and North Dakota, then end up with two weeks in Minnesota, giving him from a month to eight weeks killing time; as he kills only for market the slaughter is excessive, and the already visible results in some localities of extensive area, make us apprehensive of what will soon be the universal condition unless decisive action be taken to stop the exterminating onslaught upon the fish and game without delay.

The conference, as part of its work, named committees in each State to draft and lay before their respective legislatures such laws, or amendments to existing enactments, as would bring about the desired statutory protection. The conference was harmonious and in perfect accord as to the desirableness of such changes and modifications as would secure the practical uniformity and enforcement of game protection, enlarging the powers and authority of wardens, etc. And when they adjourned they did so feeling they had at least started in motion a force toward the accomplishment of great good in this direction; the effect, we hope, will be so apparent in its beneficence as to go on unhindered till the game and fish are saved. * * *

The birds of our State are hunted with the same reckless pertinacity and the quantity slain is enormous. The wastage is considerable. The deer family, like the buffalo, seems to be doomed, unless some strong protection is given them and restraint upon the hunters. Does in the milk are killed that the little fawns may be captured. Bucks and bulls are slain for their horns only and their carcasses allowed to rot by the hundreds. The wastage is even greater than in the fisheries. Such an enormous drainage upon the natural resources of restoration can have but one ending. The fisheries restoration may be and is helped by artificial propagation, but even that will reach its limit when the egg-producers are not to be had.

But with the birds and venison game there is no artificial help possible. Here nature brooks no interference. She is generous to man, but when too much is demanded she will yield nothing to importunity and withholds her bounty, and, when too late, we realize the reward of our reckless greed and folly.

When such enactments shall come before you for approval as will properly conduce toward the preservation and protection of our game and fish and their propagation, I feel that it will not be withheld.

"PODGERS'S" COMMENTARIES.

Domesticating Wildcats.

SAN FRANCISCO, Cal.—I see that Mr. H. B. Hersey comes to the front in a recent issue of the FOREST AND STREAM in contradiction of my experience in taming the lynx or wildcat. There must be some difference in the species, and the Florida cat shows a much more amiable disposition—or possibly Mr. Hersey's success may have been the result of their being taken in hand at an earlier age than mine was. I had no means of judging of the age of mine when I obtained them—at any rate I never saw two more vicious and untamable varmints, and all my efforts to get on friendly terms with them were fruitless, but after reading Mr. Hersey's experience with the species, I tender him my title and retire from the cat field vanquished. I think their having fits was the result of feeding meat at so early an age, as it has a similar result in the case of the ordinary domestic cat.

After the success of Mr. Hersey in the cat line, if I am so unfortunate as to ever acquire another of the kind I will express it to him for its education, and with a quit claim deed to all my right, title and interest in the thing, for I still decline to take any stock in that species of natural history.

Carp and Duck.
